25924-AW (JCC:2036) Admin Svcs Mgr II: Asst Dir respon for all operational, admin, personnel, & budgetary aspects of self-operated & leased svcs in union incl: facilities & utilities; a sundries store; a ticket offc; mtg rms & conference spaces; travel svc; a full service bank; & hairstyling shop; shall be the renovation & expansion mgr; respon for administering some TMU central svcs incl personnel mgmt; capital budgeting process; clerical & informa support svcs, etc; in absence of Union Dir, the Asst Dir shall represent the Dir at mtgs & will act on her behalf; QUALIFICATIONS: require BA/BS in Bus Admin, Facilities Mgmt, or equiv exp; significant facility/property/proj mgmt exp; significant exp in supvn of exempt/bargaining unit employees; strong organizational skills; good written/verbal commu skills; willingness to work long or odd hrs; strong interpersonal skills; successful financial mgmt exp; ability to function effectively in univ setting; C07; $2113-2724

Bargaining unit

33242-TC (JCC:5638) LIFE SCI TECH I: TMS Unit; 60%, 8-1pm; asst w/ research on natally acquired herpes simplex infections & transfusion acquired cytomegalovirus infections in newborns; respon for maintaining cell culture tubes & observing them for cytopathic effect due to herpes simplex; separates sera, records patient name & sera number & stores sera; coord receipt of specimens w/ res R.N.; prep & infects human amnion cells for typing of HSV strains; performs indir hemagglutination assays for antibody to cytomegalovirus twice a week; shares in respon for genl lab maintenance; QUALIFICATIONS: aseptic tech, genl lab eqpt standard operatihng procedure & tissue culture tech helpful; dependable, accurate; ability to learn sufficient theory to trouble shoot procedures at bench level; l yr lab exp or equiv in college level sciences; min high sch'l level biology & chemistry; ability to interact w/ doctors, patients & lab personnel.; A18; $ 7.50.

36182-TC (JCC:5644) LIFE SCI TECH II: TMS Unit; 9-5; routine but skillful prep of lipoproteins fr rat & human plasma; membrane fractionation w/ sucrose gradients; binding assays incl 125I-HDL binding to ovarian membrane & to liver membrane; treatment of rats w/ hormones or other agents; killing rats for plasma or experimental tissues; immunizing rabbits w/ antigens; QUALIFICATIONS: basic lab exp such as accurate pipetting, preparing solutions & buffers; some exp in dealing w/ instruments (such as low speed, medium speed & ultracentrifuges, spectrophotometers & scintillation & gamma counters) is preferred; willing to kill rats or bleed rabbits; ability to take respon to organize & finish assays, keep raw data & calculate them.; A24; $ 8.65.

39085-AW (JCC:8150) CARPENTER MAINT/MUS: TMS Unit; 7:30-4pm; builds, repairs & installs counters, cabinets, benches, partitions, floors, doors, stairs, ladders, bldg framework, etc; sel specified typ of lumber or other mat'l; sel & install various sound insulations mat'l; operates sanders, planners lathes, power saws, & joiners; repairs & maintains roofs; repairs or replaces chalk & bulletin boards; working fr blueprints, sketches, or verbal instruction constructs & repairs structural wood work; keep tools & machinery of trade in good condition; answers emergency calls, etc; QUALIFICATIONS: requires full journeyman level skills; completed documented Carpenter Apprentice program.; A33; $10.71.

19645-DS (JCC:8890) MISC TECHNICIAN: TMS Unit; 50%; oversee & prov tech serv for public events & rehearsals in Dinkelspiel & other locations; perform routine maintenance of stage & auditorium eqpt; operate lighting, audio & video eqpt; coord activities w/ faculty, staff, students & other performers to prov best use of eqpt & services; supv part-time students & other tech personnel during performances; determine own operating prior; QUALIFICATIONS: knowl of basic lighting design, & operation & maintenance of theater lighting sys; thorough knowl of audio & video recording & playback sys; ability to perform basic carpentry, electrical & mechanical maintenance & construction; ability to commu effectively w/ diverse users under time & performance pressure.; A30; $ 9.97.

Nonexempt

28217-PM (JCC:2496) OFFICE ASST I-SPEC: Offc Asst for Data Bank Network Post-Marketing Drug Surveillance Proj, the Outcome of Rheumatoid Arthritis Proj, & the Auranofin Surveillance Proj; prep & mail proj mat'ls to participating Data Bank Ctrs; collate & mail Outcome assessment questionnaires to approx 300 patients; follow-up on non-responders via mail & phone contact; request med & financial informa fr hospitals & proj patients; maintain patient & proj files; typ reports & corresp; xerox, collate, & distribute proj corresp, etc; QUALIFICATIONS: typ 50+ 1 yr offc training exp preferred; able to work w/ public & detail; some familiarity w/ med terminology or ability to learn; send appl/resume to Connie Hartnett, 701 Welch Road, Suite 3301.; B08; $1078-1130.

16280-PM (JCC:2562) SECRETARY III: Full range of sec'l respon for Genetics professor w/ a large, active & diverse program; receive, screen & use of judgment in referring calls & visitors to the prof., his staff or independently making appts; sort mail; set up, maintain & revise as nec, all offc files; prep check advances, expense reports, work orders & purchase orders following prescribed financial guidelines; compile non-tech data for mtgs, reports & reviews, etc; QUALIFICATIONS: typ 75-80; prior sec'l exp; genl knowl of biological vocabulary - some science courses desirable; prior exp w/ word processor desirable; prior univ or med sch'l exp desirable; send appl/resume to K. J. Carpenter, S-337, Med School.; B14; $1440-1514.

22014-BP (JCC:2596) SECY II-SPEC: Independently execute assigned bklog of work for the office; typing of tech papers, proposals, corresp, prep purchase reqs, expense reports, check requests & interdept'l requests; willing to learn word processing eqpt; perform genl offc duties for 2-4 faculty members; run errands, distribute mail; answer phone, etc; QUALIFICIATIONS: typ 70-75; 2-3 yrs of genl offc exp; knowl of tech typing helpful; send appl/resume to Judith Haccou, Terman Eng. Ctr 551.; B12; $1310-1373.

33715-PM (JCC:2714) MED SERV ASST III-SPEC: 7:45-4:30; respon for the day-to-day handling of patient inquiries either by phone, in person or thru written corresp; primary respon is to promptly & satisfactorily respond to patient's concerns in a comprehensive manner; requires intensive knowl of physician billing, medicare, med insurance billing as well as training in data retrieval for patient acctg & FPP policies & procedures; intensive patient contact; requiring high level of tact & diplomacy involving patient complaints or misunderstanding; maintain accurate acctg & billing; QUALIFICATIONS: typ 35; 1-2 yrs college edu w/ business & commu emphasis plus a min of 3 yrs exp in business offc dealing w/ public or equiv combination of both; knowl of commercial & gov't insurance billing procedures, & understanding of FPP policies; knowl of med terminology & procedures, basic business eqpt; contact: Barbie Padilla, 328-5461.; B12; $1310-1373.

44330-TC (JCC:2966) MEDICAL TRANSCRIBER: Willing to consider job share; daily transcription of rough & final Surgical Pathology reports; maintain Organ/Lesion file (index of organs & diseases) on a daily basis; retrieve informa; coord of tasks w/ other transcribers; use of IBM Offc/Sys 6 Word Processor & Mag Card A typewriter; some flexibility of hrs worked; shift differential applied to base salary if approp hrs are worked; QUALIFICATIONS: typ 70; med terminology, preferably pathology exp; 2-3 yrs transcribing exp w/ Word Processor; capability of maintaining Organ/Lesion file using SNOP & SNOMed nomenclature; contact: Leslie Culligan, Med Ctr, P-2020, 497-7211.; B14; $1440-1514.

31846-BP (JCC:5484) DATA AIDE II: Checks output quality; sorting & distribution of the output; works as a team w/ 2 other staff members & various campus units; bills users; answers routine questions; monitors output messenger service; acts as a resource for Computer Service users; typing, filing & writing short memos; order supplies & check routine data on budget statements; code & stage computer jobs; 1-3 hrs of terminal work/day w/ frequent interruptions; QUALIFICATIONS: typ 45; know or willing to learn WYLBUR, SPIRES langs; good interpersonal skills incl assertiveness; enjoy detail work w/ accuracy; good proof-reading skills; good writing skills; lift several 30-40 lb boxes of output daily; legible handwriting; send appl/resume to Liz Trujillo, 301 Encina Hall, Stanford, CA 94305.; B10; $1189-1246.

31848-BP (JCC:2210) ACCOUNTING ASST III: Work w/ med develop't professional staff, Med Sch'l & Hospital depts, Univ gift-processing offc, & controller's offc in recording, transmitting, & acknowlg gifts to med ctr; duties incl transmittal of gifts into Univ & Hospital acctg sys; drafting & typing thank-you letters; answer inquiries; documenting & filing gift corresp; supv & is assisted by 1 non-exempt, full-time employee; overtime may be required when gift workload is heavy; QUALIFICATIONS: typ 60; excel grammar, spelling, punctuation, & typing; effective telephone comm; extraordinary atten to detail; good memory for names & figures; knowl of med terminology & of Stanford admin procedures useful; aptitude & exp in acctg; send appl/resume to Liz Trujillo, Office of Development, 301 Encina Hall.; B14; $1440-1514.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Feb. 1, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Hospital

MANAGER REG. ACCTS/CREDIT & COLLECTION—Patient Acctng — #5054 (B-5): Responsibilities: Under genl supvn of Asst Director of Finance for Patient Acctng. Manages operations of regular accts and Financial Counselling functions of a large dept. Develops, implements, evaluates and revised policies, procedures and reporting systems. Ensures the applicable policies and procedures of the Hospital and Dept are followed. Performs special projects as assigned. **Qualifications:** A Bachelor's Degree in Business Administration or a closely-related field, and a minimum of 3 yrs directly-related experience or an equivalent combination of education and experience, reqd. Must be able to communicate effectively, both verbally and in writing, w/ individuals of diverse bkgrds, on matters of considerable importance to the Hospital's overall financial condition. Strong abilities in the areas of planning, work organization, problem solving and the mgmt, reqd. Knowledge of computerized billing system desirable. Permanent, M-F, 8-5 pm. $14.85-22.57 hrly. Please contact Bradlee Yochem at 497-6361 or send resume to Employment and Recruitment (SUH), 770 Welch Rd, Suite 100, Palo Alto, Ca. 94304.

39452-PM ADMIN ASST I: 75%; fixed term, 2/7/83-6/30/83; 8-3; asst Business Mgr of FCPM in the admin of all common svcs of Dept; respon for grant/contract admin incl prep of budgets & coord of submission of proposals to grnting agencies; monitor mthly budget statemts; totally respon for processing of all dept personnel/payroll records; supv clerical staff activs; answer questions requiring judgmt, knowl & interpretation of Univ policies & procedures; QUALIFICATIONS: typ 45; demonstrated supvry ability; must be tactful & discreet; familiarity w/Univ procedures & policies helpful; grant/contract admin exp preferable; contact: Droni Moo, Med Ctr A106, 497-5639. $1386

Ph.D. oral exams

MONDAY, JANUARY 31

Ehud Israel Ronn, business, 12 noon, Room 243 GSB.

TUESDAY, FEBRUARY 1

Robert Lawrence Thornton, applied physics, "Monolithic Schottky Diode Storage Correlators for Signal Processing," 3 p.m., Applied Physics 202.

WEDNESDAY, FEBRUARY 2

James E. Corter, psychology, "Similarity and the Density Hypothesis," 1:15 p.m., Room 358, Bldg. 420 (Jordan Hall).

FRIDAY, FEBRUARY 4

Neal David Benezra, art, "The Murals and Sculpture of Josef Albers," 2:15 p.m., Room 101, Cummings Art Bldg. **George Edward Newell,** education and linguistics, "A Case Study/Protocol Analysis of Writing to Learn in Two Content Areas," 2:15 p.m, Room e114, Education Bldg. **Lyle R. Smith,** electrical engineering, "An Analysis of Area Routing," 3:15 p.m., Chemistry Gazebo.

Political terrorism may consume perpetrators—Johnson

Political terrorism is as likely to cause a revolution against its users as it is to serve them, according to Prof. Chalmers Johnson of the University of California at Berkeley.

His views are developed in a new chapter in the second edition of his book, *Revolutionary Change*, recently published by the Stanford University Press (217 pp, $17.50 cloth, $6.95 paper).

"Terrorism runs a high risk of turning potential revolutionary victory into defeat," he declares.

"Nothing has done more to embarrass or discredit revolutionary movements than their use of terrorism in gaining power, as happened with the Nazis in Germany, the Japanese Nationalists of the 1930s or the Khmer Rouge in Cambodia.

"Extensive reliance on terrorism by such movements in their efforts to seize power often condemns them to a continued reliance on terror in order to rule at all.

"During the 1970s several revolutionary movements with high potential for legitimacy appealed to an international audience for understanding and support, and often received it. But one wonders whether the PLO or the IRA, for example, would ever be able to overcome the heritage of their own past and exercise genuine political authority."

Between the mid-1960s and the late 1970s, there was a major shift from guerilla warfare to international terrorism. According to the Central Intelligence Agency, the number of such incidents rose from around 10 per year to an average of more than 300 in 1978 and 1979. Deaths rose from 34 in 1968 to 642 in 1980.

Contributing causes included

1) A series of frustrations for revolutionary movements in the main arenas of revolutionary violence—such as the Israeli victory in 1967 and Che Guevara's death;

2) An array of new terrorist weapons, including the letter bomb, remote-controlled high explosives, bazookas and other portable missiles;

3) Extensive international traffic in arms, particularly machine guns; and

4) A global expansion of mass media available for terrorist exploitation.

"The mass media clearly help to publicize terrorist causes, which may in turn trigger other terrorists' decisions to act," Johnson says. "The media also facilitate the training of new terrorists—by showing them the procedures of an actual operation, for example—and promote international links among terrorist organizations."

During the 1970s, he adds, "the Soviet Union, Czechoslovakia, East Germany, Cuba, Libya and the Popular Democratic Republic of Yemen operated centers for the training and support of terrorists.

"Other nations tolerated this activity because of various overriding national policies, including superpower detente, the West German government's policy of *Ostpolitik*, and the presence of large, legal communist parties in most Western European democracies.

"However, the climate of toleration began to change following the killing of German industrial leader Hanns-Martin Schleyer by the Baader-Meinhof gang in September, 1977, the killing of Italian Premier Aldo Moro in May, 1978, the IRA bombing of Lord Mountbatten in August, 1979, and the holding of American hostages in Teheran from 1979 to 1981.

"It became clear that much of the terrorism of the 1970s was not transnational but international, a form of surrogate warfare in an international system in which open warfare had become too dangerous."

As Brian Jenkins has noted, "a secret backer of the terrorists can also deny sponsoring them."

Moreover, in Western countries there was a "persistent belief that the resort to political violence had to signify the existence of intolerable social grievances and that left-wing political movements, regardless of the temporary excesses they might commit, were basically on the side of human 'progress,' " Johnson observes. "This was particularly true in nations that had recent memories of disastrous right-wing or totalitarian regimes, such as Italy, Germany, Spain, Greece and Japan.

"While this political climate of toleration lasted, terrorists were able to obtain the training, safe havens, funds, equipment, and new recruits that made their attacks possible."

One study of 63 major kidnapping and barricade operations between 1968 and 1974 showed that terrorists had an 87 percent chance of seizing hostages, a 79 percent chance no terrorist would die or be punished, a 40 percent chance that some of all of their demands beyond just safe passage or exist would be met, and virtually a 100 percent chance they would gain major publicity.

"Small wonder terrorist acts proliferated," he comments.

Rental housing

HOUSING AVAILABLE

□ **Beg. Feb. 1, '83:** Spacious unfurn. hse, 4BR/2BA, frig, stove, dw, w/w carpet, FR, frpl, fenced yd, stor. shed, carport. No pets. So. Palo Alto, 10 min. to Stanf. $975/mo. + util. Call 329-0797.

□ **Beg. Mar. 19:** Furn. 3BR/3BA hse, spacious, new kitchen, W/D, piano, frpl, fenced yd., Palo Alto nr Stanf. No pets. $1550/mo. incl. gardener, water. Call COLLECT (602) 299-4499.

□ **Mar. 15 to June 30, '83:** Hse in Palo Alto, 4BR/3BA, library, pool. $1300/mo. incl. gardener & pool serv. Call 327-4197 or 497-4856 (day).

□ **July '83:** Med. prof. with well-behaved family seeks hsesit for 1 mo. or will EXCHANGE 4BR/3BA hse w/fenced yd, 45 min. from Manhattan nr. Rutgers Univ. Loc. refs. Call Bardin 851-0435 (eve).

□ **NOW:** Esc. Vil. family (3) seeks long term 2 to 3BR hse/apt rental in Jordan sch. dist. Loc. refs avail. Call Davidson, 857-0390.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Reasons for child abuse are still a mystery after 100 years of study

Americans concerned with "the battered child syndrome" may profit from the experiences of their predecessors a century ago, a Stanford-educated historian suggests.

"The idea that children possess a 'right' to reasonable treatment from their parents came of age in the late 19th century," Assistant Prof. George K. Behlmer of the University of Washington declared in a new Stanford University Press book on *Child Abuse and Moral Reform in England*, 1870-1908 (320 pp., cloth, $30).

"The English and American philanthropists who founded the first societies for the prevention of cruelty to children during the 1870s and 1880s were, admittedly far less sophisticated than latter-day experts in attempting to explain why parents brutalized their offspring.

"Yet the early reformers did understand that this behavior was often habitual, apt to be repeated if intervention was not forthcoming.

"Moreover, with greater experience, these reformers grew as concerned about the impact of long-term neglect as about direct physical assaults upon children.

"Convinced that strict law, conscientiously applied, would promote better care of the young in their own homes, the child-savers sought to create a public demand for such law. Why the agitation did not start sooner is an intriguing problem.

"The earliest experiments in family policing were conducted in the northeastern U.S. but it was in England that the prevention of cruelty to children became a truly national phenomenon."

In America, especially New York City, early anticruelty workers tried to remove children from physical harm without much thought to reforming their parents. But their British colleagues "not only acted on the belief that most threatened children could be helped within their homes, but also gave much thought to the pressures that shaped 'unnatural' parents," he comments.

While mass media coverage which followed description of the "battered child syndrome" in 1962 has helped create far more effective screening of potential victims "we know only marginally more about what motivates parents to harm their young than did reformers in late Victorian times," he adds.

"To patronize their concern for the safety of the child would be presumptuous. . . .

"What Victorian moral reformers liked to call 'the cry of the children' may never be hushed. But perhaps, given close cooperation between state and private bodies, more parents can be helped to wield their power with discretion."

The author credits Stanford Prof. Peter Stansky for guiding his study through the Ph.D. dissertation stage.

Dale Herman and John Toenjes

STARTS Sunday Festival opens next week with Dale Herman, John Toenjes

Dale Herman and John Toenjes will perform music for recorder, harpsichord, and celeste at 8 p.m. Sunday, Feb. 6, in the Tresidder Lounge. Admission is $3 general and $2 students and senior citizens.

The concert is the first of The Sunday Festival Series sponsored by STARTS to celebrate the 20th anniversary of Tresidder Union.

Works on the program include contemporary compositions by Miller, Alemann, Staeps, and Pinkham as well as those of 16th and 17th century composers Bach and Barsanti.

Herman received his Mus. Bac. from the University of Toronto in 1975, and his M.A. in the performance practice of early music at Stanford in 1979. He currently teaches privately in Palo Alto.

Toenjes studied harpsichord with Margaret Fabrizio at Stanford, graduating in 1978 with a B.A. in music. Since then, he has concertized in the Bay Area, and now teaches music in Palo Alto. Several of his compositions for theater have been produced in Palo Alto and San Francisco. He also has a harpsichord restoral and repair service, and plays the program on an instrument of his own construction.

Human biology lectures open up

Human Nature: The Human Animal

Are human beings naturally aggressive? Can the brain grow and change? Are men more aggressive than women? Are there basic emotions?

These and other topics will be addressed in a new course offered by the Human Biology Program. Entitled Human Nature: The Human Animal, HB 90 will explore questions about human nature that have been of concern to thinking people for millenia.

Lecture topics will include: the nature of early man; what specifically does make us human; what does natural selection select; how does evolution operate; why males act the way they do in matters of sex, and how this is biologically different from females; what is basic to the human brain that is different from other brains; and how the brain grows and changes with experience.

Each lecture will feature a different guest speaker, including Stephen Jay Gould, author of *The Panda's Thumb*, Donald Symons, author of *The Evolution of Human Sexuality*, and Paul Ekman, author of *Emotions in the Human Face*.

The course is part of a two-quarter sequence with Human Biology 91—Human Nature: the Social Animal. It is an outgrowth of a design developed by Donald Kennedy, Albert Hastorf, and Robert Ornstein.

Lectures will be held on Mondays and Thursdays from 3:15 to 5:05 in Bldg. 260, Room 268. They are open to all students and members of the Stanford community. For further information, contact Deana Fabbro-Selaya in the Human Biology office at 497-3693.

Humans and Viruses

The Program in Human Biology is sponsoring a winter quarter lecture series in conjunction with course HB 115, entitled Humans and Viruses.

Open to all members of the Stanford community, the scheduling of rooms will be announced. There is a possibility of a "brown bag" with the individual lecturers; if interested, contact instructor Robert Siegel at 497-3693 or 843-4337.

Thursday, Jan. 27: Jeff Silvers, "Influenza," 11 a.m.

Tuesday, Feb. 1: David Regnery, "The Ecology of Viruses," 2:15 p.m.

Tuesday, Feb. 15: John Ziegler, "Epstein-Barr Virus and Burkitt's Lymphong," 11 a.m.

Thursday, Feb. 24: Richard Hamilton, "Herpes Simplex Virus," 11 a.m.; and Bea Mandel, "Discussion of HSV," 2:15 p.m.

Tuesday, Mar. 1: Linus Pauling, "Vitamin C and Viral Disease," 11 a.m.

Thursday, Mar. 10: Paul Berg, "The Use of Animal Viruses in Genetic Engineering," 2:15 p.m.

Latin American film series shown Thursdays in Casa Zapata lounge

Casa Zapata (Stern Hall) has begun a free Thursday evening series of Latin American films, open to all interested people.

Shown at 7 p.m. in the Casa Zapata lounge, the remaining films in the series are:

Jan. 27: "From the Ashes. . . . Nicaragua Today," Latin Americanist, Richard Fagen, Stanford prof. of political science will be present to commentate on the current political situation and U.S. foreign policy in Nicaragua.

Feb. 3: "La Ultima Cena," set in the epoch of slavery in 18th century Cuba.

Feb. 10: "Chuquiago," explores the conflicts of contemporary Bolivian society that is marked by racial and class divisions.

Feb. 17: "Chile with Poems and Guns," documents the years and the defeat of Salvador Allende and the Popular Unity party in Chile. Destroys myths often given to the U.S. public on the role of the U.S. and the CIA in the military coup.

Feb. 24: "On Company Business," reveals the role of the CIA in U.S. foreign policy and in the Third World. This film is an event in the week of "U.S. global strategy and Third World Liberation" (Feb. 20-26).

March 3: "The Cost of Cotton," filmmaker Jim Watson will be present to speak on his film that deals with the effects of the international demand for cotton on the developing nation of Guatemala.

More Australian films at I-Center

The International Center January Australian mini film festival ends with two films on the growth and development of the Australian film industry at 7:30 p.m. Thursday, Jan. 27, at the International Center.

Now You're Talking covers 1930 through 1940, from the pioneering days of the early "talkies" to the decline of the industry with the coming of World War II.

Australia in the '80s is a sophisticated high-tech look at the country today, ranging from big city life to industry, ranching, recreation, and including scenes of cave drawings contrasting with advanced medical research.

The evening will include champagne tasting from the Seaview cellars and cabernet from the Huntington Estates, Australian products courtesy of Lathrop and Mines Wines of San Francisco.

Door prizes will again be offered. A 75 cent donation is requested.

Fagen to discuss Central America

"Can There be Peace in Central America?" is the topic of the International Center weekly Tuesday luncheon talk for Feb. 1.

Featured speaker is Richard R. Fagen, professor of political science and Gildred professor of Latin American studies at Stanford.

Fagen, who has served as visiting faculty member at universities in Mexico and Chile, was recipient of a 1979-80 Ford Foundation grant for research in Nicaragua. He has published widely on contemporary political developments in Chile, Central America, Mexico and Cuba, and frequently presents testimony before Congress relating to U.S. foreign policy.

Tickets for luncheon at $2.50 are on sale at the International Center. Brown baggers are welcome at no charge. For more information, phone 497-1831.

Stress management to begin Monday

The starting date of the Health Improvement Program (HIP) class "How to Manage Stress" has been postponed one week. It will begin 5:15-7:15 p.m. Monday, Jan. 31, and continue through Mar. 14.

The class, which meets at the Medical Center in the M121 conference room, will be taught by Chris Rosche, M.P.H., a health educator, who has taught previous stress management classes at Stanford, Midpeninsula Health Service, and San Jose State University.

All of us at Stanford confront daily situations at work and at home which evoke stress responses, but few know how to cope with stress. Fortunately, managing stress effectively is a skill that can be learned.

There are still a few openings in the "How to Manage Stress" course for SU faculty and staff and their families. For registration and fee information, call the HIP office at 497-7940.

Security topic of two-day seminar

"Security in an Insecure World" will be the topic of a two-day seminar at Stanford Feb. 26-27.

One of an annual Great Powers series presented by the Stanford Alumni Association, this program is cosponsored by the Stanford Arms Control and Disarmament Program. John W. Lewis, William Haas professor of Chinese politics and director of the arms control program, is chairman of the seminar.

Stanford faculty participants include Prof. Wolfgang Panofsky, director of the Stanford Linear Accelerator Center; Sidney D. Drell, deputy director, SLAC; Barton J. Bernstein, history; John H. Barton, law; and Coit D. Blacker, lecturer in political science.

Coming from Washington, D.C., will be William G. Hyland, senior associate at the Carnegie Endowment for International Peace and former deputy assistant to the president for national security affairs.

Also participating will be Philip J. Farley, a research associate in Stanford's arms control and disarmament program and former deputy U.S. special representative for nonproliferation negotiations, and Gloria Duffy, executive director of the Plowshares Fund. In addition, the film *The Day After Trinity* will be viewed. Its producer, John Else, will be a seminar participant.

The public is invited to participate. Tuition is $75. For further information contact Jenee Zenger-Sonneman at the Stanford Alumni Association, 497-2021.

Harold Schonberg

Music criticism subject for Schonberg lecture

The Lively Arts at Stanford will present Pulitzer Prize-winning critic Harold Schonberg, cultural correspondent and former senior music critic for *The New York Times*, in a lecture at 8 p.m., Wednesday, Jan. 26, in Dinkelspiel Auditorium.

His topic will be "Practical Music Criticism—a discussion from a journalistic point of view."

In addition to the lecture, Schonberg will be present at a book signing from 12:30 to 2:30 p.m. Thursday, Jan. 27, at Printers Inc. Bookstore (310 California Ave., Palo Alto, 327-6500).

Schonberg is a native of New York City, and a graduate of Brooklyn College (BA) and the New York University (MA). He studied piano with Alice Frisca, and at the graduate school of New York University with Marion Bauer. He also studied at the Art Students League with Kuniyoshi.

Schonberg was music critic for the *New York Sun* from 1946-1950; columnist for *London Gramophone* from 1948-58; contributor and columnist for *Music Courier* from 1946-51.

In 1950 he joined the staff of the *New York Times* as music critic, and served as senior music critic from 1960-1980.

Schonberg won the Pulitzer Prize for criticism in 1971. He has contributed to many magazines, and is the author of eight books, including *Facing the Music* (1981), *The Lives of the Great Composers* (1970), *The Great Conductors* (1967), and *The Great Pianists* (1963).

Schonberg holds honorary degrees from Temple University and Grinnell College.

Tickets for the lecture are $5.50 general, and $4 student.

For ticket information, call Tresidder Ticket Office, (415) 497-4317, BASS, and other Bay Area ticket agencies.

Indian group coming

The Berkeley Indian Dance Group will appear at 7 p.m. Saturday, Jan. 29, in Stanford's Dinkelspiel Auditorium.

The free public performance is sponsored by Hammarskjold House, the international theme house at Stanford.

The program will consist of a dance drama entitled "The Game of Fate" and selections of modern choral music from India.

Symposium, film, discussion part of Black Liberation Month

A Black Liberation Convocation on Friday and Saturday, Feb. 4-5, will be the major event of Stanford's Black Liberation Month '83.

The Convocation will begin with a free, public symposium on "Sowing the Seeds of Our Legacy: The Task of This Generation," at 7 p.m. Friday, Feb. 4, in Annenberg Auditorium.

Speakers will include Amiri Baraka (Leroi Jones), father of the Black Arts Movement, activist, author, and member of the League of Revolutionary Struggle; Maxine Waters, state assemblywoman from Los Angeles; and Omowale Satterwhite, local community leader, educator, and member of the Nairobi Secretariat.

Author-educator-poet Haki Madhubuti (Don L. Lee) will discuss "Developing Black Institutions" in a program moderated by History Prof. Kennell Jackson, chair of Afro-American Studies at Stanford, at 1 p.m. Saturday, Feb. 5, in Tresidder Union.

The discussion will be followed by workshops dealing with East Palo Alto Incorporation and Black Student Organizing: The State of the Art.

The Convocation will conclude with a program on "Our Creative Legacy: Building Positive Black Images through the Performing Arts" at 7:30 p.m. Saturday in Memorial Auditorium. The special guest will be Glynn Turman, star of *The River Niger* and currently the lead in the Broadway production of *Proud*.

A showing of *The River Niger* will follow, with a special appearance by the Kuumba Ensemble.

Tickets for the Saturday evening program are on sale for $3 ($2 for youths under 18 and senior citizens) at Tresidder Ticket Office and the Black Community Services Center, 321 Bell St., East Palo Alto.

For more information, call 497-1587.

The Lively Arts will present the Emerson Quartet at 8 p.m., Wednesday, Feb. 2 in Dinkelspiel Auditorium in a program that includes Schubert's *Quartet in A minor*, Op. 29; Beethoven's *Quartet in F Major*, Op. 135; and Brahms's *Quartet in C Minor*, Op. 51, No. 1 Tickets are $9.50 and $10.50 (student $6.50 and $7.50).

Clark to discuss Ethiopian finds

Prof. Desmond Clark, UC-Berkeley anthropologist and archeologist will discuss "The New Archeological Finds in Ethiopia: Discoveries in the History of Early Man" at 4 p.m. Friday, Jan. 28, in Building 200 (History Corner) Room 203 at Stanford.

Clark will discuss the significance of archeology for research in Africa and its implications for interpretations of human evolution and culture. He will also discuss the importance of the iron age and historical development of ethnic populations.

Dr. Clark received his formal training at the University of Cambridge in Britain and has spent the last 44 years doing archeological research in southern and western Africa. He was the founder of the National Museum of Antiquities in Zambia.

In 1961 he joined the UC-Berkeley Department of Anthropology. He has lead several field studies with archeology students throughout the African continent. His lecture will include slides from his most recent trip to Ethiopia where remains of the oldest humans were found dating back four million years.

The lecture is being sponsored by the Program on African and Afro-American Studies with support from the Hewlett Fund, which has given a special grant for programming on Africa for undergraduates.

The Lively Arts will present soprano Lucy Shelton, two-time winner of the Naumberg Award, at 8 p.m., Friday, January 28, in Dinkelspiel Auditorium.

Shelton will sing sets by Schubert, Messiaen *(Poemes pour Mi)*, and Ives, as well as a Gypsy Finale, including works by Dvorak, Wolf, and Brahms *(Zigeunerlieder.)* Tickets are $8.50 and $7.50 (student tickets $3 off).

Cotton to speak on world economics

Sir Robert Cotton, Australian Ambassador to the U.S., will speak in Room 75 of the Graduate School of Business at noon Monday, Jan. 31.

His talk on "World Economic Recovery: Restraining Protectionist Government Policies" will be followed by questions from the audience.

Cotton was appointed in August, 1982. A former senior cabinet minister, he served as minister for industry and commerce, minister for overseas trade, and minister for foreign affairs in successive Liberal Party governments in Australia.

His talk is sponsored by the International Business Association and the Student Association for Public Management. Further information is available from George Foster (497-2881).

Help Center helps with sabbaticals

"Sabbatical Leave—A Bittersweet Experience" will be discussed by a panel from 7:30 to 9 p.m. Monday, Jan. 31, at the Stanford Help Center in Galvez House (entrance in rear).

The panel is composed of Linn (of the Help Center staff), Tim Hayes, and Bernard (chairman of the Anthropology Department) and Charlotte Siegel (psychiatric social worker at Cowell Student Health Center).

Issues to be discussed include: the importance of preparing for a sabbatical leave; culture shock; the impact on the individual, the couple, and the family; implications for professional development; and integrating the sabbatical experience at home.

There will be ample time for questions and discussion following the presentation.

Reserve space by calling the Help Center, 497-4577, before Thursday, Jan. 27. The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Medical Center, and SLAC employees and their immediate families without charge.

SHELLY WHITEHOUSE will play works of Blavet, Bach, Beethoven, Enesco, Rogers and Poulenc in a Music Department concert at 8 p.m. Sunday, Jan. 30, in Dinkelspiel Auditorium. Joining her will be David Achenbach, harpsichord, and Kris Speer, bassoon.

Toth, four guest musicians, schedule chamber music concert Sunday, Feb. 6

Violinist Andor Toth has invited four outstanding musicians to perform chamber music with him at 2:30 p.m. Sunday, Feb. 6, in Dinkelspiel Auditorium.

His four guests will be Mayumi Ohira, a nationally known concert violinist; Don Ehrlich, violist with the San Francisco Symphony and the Aurora String Quartet; faculty cellist Thomas Stauffer; and Richard Dasher, clarinet.

The program will open with Haydn's "Lark" string quartet, followed by Martinu's brilliant Duo for violin and cello.

Toth will then perform Bach's Ciaconna from the Partita in D minor for solo violin. Commenting on Toth's recent New York performance of this work *New York Times* reviewer John Rockwell wrote: "the Bach sounded exalted."

The Brahms Clarinet Quintet, op. 115, will conclude the program.

Tickets ($4 general admission, $2 for students and senior citizens) are available at Tresidder Ticket Office (497-4317) and at the door.

Barnard, Ito plan flute concert Feb. 6

The Department of Music at Stanford presents flutists Kathryn Barnard and Yuri Ito in a free concert at 8 p.m. Sunday, Feb. 6, in Dinkelspiel Auditorium.

Both students of Frances Blaisdell, Barnard and Ito will perform Vivaldi's *Concerto for Two Flutes in C. Major*; Bach's *Sonata in E minor*; a sonata by Reinecke; *Deux Interludes* by Ibert; C.P.E. Bach's *Sonata in A minor*; *Poem* by Griffes; and *Sonata in E minor for Two Flutes* by Loeillet.

Barnard is a junior at Stanford majoring in human biology. She has played with both the Stanford Symphony and Chamber orchestras, and will solo with the symphony next fall.

Ito is a Stanford senior majoring in Japanese studies but planning a career as a flutist. She will solo with the Stanford Chamber Orchestra Feb. 18, performing the Stamitz *Flute Concerto in G Major*.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Jan. 26 to cover the week of Mon., Feb. 7 through Sun., Feb. 13.

MONDAY, JANUARY 31

Computer Science Lecture: "Numerical Considerations for Singularly Perturbed Convections Diffusion Equations" by Ray Chin, Lawrence Livermore Lab. 4:15 p.m. Margaret Jacks Hall, Third Floor Lounge.

EE350 Radioscience Seminar: "Remote Sensing of Polar Ice Using Satellite Altimetry," by John Vesecky, Stanford. 4:15 pm. McCullough Bldg., Room 134.

Stanford Student Jewish Appeal Workshop: "Surviving and Thriving in the Jewish Bay Area (Where do all my dollars go locally?)". 7 p.m. History Corner-Rm. 34.

Film Society: "Bicycle Thief" (De Sica, 1949). 7:30 p.m. Kresge Aud. $2.00.

TUESDAY, FEBRUARY 1

STARTS: Crochet Class with instructor Karen Springen. Noon-1 p.m. Tresidder Union rm. 132. $8 for 8 weeks.

Bechtel International Lunch/Lecture Series: Richard R. Fagen: Can There Be Peace in Central America? 12:00 pm. I-Center. $2.50 includes lunch, brown-baggers welcome.

Applied Physics Colloquium: "Semiconducting & Metallic Polymers: From Solitons to Storage Batteries," by Prof. Alan J. Heeger, Physics Dept. at UCSB. 4:15 pm. Applied Physics 200.

Communications Design Seminar: "Performance of an Advanced Character Recognition-Compression Technique" by K. Mohiuddin of IBM & Stanford. 4:15 pm. McCullough Bldg., Rm. 128.

Lively Arts at Stanford: The Robin Flower Band. An all-women group featuring Blue Grass music. 8 p.m. Dinkelspiel Aud. $5, $3 students.

Music Guild "Learning to Listen" Lecture: "Spanish Music of the Golden Age," by Prof. Albert Cohen. 8:00 pm. Annenberg Aud. $4/$3/$2.

Women in the Performing Arts Series: The Robin Flower Band. 8:00 p.m. Dinkelspiel Aud. Tickets available at Tresidder ticket office.

WEDNESDAY, FEBRUARY 2

Chemical Engineering Lecture: "Polymer Additives in Jet Fuel: The Anti-Misting Phenomenon and Aircraft Safety," by Prof. Michael C. Williams, University of California, Berkeley. 4:15 pm. Chemical Eng. Conference Room.

Lively Arts at Stanford: Emerson String Quartet, featuring Schubert: Quartet in A minor, Op. 29; Beethoven: Quartet in F major, Op.135; Brahms: Quartet in C minor, Op. 60. 8:00 pm. Dinkelspiel Aud. $10.50, $9.50; students $3 off.

THURSDAY, FEBRUARY 3

Stanford Geothermal Lecture Series: "Geothermal Energy Development at the Geysers" by Robert Linquist, Former Chief Engineer of Magma Thermal Power. 1:15 pm. Mitchell Bldg., Room B67.

Condensed Matter Physics Seminar: "Noble Metal-Silicon (111) Interface," by Prof. J. Derrien of the Universite d'Aix-Marseille II, France. 4:15 pm. Applied Physics 200.

Solid Mechanics Seminar: "Further Development and Application of Elastic- Viscoplastic Constitutive Equations," with Prof. S. R. Bodner, Technion Univ., Haifa, Israel. 4:15 pm. Skilling Aud.

Latin American Film Series: "La Ultima Cena": a film on Cuba. 7:00 pm. Casa Zapata.

Bechtel International Center Film Series: "Kamouraska" (Quebec, 1973). 7:30 p.m. I-Center. 75 cent donation.

FRIDAY, FEBRUARY 4

Condensed Matter Physics Seminar: "Chemisorption of Oxygen and Hydrogen on GaAs (110): Some Puzzles and some answers," by Wilfred Monch, University of Duisberg, Germany. 1:30 pm. Applied Physics 200.

Mathematics Dept. Lecture: "Oscillations and travelling waves in delayed differential equations," by Dr. Luis Bonilla, Stanford. 3:15 pm. Bldg. 380, Room 380-C.

Black Liberation Symposium: "Building Unity, Self Reliance and Self-Determination. 7:30 pm. Annenberg Aud.

Lively Arts at Stanford: Emanuil Sheynkman, mandolin and balalaika. 8:00 p.m. Dinkelspiel Aud. $8.50, $7.50; students $3 off.

STARTS/GSA Great Directors Film Series: "Il Grido" (The Cry). 8:00 pm. Geology Corner, Rm. 320. $2.50.

Stanford Law School Film Society: "Sunset Boulevard." 8:00 pm. Kresge Aud. $1.50.

Stanford Society of the Archaeological Institute of America: "Kourion," with David Soren, University of Arizona. 8:15 p.m. Bldg. 300, Room 370.

SATURDAY, FEBRUARY 5

Music Guild: Violin Master Class Auditions: Donald Weilerstein. 1-5 p.m. Dinkelspiel Aud.

Black Liberation Month Convocation: Symposium on "Building Institutions on Campus and in the Community." 1 pm. Tresidder Union, Rm. 281.

Black Liberation Month Convocation: Reception for Glynn Turman, star of "The River Niger." 5:00 pm. Tresidder Union, Rm. 282.

STARTS/Black Liberation Film Festival: "The River Niger." 7:30 pm. Memorial Aud. $3 general, $2 under 18 and senior citizens.

Music Guild Concert: Baroque Orchestra & Wind Ensemble George Houle, director. 8:00 pm. Dinkelsspiel Aud. free.

SUNDAY, FEBRUARY 6

University Public Worship: Communion Service. 11:00 am. Memorial Church.

Music Guild Concert: Andor Toth & Guests, An Afternoon of Chamber Music. 2:30 pm. Dinkelspiel Aud. $4/$2.

ASSU Sunday Flicks: "The World According To Garp." 6:30 pm. & 9:30 pm. Memorial Aud. $1.50.

Music Guild Concert: Kathryn Barnard & Yuri Ito, duo flute. 8:00 pm. Dinkelspiel Aud. free.

Young Stanford Artists Classical Series: Dale Herman, recorder & John Toenges, harpsichord. 8:00 pm. Tresidder Union, upper lounge, rm. 280. $3 general, $2 students.

EXHIBITS

Recent Acquisitions. Paintings, drawings, sculptures and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. Jan. 11 - Feb. 20.

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

Photographs by Olivia Peterson. Coffee House/Tresidder Union. Feb. 1 - Feb. 28.

Recent Expressionist Drawing Experiences by Barbara Scoledes. Tresidder Union, upper lobby. Feb. 1 - Feb. 28.

CAMPUS REPORT

Volume XV, Number 18 | A publication for Stanford University faculty & staff | February 2, 1983

President's budget includes $40 million for new collider

President Reagan's budget for fiscal 1984 includes $40 million to start construction of the Stanford Linear Collider, Prof. Wolfgang Panofsky, director of the Stanford Linear Accelerator said Tuesday, Feb. 1.

"Anyone reading the newspapers knows that on budgetary matters there is much commotion between the Congress and the President, and it is even more difficult than usual to make a firm forecast about SLAC's future based specifically on the President's message," he cautioned SLAC workers attending two separate "all hands" talks.

If approved, "this will be a bold venture for all of us. . . .

"We expect to pursue the SLC vigorously," with completion in late 1986. This would be two years ahead of the planned completion of a 17-mile, circular storage ring by CERN in Europe.

Total projected costs of SLC are $112 million. It will require a "thorough reworking" of the present two-mile linear acclerator and building major new rings and tunnels in the area bordered by Sand Hill Rd., Alpine Rd., and the present end station.

"The SLC is technically an extremely difficult but also important and exciting undertaking. It pioneers a new direction to obtain very high energy electron-positron collisons and at the same time gives physicists from many institutions a new tool to reach what is currently believed to be the most critical energy region in which new phenomena are expected," Panofsky said.

In the linear collider, electrons and positrons from the linear accelerator will be focused down to an area only one micron wide, in single pass collisions with an energy as high as 100 billion electron volts (GeV).

"When the electron collides with its anti-particle, the positron, the two particles disappear in a bundle of energy from which new particles emerge," Panofsky explained.

"The energy density of these collisions has been compared to that of the Big Bang at the beginning of the universe, although it is of course of vastly smaller scale. . . .

"A new particle, called Z^0 should be produced. We can learn about this new world (where the so-called weak interaction becomes dominant) by studying the reactions in which Z^0 participates. This is as exciting as anything we have learned about the world so far."

Panofsky said SLAC should be able to move "quite rapidly" on the new collider if Congress acts favorably on the budget. Detailed design of the facilities will be complete before October.

"If things go as planned, we will issue competitive bids to the construction industry even before the end of this fiscal year to be able to get a running start on the work by this fall," Panofsky said.

Thanks to "good communication with our neighbors. . .the current design

continued on page 18

Life was difficult around Tresidder Union during last Wednesday's storm, what with trees falling on cars and transformers shorting out. This car became a convertible of sorts, luckily during a Bookstore visit by the man who had rented it a few hours earlier. Tresidder was without power from 5:30 p.m. Wednesday, when a flood knocked out its transformer, until 8 p.m. Thursday. Operations and Maintenance put in a standby unit, one of four recently purchased for just such an emergency. A new, custom-made transformer will arrive in about four months.

Students criticize linkage of draft, financial aid

Student opposition to new federal law linking financial assistance to draft registration is growing, according to Matt Nicodemus, a Stanford student "stop-out" who has publicly announced his refusal to register.

"Students should begin considering how much their conscience and stopping the draft is worth to them," he said in a campus interview Tuesday, Jan. 25.

Yale, Earlham, and Haverford Colleges already have declared their intent to make up federal aid nonregistrants would lose through their own private grants or loans, according to a statement Nicodemus circulated at a hearing of the National Commission on Student Financial Assistance, held on campus Tuesday.

He was joined by Sushma Govindarajulu, an undergraduate active in Stanford Against Conscription, a voluntary organization with about 10 active members.

Their material urged educators to comment on proposed new federal regulations issued by Selective Service and the U.S. Department of Education by Feb. 22, the deadline for public responses.

Student governments at Humboldt State University, the University of California at Santa Barbara, and Syracuse University have strongly condemned the new law.

Students on dozens of campuses are organizing around the issue, they added. Work against the Solomon Amendment has started at Berkeley, Chico, Santa Cruz, Santa Barbara, Los Angeles, Mt. Carmel, Riverside, Sacramento, Arcata, San Diego, San Francisco and Stanford.

Last June, prior to passage of the new law, Stanford Vice President Robert Rosenzweig called it "absolutely awful legislation.

"We have in the past strenuously opposed mixing educational policy and the draft. We shouldn't use educational opportunity for punitive purposes."

ACADEMIC COUNCIL MEETING FEB. 3

President Donald Kennedy will discuss indirect costs, and Admissions Dean Fred Hargadon will speak on undergraduate admissions at the winter quarter meeting of the Academic Council.

It is scheduled for 4:15 p.m. Thursday, Feb. 3, in Room 290 of the Stanford Law School, immediately following the Faculty Senate meeting, which is scheduled to start at 3:15 p.m.

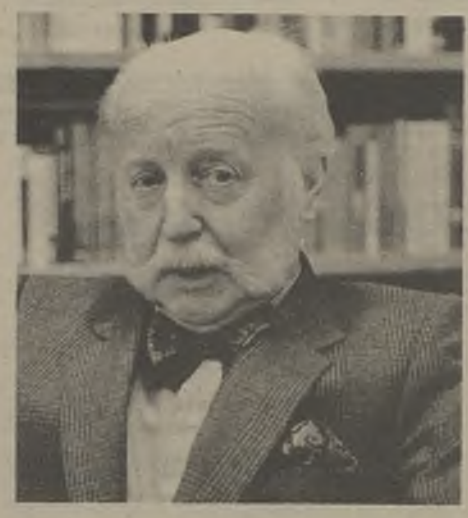
People

External pressures seem effective against war, say two Stanford authors

Moral perfectionists in foreign policy "provide a useful safeguard against the tendency of practical men to engage in moral self-deception," two noted Stanford scholars declare in a new book on *Force and Statecraft: Diplomatic Problems of Our Time* (Oxford University Press).

Profs. Gordon A. Craig, history, and Alexander L. George, political science, developed their basic ideas in a Stanford course, drawing on extensive case histories from 19th and 20th century diplomatic history.



While moral perfectionists are "often irritating and naively impractical, we should still appreciate the contribution they make to public debates about foreign policy. . . .

"It is often forgotten that Machiavelli, even while advising the prince that circumstances would force him to use morally questionable means on behalf of worthwhile goals, also remarked that it was important that the prince should know he was doing so, and that he should suffer a bad conscience so that moral values would at least survive their violation."

The scholars note that "in the history of the West from the Middle Ages to the present, the most effective restraint upon the warlike tendencies of the individual, group or state has been the pressure exerted by external forces.

Alexander George

Gordon Craig

"The periods least affected by interstate violence have been those in which there existed a viable international community and an accepted body of law and custom to guide and control it."

Only "modest success" has been achieved by other means, they observe:

"Religion has not only failed to discourage war, but has often motivated it;

"Attempts at arms control and disarmament have had minor successes that all too often, once achieved, encouraged evasion; "The rules of war that alleviated the brutalities of 18th century conflict are clearly ineffective in an age of nuclear weaponry; and "Recent experience hardly encourages. . .belief in the capacity of modern governments to employ war strictly as an instrument of policy, restraining its inherent expansionist tendencies."

Adaptation to accelerated change has become the major problem of modern statecraft, testing both the ingenuity and fortitude of those responsible for controlling international violence and for maintaining the security of their own countries.

Social and economic change, intense nationalism and ideological conflict on a global scale "have had an impact on international politics that amounts to a diplomatic revolution," they declare.

Most policy-makers and advisers in the U.S. "probably regard themselves as practitioners of the nonperfectionist approach" to foreign policy, Craig and George declare. Any moral guidelines are applied in "a very subjective, loose, and highly inconsistent way. . .not only because these guidelines are so vague but because other pressures on policy-making are often so much stronger. . . ."

Policy makers are under pressure to advance their country's position, "even when vital interests are not at stake," to achieve results and to win elections.

These factors tend to be more important for most policy makers than "what may seem to them to be an overly squeamish concern with the morality of the means employed.

"It is all too easy for decision makers to justify their resort to morally questionable means, to engage in self-deception, and to offer convenient rationalizations (regarding) the necessity to do so."

Carlyle, Daniller, Coreysis

Lynne Carlyle, formerly editorial coordinator for the Registrar's Office, has been appointed information and registration officer, with responsibility for the registration and information sections as well as the editorial.

Mae Daniller is the new editorial coordinator and Cecilia Coreyis registration and information coordinator. Both now report to Carlyle.

Faculty openings

EE, Computer Science posts open

The Departments of Electrical Engineering and Computer Science have a number of openings for regular and adjunct faculty and research positions. Applications are invited. Applicants should have a demonstrated research ability in one or more areas of computer-aided design and computer systems design, including IC routing and placement, semiconductor devices and processing, IC fabrication and testing, operating systems, program verification, computer architecture and programming languages. The departments are particularly interested in research applications for VLSI fabrication, design, architecture and application.

All applicants will be considered for positions beginning with the fall quarter 1983.

Please submit as soon as possible a detailed resume including names of references to Prof. Robert Dutton, chairman, Search Committee, Department of Electrical Engineering, Stanford University, Stanford, Calif. 94305.

Stanford University is an Affirmative Action, Equal Opportunity Employer and welcomes applications from women and minority groups.

Appointment announcements clarified

Clarification: When the listing of Trustee actions on new faculty appointments appears in *Campus Report*, it should be understood that some of the offers of appointment might not yet have been accepted by the candidates. Such is the case with the candidate Joan Bresnan whose appointment as professor of linguistics, effective Sept. 1, 1983, was reported in the Jan. 5 issue.

Ralph Keller

Ralph W. Keller was recently presented an outstanding service award at the Western College Placement Association in recognition of the many contributions he made to the profession during his tenure as director of the Career Planning and Placement Center at Stanford. Keller retired as director of the CPPC in June and is currently the assistant dean for alumni relations in the School of Education.

Selma Meyerowitz

A new book by Selma S. Meyerowitz, Ph.D., lecturer in undergraduate studies, has recently been published by Twayne publishers, a subsidiary of G. K. Hall & Co. The book, entitled *Leonard Woolf*, is a study of Woolf's literary and political work. Since very little critical material on Leonard Woolf has been published so far, this study should fill a gap for twentieth-century British scholars.

Meyerowitz received her Ph.D. in English in 1975 from Wayne State University and has been teaching at Stanford since 1978 in both the freshman English and freshman seminar programs.

Robert Textor

Prof. Robert B. Textor, of education and anthropology, keynoted the annual American studies seminar in Bangkok, Thailand, Jan. 19. Delivered in Thai, his talk covered "Reflections on Futures Research in America and Thailand: An Anthropologist Looks One Generation Forward and Backward." Cosponsoring the conference were the American Embassy, Chulalongkorn University, and the Thai American University Association.

John, not Leo

In last week's *Campus Report*, a photograph of Prof. John McCarthy was mistakenly identified as Leo McCarthy. *Campus Report* regrets the error.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Anthropologist Befu bridges American, Japanese cultures

BY DONALD STOKES

Harumi Befu has lived three separate lives, first as an American, then as a Japanese, and now as an American again. Each time, as a citizen of the country he was in, he thought and spoke in the lifestyle of the particular country.

Today Befu is professor of anthropology at Stanford, and is resident fellow at its East House, where 61 students interested in the Orient soak up the respective atmospheres of East and West.

As a result of his three lives, Befu can explain the Orient, and particularly Japan, as few others can. In a campus interview he told his strange story, and exploded many myths about Japan. These included:

* Large Japanese corporations are not "extended families," but scenes of intensive competition that is carefully concealed;
* Social pressures compel Japanese women to leave work as early as 25, for marriage; they return to work in their 40s to take the lowest-paid jobs;
* It is not true that the Japanese meekly follow "group-think"; strikes and riots are frequent;
* Most Japanese mothers are benignly overbearing in their control of their children's education.

Befu's remarkable story began when he was six years old, living in Los Angeles as one of the five sons of a Japanese gardener and his wife.

"My mother decided that American education was not suitable for her sons," said Befu. "In particular, she did not like the idea of coeducation. She decided to send her three youngest sons to Japan to be educated. I was the youngest of those three sons, the other two being respectively three and five years older than I. We were all dual nationals.

"When I started school in Japan I was very unpopular at first, as anti-foreign feeling was being fanned by the military, and I was regarded as an outsider. The other kids were often very brutal and nasty to me.

"I adapted quickly, learned to speak fluent Japanese, and to become completely Japanese. I went through grade and high schools. The war broke out when I was 11.

"The oldest of my brothers in Japan was drafted into the Japanese Army, and the second went into the equivalent of the U.S. Naval Academy.

"Meanwhile, back in the U.S. notices appeared on all the telephone poles in Los Angeles and elsewhere on the West Coast, ordering all persons of Japanese ancestry to report to various centers. They were given only a few days notice to dispose of all property except what they could carry with them into the camps that were set up for them in isolated areas.

My mother and father, with their two oldest sons, had to go into one of those 'relocation centers.' My oldest brother, Yoshiro, was a super-patriot for the U.S. and he wanted to volunteer to fight for freedom. My father said to him, 'What freedom do you have?'

"My father and Yoshiro had many bitter arguments about this. Yoshiro kept saying that he intended to enlist in the U.S. armed forces. My father would retort, 'If you leave our family and do that you need not come back to us.'

"Yoshiro did volunteer, but he flunked the physical examination. His dilemma then was that having left, he would not be allowed back into the camp by the authorities or into the family by his father. My mother made urgent pleas on her son's behalf, and finally Yoshiro was allowed back. But his relations with our father were very strained.

"My other brother in the relocation camp, Masuo, was drafted into the U.S. Army. He was sent to Fort Snelling in Minn., where he was trained to become an interpreter in the Pacific War area, but fortunately the war ended before any of my brothers went on active service.

"All through the war years, there were no communications between those of us in Japan and the rest of my family in America, except that we were able to send form letters through the Red Cross in Switzerland that simply reported we were alive."

In 1947 Befu came back to the U.S. and the family reunited in a house in Los Angeles. "That was a very emotional and strained time," recalled Befu. "It took us a long time to get to know each other again."

The father assumed his job as a gardener, and young Harumi went back to high school. He was then 17. "By that time I had forgotten nearly all my English, although we had been given some instruction in it at school in Japan. I had to go to special classes for adult immigrants.

"I grew so bored in high school that I obtained permission to transfer to City College, where I studied French and Latin. I got my first degree there, majoring in foreign languages.

"Starting life again in America was a cultural shock. I became fascinated by the differences between Japan and America, and I suppose this launched me into anthropology. In Japan I had been indoctrinated with the belief that the Emperor was a god, and that we Japanese were descendants of the Sun God, and that the American system was immoral.

When I came back to the U.S. I was thrust into an entirely different atmosphere. It was a wonder that I did not become a schizophrenic. Instead, I became apolitical, but fascinated by the cultural and spiritual differences between east and west."

He studied at UCLA for three years, and after that at the University of Michigan, Syracuse University, and UC-Berkeley, before getting his doctorate at Wisconsin in 1962.

Befu has been back to Japan many times, often on fieldwork. Usually, he stays in one locality so that he can study conditions intensively. He also has carried out archaeological research into the prehistory of Japan.

My mother and father, with their two oldest sons, had to go into one of those 'relocation centers.' My oldest brother, Yoshiro, was a super-patriot for the U.S. and he wanted to volunteer to fight for freedom. My father said to him: 'What freedom do you have?'

Befu/ continued from page 4

"As a result of my experiences I have dedicated myself to correcting the stereotypes of East Asia, particularly of Japan," said Befu.

"The Japanese are not typically engaged in 'group-think.' Workers are not blindly loyal to the group, such as the company they work for. There have been a great many industrial strikes. The leaders of these strikes are punished, but the strikes continue.

"Government workers are forbidden by law to strike, but they do, and when this happens the leaders are punished severely.

"The stereotype of the Japanese that is widely believed by most Americans, and often promoted by many Japanese, is that of a people who find a consensus by a sort of osmosis or that in Japanese business concerns the executive decisions are reached by some subtle process of finding out what everybody thinks. That is far from true. A good many Japanese corporations are headed by individuals who make the decisions and make them stick."

The large Japanese corporations are also widely regarded by Americans as being corporately-sponsored "extended families," with beneficient managements extending help into all form of human relations, including the encouragement of employees' marriages within the 'family' and so on.

"That is true only to a limited extent," said Befu. "It is a stereotype cultivated by many Japanese themselves. It is true that some Japanese companies like to present a view of themselves as one big happy family. Probably they do so more than American firms, but the real picture is that working for a Japanese corporation is not always easy or comfortable.

"For example, a Japanese corporation that gives the impression of being one family will typically hire, say 200 college graduates in the spring. From that first day each of those 200 is strongly contesting with each other for higher positions. Each is fully aware of the fact, and lives in that competitive atmosphere all the time.

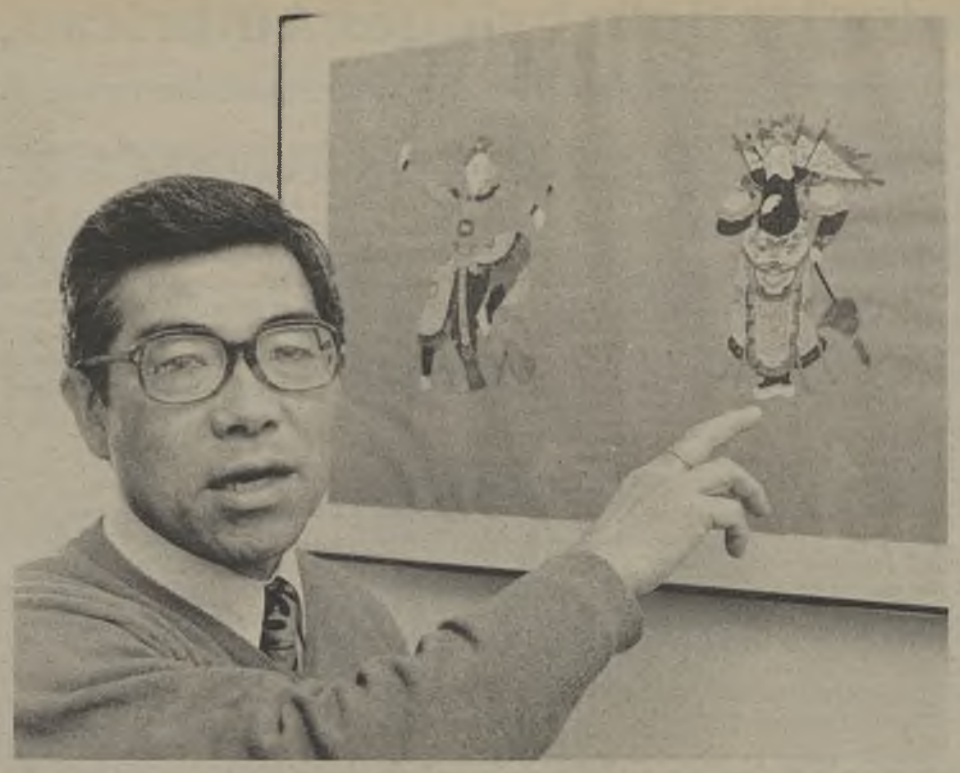
"There is a facade of harmony and cooperation, which smothers and hides the competition. That is not understood by American observers, who look only at what is happening on the surface."

It is one of Befu's aims to destroy the stereotype that all Japanese fall into a pattern. "It is a multi-faceted society, with many permutations and sometimes contradictory forces.

American women, particularly feminists, are very curious about the role of women in Japanese life. It might be true to say that Japanese women enjoy less freedom than American women. They tend to have more circumscribed roles, and American feminists point their fingers at this.

"A great many Japanese women do not accept this criticism. They say that the proper role of a woman is to be the ideal wife and mother. The Japanese believe that whatever one does should be done to the limits of one's capabilities, and that being a good wife and mother demands full-time attention.

"This attitude has both good and bad consequences in Japan. One bad one is that Japanese women concentrate so hard on their duties as mothers that they tend to have far too much influence on the child's academic progress."



More so than the famous Jewish Mother?

"Jewish mothers allow a great deal of independence for their children in academic matters, whereas Japanese mothers tend to be overbearing in those respects."

Was Befu perhaps thinking of his own mother, who had sent him away at the age of six to spend his green years 8,000 miles away?

"Perhaps so for the initial decision to send me away. But if the decision did indeed pay off, it was largely due to what happened after I arrived in Japan, while my mother stayed in the U.S."

Befu spoke of the wives of Japanese businessmen who come to this country to live with their husbands.

Prof. Befu shows a papercut of a traditional Chinese figure

"The minute their children get home each afternoon from their U.S. schools they superintend while the children work on the lessons sent by correspondence schools in Japan. Then they do their American school's homework, after which they will take their piano lessons or perhaps some Japanese artcraft or martial arts. Often it is 10 at night before the children finish. Then on Saturdays, children are sent to an all-day Japanese school.

I do not say that we should not make value judgments about each other. Even in Japan there is a considerable body of opinion which maintains that women should not be required to leave work at 25.

"Nearly half of the entire Japanese labor force is female, in spite of the fact that women are expected to leave work at 25 for motherhood. This is because they come back to work in their early 40s after their kids have gone through junior high school, in other words after the mothers have been at home for 16 years.

"When they come back into the labor market they have to accept the lowest-paying jobs. There are some female managers and executives, but they are very few.

"When workers are hired at a Japanese firm, the men are hired at one window and the women at another. The conditions and opportunities for each are strikingly different, even though the two may be equally qualified."

Suppose a Japanese woman does not quit her job at 25, as she is supposed to?

"All sorts of gossip starts. She is faced with the comments of the other women: 'You can't find a man?' It becomes increasingly uncomfortable for her to stay on. It has sometimes been said that the greatest danger to feminism is women."

What happens to the woman who reaches 25 and does not have any marriage prospects?

"The vast majority of Japanese women see marriage as a social necessity and they do find husbands. Only a small percentage of Japanese women do not marry.

What can the U.S. and Japan learn from each other?

"Japan has one of the lowest crime rates in the world. They have an extremely efficient police system, and crime is largely under control. No citizen is allowed to have a handgun under any circumstances."

Asked why the Japanese were more law-abiding and less prone to drugs and violence, Befu said the Japanese had better motivation. They internalize values that are useful to society.

"In the U.S. people often have a distorted idea of the meaning of freedom, and this in turn affects their value motivation. Another reason is that the U.S. has so many diverse racial groups, often with differing values. Americans are encouraged, under the Constitution, not only to tolerate but to encourage this diversity.

"The Japanese have a relatively strong consensus on how people should act, on what is right or wrong.

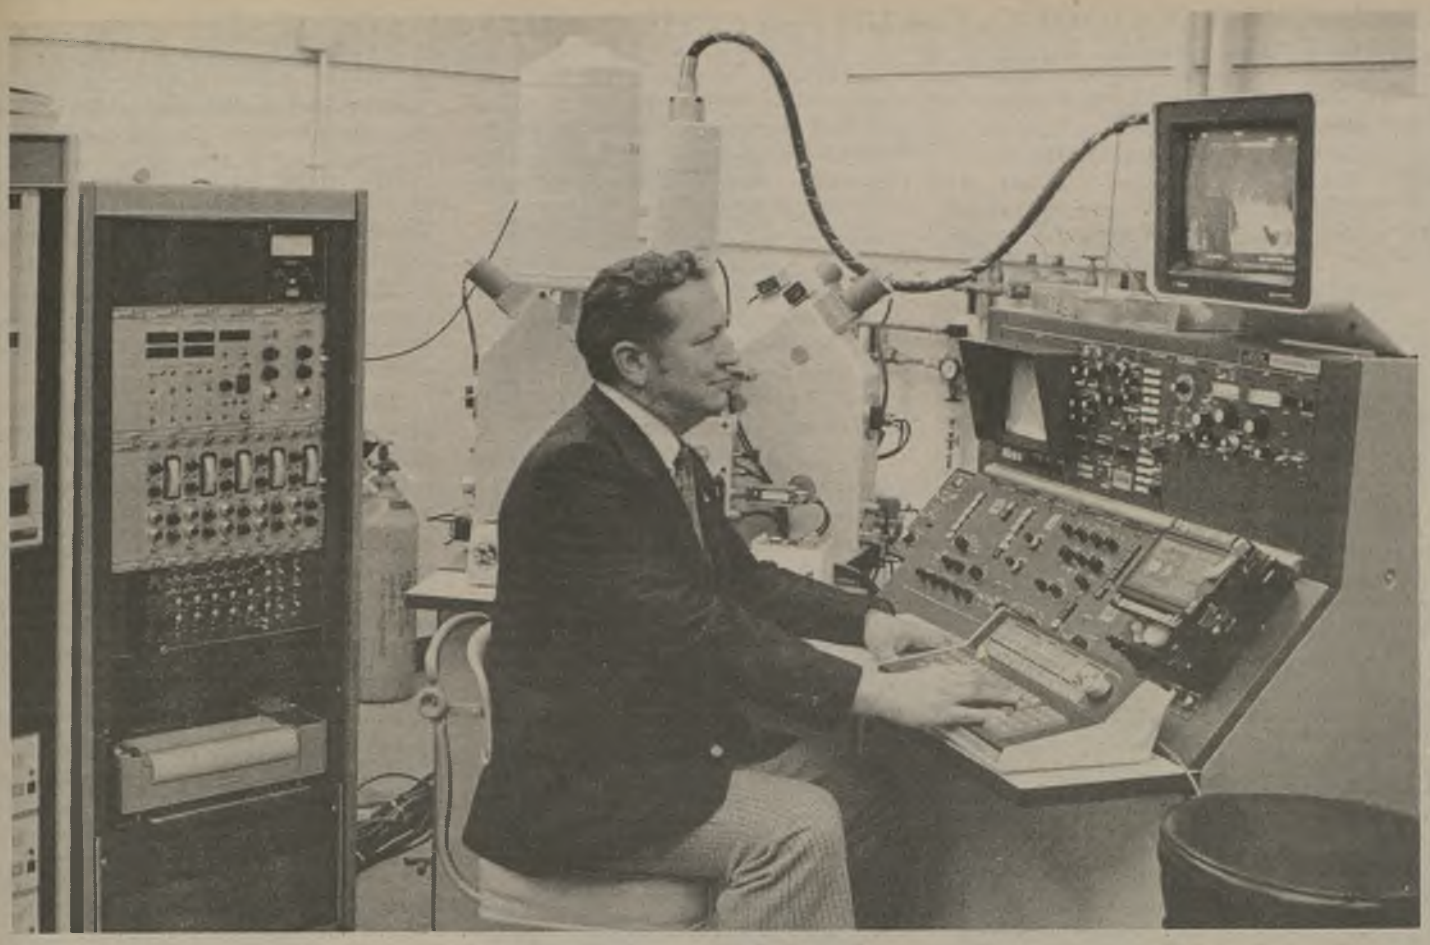
"General MacArthur decreed an American form of government for Japan. Ever since he left the Japanese people have in effect gone back in many ways to the status that existed before the American occupation.

One of the special problems facing both countries today is the stream of pornography. "In Japan porn periodicals are sold in machines, and anyone, including children, can get them simply by putting a coin in a slot."

In his present position as resident fellow at Stanford's East House Befu is dedicated to bringing into focus the real nature of Japan and the other East Asian countries.

Sixty-one students live and study in the house, which is part of the brand-new complex of buildings at Governors Corner.

"The house is dedicated to undergraduate education on East Asia in a residential setting. Students are already able to draw on one of the finest set of course offerings in America, ranging from Chinese philosophy through Sino-Soviet relations to Japanese medieval literature and U.S.-Japanese economic relations.



"While China and Japan are the foci of our programs at East House, we offer programs on other East Asian countries. In addition to all the academic work, we sponsor or plan to sponsor programs in practical arts such as flower arrangement, tea ceremony, martial arts, music, dance and so on.

"Already Stanford attracts hundreds of scholars and students from East Asia. We shall help to bring it all together."

Befu is busy not only on researching and explaining East and West to each other. In addition to scores of published works in the U.S. he also writes for Japanese learned journals. He has been commissioned to explain, in the Encyclopedia of Japan, a variety of American and Japanese characteristics.

Befu lives with his wife, Kei, and his son, Justin, who goes to Gunn High School. His daughter, Marina, is at Chapman College.

Asked whether his children were being brought up as Americans or Japanese, Befu replied with Oriental subtlety: "Hopefully as civilized people," he smiled.

CMR electron microscopist Chris Zercher operates the new JEOL superprobe, which was supplied with Tracor Northern EDS detector and 5 WDS spectrometers.

Atlantic Richfield, NSF help fund microprobe

Geologists at Stanford will now have at their fingertips the world's most advanced "microprobe"—a device that acts like a microscope but can perform quantitative analysis of very small rock samples.

Called the electron microprobe analyzer, it combines the latest solid state electronics with computer automation so that scientists can determine the ingredients of samples the size of a micron (1/1000th of a millimeter) in diameter.

The microprobe has "revolutionized our understanding of the chemistry of minerals and thin films," said Gordon Brown, associate professor of geology and director of the microprobe project.

At a recent luncheon meeting, the microprobe was officially dedicated to those departments at Stanford that will be using it for materials research in the coming years.

The microprobe project was funded by a combination of grants from the Atlantic Richfield Foundation, the National Science Foundation, and various departments at Stanford. The price of this sophisticated measuring instrument is $500,000.

In the order of the amount contributed to the project, those departments are: the School of Earth Sciences, the Center for Materials Research, the Provost's Office, the School of Humanities and Sciences, the School of Engineering, the Medical School, the Materials Sciences Department, and the Institute for Energy Studies.

The microprobe was designed and manufactured by a Japanese company called JEOL (Japan Electron Optics Laboratory) which is one of only three companies in the world that make this instrument. The other two are Cameca, a French company, and Applied Research Laboratories, an American company based in Los Angeles.

"The real benefit of this machine is that we can now look at very small rock samples 'in situ' (while in their original form) and not have to destroy the sample in order to get it under the microscope," said Brown.

The new electron microprobe analyzer will be used interdepartmentally to analyze not only such things as rock solids, minerals, synthetic crystals and metallurgical samples, but also tissues from human organs, and semiconductor materials.

Brown explained that the microprobe operates by bombarding solid samples with a beam of electrons which dislodge other electrons in the sample being studied. The results are x-rays that tell scientists the relative amounts of whatever substances are present in the sample.

According to Brown, Stanford's new microprobe is "the best facility of its kind to be found in the Western half of the United States."—**Craig LaGrow**

Students form entrepreneurs' center here

With startup funds totaling $1,500 from three graduate deans' offices, Stanford students have organized a Center for Entrepreneurship.

The outgrowth of a surprisingly strong response to a student-organized conference on entrepreneurship last spring, the new center's board of advisors includes Howard Head, inventor of Head skis and the Prince tennis racket, and University of Washington Prof. Karl Vesper, one of the nation's leading educators in entrepreneurship. Both spoke at the 1982 conference.

At a recent organizational meeting, student directors of the center started planning a second conference, tentatively set for April 30. They're also considering an internship program to link Stanford students with local entrepreneurs and a newsletter to highlight campus and community entrepreneurial activities.

Organized by students in engineering and business, last year's conference drew more than 500 Stanford students.

"This year we're hoping for about 700," said Thayer Wendell, second-year MBA student who is chairman of the Student Management Committee.

Initial funding for the center includes $500 each from the deans of graduate studies and research, engineering, and business. Wendall expects the conference and other activities will net an additional $4,000.

Other members of the Student Management Committee are Debbie Chen, David Gleba, Jim Hake, John Hendrickson, Bruce Johnson, Trish Kubal, John McCarthy, Luanne Picard, and Steve Wisch.

Serving ex-officio are last year's conference organizers Scott Buehrer, Constance Carroll, and Jonathan MacQuitty.

Besides Head, Vesper, and Wendell, the Board of Advisors includes Vice-Provost Gerald J. Lieberman, dean of graduate studies and research, Engineering Dean William Kays, Business School Dean Robert Jaedicke, Jim Levy, and Rene McPherson, outgoing dean of the Business School.

The Center can be contacted through P.O. Box 3678, Stanford, Calif. 94305.

The Center currently is establishing its quarters in Owen House.

Communist prospects in southern Africa appear bright, Henrikson says

"Prospects for communist governments in Africa south of the Sahara look bright," Thomas H. Henrikson, research fellow at Stanford's Hoover Institution concludes in a new book, *Communist Powers and Sub-Saharan Africa* (Hoover Institution Press, Stanford, Ca. 94305).

Armed intervention in Angola and Ethiopia "revealed that Soviet hardware and Cuban regulars could not only advise and assist, but also they could make up for the sloth, indifference, ethnic rivalries, and sheer incompetence of local forces," he declares.

Besides continuing to back opponents of the South African government, the Soviets have other pretexts for intervention, Henrikson says.

"Border disputes between African states and power struggles within countries are more prominent than at any time since the independence era. The Organization of African Unity has generally proved powerless to regulate border conflicts, and the absence of African institutions to implement peaceful transfers of power make for political violence.

"Regimes dubbed neocolonialist are fair game for toppling by self-styled national liberation movements. The most likely candidate for such a scenario today is Zaire, where the corrupt and inefficient regime Mobutu wavers. Several groups are organizing a bush war against Mobutu and "the old Katanga gendarmerie, trained and armed by Moscow, Havana, and East Berlin, wait in neighboring Angola. . . .

"Guerilla movements and their host states cannot overlook the obvious advantage of an alliance with the sole external military power ready and able to extend armed backing on a decisive scale."

But Soviet-Cuban intervention has raised fears among moderate African states, as did the invasion of Afghanistan.

"In the long run, the Russians could be eclipsed by the Chinese whose racial characteristics, semicolonialized past, and much lower-key activities find less opposition in Africa," he declares. "The Chinese have shown themselves to be personally diplomatic and willing to accept humble accomodations."

Where some Western analysts view Soviet intentions as "a riddle wrapped in a mystery inside an engima," as Winston Churchill once phrased it, Henrikson suggests policy-makers should heed the British statesman's conclusion that "Perhaps there is a key. That key is Russian national interest."

Thomas Henrikson

Financial aid helps achieve economic, racial diversity, survey suggests

Stanford's financial aid policies are working well, results of a new freshman survey indicate.

The proportion of incoming students expressing "major concern" about financing college this year was 11.4 percent, compared to 11.9 percent five years ago.

The proportion citing financial aid as a "very important" factor in selecting Stanford rose from 23.1 to 31.3 percent in the same period.

Both the family income and racial background of Stanford students are significantly more diverse than those of freshmen at highly selective private universities nationally, the survey indicates.

Stanford is one of the few universities nationally which continues to admit students without regard to financial need and to then meet their calculated financial need.

Conducted every fall for the American Council on Education by Prof. Alexander Astin of UCLA, the survey covered 188,692 freshmen entering 350 colleges and universities, including 1,200 at Stanford.

The University's "good academic reputation" was cited by 92.6 percent as "very important" in choosing Stanford, up slightly from 90.1 percent in 1978.

Interest in obtaining graduate and professional degrees remains very strong, with only 6.3 percent planning to complete their formal education at the baccalaureate level.

The proportion planning to earn a master's degree is 34.1 percent, Ph.D. or Ed. D. 24.8 percent, M.D. and related degrees 22.2 percent, and LL.D. or J.D. 11.5 percent, all about the same as five years ago.

In keeping with national trends, students entering Stanford this year are somewhat more likely to describe themselves as "liberal" than last year. They also are more liberal than their colleagues at other selective private universities and the average for all respondents nationally. *(See Table 1.)*

When asked what objectives they considered essential or very important, 78.8 percent of the Stanford freshman cited "to be an authority in my field," 69.1 percent "to develop a philosophy of life," 67.7 percent "to raise a family," 66.8 percent "to keep up with political affairs" and 66.3 percent "to help others in difficulty." Compared to five years ago, the proportion citing raising a family rose more than 10 percent.

Reasons cited as "very important" in deciding to go to college were virtually unchanged, with 88.6 percent citing "to learn more about things," 84.7 percent "to gain general education," 74.4 percent "to meet new and interesting people," 71.7 percent "to prepare for graduate school," and 65.8 percent "to get a better job."

Compared to five years ago, the proportion intending to major in engineering rose sharply, the portion heading to arts and humanities declined, and those interested in education as a field nearly disappeared. *(See Table 2.)*

Engineering also grew as a preference among probable careers. *(See Table 3.)*

When asked to estimate their parental income, eight percent placed it below $15,000 while 12.9 percent said $100,000 or more. Compared to other selective private universities, more freshmen come from low income families and fewer from the highest bracket. *(See Table 4.)*

The racial background of Stanford freshmen was more diverse than both private universities and the average for the entire U.S.. *(See Table 5.)*

The proportion of entering freshmen reporting they attended religious services dropped from 77.4 percent in 1978 to 39.8 percent in 1982.

Those reporting they frequently smoked cigarettes dropped from 1.6 to 0.8 percent, while tnose participating in political demonstrations rose from 11.6 percent to 15.9 percent.

One in five freshmen (20.6 percent) said they had taken computer-assisted courses and nearly half (46.9 percent) said they had written computer programs, findings very similar to those enrolling at private universities nationally.

In the 1981 survey, other private selective universities included Brandeis, CalTech, Cornell, Duke, John Hopkins, Lehigh, Northwestern, Princeton, Rice, Vanderbilt, Tulane, and Notre Dame.

Table 1

Political orientation	Stanford		Private Univ.	U.S. Total
	1981	1982		
Far left	1.1	1.4	1.5	1.8
Liberal	29.5	32.0	25.3	18.9

The way it was....

75 YEARS AGO (1908)

The Board of Trustees passed a resolution making drunkenness sufficient ground for the suspension of a student and authorizing the president and the faculty to take all necessary steps to enforce the resolution.

* * * *

As the first step in the installation of an automobile bus line from Palo Alto to the campus, a five-passenger touring car began carrying persons at a 10 cent fare. Thirty-passenger automobiles were to begin a regular schedule soon.

* * * *

The remains of the statue of the "Angel of Grief" were moved into the Museum for safekeeping. It had been erected by Mrs. Stanford in memory of her brother, Henry C. Lathrop. After it was damaged in the 1906 earthquake souvenir seekers began taking away parts of the rare Italian marble statue.

50 YEARS AGO (1933)

The Board of Trustees extended the leave of absence of President Ray Lyman Wilbur until March, the end of the Hoover administration. Herbert Hoover and W. Mayo Newhall were reelected to the board. Each had joined the board in 1912.

* * * *

The last was seen of the booted and spurred military man leading an extra horse up the Row or to Roble Hall to take his girl for an afternoon ride at the Army's expense. That privilege of long standing was withdrawn by Colonel Cubbison, commander of the Stanford unit of the R.O.T.C., after several accidents.

25 YEARS AGO (1958)

University scientists started setting up a satellite research station to chart the paths of new Sputniks. The station, located in a meadow near the athletic fields just off Campus Drive, was being equipped with 20- and 40-megacycle receivers and recorders. The equipment would be used for university studies of the ionosphere and upper atmosphere. The project, sponsored by the International Geophysical Year Program, was to be manned by graduate students of the Radio Propagation Laboratory under the direction of Professors O. G. Villard, Jr., Ronald N. Bracewell and Allen M. Peterson.

How Admissions copes with 14,000 applicants, Murphy's Law

In the Stanford Office of Admissions, in any given year:

Twenty to 30 pairs of applicants will have the same first and last names;

About six pairs will have the same first, middle and last names;

One or two pairs will have the same first, middle, and last names, and the same birthdate;

And that's only the beginning.

This mass of files represents the 14,000 applicants for next September's freshman class. Each file contains at least 10 documents—no wonder Admissions is so organized.

"People don't appreciate, or even think about, the massive, dedicated clerical effort behind the admissions process," says Admissions Dean Fred A. Hargadon. "The ones who do that work here are unsung heroes."

Last year, there were almost 14,000 applicants for the approximately 1,500 spots in the freshman class. By mid-January of this year, there were nearly 700 more than that figure.

"There are about 10 documents for each applicant," says Hargadon, "which means almost 7,000 additional pieces of mail to receive, open, sort, and file."

Each complete file includes, at a minimum:

The student's application;
Two teachers' recommendations;
Counselor's or principal's report;
Transcript;
Test scores;
Preliminary application data.

Kmetovic controls traffic

Helen Kmetovic, assistant to the dean, is in charge of the staff and handles all of this, and has been in the admissions office for 19 years.

"She is like a senior traffic controller," says Hargadon.

Starting in late December, about six bags of mail arrive daily. The Federal Express man "seems to be working solely for us," says Hargadon. But the intricate and vital part is keeping all the paperwork straight.

"Just today," he added, "I read applications from two girls, with the same first and last names, from the same high school. Our credentials staff thoughtfully had put a precautionary note on each folder to alert the readers.

"And there are many other things to watch out for. There's a sort of Murphy's Law here. If a high school has two people with the same name, and one applies to Stanford, inevitably we'll get the other person's transcript, and inevitably it will show terrible grades.

The Federal Express people "seem to be working solely for us" —Fred Hargadon

"Many students take tests more than once, taking the SAT on several different dates, the achievement tests on yet another. We always use the highest score, so we have to check all those test reports against one another. And the last test is given in January, which means we don't get those reports until mid-February.

"Often students forget something—or a required letter doesn't arrive. We write and tell what's missing and give them 10 days to supply it.

"Every transcript is different. Some look like ancient maps, and others are so computerized and esoteric we can't decipher the acronyms. Furthermore, schools have different grading systems. Some use A-B-C, some use 5-4-3-2-1, some 100 to zero.

"We always 'work' the transcripts, crossing off courses Stanford doesn't count, and then recalculate the GPA."

Financial aid checks

The Financial Aids Office checks regularly to find out who is admitted, then does a cross-check to see if the person has applied for financial aid. If so, and if the student is eligible, the amount is determined and a letter can go out in the same envelope as the "admit" letter.

"We send a letter to every applicant saying 'yes' or 'no,' and we always use the first name or nickname," says Hargadon. "But we have to make sure the nickname is useable—some of them are pretty wild—especially if our response is 'no.'

"And of course, we double-check every one of those 14,000 letters and envelopes before sending them out. One of the reasons for that double-check is that about 1,000 applicants will have an address change every year, between the time at which they filed their applications and April 1, when we mail our letters."

With all the paperwork, however, there is a lighter side.

Many applicants send supporting material, such as photos of scientific projects, audio or video tapes, or art work.

"One girl this year wanted to make sure we believed she'd had a successful catering service," says Hargadon. "She sent a cake and several kinds of cookies. There was no way to file them except in our stomachs. And no, I can't tell you whether or not she'll be admitted."

—Harry Press

Proposed PG&E rate increases could cost Stanford $2.6 million more in '84

Pacific Gas and Electric has recently proposed changes in utility rates that could mean an increase of as much as $2.6 million in Stanford's annual energy bill beginning in January, 1984.

The company's proposals are set forth in its latest general rate request, which deals primarily with the utility's non-fuel costs of doing business. This is in contrast with electricity and gas fuel-cost-passthrough requests that occur several times a year.

If the state Public Utilities Commission approves the full amount of the increase, residential PG&E customers would also pay more—up to 12 percent more per year for gas and 25 percent more for electricity. That is unlikely, however, for the PUC has approved 60-80 percent of the company's general rate requests in the past.

In addition to regulating California's gas and electric utilities, the five-member Commission oversees telephone and water companies as well as trucking and transportation. The Commission and its staff must analyze and decide on hundreds of proposed rate changes each year. The most complex of these are the general rate requests of the utilities, which involve billions of dollars and a lengthy regulatory review process.

For example, in the request for 1984, PG&E has asked for an increase in revenues of nearly a billion dollars for their $7.5 billion dollar a year business. The utility says that the increase is necessary to allow it to improve its financial condition and to attract the investors who provide the company with much of its capital. It is the job of the PUC to decide just how financially healthy the company should be.

"What you have with most utilities is a situation where it is in *everyone's* best interest to have a monopoly because the cost of laying more than one set of power, water or phone lines is so huge," says William Swanson, who prepares forecasts of Stanford's energy bills and so must stay abreast of all the rate changes.

"What the PUC does is become 'pretend competitors' for PG&E. They try to set their rates so that they would resemble those of several companies in healthy competition."

The process of creating imaginary competition for a multi-billion-dollar business is not simple. At the beginning everyone is involved but the five PUC Commissioners themselves.

PG&E submitted their proposals—a stack of documents a foot high—in December. An administrative law judge, who cannot make decisions but who guides the proceedings, will oversee public hearings beginning in March. The hearings involve six months of testimony and cross-examination by PG&E, the PUC staff and many "interested parties."

The interested parties are usually the representatives of large groups like the California Manufacturer's Association or the ad hoc consumers group TURN (Toward Utility Rate Normalization), but if an individual customer wants to berate a vice-president of PG&E about his or her utility bill, he too can sign up as an interested party and cross-examine or testify. Stanford sometimes becomes an interested party in these cases because the interests of universities and hospitals might be overlooked.

Stanford is interested in changes in rate design as well as the amount of rate increases, because the way in which rates are designed can have a significant impact on our costs.

For example, PG&E is proposing to eliminate the rate schedule on which the University presently purchases its natural gas. Under present PUC policy this rate is lower than that which most residential customers pay because it is tied to the equivalent price of heavy, low-sulfur fuel oil and is available to customers who can use that oil as a backup fuel.

PG&E claims that its large customers have developed the capability to burn oil without ever intending to do so under most circumstances, in order to take advantage of the advantageous rate. PG&E wishes to establish a new rate that would actually be slightly cheaper, but might be unacceptable to Stanford because the gas supply could be less reliable. Consequently the University might be forced to purchase gas at a more expensive rate to assure reliability. This one change in rate design would amount to a 14.3 percent increase in gas costs, or about $750,000 annually.

When the hearings on the PG&E case end in September, the administrative law judge prepares a summary and recommendation for the PUC. The PUC staff, PG&E and the interested parties also prepare their final briefs. The Commissioners then review all of the briefs, summaries, and recommendations, as well as the original PG&E proposals and six months of transcribed testimony, and take them into consideration in rendering a final decision.

The decision on the case will be issued in December and is likely to contain surprises, for none of the recommendations or briefs are binding. For example, in 1978 the Commission decided that PG&E was not doing enough to encourage cogeneration. They shaved a few percentage points from the rate of return that PG&E was allowed to earn, resulting in millions of dollars in lost revenue for the company.

Lyle Zimmerman

Malinda Larry memorial set for Friday

Malinda Larry, who retired as administrative assistant for the Center for Materials Research in 1981 after 25 years at Stanford, died Saturday, Jan. 29, at the age of 66. She had been in declining health since her retirement.

A memorial service will be held at 4:30 p.m. Friday, Feb. 4, in the Round Room at Memorial Church.

Besides her husband, Andrew, Larry is survived by her two children and their families: daughter and son-in-law Malinda and Gene Koch and their daughter Gretchen Malinda; and son Michael and his wife Lilo.

At the beginning of her working career, Larry spent two years as secretary to W. C. Fields in Hollywood. His private name for her was "Miss Bossy."

Her 25 years at Stanford were spent in the same department, where she was noted for her sense of humor and talent for organization.

Telephone trouble on Personnel lines

The continuing wet weather has created phone problems for some sections of the Personnel Department—because of wet switching equipment in the Old Pavilion, many incoming calls are not ringing through. Unfortunately, repairs to the equipment cannot be made until the weather subsides. People experiencing difficulty in reaching a section of Personnel by phone should send a message through Campus Mail or call another Personnel section indicating the person with whom they wish to speak. That person will call back as soon as possible.

Offices move

The offices for the Center for Teaching and Learning and the Program for Faculty Renewal will be closed Feb. 3 and 4 in order to move to a new location.

Beginning Monday, Feb. 7, they can be found at Encina Commons 126. Their telephone numbers will remain the same—ext. 7-1326 for the Center and ext. 7-0761 for the Program.

Health and safety report

Accidents and Injuries Occurring Jan. 24-28

Type of Accident or Injury	Number of Incidents	Days Lost
Chemical-absorption	1	0
Impact with object	2	(0, 0)
Non-impact: sharp object	1	0
Fall from same level	4	(0, 0, 0, 2)
Lifting	2	(0, 0)

New first aid kits, called J-Kits, are available at half the cost of old kits and include band-aids, first aid tape, flexible gauze, sterile pads, alcohol swabs, a triangular bandage, ammonia inhalants, a first aid guide, and Stanford emergency information.

These kits can be ordered from Stores, using the same stock no. 690004 as the old kits. A memo will be distributed by Stores regarding the numbers for replacement items.

Letters to the editor

To see—or not to see— the Queen

Editor, *Campus Report*:

I enjoyed Prof. Chace's whimsical letter in which he suggested that we should read *King Lear*, etc., instead of going to see the Queen.

He reminds me of the occasion when George Bernard Shaw stood on the stage on the first night of his *Major Barbara* and waited patiently while the storm of applause continued. At length he was able to make himself heard, and was about to speak when a single but loud "Boo!" came from the gallery.

Shaw beamed in delight and shouted "I agree with you sir, but who are you and I among so many?"

Donald Stokes

Do computers add glibness to writing?

Editor, *Campus Report*:

A delightful student who is solidly grounded in both math and lit said today: "I thought computers would save time which I could then apply to personal and humanistic pursuits, but it hasn't worked out that way."

He went on to explain that his life and work were meantime being increasingly corrupted by the *means* while the ends became more remote. Yes, indeed. This is why Camus attacked people like Sartre: for putting the end—"essence"—after existence in a way that allowed a radical increase in pragmatic ruthlessness unchecked by simultaneous *values* (morality, the aesthetic, the deeply personal generally).

May I repeat? Creative or humanistic work prospers precisely by being constantly checked or balanced with *inefficient* realities, concerns about the past, and all sorts of scruples and issues *surrounding* the project, i.e., a wholeness and complexity unknown to manipulatory, one-dimensional, "tunnel-visioned" and future-directed technology.

Examples: the two finest critics I have known both stammered, hampered as they were, apparently, by their desire to say it all. Thus Richard Wilbur: "We respect *some* scholars' stammers" (*Grace*).

When a leading humanist sent me some recent articles printed from a word-processor, I immediately saw a new sloppiness and flaccidity, a new glibness. I sometimes see this in the work of even my best students these days.

I don't expect many scientists will understand what I am saying here. But what distresses me is that the way things are rapidly going, soon almost no humanists will understand either. It is later than we think. Where are the protesting voices of the few who know?

Robert Greer Cohn
Professor of French

P.S. Need it be said that I am not against computers and processors for routine purposes? I am talking about a subtle and all-important "certain point" and a dangerous bent in our time and place.

Managing technology key to small company success

Learning how to "manage the business of technology" is the key to success in a small company today, says Dan Verser, president of a newly formed chemical processing company in Menlo Park called Engenics.

"The trick is to have a combination of a solid technical background and the good business sense to go out and put your ideas to work," he said to a crowded classroom of Stanford MBA students on Tuesday, Jan. 25. Verser has a bachelor's degree in chemistry from Louisville, a Ph.D. from Princeton, and an MBA from Harvard.

Verser described the feeling he had when he woke up one morning and decided that he just didn't want to go to work for the large corporation he was working for at the time.

"In a big technical company, you feel lost and unimportant. Instead of allowing technical people the freedom to develop new and important ideas, most corporations force their thinkers into little administrative boxes. I'm much more attuned toward making things happen than knowing the finest details of why they happen," he said.

Verser sees a need today for people to develop their own technical ideas in the small business world. He recommends that, as a society, we move away from the traditional assumption that technological progress can only happen if it is developed by a large corporation.

Original investment

Although Verser's company began on the original investment of $10 million from six major corporations, he said that Engenics intends to remain a small private company.

"I hope that we never get to the point where the company is so big that I can't keep tabs on the research going on at every level," he said.

Engenics is in the business of making synthetic products like pharmaceuticals and agricultural chemicals through what Verser calls "biotechnological processes." Verser said that he hopes to market state-of-the-art chemical processes that will be more reliable than what he calls the "hit or miss" approach of genetic engineers.

While genetic engineers manipulate the coded information of a cell's DNA to produce a certain chemical, Verser's company is developing different methods of obtaining the same chemical results by using the techniques of fermentation and chemical separation.

"What I enjoy most about working on this approach," he said, "Is that I can develop a personal relationship with the technology and then go out and make money on the ideas that surface from our research."

Verser also said that he foresees a time in the near future when his research in chemical processing will blend with some of the research techniques that genetic engineers are working on today.

"We're using the same tools as they use. But their success is wholly dependent on whether or not they find the exact DNA code they're looking for or not," he said.

Verser's speech was sponsored by two student business groups at Stanford—the New Enterprise and Small Business Association and the Technology and Business Association.

Engenics background

In 1981, six companies provided $7.5 million for four years of applied research and development by Engenics. They are: Bendix, General Foods, Koppers, Mead, MacLaren Power and Paper (a subsidiary of Noranda Mines) and Elf Technologies of Societe Nationale Elf Aquitaine.

They also provided $2.4 million for a non-profit Center for Biotechnology Research, which will fund basic research at Stanford, Berkeley, and other academic institutions.

Governed by three independent trustees, the Center holds a 30 percent share of Engenics. If Engenics proves a commercially important biotechnical enterprise, this share will increase in value, providing universities more private support for fundamental research.

The Center's initial grants included approximately $1 million each to Stanford and Berkeley for four years. Chemical Engineering Prof. Channing Robertson and Dr. Abdul Matin of the Stanford Department of Medical Microbiology will be coprincipal investigators at the University, while Prof. Harvey Blanch of the UC-Berkeley Department of Chemical Engineering serves in a similar capacity there.

In 1981, Stanford President Donald Kennedy said that "while there is no commitment by the Center to support research at Stanford beyond the present contract, I believe this novel approach to the funding of research and technology can set a new pattern of long-term support for university research which can contribute significantly to meeting future needs.

"I am particularly grateful for the far-sightedness of the six companies for developing this new and imaginative approach."

—Craig LaGrow

Here's how WYLBUR can help manage office information

A secretary sits down at a desk, types at a keyboard, and produces twenty copies of the minutes of yesterday's staff meeting on Stanford memo paper.

Later an accounting assistant sits at the desk, enters some figures, and is shown a ten-year depreciation schedule for the laboratory equipment the department has just purchased.

At the end of the day the department head types into the same keyboard and finds out what lectures are being given on campus during the next week.

This may sound like the office of the future, but if you have a WYLBUR account, you can use CIT's IBM timesharing system to perform all of the tasks just described, and more. What makes it possible is a new WYLBUR word called ADMIN.

When you type the word ADMIN at your computer terminal in response to the COMMAND prompt, you are given the option of choosing from a whole list of administrative functions. ADMIN is the name of a system that was developed by CIT's Departmental Information Systems (DIS) in order to make the resources of administrative information technology readily accessible to University departments. The options currently available are summarized below.

ADMIN ADDRESS BOOK builds and maintains for you a personal SPIRES file of names and addresses which can be used to create telephone or address lists and mailing labels. It will eventually be possible to use it in conjunction with BULK MAILER, a feature still in the planning stage, which will merge a name and address file with a specified text to produce personalized letters.

ADMIN CALCULATOR is an interactive financial calculator. Currently, it can perform computations in four areas:

* Interest—Simple and Compound
* Depreciation—Straight, Sum-of-Years' Digits, and Real Declining
* Cost/Benefit Analysis—Net Present Value, Internal Rate of Return
* Amortization—Periodic Payment Amount, Mortgage Amount, Length of Time to Amortization.

The CALCULATOR operates in a way similar to hand-held calculators, but with several added conveniences. It can detect and ask for correction of some entry errors, and it displays both input and results. It can also produce tables, such as amortization schedules, which may be printed on paper or sent to others using electronic mail. A Buy-versus-Lease computation is planned for Cost/Benefit Analysis.

ADMIN INFO provides a director and access to a collection of public databases of interest to the Stanford community. These databases are generally owned and maintained by members of the University community rather than by DIS. INFO currently includes:

* AAPLAN—Stanford University's Affirmative Action Plan
* BUILDING—Stanford Building Managers
* COMMUNITY—Community Information
* COMPUTERS—Mini and Maxi Computers at Stanford
* DISABLED—Resources for the Disabled
* PACNET—Public Affairs/AAU/COFHE schools
* PUBLIC EVENTS—Calendar of Public Events at Stanford.

ADMIN LEAVE is an online system which can record, store and report leave taken by any regular Stanford staff member. It automatically posts monthly accruals according to established rates, and computes leave balances. Using ADMIN any University department may be added to the system. ADMIN LEAVE also includes an accrual calculator which computes partial month employee leave accruals. You need not be a participant in the leave system in order to use the accrual calculator.

ADMIN MEMO prepares a Stanford University memorandum for printing, either on CIT's 3800 or 9700 laser printers or on a local printer, using a standard or customized format. A choice of paper, type faces and number of copies is offered.

Two other ADMIN functions are available to accounts authorized to use them. These are EMAS, a departmental expenditure management analysis system, and EASYMARK, a batch reporting system used by financial analysts and others. Anyone interested in using these two systems, or who would like more information about ADMIN, should contact the DIS staff at 497-1415.

Stanford ranks high in latest graduate education survey

Stanford has made a strong showing in the latest comparative evaluation of graduate faculty by their peers in the nation's major research universities.

Stanford ranked among the top 10 in 25 different fields, a record exceeded only by Berkeley, which finished among the top 10 in 30 of 32 fields surveyed.

Stanford ranked first in four fields:

* **Biochemistry**
* **Computer Science**
* **Psychology**
* **Statistics-biostatistics**

The faculty was among the top five in seven other fields

* **Economics**
* **Chemistry**
* **Geoscience**
* **Chemical engineering**
* **Civil engineering**
* **Electrical engineering**
* **Mechanical engineering**

Fourteen additional departments ranked among the top 10 nationally:

* **Anthropology**
* **Art history**
* **English**
* **German**
* **History**
* **Linguistics**
* **Mathematics**
* **Microbiology**
* **Philosophy**
* **Physics**
* **Political science**
* **Spanish**
* **Sociology**
* **Zoology**

Harvard ranked among the top 10 in 22 fields surveyed, followed by Yale, 20; Princeton and Chicago, 18 each; UCLA, 17; and MIT, 16.

Berkeley and UCLA were the only institutions represented in all 32 fields. Stanford and Yale each has 30 programs; Princeton and Chicago, 26 each; Harvard 23; and MIT 17.

Harvard had seven programs rated first nationally, followed by Yale and MIT, six each; Berkeley, five; and Stanford, four.

Berkeley led in programs ranked among the top five, with 24, followed by Harvard and Yale, 15 each; MIT and Chicago, 13 each; Stanford, 11; and Princeton 10.

The accompanying table, prepared by Stanford News and Publications Service, compares the perceived quality of faculty at Stanford in four national surveys of graduate education since 1957, when the University ranked 13th nationally.

Rankings of the most recent survey are compared with seven other institutions—Berkeley, Harvard, Yale, Princeton, MIT, Chicago, and UCLA—all of whom had at least 16 departments ranked among the top 10 in their respective fields nationally.

Standardized scores for each field in the 1982 survey also are shown. In the standardized scores, 50 represents the average, with about two-thirds of the responses clustered between 40 and 60. These show a much greater perceived difference between first and second place rankings in art history (where Yale was first with a standardized score of 75 and Harvard second with 69) than economics (where MIT led with 73, followed by Stanford, Chicago, and Harvard, all clustered at 72).

The most recent survey was sponsored by the Conference Board of the Associated Research Council, which includes the American Council of Learned Societies, the American Council on Education (ACE), the National Research Council and the Social Science Research Council. The $500,000 two-year study was funded by the Mellon, Ford, and Sloan Foundations, the National Institutes of Health, the National Science Foundation, and the National Academy of Sciences. A random sample of scholars in each field was asked to rank other institutions on a variety of dimensions, of which perceived faculty quality was one. Prof. Lincoln Moses of the Stanford Department of Statistics, was one of 17 scholars who served on the Committee on an Assessment of Quality-Related Characteristics of Research Doctorate Programs in the U.S., overseeing the study. The committee was co-directed by Lyle V. Jones of the University of North Carolina at Chapel Hill, and Gardner Lindzey, director of the Center for Advanced Study in the Behavioral Sciences at Stanford.

Copies of the final reports, *An Assessment of Research-Doctorate Programs in the U.S.* (five in all, one for each broad field surveyed) are available at $10.50 each from the National Academy Press, 2101 Constitution Ave. NW, Washington, D.C. 20036.

The 1969 and 1964 surveys were sponsored by the ACE, while the 1957 survey was done by the University of Pennsylvania.

Compared to 1957, Stanford improved in every field except botany in 1982. Compared to 1964, the University remained the same or improved in every field except botany, English, French, history, microbiology, physiology, physics, and zoology. Compared with 1969, the findings were quite mixed, with advances in some fields and setbacks in others. In some instances very small differences in standardized scores translated into large differences in rankings among those near the top of their respective fields.

RLG's solution to the interlibrary loan problem uses electronic mail

Many Stanford library users have recently noticed a significant improvement in the response to their interlibrary loan requests.

Studies made four years ago showed that materials requested from eastern universities such as Yale, Columbia, Princeton, and Cornell, were taking four to five weeks to arrive at Stanford from the date the request was sent.

Today this figure is more often 10 to 14 days. The reason for the improved response time is that each work day a library specialist sits at a terminal in Green Library and sends requests to other libraries via the RLIN electronic message system for loan or photocopy of library materials required by Stanford faculty, students, and staff, but unavailable here.

Meyer Library circulation desk

RLIN message

This new system, originally introduced by the Research Libraries Group (RLG) in November, 1980 and improved last September, goes a considerable way to removing many of the drawbacks associated with traditional interlibrary loan service.

No matter how large or comprehensive a University's library collection, it has always been necessary to borrow materials to support the research of its scholars.

Since its formation in 1974, the Research Libraries Group has had as one of its primary goals a responsive and cooperative interlibrary loan service between members. Each RLG library enters into the RLIN data base records of its newly cataloged materials. Stanford's Interlibrary Loan unit searches this data base, which now contains over 7½ million records, to locate libraries which own the materials requested by faculty and students.

With positive information that a member library owns the requested material, Interlibrary Loan can then ask for it via the special RLIN electronic message system. If more than one library has indicated ownership, the staff can, at the time of the initial request, instruct the system to relay the request, when not filled, from one library to the next without it being returned to the originating library after each negative response.

Speedy shipment

Each RLG library has instituted internal procedures to ensure that member's requests receive priority handling and that a response of "filled" or "unfilled" is returned to the requesting library within three working days.

Shipment of materials is no longer through the mail but by UPS surface delivery or, at the request of the borrowing library, by UPS Air Service. The results of these new methods of communication, speedier shipment of materials and increased dedication of staff effort, have been very dramatic in the past few months.

Another attractive feature of the RLG network is the provision of free photocopy, between members, of journal articles, etc. of reasonable length (defined as 50 pages). This not only provides material not otherwise available but also eliminates the paperwork associated with billing and other financial charges.

As many Stanford faculty and students have discovered, many U.S. and Canadian universities will not loan their dissertations when there is a microfilm copy available for purchase. This problem has been greatly reduced within the RLG network since the members have agreed to lend their dissertations to each other whenever there is a non-archival (i.e. second) copy available.

In addition to dissertations, member libraries are making other materials available which they formerly did not loan. Often they require that the material be for "library use only" and it is then placed in the Department of Special Collections for use in the reading room there.

Although this is a restrictive measure, it is nevertheless an improvement from when the lending library would not have sent the material at all. Another significant step forward in cooperation is that two RLG members, New York Public Library and American Antiquarian Society, which previously did not loan materials, have agreed to make parts of their collections available to other RLG libraries.

There is a unique relationship between Stanford's Interlibrary Loan and that of UC-Berkeley. As with other RLG libraries, Stanford's requests are sent to Berkeley via the electronic system; but the materials from Berkeley are delivered to Stanford twice a day on the Gutenberg Express bus and hence shipping time is saved. Berkeley is also very cooperative in lending Stanford bound journals not normally available through Interlibrary Loan.

The staff's best success using the RLG electronic mail system in recent weeks was the receipt of a dissertation from University of Minnesota within three days of initiating the request.

However, Bernard Denham, head of Stanford University Libraries Interlibrary Services Division, commented that this speedy response cannot be taken as the norm; there are still many requests for which the lending library may have to do special searching or recall and those requests for which there is difficulty in locating a library which owns the material.

While the new system is meeting with success, it is still not able to locate all of the materials required and Stanford must rely on libraries outside the network. Last year, 40 percent of all the materials Stanford borrowed or received as photocopy came from RLG libraries. However, it is expected that RLG activity will grow in the future as the RLIN data base is enlarged, creating a greater knowledge of the holdings of the member libraries.

All the components are in place for a successful, cooperative and responsive interlibrary loan network. This includes not only the technological and other features ensuring rapid transmission of requests and material, but the equally necessary positive approach of all library staffs at Stanford and throughout the Network who provide this important library service.

It is already working and the beneficial results are available for all Stanford faculty and students. The Interlibrary Loan staff invite Stanford faculty, staff, and students to use the service.

Berkeley sound archives have arrived at Stanford

Cooperation between the Stanford Archive of Recorded Sound and the UC-Berkeley Music Library over the past year has resulted in the transfer of more than 10,000 commercial 78 rpm sound recordings from the soon-to-be-closed old UC storage facility at Richmond to the Stanford Archive of Recorded Sound. Located on the ground floor of the Knoll, the archive is a part of the University Libraries dedicated to the collection and preservation of historically and artistically significant sound recordings, including classical and popular music, literature, drama, interviews, and public addresses.

When it became clear that the Berkeley archival recordings could not be accommodated in the new Northern California Storage Facility, plans to move them to Stanford were initiated by Berkeley both to provide proper housing and to make them accessible once again to Berkeley and Stanford library users alike.

Classical vocal and instrumental performances from the early 1900s to the 1940s make up the largest part of the newly-acquired recordings, but a significant collection of jazz as well as some spoken-word material is included, all of which complement and enhance the Stanford Archive's present holdings.

Approximately 2,500 of the more interesting and important Berkeley records were added to the Archive's collection during the summer and fall, and they will be included in the *Rigler and Deutsch Index of Pre-LP Sound Recordings* to appear later this year.

A consortium effort funded by the National Endowment for the Humanities and the Ledler Foundation, this index will document all Stanford's 78 rpm discs as well as those in the sound archives of Syracuse and Yale Universities, the New York Public Library, and the Library of Congress. The remaining Berkeley recordings will be gradually incorporated into the Archive as time and staff permit.

Containing about 100,000 items, the Stanford Archive of Recorded Sound is a non-circulating collection open to users from 1 to 5 p.m. weekdays or by special appointment.

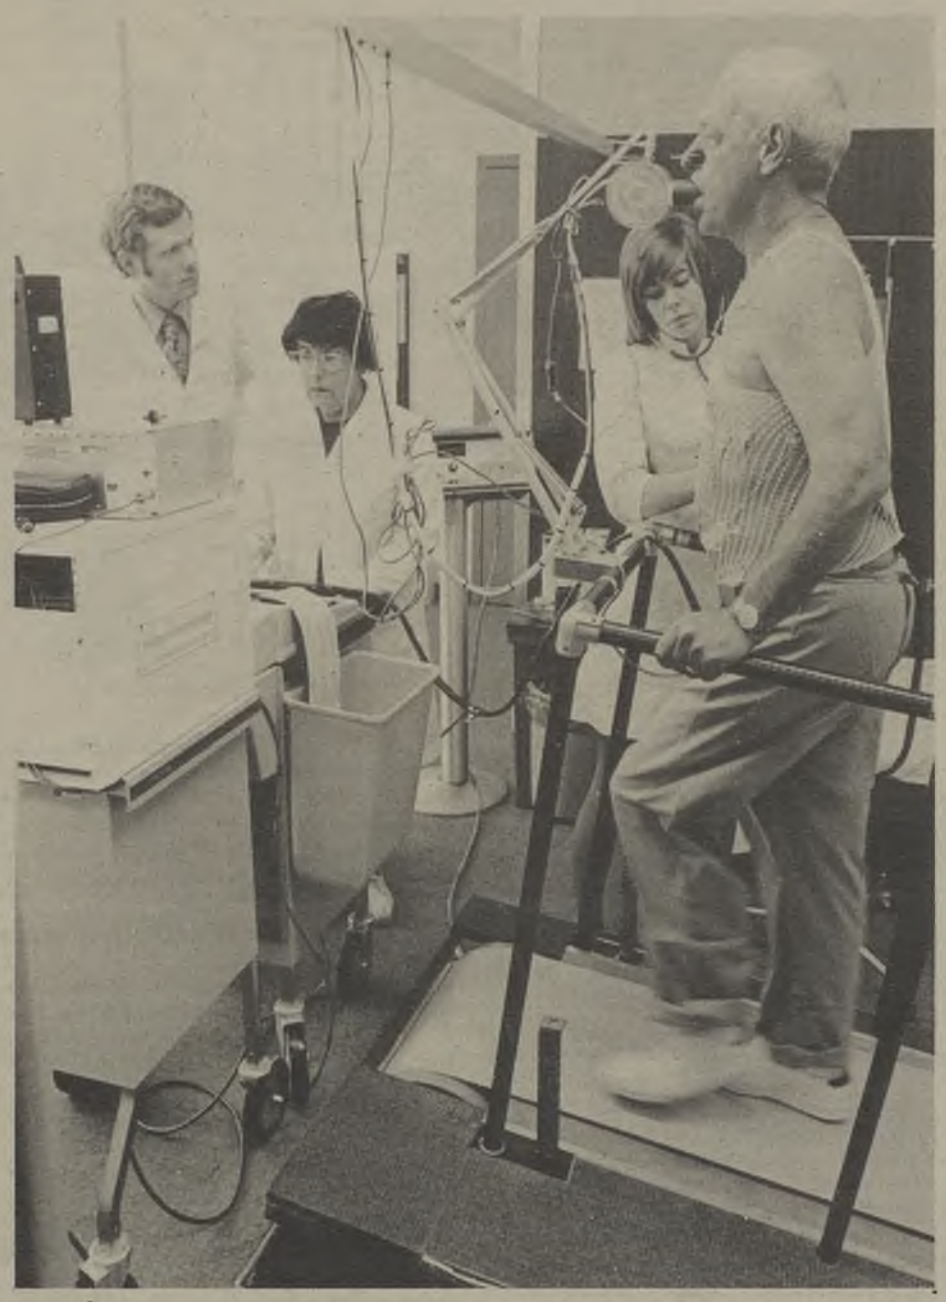
One of the largest general sound recording collections in the United States, the Archive serves not only the Stanford and UC-Berkeley communities but researchers from all over the country and abroad as well.

Further information is available from Archivist Barbara Sawka at 497-9312.

After a heart attack. . .

Study probes question of getting patients back to work

Many mild heart attack patients are probably told by their doctors to stay home from work longer than is necessary, a Stanford University cardiologist believes.



"A good number of the lower-risk patients could likely hasten their return if they were given the confidence to do so," said Dr. Robert DeBusk, associate professor of clinical medicine and director of the Cardiac Rehabilitation Program.

Heart attack patients, he said, currently are advised to wait 80 to 90 days before returning to work. But his and colleagues' previous studies on more than 700 patients within three weeks of infarction have demonstrated that early exercise testing permits the distinction between high- and low-risk patients, said DeBusk.

His present study, funded by a new grant from the Robert Wood Johnson Foundation's Medical Practice Research and Development Program, builds upon those previous studies by carrying the question one step further: can the effective communication of information thus obtained through testing facilitate an earlier return to work for low-risk postinfarction patients?

The study will test a combined intervention—including both an occupational work evaluation and a behavior change program. "The intervention is designed to enhance patients' perceived health status," said DeBusk, explaining that this is a key factor in determining the patients' confidence and thus their return to work.

"Through the use of certain specific techniques, we hope to cut down to 30-50 days the amount of time the lower-risk patients need to stay home after heart attacks," he said.

DeBusk (far left) stands by with other staff members as a patient undergoes treadmill exercise testing in the laboratory of Stanford's cardiac rehabilitation program.

Comparisons

The $150,000 grant will enable DeBusk and his colleagues to work with 600 male heart attack patients over the course of about two years. The researchers will attempt to detect changes in the time patients take to go back to work depending on such factors as age, state of employment, medical impediments, and mode of medical follow-up.

Moreover, DeBusk predicts that if doctors better identify high-risk patients from the start, they'll be able to more successfully intervene medically when necessary, while encouraging the lower-risk patients to get back on their feet sooner.

As the first step of his research protocol, a treadmill exercise test will be administered to patients three weeks after infarction. "This test serves a therapeutic as well as a diagnostic purpose," said DeBusk, "by demonstrating to patients their capacity for work."

The test allows doctors to establish a prognosis for each patient on which to base decisions. (In the event that abnormalities are found, medications or bypass surgery may be indicated.) A private counseling session will follow the test.

The behavior change program will be carried out by patients at home, DeBusk explained. "Physical activity, inability to cope with job stress, and smoking are three major areas of concern to postinfarction patients." These issues will be addressed by a program tailored to each patient's needs, making use of audiovisuals, advice-filled workbooks, and individually prescribed exercise (walking and jogging) regimens.

"Patients will monitor their heart rates, send us progress reports, and talk with nurses on the phone periodically. We'll revise our instructions based on what the patients tell us, and then we'll see them at the end of six months," DeBusk said.

A key question of the research, he added, will be whether or not the findings can be expanded to apply to a greater number of people. "For example, we will use these techniques only with patients 60 or younger during the study. But perhaps, observing older patients, we'll find that the same principles hold true for some of them.

"So we'll try to determine the relevance of our intervention, as related to different segments of the population."

Subjects

Patients will be enrolled as volunteer participants in the study from five Kaiser hospitals throughout the Bay Area, DeBusk said. The project may begin as early as April.

DeBusk's research is one of 21 projects being funded under the Foundation's Medical Practice Research and Development Program. The grants, totaling $3 million, are aimed at improving medicine's capacity to assist impaired, acutely or chronically ill individuals in regaining or maintaining their functional abilities.

The present grants were made under a second annual round of projects funded under the Program. A total of 254 applications were received and reviewed by an expert panel for selection.

DeBusk, who received both his B.A. in history and M.D. degree at Stanford Universiy, has been on the faculty here since 1973. He is a Fellow of both the American College of Cardiology and the American College of Physicians.

The Robert Wood Johnson Foundation, the nation's largest private health care philanthropy, is committed to improving the quality, affordability, and delivery of health care in the United States. In the past ten years over $400 million in grants have been made to institutions in support of health care projects.

Molecular Biology gets top marks in national survey

Stanford University's biological science graduate programs received high marks in a national study recently published by the National Academy of Sciences.

The study was not intended to rank the programs, but on a scale of 0 to 5, Stanford's biochemistry program scored 4.9, a tie with Harvard and just behind Massachusetts Institute of Technology (MIT). The cellular/molecular biology and the microbiology programs scored 4.0.

"The study is extremely indicative of Stanford's present reputation in newly developing areas, and that the reputation will continue to grow," said Dr. Dominick Purpura, dean of the Medical School.

However, he noted that Stanford did not score among the top schools in physiology. "Establishing a strong physiology department is a target of the School's growth," he said. "It would be surprising if ten years from now Stanford was not included among the top ten physiology programs.

"It's nice to stand on laurels, but it's better to work towards meeting challenges," he added.

The study was sponsored by the American Council of Learned Societies, the American Council on Education, the National Research Council, and the Social Science Research Council.

About 56 percent of the 1,848 academic biologists surveyed participated in the study. Many objected to the survey, which has been criticized in the past for "confusing prestige for quality."

Data collected by the study includes the number of faculty members in each program, the size of the university library, and the proportion of faculty receiving federal funds.

State of the art: plastic and reconstructive surgery

Imagine a young man losing his arm in a car accident. So badly mangled, it cannot be surgically reattached. Instead, surgeons attach a new arm—received from a donor. With proper medication and physical therapy, the young man gains full use of his new limb.

Sound impossible? Not at all, predict leading plastic surgeons at Stanford University Medical Center. "We've got the technical know-how now," said Dr. Lars Vistnes, surgery professor and chief of the Plastic and Reconstructive Surgery Clinic. "As soon as we can overcome the immunological barriers, we'll be able to transplant limbs. It's the next big leap."

The "immunological barrier"—rejection of the limb—is being broken down, however, Vistnes added, with the development and refinement of immunosuppressant drugs, such as Cyclosporine, which are used in heart and heart-lung transplants.

"The reason we won't risk transplanting limbs and possible rejection by the patient is because a limb, unlike a heart or a lung, is not essential to sustain life," explained Dr. Robert Chase, surgery professor and head of the hand unit of the Clinic.

Powerful immunosuppressants always compromise the body's ability to fight off infections. Transplanting limbs, the surgeons believe, is not yet sufficient trade-off if the infection risks are high.

Vistnes and Chase are cautious, but optimistic about the future of plastic and reconstructive surgery. Their optimism is based on the recent development of techniques that have enabled their specialty to advance in great strides.

The two major developments in the last decade, Vistnes said, are the discovery that it is possible to move entire units of skin, based on the underlying muscles and blood supply, and microsurgery.

Until recently, Vistnes elaborated, surgeons thought skin could only be moved if the blood supply remained intact. For example, in order to graft skin from one part of the body to another, it was necessary to bind the two parts together, let the skin begin to grow on the new area while still being kept alive by its attachment to the original area, and then separate the two parts once again.

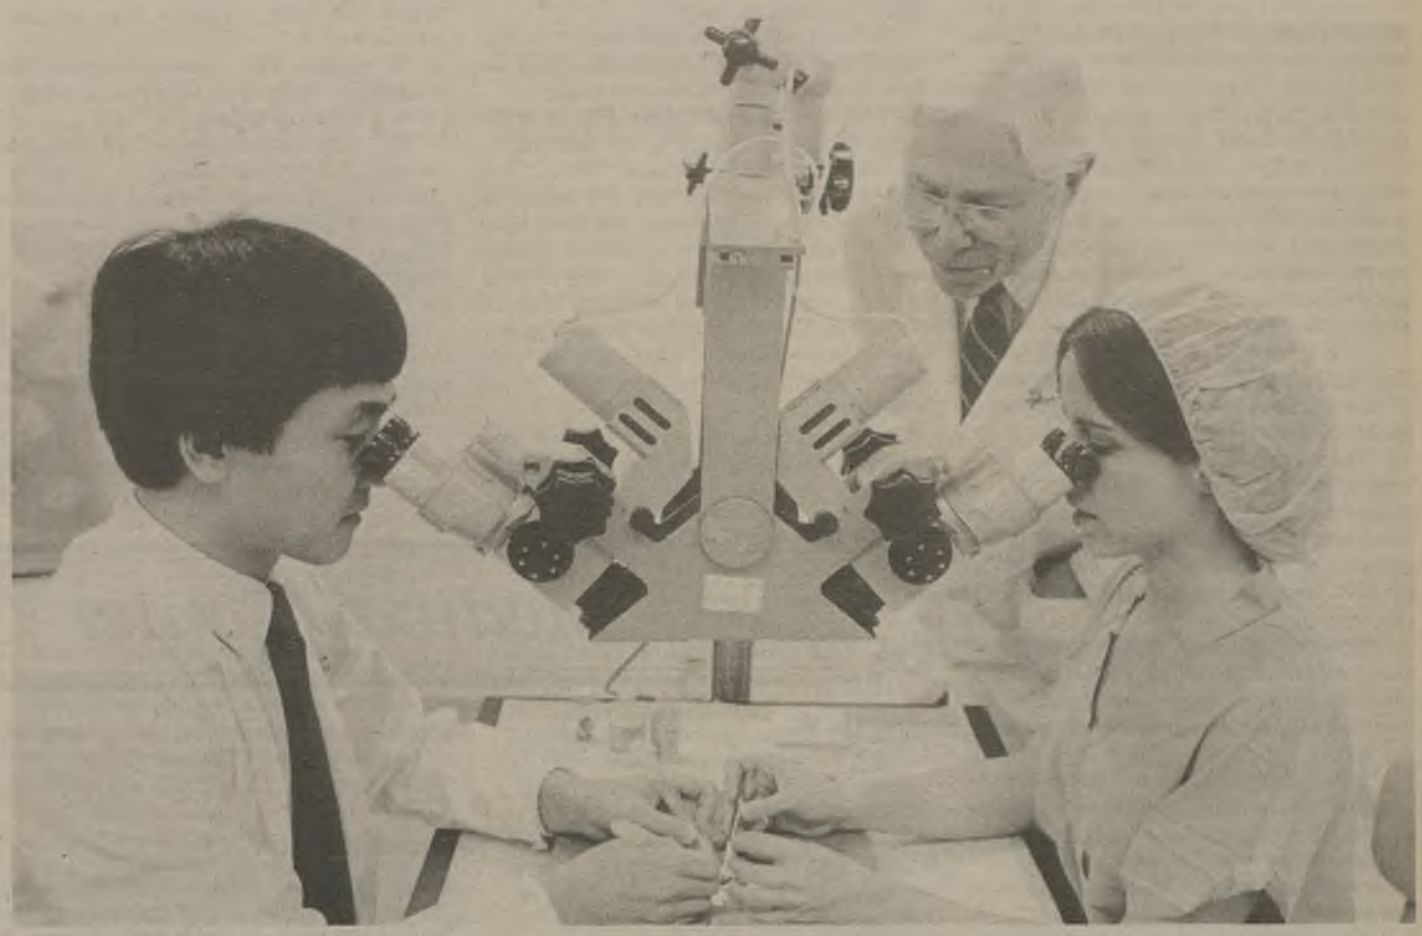
Now surgeons can completely remove a unit of skin and muscle from one area, and transfer it to a new area, without the two areas having to be physically attached to each other during the process.

"This discovery shortens the hospital time for the patient, cuts the number of operations to only one, allows the patient more comfort, and it doesn't ruin the site the skin is taken from," Vistnes explained.

What's more, he continued, it enables surgeons to do procedures such as reconstructing breasts on women who have had mastectomies, and replanting patients' limbs that have been severed.

"For example," Vistnes said, "some time ago an Alaskan man caught his hair in a machine and his whole scalp was torn off. The man was flown down to Stanford, with his scalp in a bucket of ice. Dr. Vincent Hentz (associate professor of surgery) replanted it, and today he has a full head of hair. Ten years ago this wouldn't have been possible."

Not to be overlooked in the success of such procedures is the use of microsurgery techniques. With the aid of microscopes, surgeons can now see how to reconnect miniscule tendons, blood vessels, muscles, and other components of the body. This ability, Vistnes said, enables surgeons to "salvage severely mangled extremities that would otherwise have to be amputated."



"Microsurgery is the most dramatic technical advance in years because it allows surgeons to transfer parts of the body, including skin, bones, soft tissue, and entire parts from one place to another," said Chase. "What's also very exciting is the transfer of muscles, often from lower to upper limbs, to take over the function of muscles that have been lost."

Other advances in the area of hand surgery, Chase continued, include the management of fractures. "By using mini mechanical gadgets, such as pins and screws, to hold the fractures in place, we can mobilize the hand immediately even though the bones are broken," he said.

This also cuts down on the length of time casts are used, if at all.

More implantable devices, such as artificial joints and bones, aid in the management of degenerative diseases, such as arthritis, Chase added.

Considered by many to be the "father" of hand surgery, Chase is also developing a computer image of the hand. By converting each component of the hand to a numerical formula, it will be possible to get a multidimensional image on a screen. By making all the components movable, Chase said, surgeons will be able to learn the biomechanics of the hand, to aid them in managing hand injuries and in building robotic hands. —Shirley Kraus

Dr. Lars Vistnes (standing), chief of the Plastic and Reconstructive Surgery Clinic, watches eagerly as residents Seung Kim and Jane Weston practice microsurgery techniques.

The specimen under examination

Plastic Clinic consolidates thanks to new location at Hoover

Stanford University's plastic and reconstructive surgery clinic has a new home at Hoover Pavilion as of Feb. 1.

The move, part of the Stanford University Clinics renovation project, consolidates the clinic to allow patients to register, and receive treatment and therapy all in one area.

Hoover Pavilion is Stanford University Hospital's annex on Quarry Road and El Camino Real, Palo Alto.

"Our offices used to be in one place, our clinics in another, and our research laboratories in yet another place," noted Dr. Lars Vistnes, clinic chief. "Now we have everything concentrated in one area to offer care more efficiently."

The new clinic has access to two operating rooms for major operations, an outpatient minor operating room, available Hospital rooms within the proximity, and laboratories in addition to larger examining rooms.

"We're gaining hours of availability in addition to space," Vistnes explained. "Before we had to share the rooms with other specialties. This is all ours."

Vistnes is also excited about the chance to offer patients increased continuity of care. Because of the proximity, the nurses in the clinic will be able to see hospitalized patients as well, he said. Occupational and physical therapists will also be at the clinic. "It will be more of a family affair," Vistnes concluded.

"We're quite excited about the move because it places us in direct relationship to inpatient and outpatient services, just one floor below the operating rooms, and near occupational and physical therapists," added Dr. Robert Chase, chief of the hand unit of the clinic.

The clinic is open from 8 a.m.-5 p.m. Monday through Friday. General plastic and reconstructive surgery patients should call 497-7001, and hand surgery patients should call 497-5256 for information and appointments.

New billing system hoped to increase efficiency

The major changes in SUH's patient billing system may be more felt than seen by the 44,000 patients who currently have active acounts at the Hospital.

Yesterday, Feb. 1, the Hospital converted all patient billing accounts to a new Patient Accounting System (PAS).

The change includes the addition of 75 computer terminals which are expected to assist the 150 employees of the Patient Accounting Department to produce accurate bills more efficiently and less expensively, said Suzanne Cameron, the department's director.

"One thing patients will feel more than they will see is their improved accessibility to our billing personnel when they have questions," Cameron said.

"Operationally we have made a very substantial change in the handling of phone inquiries. We now have six persons who can call up a patient's billing information on a computer terminal and provide answers immediately," Cameron explained.

Previously, an individual employee was responsible for about 2,000 paper files. Queries had to be referred to the individual employee responsible for locating the file.

"Delays predictably occurred when the employee was on break or otherwise absent from the office. It was frustrating for the patient."

Some changes will be seen directly by the patient, Cameron said.

"Bills will be clearer and include more information," she said. For example, patients previously were billed for items without being told how many. "Patients would wonder why they were charged one figure for a lab test during one stay and five times more the next.

"What the bill didn't tell them was that the second time they had five tests and the first time only one," Cameron said.

"We also have the capability to write individualized messages to the patients via the computer terminals now. We can tell patients right on their bill, for example, that their insurance company has been billed. Before the only capability we had was to write a separate letter," she added.

Also, one computer terminal will be placed in the Emergency Room, giving that department the capability to gain vital information on patients more quickly.

"If someone comes in in a coma, and we need to get information quickly, the computer can tell us his or her medical record number almost instantly if the person has been a patient here before," said Cameron.

"It could also provide next-of-kin information quickly, if there was a need to contact family members."

The new system services all Hospital patient billing activities, as well as laboratory or other Hospital procedures performed for outpatients at the Clinics. Not included will be Faculty Practice Program professional fees which will continue to be billed separately.

Cameron said the new system is being driven by a new Data General minicomputer at the Center for Information Technology on the main Stanford campus.

The cost for hardware was $500,000 and all software is being leased on a monthly contract. Cameron said the former 16-year-old billing system cost $1.5 million annually to operate and that the new system is expected to cost much less.

A team of 20 people under the direction of Project Manager Bill Rolapp worked 10 months to install the new billing system, Cameron said.

The capability of identifying bad debts more quickly is expected to result in additional cost savings, she said.

The PAS is the second step in a multi-year approximately $3.5 million Hospital-wide reorganization of data communications and record keeping.

The first step was the implementation last year of a computerized master patient index, which gave Admissions personnel much faster access to a former patient's medical record.

—Mike Goodkind

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

ONGOING: CPR courses at SUH. A variety of times are available to take this course, which is designed for those 13 and older and trains for Red Cross certification. A $10 fee per person is required. For further information, call the Life Support Training Center at 497-7907.

WEDNESDAY, FEBRUARY 2

Basic Science Research Colloquium: "Possible Roles for DNA Topoisomerases in Gene Expression"—Dr. Douglas Brutlag. 5 p.m., Fairchild Auditorium.

Dept. of Neurology Grand Rounds: "Infantile Spasms"—Dr. Joseph Lacy (Palo Alto Medical Clinic). 5 p.m., C364.

Div. of Orthopedic Surgery Grand Rounds: "Evaluation and Treatment of Back Pain"—Dr. John Hanbery. 8:30 a.m., M114.

THURSDAY, FEBRUARY 3

Nursing Educational Services: Basic EKG Interpretation Workshop. Four sessions—Feb. 3, 10, 17, 24. Registration required. 7 to 10 p.m., W005. For further information, call Carole Kidder at 497-6366.

Dept. of Medicine Grand Rounds: "Medical Application of Synchrotron Radiation"—Dr. Edward Rubenstein. 8:30 a.m., Fairchild Auditorium.

Dept. of Pharmacology Seminar: "The Molecular Basis of a Simple Behavior"—Dr. Richard Scheller. 4:15 p.m., Pharmacology Library R358.

Div. of Otolaryngology/Head and Neck Surgery Grand Rounds: "Injuries of the Temporal Bone and Facial Nerve"—Drs. John Shinn, Victoria King, Steve Denenberg, Clough Shelton. 6 p.m., Wang Library R117.

Dept. of Pediatrics Grand Rounds: "Respiratory Syncytial Virus Infections in Infancy"—Dr. Ann Arvin. 8 a.m., M106.

FRIDAY, FEBRUARY 4

Dept. of Structural Biology Seminar: "Monoclonal Antibodies to Tumor Antigens"—Dr. Gerard Evan (UCSF). 3:15 p.m., D102.

Dept. of Structural Biology Special Lecture: "Leonardo da Vinci: Artist or Anatomist?"—Eric Glasgow (Prof. of Anatomy, Australia). 4:30 p.m., Fairchild Auditorium.

SATURDAY, FEBRUARY 5

Stanford Hospital Auxiliary Volunteer Orientation. 9:45 a.m., W001. For further information, call the Auxiliary office at 497-6636.

MONDAY, FEBRUARY 7

Film: "My Brother's Keeper"—sponsored by Committee on the Well Being of Medical Students. Following will be a discussion led by Dr. Vincent Dandrea, Dr. Stephanie D. Brown, and Sally Rubenstom. 4:30 to 6 p.m., Fairchild Auditorium.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Getting the message out on life-saving skills

The floor is littered with limp bodies; rescuers crouch over the lifeless, attempting to blow breath into their still forms. Words of encouragement come from helpers nearby.

It looks like a cluttered emergency scene, but it's actually Stanford Hospital emergency department's life support training center, a facility dedicated to training local citizens and health professionals in cardiopulmonary resuscitation (CPR) and advanced cardiac life support (ACLS) techniques.

Above, community members practice life-saving skills on a manikin during classes run by the Palo Alto Junior League, and held at the Center.

On the Peninsula, the American Red Cross and the American Heart Association traditionally have certified local citizens in life support techniques. The Center and its equipment are available to these organizations for their training activities, as well as to members of local service clubs who are trained as instructors and can train others at the Center.

For further information about the Center and its activities, call 497-7907.

...News Notes...

Six areas of the Hospital have been targeted for pilot cost containment projects in 1983.

The cost containment subcommittee of the Medical Board has earmarked Diagnostic Radiology, the Emergency Room, North Intensive Care Unit, Neonatal ICU, a nursing unit to be selected, and the Compromised Host Unit.

Chief of Staff James Silverman said meetings would begin early this year in each of the areas to develop methods of decreasing the overall cost of the units.

* * * *

Dr. Thomas Hoffman, assistant professor of dermatology and a Menlo Park physician, has been elected to Fellowship in the American College of Physicians.

* * * *

Dr. Robert Black, clinical professor of pediatrics, has been appointed to the California Health Planning Law Revision Commission.

* * * *

Employees are encouraged to make use of the escort service offered by the Facilities Protection Department at SUMC. Hilary Ryniewicz, director of Safety/Security Services, reminds personnel that from 10 p.m. till 12:30 a.m., a vehicle (No. 2) patrols the north, west, and south SUMC parking lots, offering rides to incoming staff to the main Hospital entrance.

The vehicle passes the main entrance every 10 minutes to pick up outgoing personnel for delivery to indicated lots.

Another vehicle (No. 1) patrols Hoover, Lot "Q" and east SUMC parking lots, offering assistance to all incoming and outgoing personnel.

In the event that personnel desire escort service at other than the indicated times, they should contact Communications at 7-5931, or Facilities Protection at 7-7222, 7-7223, 7-7224 or 7-7225. They will be met at a predetermined site and time.

The Facilities Protection Department also provides a vehicle jump-start service for employees and visitors whose cars have dead batteries in SUMC parking lots. Persons should contact the department at the phone numbers listed above. This service is provided on a 24-hour basis.

The department can also assist people who have locked their car keys in their vehicles.

Frank Montalvo has been appointed manager of wage and salary administration for SUH effective Feb. 1, announced Don Thomas, director of Personnel Management.

Montalvo has over ten years of experience in different facets of personnel management, with his most recent appointment as wage and salary administrator at the University of California, Irvine Medical Center. He did his undergraduate work at Cal State University and has also done some graduate work there and at U.C., Irvine.

Montalvo will report directly to Thomas. His office is located at 770 Welch Road, and he can be reached at 497-6855.

Don Thomas

Don Thomas, director of personnel management at SUH, has been named an Accredited Executive in Personnel (AEP) by the Personnel Accreditation Institute, Inc., the accreditating body for the nation's personnel professionals.

Besides his extensive experience in personnel management, Thomas has been active in teaching and currently serves on the part-time faculty at the Menlo College School of Business Administration.

Accreditation for personnel, industrial relations, and human resource management professionals was introduced by the institute in 1976. Individuals who become accredited must update their status every three years.

The primary purpose of the accreditation program is to improve performance within the profession, indicating that the accredited individual has mastered a validated, common body of knowledge.

* * * *

The Medical Center Auxiliary has approved requests to fund two electric operating tables for the Hospital, at a cost of $36,788, and five passive leg exercisers for physical therapy, at a cost of $14,883.

* * * *

Physician impairment is the topic of the film "Our Brother's Keeper," scheduled to be shown 4:30-6 p.m., Feb. 7, in the Fairchild Auditorium. The film, which kicks off Mental Health Week, will be followed by a brief discussion led by Dr. Vincent Dandrea, clinical associate professor of psychiatry; Dr. Stephanie Brown, acting assistant professor of psychiatry; and Sally Rubenstom, fourth-year medical student.

* * * *

The Facilities/Projects Department is conducting an electrical power factor correction project. Weather permitting, work will again be performed between 8 a.m. and 6 p.m. Sunday, Feb. 6, to tie in the new power factor capacitors to the normal electrical power source to the Medical Center.

There may be some momentary interruptions of normal electrical power during the work period. Emergency power will not be affected. The project affects only the following buildings: Core, East, West, Boswell, Grant, Lane, Medical and Edwards.

All departments will be notified in the event that rescheduling is necessary. All questions should be directed to Bob Bohnet, electrical foreman, at 497-5555.

Lecture: sex after a heart attack, sorting the facts from fiction

"The Loving Heart: Sex after a Heart Attack" is the topic of a program to be held 7-10 p.m., Thursday, Feb. 10, in the Sherman Fairchild Auditorium at Stanford University Medical Center.

Sponsored by Stanford Nursing Services, the workshop will attempt to provide factual information to health care professionals, increasing their ability to contribute to patient awareness and understanding.

A lecture-slide presentation will identify numerous myths associated with the subject, describe the phases of sexual activity, discuss various positions for sexual relations, and review medications and their effects on the heart and sexual functions.

Speaker for the program will be sexologist Richard Sharon, M.A., Ph.D., who has his doctorate from the Institute for Advanced Study of Human Sexuality where he studied under Dr. Wardell Pomeroy, co-author of the Kinsey Reports.

Sharon has published in the *Journal of the American Medical Association* and is the author of two books and numerous articles dealing with sex-related issues. Currently practicing in Burlingame, California, Sharon has completed a large research study on the effects of heart attacks on the sexuality of men, women, and their respective partners.

Fee for the course will be $5, which can be paid at the door, with an extra $10 for nurses who wish to receive continuing education credit. Net proceeds will go to the Friends of Nursing Scholarship Fund.

The program is open to the public. For further information, call Katherine Barnett, R.N., at 494-8074.

State approves new scanner for SUH

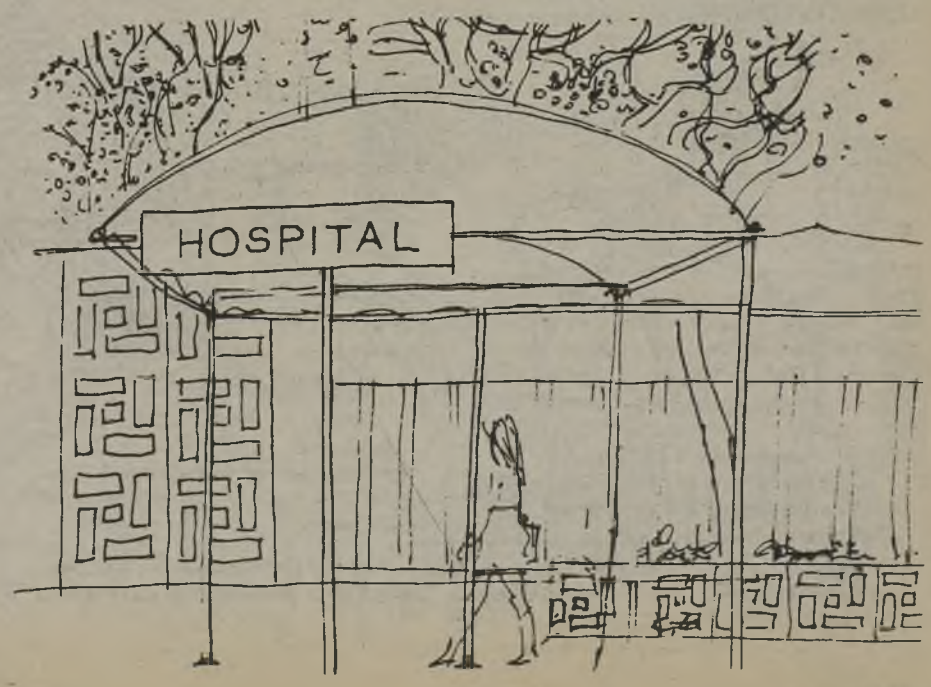
Stanford University Hospital has been granted approval by the state to replace its present EMI computerized head scanner with a new GE 9800 scanner.

The new instrument, to be used for head scans, will allow faster scanning and greater diagnostic quality. It has the capability to be upgraded in the future to perform body scans as well.

Total cost of the new equipment is $1,257,840, according to Ron Hill, director of Health Services Planning.

In addition to the head scanner, the Hospital operates a GE 8800 scanner which accommodates both body and head scans.

The new machine is expected to allow physicians to scan up to 20 patients per day instead of 10 as at present, because of more rapid computer processing. More than 6,000 head scans and 1,365 body scans were performed at Stanford Hospital in 1981.



The two existing scanners will remain in use during construction and installation of the new scanner. An area in the Phase I building used for general radiographic activities and an adjacent service corridor will be converted into a new scanner area. According to Hill construction should begin by March.

Blood drive next week; come donate!

The Stanford University Blood Bank will hold a blood drive in the Medical Students' Lounge 11 a.m.-3 p.m. Thursday, Feb. 10. Medical School faculty and students especially are encouraged to participate, and all Medical Center staff are invited to donate at this time.

According to Renee Burgard of the Blood Bank, patients at SUH and Children's Hospital at Stanford often have complex and sophisticated transfusion needs, and the demand for all blood products is heavy. The two hospitals combined use more than 100 units of blood each day, and in order to support this need, the Blood Bank asks for everyone's support.

Call 497-7831 to make an appointment to donate Feb. 10, or just drop by the Lounge during the day's scheduled blood drive.

Tinkering with the MBA curriculum

BY RICHARD KUROVSKY

The 1982 MBA Review Committee Tried But Failed to Overhaul the First-Year Curriculum for MBA Students. The Issues It Raised, However, Will Affect the School for Years to Come.

The 1982 MBA Review Committee at the Stanford Business School is now history. The 14-member committee came into being in the spring of 1981 and issued its lengthy report and recommendations on the MBA Program a year later. The GSB faculty met as a whole last spring to consider the committee's dozen or so recommendations, the most sweeping and important of which would have replaced the first-year "core" curriculum with a set of distribution requirements. As might be expected, that controversial proposal dominated the faculty discussions. By the end of the debate—and without a vote—the proposal was moribund. Another way to view what happened, according to GSB Associate Dean for Academic Affairs Eugene J. Webb, was that "the faculty, in effect, endorsed the concept of the core."

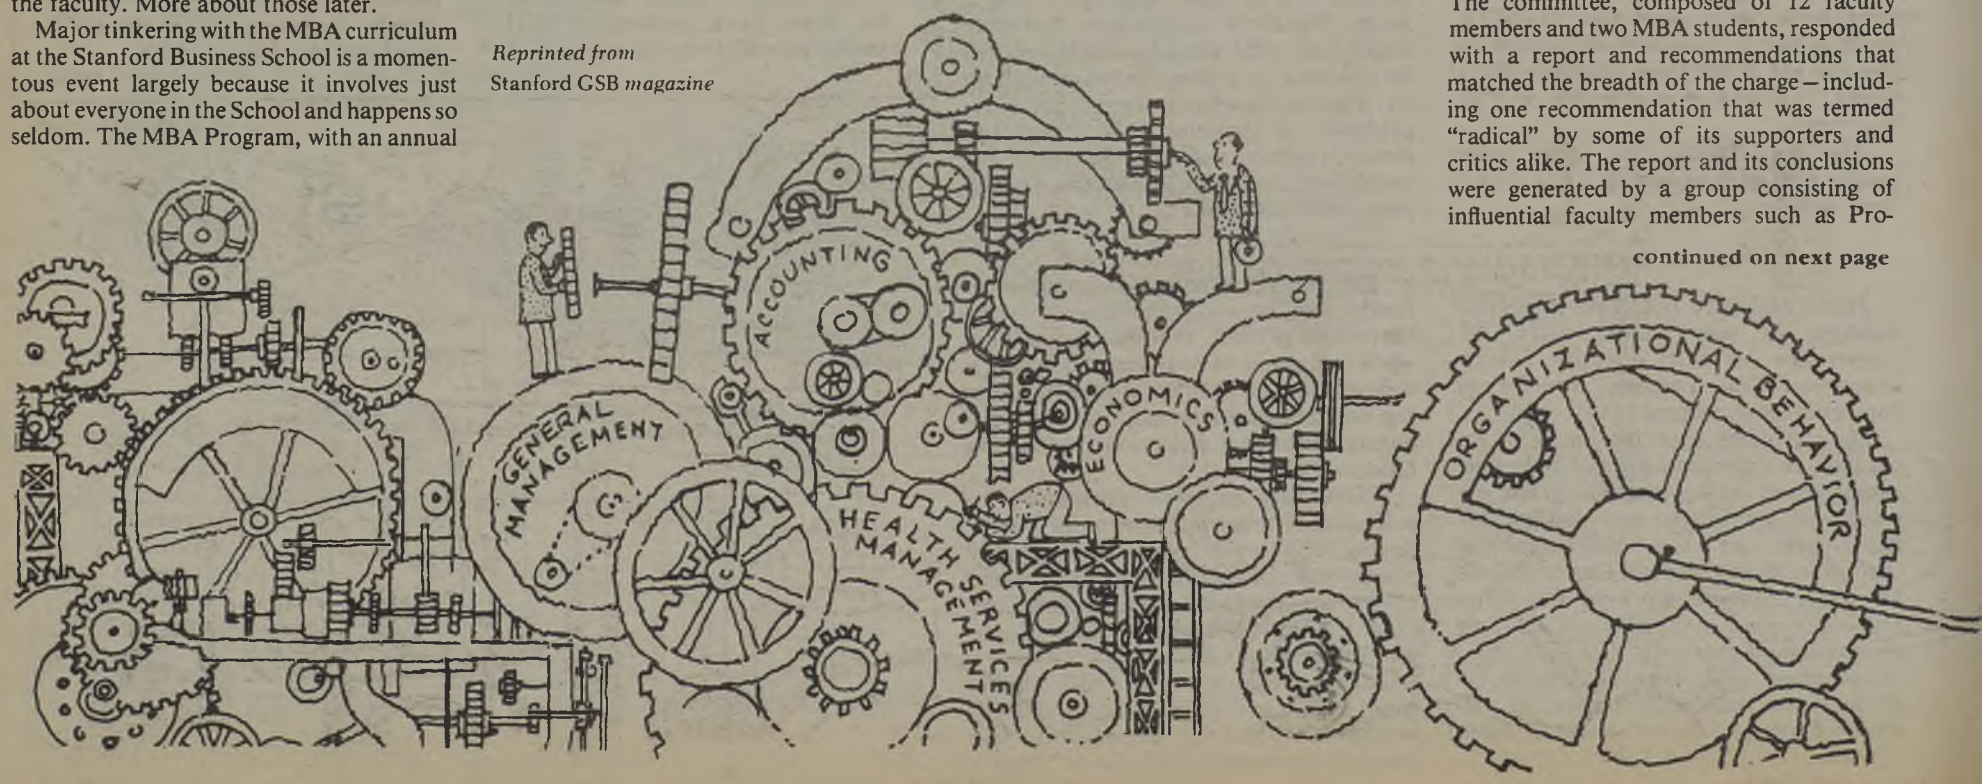
But the story continues. Like the salesman who somehow managed to get his foot in the door, the 1982 MBA Review Committee still has a fair chance of making a sale to the faculty. Although its major proposal was defeated, the committee effectively articulated several problem areas in the MBA curriculum and set forth an agenda of items that will occupy the School for years to come. In addition, several of the less controversial recommendations received at least tacit approval from the faculty; some are already being addressed by the GSB administration, such as upgrading of computer facilities and instruction, encouraging experimentation, disbanding the first-year "cohort" structure during winter quarter, and increasing the breadth of the MBA Program by expanding the faculty. More about those later.

Major tinkering with the MBA curriculum at the Stanford Business School is a momentous event largely because it involves just about everyone in the School and happens so seldom. The MBA Program, with an annual enrollment of over 600 students, is the centerpiece of the School's academic programs. The GSB's 72 permanent faculty members play all the leading roles in the life of the MBA Program, shaping and guiding it over time as architects, builders, inspectors, caretakers, and critics. Nearly every faculty member teaches one or more MBA courses during the academic year; the professional reward system at the School is directly tied to the teaching effectiveness and course development abilities. Naturally, the faculty's vested interest in the integrity and vitality of the MBA curriculum ensures a careful, considered, and cautious response to calls for major changes in the program.

The need to make major changes or even to discuss them has been felt only rarely. The last major curricular review and overhaul came in 1971, after a detailed analysis of the MBA Program by a specially appointed review committee chaired by James C. Van Horne, a GSB finance professor and former associate dean for academic affairs. Between the reviews, the curriculum can be modified slightly, thus allowing for growth of the curriculum without distorting its goals. Yet in any case, the process of altering the curriculum remains evolutionary and carries the important stipulation that no missing links are permitted. Curricular movement must be incremental, smooth, and logical.

Some parts of the curriculum are easier to change than others. The last two curricular reviews have concentrated to a large extent on the first-year or "core" section of the curriculum because it is the most difficult to alter. As the foundation for the MBA Program, the core is the only part of the curriculum encased in a relatively rigid structure. Changing the core requires the consensus of the faculty, which can be difficult to achieve. "The faculty is a group of free spirits," said William Beaver, a GSB professor of accounting and a member of the MBA Review Committee. "That attribute—the diversity of the faculty—is a key factor in its excellence. But at the same time, it can make major changes difficult to achieve."

The MBA curriculum is divided into required and elective courses. The core section consists of 13 required courses, most of which are taken during the first two quarters of a student's first year in the program. The core is generally considered to be "basic training" for Stanford MBAs; it exposes them to all disciplines of the GSB and develops analytic techniques necessary to the study of management. As basic training, the core is especially rigorous and challenging. It tests the endurance and intellect of first-year students by presenting them with an almost overwhelming amount of material to be learned, much of it analytic and quantitative in nature—Stanford Business School is widely known, after all, for its emphasis on number crunching. Thinking of the core as basic training can become irksome and confusing to first-year students, who often instinctively look for some overarching pattern to the required courses—a "Stanford View on Management." They never find one because it doesn't exist, a point stressed in the committee's report. Indeed, the disparate viewpoints at the School are widely viewed as the GSB's major source of strength. As the committee noted in citing a 1977 memorandum written by GSB Professor of Accounting Charles Horngren: "Stanford has no sharply defined philosophy other than eclecticism; in my opinion, its heterogeneity is its greatest strength."



Students traverse the core in groups or "cohorts" of about 60 people each. The committee's report noted that the cohort's most redeeming feature is its function as a socialization device: It helps students get to know one another more quickly and encourages group interaction and cooperation in and out of class—another hallmark of the Stanford MBA Program. However, the report said that the cohort structure had locked students into a single group for two quarters, with little or no choice over their instructors, sequence of courses, or classmates. Although all students admitted to the Stanford MBA Program must meet extremely high academic standards, students still arrive with varying backgrounds and levels of abilities—especially in the quantitative area. The cohort core mixes students together in the first-year classes, which can have a negative impact on the course and the instructor. David Kreps, a professor of decision sciences and cochairman of the committee, said he sometimes feels constrained in his teaching because of the presence of quantitatively less adept students in his classes. "I have to teach so that most students can be moved along. In decision sciences, I aim for the 75th percentile," he said.

The elective portion of the curriculum, in which students devote a portion of their first year and almost all of their second year, is a constantly-changing relative of the core. While the core has experienced three major changes over the past decade, about half the elective courses offered in the 1982–83 GSB Catalog didn't exist five years ago. The considerable fluctuation in the elective area is caused by two major factors, one procedural and one coincidental, according to Associate Dean Webb. Under a so-called One Year Rule, any faculty member may design a new elective course and teach it on a one-year experimental basis, subject only to initial approval by the Dean's Office. If the course succeeds and the faculty member wants to continue teaching it after the first year, the course is then brought before the full faculty for what is normally perfunctory approval. Courses that don't work out usually die by the hands of their creators. Last June, GSB professors approved continuance of seven new elective courses created in this way. Electives also change as a result of faculty turnover. Since GSB elective courses reflect the interests and diversity of the individual faculty members, course content and emphasis can change substantially from professor to professor and year to year. No two courses, even with the same name, are ever taught exactly alike. Course content isn't standardized. The elective area's capacity to reflect the school's diversity and to change rapidly earns it high praise. Prof. Kreps believes that elective courses, and not core courses, make up the true heart of the MBA Program. "It's what we as faculty members do best, and I think the students recognize it," he said.

The 1982 MBA Review Committee was given the broad charge of examining the entire MBA Program for its strengths and flaws, and of recommending a course of action to correct problems or inadequacies. The committee, composed of 12 faculty members and two MBA students, responded with a report and recommendations that matched the breadth of the charge—including one recommendation that was termed "radical" by some of its supporters and critics alike. The report and its conclusions were generated by a group consisting of influential faculty members such as Pro-

fessor of Finance William F. Sharpe, Professor of Management James G. March, Professor of Economics and former GSB Associate Dean James E. Howell, Professor of Marketing David B. Montgomery, and Associate Dean Webb, who served as committee cochairman, among others.

The controversial nature of the main curricular recommendation may have been fueled by research on the attitudes of past and present MBA students toward the Stanford program. In attempting to define the problems within the MBA curriculum, the Review Committee spent hours listening to comments of people in and out of the School—students, faculty, alumni, and outside interest groups, including the business world. But data on the MBA classes of 1971–76, 1981, and 1983, obtained from surveys and focus group discussions, provided a great deal of provocative material for committee deliberations. Tracy S. Smith, MBA '82 and now a Ph.D. student at the School, was the committee member responsible for much of the research. "My main objective in wanting to be a participant on the Review Committee—given how infrequently reviews are done—was to encourage it to take into account the views of students and alumni. In the end, I think the committee learned a lot about how students perceive the MBA experience at Stanford."

The research showed that students have a large number of complaints about the core. A substantial number of students said the heavily analytical nature of the core crushed

"The committee's recommendations arose from a sentiment that we've created a pressure cooker for students. The committee was acutely sensitive to issues of personal stress."

— Tracy Smith

their spirit, intuition, and inventiveness. Another substantial number felt completely overloaded with work, with no time to think. Nearly all students complained that some of their assignments seemed like busywork. The elective area of the curriculum, in contrast, was received far more positively by the students, whose main concern was that the administration reacts too slowly in adding extra sections of popular courses. Tracy Smith said the committee's recommendations arose "from a sentiment that we've created a pressure cooker for students. The committee was acutely sensitive to issues of personal stress."

The committee blamed frustrations over the MBA Program almost entirely on the cohort core. The report stated: "We believe that the cohort core is no longer the best mechanism by which to teach the common knowledge that every MBA ought to possess: It imposes entirely too many constraints on both faculty and students." The committee unanimously agreed that every MBA ought to be exposed to the different ways in which managers think, but the exposure need not be uniform. The committee's solution was to replace the core with a distribution requirement scheme that would have required students to take at least one course from each of the major areas represented in the curriculum: accounting, business policy, finance, organizational behavior, etc. Underpinning the proposal was a philosophy that "there is no single program of study that is appropriate for all our MBAs—or, if there is, we have not found it, nor are we likely to," according to the report. By eliminating the core and disbanding the mandatory cohorts, the committee fashioned a proposal that mirrored the successful (and noncontroversial) structure of the elective courses. Associate Dean Webb described the solution as "adaptation without destruction."

The committee said the change would bring about three primary benefits. First, it would end the lock-step of the current system by not forcing students to take courses in any proscribed order. "The premise here is that no single progression of courses is best for every student," the report said. "Some may wish to delay heavily analytical material; others may wish to concentrate on analysis early on." Second, the new system would allow greater diversity in the core (200-level) courses. Students could enroll in sections of courses that were either more or less analytic—not unlike the current, limited option of "poets" and advanced sections of some core courses. The "poets" sections are designed for students who are less quantitatively adept. This fall, for instance, students could have taken a "poets" section of the optimization (260) course. In addition, diversity would allow professors to offer courses that differed in terms of emphasis or pedagogical style. Third, the proposal would reduce the number of required courses in the belief that students are too constrained under the current load. In effect, the proposal would have allowed students to escape from taking, for instance, both micro and macro economics core courses, and would have instead required only one of them. Although Prof. Beaver noted that Stanford MBAs spend more time in the classroom during their first year than business students at the University of Chicago spend in two years, faculty critics later assailed the reduction as an assault on the rigorousness of the Stanford MBA Program. The committee admitted that it could not predict how its proposal would affect demand for core level courses—a deficiency in the eyes of faculty members who criticized the report for its lack of information on how the proposal would ultimately affect the School. Prof. Kreps said in an interview that he believed "90 percent of students would do [under the new proposal] what they do now. Still the idea that 10 percent or more would be doing something radically different has a philosophical implication—that there is no core set of ideas that we are presenting to students."

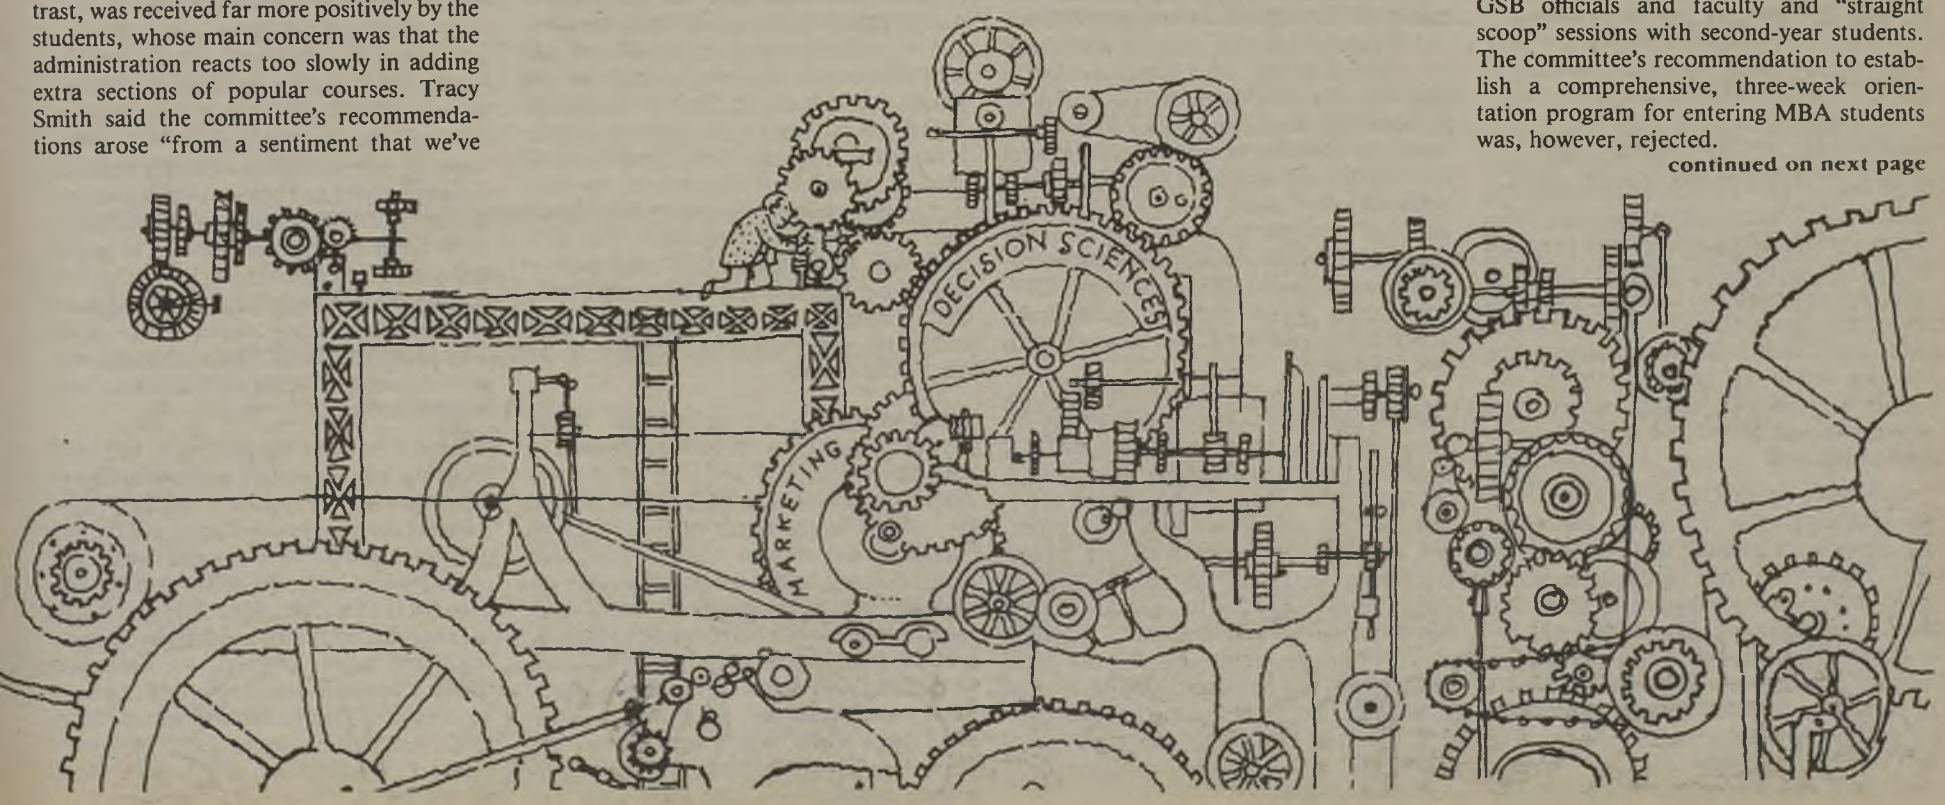
Overall, the committee believed that the proposal would "significantly improve the quality of classroom life by removing many of the frictions that currently beleaguer us." Prof. Beaver said, "To me, it was a move in which everyone gained."

But the faculty disagreed. Committee members failed to convince their colleagues that the problems of the first-year MBA curriculum merited a major change in direction. "The present structure has served us well; we should depart from it carefully," said Professor of Accounting Robert K. Jaedicke, who opposed replacing the core. Jaedicke, a former GSB associate dean for academic affairs and acting dean in 1979–80, predicted that the School will continue to work on problems identified by the committee, though it would probably never fully adopt the committee's solution—or do so only to a limited degree. He said, however, that the faculty's rejection of the plan shouldn't be taken as "evidence that nothing will happen. There are some changes that are called for. I think you will see the School move in that general direction." He suggested, for instance, that GSB faculty members within the various disciplines may eventually decide to substitute a distribution requirement plan for their own core courses. Such a plan would rely on faculty members to disband the core concept area by area, if they thought it was necessary. In any case, he said, the report must be seriously considered simply because of who the committee members were and the fact that they represented 14 percent of the faculty.

Members of the Review Committee were surprised and disappointed by the faculty's rejection of their major ideas, though they also predicted the GSB will change as a result of the report. "If nothing else, the report raised the consciousness of the place," said Prof. Kreps. "I know at least one colleague who would call that a rationalization, and that we should admit we were defeated. But

"The present structure has served us well; we should depart from it carefully."

— Robert Jaedicke



pieces will slowly surface—one or possibly two, though I don't think we'll see anything radical. But the strains on the system are not going to go away." Tracy Smith agreed: "I feel good about the consciousness-raising as an end, especially when you're dealing with an organization that runs itself by consensus. But I will be disappointed if nothing changes after a couple of years."

Unfortunately, the faculty's swift and efficient dismissal of the main proposal obscured some of the successes scored by the Review Committee—including the establishment of an agenda for action by the School. Several recommendations, which required only administrative approval or implicit faculty consent, have already been launched or are now being planned. They include:

—*Experimental disbanding of the first-year cohort system.* The GSB administration has okayed breakup of the cohorts on a trial basis during the 1982–83 winter quarter, according to Gary Williams, GSB assistant dean for the MBA Program. The move will give first-year MBA students the opportunity to select instructors for their core courses.

—*Modifications in the orientation program for entering MBA students.* The GSB revamped the format of orientation activities for incoming first-year students this past fall at the urging of the Review Committee. The committee noted that students complained that previous orientation programs were too much, too fast, followed by nothing. This year's orientation program included a tightly run and informative meeting with senior GSB officials and faculty and "straight scoop" sessions with second-year students. The committee's recommendation to establish a comprehensive, three-week orientation program for entering MBA students was, however, rejected.

Panofsky reviews SLAC budget outlook during annual 'All hands' talk

continued from page 1

appears acceptable to almost everyone," he commented. Completing construction by the end of 1986 "depends critically on pushing as hard as possible our current research and development program designed to solve the technical problems."

The President's budget also includes two other important new projects: a "very substantial growth" in the Stanford Synchrotron Radiation Laboratory's facilities and an injector which will make it possible to generate low energy beams, possibly extending SLAC's use during the summer when it is highly restricted in electric power use.

SLAC has become an international center for high energy physics research, involving 25 American and 10 foreign institutions this year. Participating physicists include 231 from the U.S. and 69 from other countries. A total of 73 American and 16 foreign graduate students also use SLAC.

"There is no intention of any kind of changing our single-minded dedication to basic, open science," Panofsky said.

Both SLAC and SSRL are independent laboratories reporting to the University administration. Each determines its own program under general policies of the University. These specify that the work shall be free from any secrecy constraints and results be published with minimum delay.

SSRL, while independent, depends on SLAC for technical support in many areas on a reimbursable basis. "As SSRL expands, questions are raised whether this type of relationship will continue to serve the needs," Panofsky said. Accordingly Provost Albert Hastorf has appointed a committee headed by Prof. Sidney Drell, deputy director of SLAC and former head of the U.S. high energy physics advisory panel, to make long-range recommendations on relations between SLAC and SSRL.

If the President's budget recommendations are approved by Congress, it is "extremely unlikely" SLAC staffing levels will decrease, Panofsky said. "But we simply have not had time to analyze in what categories, if any, increases are warranted. It does appear, however, that the total amount of detailed engineering will be increasing substantially over the next year if we are to meet our schedules."

The linear collider can accommodate only one experiment at a time, he noted. "Even with today's large collaboration of physicists, the total number of people who can participate with SLC is considerably smaller than the total number now participating in SLAC's program."

High energy physics

But Panofsky emphasized that "above all, we are going to continue our normal high energy physics activities, both with stationary beams and colliding beam storage rings into the future, and will continue to probe new directions. . . .

"We have all been spoiled by the great spurt of discoveries and exploration at the Stanford Positron Electron Accelerator Ring (SPEAR) following the unsuspected phenomena that began to emerge at the end of 1974.

"In contrast, the regions of energies accessible to the Positron Electron Project (PEP) has thus far not shown up anything truly unsuspected or qualitatively new.

"All the results obtained at PEP and at our sister institution PETRA in Germany have improved our quantitative understanding of many phenomena. However, none of the new measurements have shocked the physics community into changing the basic view of things which had emerged previously.

"It is on the basis of this picture—excellent performance of PEP and its instruments, but thus far not too rich a field for new surprising results—that I cannot forecast how long the PEP program will continue once the SLC is fully operational. Naturally, we have to be fully flexible. . .pending analysis of those measurements now in progress at PEP and PETRA."

Proposed regulations on draft registration are issued

continued from page 1

Rosenzweig is preseident-elect of the Association of American's Universities, 52 leading U.S. and Canadian graduate-level institutions.

According to SAC, Education Secretary Bell, in a memo to David Stockman, director of the Office of Management and the Budget, said "The means proposed (for this legislation) would require a level of unnecessary federal intrusion and administrative complexity and burden we roundly oppose."

At a news conference Jan. 21, Bell said "The law is clear and the government will carry out its responsibility. We hope we can do that fairly but firmly. The message is simple: no registration, no student aid."

Major Gen. Thomas K. Turnage, director of selective service, told reporters: "If a man does not accept the basic responsibility of a society, he has no claim to the benefits of that society."

The proposed regulations would require financial aid applicants to complete a statement certifying they were registered or they were not required to be registered.

The law has been challenged by the American Civil Liberties Union in Minnesota. The ACLU says the law discriminates on the basis of sex, age and income, and will have a disproportionate effect on minorities. It also contends the legislation violates Fifth Amendment rights and violates the Privacy Act.

In the statement circulated at Stanford Tuesday, SAC notes that the legal penalties for nonregistration "are already severe. No other felonies are given such special treatment."

The law turns educational institutions into enforcement agencies, will deny education to some of the nation's most conscientious youth, and will add to administrative burdens, SAC notes. It also "harkens back to the McCarthyistic loyalty oaths" and "further increases the militarization of our entire society."

The proposed regulations would limit appeals to students who assert they have, in fact, registered but have not been able to prove that registration.

According to *The New York Times*, Secretary Bell told reporters "Regardless of what your moral code says, the law is the law."

—*Assistance for new faculty in teaching.* New assistant professors at the GSB were given help on how to improve their teaching skills this fall, according to Associate Dean Webb. New faculty members were provided with books on teaching and given access to videotape materials and facilities. The committee urged such steps after noting that students frequently complained about the teaching abilities of untried junior faculty members—especially in the core courses, where first-year MBAs had no choice over their instructors.

—*Upgrading of the GSB's computer facilities and instruction.* The report states that the computer is an area "that has bedeviled the GSB for many years" and is the source of great student discontent. It also notes that the GSB is not succeeding in this area because of tremendous obstacles that need to be overcome, such as the astronomical costs of keeping up-to-date with technological advances and the enormous difficulty in hiring and retaining first-rate people in the computer area, who now find industry more financially and intellectually rewarding. The committee actually threw up its hands and said it couldn't decide how to proceed, but did recommend further study. A special faculty committee has been appointed and is now working with Associate Dean Charles A. Holloway to develop a plan for computers at the GSB. In the meantime, the School has substantially increased its existing computer capacity for use by students, faculty, and staff through the addition of two new mainframe computers and a number of microcomputers and remodeling of the computer center. A new course on management information systems was also instituted with this fall quarter.

—*Increase the breadth of the GSB by expanding the faculty.* The committee said the School must do better in subjects that fall under the general rubric of the "environment of business," embracing subjects such as political science and policy analysis, history, law, the nature of the workforce, etc. Its recommendation, which was accepted by the faculty, was to hire five to eight new faculty members over the next five years—including some senior appointments—who can operate in more than one discipline and develop these topics from a business school perspective. Associate Dean Webb said the costs involved may make the recommendation difficult to implement.

—*Expand the international approach of the School.* The committee noted that the GSB has struggled for many years with the question of instruction in international and global management. It recommended that the School do all it can to "lessen the provincialism" of existing faculty as the best long-term solution to the problem. The School reacted by establishing two general management programs for executives to be held next year in Geneva and Singapore. The programs will be taught by GSB professors—thus giving a number of senior and junior faculty members the opportunity to meet and work with colleagues and executives from other nations.

—*Establish a "venture capital fund" within the School to support experimentation.* The committee proposed and the faculty endorsed the idea of establishing a special fund that would, in the words of the report, be "designed for mutant ideas." The fund would be used to finance activities that are high-risk and substantially different from the School's current activities or programs, and which have a comparatively low chance of meshing with current instructional plans. Such experimentation, according to Associate Dean Webb, would help balance the strong conservative forces that exist in all mature organizations, such as the GSB. The proposal is now in the Dean's Office and awaits funding and further study.

In addition, the committee outlined a broad area, which it labeled second-track activities, that should be addressed by the School over the next several years. Such activities include further study of or improvements in communication skills for students, career planning and placement for students, courses in learning skills, and vehicles for stress handling. In issues related to gender and race, the School responded to the committee's recommendation for improvements by establishing a fall quarter course on sex roles in management. The committee's suggestion to change scheduling of classes was, however, defeated by faculty vote.

Besides pinpointing glitches in the MBA Program, the committee also identified why Stanford's MBA Program is so highly rated. Its list of the most positive aspects of the program included the diversity and intelligence of the student body, the diversity and intelligence of the faculty, the confidence instilled in the graduates, and the emphasis on teamwork and group projects. As the report stated: "Stanford should be proud of what it has attained. As one member noted, 'Stanford doesn't have to move in the direction of being a Harvard or a Chicago. It *is* Stanford.' "

New executive education programs planned in Singapore, Geneva by GSB

Stanford Business School will conduct two new executive education programs overseas this summer, one a three-week general management seminar in Singapore, and the other an international investment management seminar in Geneva, Switzerland.

The Singapore Executive Program, jointly sponsored by Stanford and the National University of Singapore, is expected to be the start of a long-term teaching and research relationship between the two institutions, said program director Harold J. Leavitt.

The International Investment Management Program is a seminar for European institutional investors, to be held under the joint sponsorship of Stanford and the International Management Institute (IMI) in Geneva. Aug. 29 to Sept. 2.

Professor of finance William F. Sharpe, program director, said the seminar will be taught by a six-member faculty team including three finance professors from Stanford and three from IMI. He said the Stanford group will concentrate on investment management theory and the generalizing of that theory in an international context. The IMI faculty will deal mainly with international accounting issues and the workings of the international monetary system.

He said the plan is for Stanford to host a similar seminar for American institutional investors in 1984 if both schools decide to continue with joint sponsorship.

Photographs of Old Russia **by Jack Kollman of the Hoover Institution will be shown at the Faculty Club until early March. Kollman is a specialist in the history of the Russian Orthodox Church and old Russian art and architecture.**

SOAR organizes new adventures

Do cross-country and downhill skiing, whale watching, wine touring, nature walks and San Francisco eating adventures sound appealing?

They're a few of the new and exciting adventures offered this quarter through SOAR (Stanford Outdoor Adventures and Recreation).

Gather the latest on what they're up to by stopping by the SOAR switchboard, located in the Recreation Center on the ground floor of Tresidder Union. Sign-up lists and information on activities are available there.

SOAR also provides assistance to groups and departments interested in organizing their own adventures. Call 497-4316 any Monday, Tuesday, or Friday between 10 a.m. and 2 p.m. with trip ideas or groups you'd like to put together.

AHA takes stand

The American Historical Association officially opposes the production of any new nuclear weapons systems, according to Stanford Prof. Gordon A. Craig, immediate past president of the organization.

At its December meeting, the AHA voted "to support the objective of negotiated nuclear arms reductions with the Soviet Union and other states."

To produce new nuclear weapon systems "at this time" would be "prejudicial to our national security and to the pursuit of peace," the AHA added.

Subsequently approved by the AHA Council, the policy position now has been transmitted to President Reagan, Vice President Bush, House Speaker Tip O'Neill, and the director of the National Security Council, according to Craig.

USW agrees to post notices

United Stanford Workers has agreed to post notices reminding its members not to engage in illegal secondary picketing of construction sites.

The agreement to post the notices for 60 days was made pursuant to a settlement approved by the Oakland regional director of the National Labor Relations Board.

The University charged the union with unfair labor practices when USW members and supporters picketed the Stanford Linear Accelerator Center, the Cardiovascular Research Building, and the Peter Coutts and Governor's Corner housing projects during a month-long strike in September and October.

Arms control panel set at I-Center

"Nuclear Arms Control: Soviet and American Approaches" will be discussed at noon Tuesday, Feb. 8, at Bechtel International Center.

Coit D. Blacker, associate director, and Condoleezza Rice, assistant director, of the Stanford arms control and disarmament program will discuss the history and content of recent Soviet and American arms control proposals in both START (Strategic Arms Reduction Talks) and INF (Intermediate Range Nuclear Forces) contexts.

Blacker has recently returned to Stanford from Washington, where he was a special assistant to Senator Hart of Colorado on national security issues. Rice is a consultant to the Rand Corporation. An assistant professor in political science, she previously was a Stanford arms control and disarmament program fellow.

The presentation is one of the I-Center's series of Tuesday luncheon/lectures focusing on major world problems. Tickets for the lunch are $2.50, available one week in advance. Brown baggers are also welcome at no charge.

Dance-video performance Sunday at 8

The Undergraduate Special Program at Stanford University will present "Conversing," a collaborative dance/video performance conceived and choreographed primarily by Duncan Macfarland and Clare Whistler, at 8 p.m. Sunday, Feb. 6, in Stanford's Terman Auditorium.

This one-time only performance explores the balance between technological advancement and the human element in art, and also includes the contributions of over a dozen San Francisco based dancers, choreographers, musicians, filmmakers and artists.

The performance will be given in conjunction with Undergraduate Special No. 31, "Experimental and Avant-garde Rock, 1965-Present." It promises to take full advantage of one of the special features of Terman Auditorium, a specially designed, fully-equipped television studio.

Donation is $5 general ($3 students). For ticket information, call 497-4317.

Nonexempt

39452-PM ADMIN ASST I: 75%; fixed term, 2/7/83-6/30/83; 8-3; asst Business Mgr of FCPM in the admin of all common svcs of Dept; respon for grant/contract admin incl prep of budgets & coord of submission of proposals to grnting agencies; monitor mthly budget statemts; totally respon for processing of all dept personnel/payroll records, supv clerical staff activs; answer questions requiring judgmt, knowl & interpretation of Univ policies & procedures; QUALIFIATIONS: typ 45; demonstrated supvry ability; must be tactful & discreet; familiarity w/Univ proceds & policies helpful; grant/contract admin exp preferable; contact Droni Moo, Med Ctr A106, 497-5639; $1366

42627-PM (JCC:2562) SECRETARY III: Prov sec'l support for 3 faculty members & their research staff; receive & screen all calls; make appts & maintain calendars; type & edit all manuscripts, corresp, grant proposals & clinic notes in finished form; monitor & maintain all grant budgets in res lab; order supplies & set-up procedures for follow-up; do lib & bibliographic searches; able to deal w/ a variety of indiv & set work priorities; QUALIFICATIONS: typ 60; med or scientific terminology required; able to transcribe fr dictaphone in fininshed form; good command of vocabulary & punctuation; able to organize & handle a large volume of paper in methodical & precise manner; exp in Univ grant policies & procedures helpful; exp or ability to learn NBI word processor; 1 send appl/resume to Phyllis Friedman, Dept. of Neurology, Med Ctr C338, 497-5072.; B14; $1440-1514.

41733-PM (JCC:2596) SECY II-SPEC: 75%; serv as sec to one professor active in labor law; handle all manuscripts, class work, corresp, nec arrangements for expense reports, travel, etc., phone calls & any other requests to make work flow smoothly; able to accept respon to plan own time at extremely busy desk; excel skills a must to keep up w/ work load; some legal bkground nec; QUALIFICATIONS: typ 60+; excel typing skills; good office bkground; willingness to learn computer sys; send appl/resume to Dena Landsman, Rm 113, Crown Quad.; B12; $983-1030.

36144-BP (JCC:2454) OFFICE ASST II: 50% between 10-5pm; 9.5-10 months appt. mid-Sept thru mid-June; office is respon for appl of Univ housing policies & administering student residence assignment flow to & fr Toyon houses,providing program support to Resident Fellow & student staff, etc; duties fall into following categories: informa & commu, residence operations, liaison w/ custodial staff, liaison w/ food serv staff, maintenance of Toyon program budgets, & supvry duties; QUALIFICATIONS: typ 45; thorough knowl of, & ability to perform offc procedures, practices, & methods; ability to win coop fr students & faculty of all ethnic bkgrounds; clear & succinct in oral & written commu; accuracy w/ numbers; a sensitivity to residence programming & to prov program support; ability to evaluate admin procedures; send appl/resume to Elizabeth Hiyama, 311 Old Union, 497-3044.; B09; $565-595. 1

29458-PM (JCC:2554) SECRETARY II: Sec to Asst Dean for Admin/Staff Affairs Officer; prov full range of sec'l support; sort mail; answer telephone; keep calendar; arrange appts; make travel arrangements; maintain files; maintain computer-based GSB room inventory, quarterly head count for faculty & staff; relief receptionist fr 12-1pm; QUALIFICATIONS: typ 60-65; several yrs sec'l exp; demonstrated organizational skills; commu skills; good typing, spelling & grammar essential; computer/MUSE word processing exp or willingness to learn; send appl/resume to Norma Sandy, GSB Rm 131.; B11; $1246-1310.

Bargaining Unit

32117-LL (JCC:5652) LIFE SCI TECH III: TMS Unit; 50%, 3 days one wk & 2 days the next wk; certified X-Ray Tech to work in Radiology Research lab; may be an occasional night or wkend; procedures are mostly animal related; computerized Tomography (CT), digital imaging, as well as routine radiography are employed in res labs; QUALIFICATIONS: CT exp as well as some spec procedure (angio) exp strongly desired; must be a grad of an approved A.R.R.T. program; must be A.R.R.T. registered & have Calif. license.; A30; $ 9.97.

42880-PB (JCC:5835) ANIMAL CARE ASST I: TMS Unit; 50%, Tues & Thurs, 8-5; Fri,12-2; maintain clean environ for lab mice & rats; change dirty cages, feed & water; wash all cages & bottles; do basic daily chores; sweep & hose floor, take trash out; QUALIFICATIONS: no allergies to animals; able to lift 50 lbs; work requires manual dexterity; able to follow detailed oral & written instruc in English; able to learn techniques & procedures in caring for & handling the animals & able to operate related eqpt.; A12; $ 6.54.

Carpools

Ride needed to S.F. MWF. Money negotiable. Brandt, ext. 7-1171.

Carpool wanted to Santa Cruz from Palo Alto M, W, F. Call Mark, 856-2428.

Join existing carpool. Leaves Homestead and Foothill Expressway to Stanford. M-F, 8-5. Call Jeannette, 7-9627.

I'm looking for a carpool between S.F. and Stanford (preferably from the Haight-Ashbury) 4-5 days/week, approx. 9-5. Please call Nora at 431-9649 eves.

Looking for two persons to join a Mission Noe Valley-Stanford Univ. carpool. M-F, 8-5. Call John, 821-1665, or Yinon, 431-0951.

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

SLAC

93292-JM (JCC:8880) Electronics Engr: Sys/Proj engr duties incl to develop sys & subsys specifications, schedules & cost estimates; coord & supv design engrs & support personnel; coord all phases of proj incl conceptual design, fabrication, installation, documentation & subsys & sys checkout; MSEE or equiv; demonstrated exp in proj mgmt & supvn; expert knowl in state-of-the-art data acquisition sys for high energy physics, incl front end electronics, data acquisition, modular interface standards, cable power, rack & cooling sys.; C99; $3600-4200. APPLY AT SLAC

91788-JM (JCC:8880) Electrical Engr: Support of main electrical power sys; design of facility alterations & support of experimental physics program which incl design & initial operation & modifications of existing a.c. variable voltage substations; switchgear selections; underground cableways, sys coord; lighting & conventional electrical utiilities design & instaliation; direct field operations; BSEE or equiv; comprehensive field exp in electrical engrg; registered professional desirable; familiar w/ OSHA, Nat'l & Calif. Code & Safety Regulations; broad functional knowl of electrical power eqpt & sys & heavy electronics power eqpt & circuits; exp in coordinating projs w/ drafters & work inspectors.; C99; $3000-4000. APPLY AT SLAC

95091-JM (JCC:8880) Electrical Engr: Support of main electrical power sys; design of facility alterations & support of experimental physics program which incl field operations; sys coord; installation & alteration cost estimates; establish electrical sys protection relay settings; coord routine maintenance work; BSEE or equiv; comprehensive exp & demonstrated knowl & ability to perform work of considerable scope & compiexity; registered professionai desirable; must be familiar w/ OSHA, Nat'l & Calif. Code & Safety Regulations; overall knowl of primary power transmission procedures; thorough knowl of engine-generator sets & battery sys essential; supvry exp desirable; ability to commu both orally & in writing.; C99; $3000-4000. APPLY AT SLAC

94949-JM (JCC:8880) Electronics Engr: Design high power puise modulator, pulse power supply & associated interlock & low level sys; define overall sys requirements for linear collider pulsed power sys; produce design reports, cost estimates, schedules & engrg sketches for prototype construction & supv production & testing of components; BSEE plus extensive exp in high power, high voltage pulse sys; MSEE preferred; exp in design, high voltage components & safety & protection procedures; demonstrated ability to manage & work smoothly w/ variety of people.; C99; $3200-4200. APPLY AT SLAC

93295-JM (JCC:8646) SR S&E TECH - ELECTRON: TMS Unit; all shifts; perform diagnostic, corrective, scheduled & preventative maintenance on wide variety of simple to highly complex accelerator electronic sys, sub-sys & eqpt; requires tech knowi & skiils acquired thru college courses & related exp or equiv; ability to troubieshoot eqpt down to component level using schematics & diagrams; several yrs exp maintaining high power modulators & familiarity w/ thyratrons, thyristors & klystrons desirabie; working knowl of conventional solid state circuits & associated hardware; able to climb ladders & assist in heavy lifting; familiarity w/ CAMAC desirable.; A34; $1901. APPLY AT SLAC

91782-JM (JCC:6654) PR S&E TECH - ELECTRON: TMS Unit; maintain radiation monitoring eqpt such as ionization chambers, proportional counters, GM counters, thermoluminescent dosimeter readers & solid state radiation measuring devices; interact w/ a variety of people; AA degree in Electronics or equiv several yrs related exp; thorough knowi of circuit analysis, guarding techniques & some basic radiation physics; good verbai & writing skills; demonstrated exp in independent work & exercising judgement; A39; $2148. APPLY AT SLAC

94318-JM (JCC:6680) S&E TECH MECH: TMS Unit; Klystron processing to incl installing on bake station, leak checking, operating the station, pinching off after bake, & preparing the tube for testing; high sch'l and/or equiv related training; a coupie yrs related exp; ability to do heliarc welding; ability to interpret blueprints & use hand & power tools; able to qualify for gov't driver's license.; A28; $1647. APPLY AT SLAC

95048-JM (JCC:6680) S&E TECH MECH: TMS Unit; ali shifts; assemble ultra high vacuum (UHV) chambers, pumps, valves & gauges, & test components in a clean room area; prepare UHV chambers for pumpdown, bakeout & installation into storage rings; maintain inventories; expected to complete vacuum technology course; have good mech skills; ability to read engrg. drawings; prev related exp; knowl of algebra & trig usefull; able to qualify for gov't driver's license.; A28; $1539. APPLY AT SLAC

94316-JM (JCC:6696) PR S&E TECH MECH: TMS Unit; receive & inspect, check certificaitons & insure conformance to specifications of all incoming mat'l; inspect klystron parts, components, ceramics & assemblies; construct & assemble klystron parts & components; conduct spec tests on OFHC copper; keep inventory; AA degree or equiv (physics or engrg); exp in various phases of quality control & inventory procedures; familiarity w/ welding, brazing tech & heat treating & plating; 1 extensive exp in above areas w/ emphasis on metallurgical & ceramic tech & procedures.; A39; $2148. APPLY AT SLAC

94304-JM (JCC:6714) ACCELERATOR SYS OPR TR: TMS Unit; rotating shifts; geni operation of complex sys to dir, tune & maintain electronic beam; perform corrective & preventive maintenance; fabricate, instaii, modify, etc, eiectronic & electro-mechanical components & sys; AA in electronics or equiv; several yrs related exp incl digital electronics, fast electronics, etc.; A00; $1811. APPLY AT SLAC

94428-JM (JCC:6492) LAB MECHANICAN III: TMS Unit; operate heavy eqpt & large machine toois i.e. lathes to 60 in. swing, vertical boring mills to 84 in. swing, etc; set up jobs & plan work; do complicated work to precision tolerances; apprenticeship or equiv; several yrs journey level exp on basic heavy machine toois; highly skilied at working fr blueprints and/or verbal instructions.; A41; $2250. APPLY AT SLAC

94781-JM (JCC:6588/6604) Sr. S&E Tech/Trainee (Electro-Mech): TMS Unit; rotating shifts; operate & repair liquid helium refrigerators & systems; operate & maintain cryogenic, hydrauiic & pneumatic eqpt; leak check high vacuum eqpt; use machine tools; bend tubing; do silver solder & braze; read blue prints; fill & transport liquid hydrogen trailers; keep records; related courses desirable; exp w/ hydrogen & helium refrigerators, high pressure gas, photography, optics, hydraulics & cryogenics desirable; skills in ieak detection & lab vacuum practices. Salary for trainee may be lower.; A00/A34; $ .00/1901. APPLY AT SLAC

93297-JM (JCC:6646) SR S&E TECH - ELECTRON: TMS Unit; all shifts; perform diagnostic, corrective, scheduled & preventative maintenance on wide variety of simple to highly complex accelerator electronic sys, sub-sys & eqpt; requires tech knowl & skills acquired thru college courses & related exp or equiv; ability to troubleshoot eqpt down to component level using schematics & diagrams; several yrs exp maintaining high power moduiators & familiarity w/ thyratrons, thyristors & klystrons desirabie; working knowl of conventional solid state circuits & associated hardware; able to climb ladders & assist in heavy lifting; familiarity w/ CAMAC desirable.; 1 A34; $1901. APPLY AT SLAC

93296-JM (JCC:6646) SR S&E TECH - ELECTRON: TMS Unit; all shifts; perform diagnostic, corrective, scheduled & preventative maintenance on wide variety of simple to highly complex accelerator electronic sys, sub-sys & eqpt; requires tech knowi & skills acquired thru college courses & related exp or equiv; ability to troubleshoot eqpt down to component level using schematics & diagrams; several yrs exp maintaining high power modulators & familiarity w/ thyratrons, thyristors & klystrons desirabie; working knowl of conventional solid state circuits & associated hardware; able to climb ladders & assist in heavy lifting; familiarity w/ CAMAC desirable.; A34; $1901. APPLY AT SLAC

91593-JM (JCC:6646) SR S&E TECH - ELECTRON: TMS Unit; troubleshoot, repair & calibrate a variety of commercial electronic test eqpt, incl oscilloscopes & associated plug-ins, signal generators (puise, function, oscillators), digital voltmeters, digital panel meters, CCTV cameras & monitors, RF commu sys, recorders, multmeters & power meters; AA degree or equiv; military schooling or equiv acceptable; exp in repair & calibration of electronic eqpt; use of test eqpt & special calibration fixtures; ability to restore malfunctioning test eqpt to original specifications; knowl of digital & analog theory & able to read schematics, etc.; 1 A34; $1901. APPLY AT SLAC

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, Feb. 8, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Committee for Art sponsors series of lectures on the Spirit of Japan

The Committee for Art will sponsor a series of lectures on The Spirit of Japan at 8:15 p.m. Thursdays, beginning Feb. 10, in Annenberg Auditorium.

The topics in the series offer a rare opportunity to hear distinguished experts on gardens, ceramics, art, history, woodblock prints, and major tourist points of interest.

Admission is $4 for Committee for Art members and students, $5 for others. The schedule follows:

Feb. 10—"Will the Real Japan Please Stand Up" by Prof. Peter Duus, history. He'll discuss the historical background of the contradictions of the Japanese character.

Feb. 24—"The Emperor's Villa and Other Gardens" by Ron Herman, lecturer in landscape architecture at UC-Berkeley and author of *A Guide to the Gardens of Japan*.

Mar. 10—"Is Japan One Big Disneyland?" by Prof. Melinda Takeuchi of Stanford's Art Department.

Mar. 24—"Japanese Ceramics" by Art Prof. John LaPlante, who will lead the Committee for Art's Spirit of Japan trip next September.

Apr. 7—"Japanese Woodblock Prints" by Roger Keyes, world authority, lecturer, author, and consultant.

Apr. 14—"Search for the Spirit of Japan" by John LaPlante, who will speak this time on the trip itinerary and major sites.

Rental housing

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

HOUSING AVAILABLE

□ **Beg. Feb. 1, '83:** Spacious unfurn. hse, 4BR/2BA, frig, stove, dw, w/w carpet, FR, frpl, fenced yd, stor. shed, carport. No pets. So. Palo Alto, 10 min. to Stanf. $975/mo. + util. Call 329-0797.

□ **April 10 to July 15, '83:** London: Hampstead nr Heath. Beautifully furn. hse, 3BR/2BA, FR, study, garden. EXCHANGE or rent. Details incl. photo avail. Call Himmelweit, 321-2052 or 328-6040.

□ **June 22 to July 28, '83:** Fully furn. hse on campus. 3BR/2BA, pool, hot tub. Gardener & clean. woman incl. Must care for dog. $1400 + util. Sec. dep req. Call 497-7196 (day), 493-1882.

□ **May thru July '83 (flex):** Fully furn. hse, 2BR/1BA, nr footbrdge from MP to PA. $475/mo incl. water & ¼ util. Call H. Whiting, 322-5669, 392-1739.

□ **Summer '83:** LONDON HOUSEBOAT. Chiswick-on-Thames. Views, comfort. Suitable for cpl w/teen-ager or 3rd adult. Fully furn. elec. heat, DW, W/D, frig., TV. City water & sewer. $800-1,000/mo. 3 to 5 mo. nego. Call Beard, 323-2755.

□ **NOW:** Tahoe Donner Ski Bowl Condo. 3BR + loft, sleeps 10, color TV, spa. Call Bienenstock, (415) 493-8649.

□ **Aug. to Dec. '83 (flex):** Fully furn. hse 4BR/3BA (1BR/BA w/sep. ent. & rentable), study, FR, 2 patios, 2 frpl, AEK, W/D. 5 min. walk to campus ctr. Call Nancy Packer, 857-0908.

□ **Late Mar. to early June '83:** Furn. 1BR apt. Menlo Pk. $500/mo. Call 497-3025 or 497-0769 (day), 322-3301 (eve).

□ **Aug. 1, '83 to June 30, '84 (flex):** Fully furn. campus hse., 4BR/3½BA, study, library, DR, frpl, pool, view, acre. $1700/mo. incl. grdnr, pool serv. Call (415) 327-5204 or 497-4732 (day).

□ **Beg. Mar. 19:** Furn. 3BR/3BA hse, spacious, new kitchen, W/D, piano, frpl, fenced yd., Palo Alto nr Stanf. No pets. $1550/mo. incl. gardener, water. Call COLLECT (602) 299-4499.

□ **Mar. 15 to June 30, '83:** Hse in Palo Alto, 4BR/3BA, library, pool. $1300/mo. incl. gardener & pool serv. Call 327-4197 or 497-4856 (day).

□ **NOW:** 6 mo. lease. Lux. twnhse, 3BR/2½BA, furn. & fully equip., pool, etc., no pets. $2500/mo. Call (415) 854-1443.

□ **NOW:** North Berkeley/Albany area; one/half hse to share, 10 min. to UCB, 20 min. to city, sunny, quiet, $300/mo. Prof. woman will SWAP for similar situation in this area. Call 328-4432.

□ **July 1 to Dec. 31, '83:** Furn. hse, 4BR/3BA, study, FR, Sharon Hgts., 1 mi. to campus. Sep. DR, 2 frpl., 1/3 acre. $1500/mo. Call 497-3785 (day), 854-7471 (eve).

□ **Beg. Mar. 1, '83:** Fully furn. hse, 2BR/1BA, nr. Stanf. Piano, lrge yd, gardener. $900/mo. Call Jenny, 497-4744 (day), or 321-9760.

□ **NOW:** Ski Cabin. So. Lake Tahoe. 2BR, frpl, color TV, phone. Adj. Nat'l Forest, walk to lake, Tahoe Keys. $120/wknd, $150/wk (5 days). Call Janine (415) 497-2501 (day), (408) 739-3141 (eve).

□ **Regularly Avail.:** 1 & 2BR furn. and unfurn. apts & twnhses, & 3BR/2BA hses in Palo Alto & Menlo Pk. in good nghbrhds. Close to Stanf. $525 to $1200/mo. Call Shirley (415) 493-2321 or Jane (415) 968-4957.

□ **Beg. Mid/End Feb. '83:** SHARE 3BR/2BA condo in Redwood City. Pool, beaut. view, nr 280, bus. Occas. child care. 7 yr. old boy deduct. from rent. $225/mo. Call 497-6283 (day), 364-6298 (eve).

HOUSING NEEDED

□ **NOW:** Reliable Stanf. staff seeks hsesit. Prefer long term 3 to 6 mo. or longer. Will give excl. care to hse, pets, plants, yd. Loc. refs. Call Donna, 497-3967 (day).

□ **Beg. Spring Qtr:** April 1 or May 1, two Stanf. med. students seek to rent hse. or apt. (2 to 5BR) nr. Stanf. Nonsmokers. Long term hsng wanted. Call Steve (415) 857-1792 or Bill (415) 327-3868 (eve).

□ **Mar. thru June '83:** Visit. Australian prof. seeks 3-4BR hse for self, wife & 3 children. Nonsmokers. Will care for hse & garden. Call Pamm, CERAS, 497-4717 before 2:30 p.m.

□ **July '83:** Med. prof. with well-behaved family seeks hsesit for 1 mo. or will EXCHANGE 4BR/3BA hse w/fenced yd, 45 min. from Manhattan nr. Rutgers Univ. Loc. refs. Call Bardin 851-0435 (eve).

□ **NOW:** Esc. Vil. family (3) seeks long term 2 to 3BR hse/apt rental in Jordan sch. dist. Loc. refs avail. Call Davidson, 857-0390.

□ **Beg. April 1:** For 3-4 mo. Cambridge Univ. prof. & wife, seek quiet 2BR hse, apt. nr Stanf. campus. Call 497-2972 or 497-1978 (day), 327-3344.

□ **May 15 to Aug. 15, '83:** Visit. prof., wife, 2 children seek 3BR fully furn. & equipped hse or apt on or nr campus. Call COLLECT, Indiana, (317) 463-3912.

□ **NOW:** VA Resident seeks rm w/ba in Palo Alto during wk. nites in EXCHANGE for my S.F. r. w/ba & priv. entr. Call Margie, (415) 564-2622 (eve) or 493-5000, pager #229 (day).

□ **Mid-Mar. to June (flex):** Visit. prof, wife, 2 pre-sch. child. seek 4BR fully furn hse Palo Alto/Stanf. area. Call (415) 965-1109.

□ **Mid-June thru July '83:** TRADE HOUSES. 4-mbr prof. family seek Bay Area hse for Gattingen, W. Germany. Lovely new home in small vill. nr. Univ. twn. Accessible to fields & forest, 3BR/2BA & study. Car avail. Call (415) 859-4757, (415) 941-4319 (eve).

Iris by Sally Spence

Watercolors by Sally Spence scheduled for showing at I-Center this month

Images in Bloom, watercolor paintings by Sally Spence of Novato, will be shown at Stanford's International Center Feb. 3-28. A reception for the artist will be held there from 5 to 7 p.m. Friday, Feb. 4.

A second-generation California watercolorist, Spence studied with several Northern California artists, including the late Richard Yip.

As a young adult Spence divided her time between being a wife, mother, practicing nurse, and a "very part-time" artist, experimenting with a variety of media and subject matter.

In 1973 she, her husband, and their children joined the Peace Corps as a family group and served for two years in Venezuela.

Since her return she has focused almost exclusively on watercolor, portraying the rural environment of Western America, Chinese life and culture, and flowers.

Many of her recent large watercolors plunge the viewer into a mass of flowers; the horizon disappears and all sense of direction is obliterated.

The International Center, located at the intersection of Mayfield Ave. and Lomita Dr., is open for viewing exhibitions from 8:30 a.m. until 11 p.m. on weekdays and from noon until 11 p.m. on weekends.

Ph.D. oral exams

MONDAY, FEBRUARY 7

Delmar Doucette, history, 3 p.m., Room 230, Bldg. 200. **Frank G. Halasz,** psychology, "Mental Models in the Routine Operation of Complex Systems," 2:15 p.m., Room 358, Jordan Hall.

TUESDAY, FEBRUARY 8

Daniel H. Greene, computer science, "Techniques for the Analysis of Algorithms," 3 p.m., Room 146, Bldg. 460.

WEDNESDAY, FEBRUARY 9

Benjamin Moszkowski, computer science, "A Temporal Logic for Multi-Level Reasoning About Hardware," 3:30 p.m., Room 146, Bldg. 460. **Mordechai Shefer,** aeronautics and astronautics, "Estimation and Control with Cubic Nonlinearities," 4:15 p.m., SK-191.

THURSDAY, FEBRUARY 10

Daniel Moos, geophysics, "Velocity, Attenuation, and Natural Fractures in Shallow Boreholes," 2:15 p.m., Mitchell 350.

FRIDAY, FEBRUARY 11

Peggy Pascoe, history, 10 a.m., Room 307, Bldg. 200.

Violinist Andor Toth and guests will play works by Haydn, Martinu, Brahms, and J. S. Bach at 2:30 p.m. Sunday, Feb. 6, in Dinkelspiel Auditorium. Joining him will be Mayumi Ohira, Don Ehrlich, Thomas Stauffer, and Richard Dasher. Tickets are $4 ($2 for students and seniors).

Minority business fair expects 300

Some 300 minority graduate and undergraduate students from throughout the Bay Area are expected to attend the second annual minority business conference and job fair at the Holiday Inn in Palo Alto, Friday and Saturday, Feb. 4 and 5.

The job fair, which will be held from 1 to 6 p.m., Friday, Feb. 4, will give Black, Chicano, and Asian American students a chance to discuss career prospects with representatives of national and regional corporations. The fair is under the joint sponsorship of the Stanford Black Business Students Association, the Chicano Business Students, and the Asia Forum.

Percy E. Sutton, chairman of the New York-based Inner City Broadcasting Co., is scheduled as keynote speaker at the conference on Saturday, Feb. 5. Inner City Broadcasting, which began with two radio stations in 1972, now includes seven stations, an inner city cable TV hookup, the Apollo Entertainment Network, and Amistad Electronics.

The conference will run from 9 a.m. to 9 p.m., with registration starting at 8 a.m., and will include panel discussions on assessing corporate careers, entrepreneurship and community service, career opportunities and male/female dynamics, balancing personal and professional needs, identifying and pursuing investment opportunities, and reassessing black economic development. Panelists will include minority executives and educators.

The conference theme is "Pathway to Parity: Managing our Resources to Accelerate Black Economic Growth."

Conference sponsors are the Stanford Black Business Students Association and the Stanford Black Pre-Business Society. There is a fee for the conference, but the job fair is free.

Purrington plans bassist concert

Bassist Courtney Purrington and Friends will give a free concert at 8 p.m. Saturday, Feb. 12, in Tresidder Lounge. Joining Purrington will be Jennie Abrahamson, flute; Curtis Smith, cello; and keyboardists Arno Mundt, Jeff Sugarman, and Lee Cosart.

Purrington is a senior at Stanford majoring in political science and Russian. He has played the bass since sixth grade in Albany, N.Y., and studied with Roger Scott—principal bass with the Philadelphia Orchestra. In high school Purrington performed with the All-Eastern Orchestra; at Stanford he has been principal bass with both the Symphony and Chamber orchestras.

Purrington will offer a variety of seldom-heard works for accompanied bass by Lorenziti, Monteverdi, Koussevitzky, Eccles, Handel, and Rossini. Purrington will also perform three movements of Bach's *Suite III for unaccompanied cello*, a medley of folk songs, and two of his own compositions for solo bass: *Variations on a Theme by Mahler* and *March for Peace*.

Cosart and Abrahamson will perform Claude Bolling's *Suite for Flute and Jazz Piano*.

Purrington, who is fluent in Russian, works part-time at Hoover Institution microfilming Russian newspapers.

Library Associates to hear bookbinder

Deborah Evetts, hand bookbinder and head of the Conservation Bindery at the Pierpont Morgan Library in New York City, will be the featured speaker at the Feb. 11 meeting of the Associates of the Stanford University Libraries. Her topic will be "Collector Bindings: My Approach."

The meeting is scheduled for 4 p.m. in Annenberg Auditorium and will be followed by dinner at a local restaurant. Advance reservations for the dinner must be made through the Associates office, 497-9426. The meeting is open to the public without charge.

Evetts is an expert on restoration of books and documents. She develops original designs for these projects and also teaches bookbinding classes.

WISE lecture set on random process

"Random Processes in the World: Three Perspectives" is the title of the next in the Stanford Women in Science and Engineering (WISE) lecture series, to be given at 4:15 p.m. Thursday, Feb. 10, in Room 420-041 (entrance in the basement of the Math Department).

Speakers will be Stanford math Ph.D. candidate Ruth Williams, Civil Engineering Prof. Anne Kiremidjian, and SRI International population genetics specialist Dorit Carmelli, Ph.D.

All members of the Stanford community are welcome; refreshments follow each lecture.

The series is designed to promote interdisciplinary discussion among women by providing a regular forum where nontechnical lectures on research topics are followed by informal discussion.

It is jointly sponsored by the Office of the Dean of Graduate Studies and WISE. For more information, call ext. 7-2496.

Anthony J. Haney and Graham H. Winton as satyrs

Cyclops/Nobody's musical to premiere here with Rush Rehm directing

"Cyclops/Nobody's Musical" will receive its premiere production at Stanford's Little Theater Feb. 16-19 and 23-26.

This bold new musical features book and lyrics by Schubert Award-winning playwright Rush Rehm, who also directs, and music by Francis James Born, composer of the filmscore for Christopher Miles' recent "Priest of Love."

A very free adaptation of Euripides' satyr play, "Cyclops" breaks new ground for the musical theater. The archetypal Greek story of Odysseus' encounter with the one-eyed monster takes on the excitement and drive of a Broadway musical. The jazz-rock score draws on elements of musical comedy even as it transforms them into a mode of revenge and triumph.

Marooned on Cyclops' island, a group of satyrs are forced to serve as the monster's shepherds while they dream of long-absent women and wine. Led by Silenus (played by Anthony J. Haney), they invoke their god Dionysius in a ritual of theatrical magic—sheep turn into women, women into men. When the smoke clears, the satyrs discover Odysseus (portrayed by Marc Accornero) and his crew have stopped for food on their way home from war.

In another miraculous transformation, Odysseus produces an endless supply of wine, and the satyrs' dream of Dionysius seems realized. The return of the one-eyed cannibal Cyclops (Andre Bruagher), however, breaks up the festivities.

Caught on this island-stage, hedonist Silenus, opportunist Odysseus and natural-man Cyclops work through the conflicting views of what the god Dionysius means: freedom, seduction, wine, nature, war, death, triumph.

In the archetypal account of Cyclops' temptation and Odysseus' revenge, "Cyclops" presents a humorous but ultimately disturbing parable of our own day.

Musical direction and orchestration for the premiere production are provided by Steven Ullman. William S. Eddelman, past winner of the Bay Area drama critics award for scenic design, designed the highly evocative setting and costumes. Lighting and special effects are by John Rathman, who recently returned from a design project with the Guthrie Theatre in Minneapolis. Choreography is by Stacey Greenburg.

Performance dates are at 8 p.m. Wednesday through Saturday, Feb. 16-19 and 23-26 with a special 2 p.m. matinee Saturday, Feb. 26.

For ticket information call the Tresidder Ticket Office at (415) 497-4317.

Free slide-lecture on *Cyclops* set

Assistant Prof. John J. Winkler of the Stanford Classics Department, will give a free public slide-lecture entitled " '. . .Or Are You Just Glad to See Me?'—Phallos and Festival in Ancient Greece," at 4:30 p.m. Thursday, Feb. 10, in the Forum Room of Meyer Library.

The lecture is the second in the Drama Department's Drama forum series and is given in connection with the upcoming production of the new musical "CYCLOPS/Nobody's Musical."

"CYCLOPS/Nobody's Musical" has been very freely adapted by playwright-director Rush Rehm from Euripides satry play, *The Cyclops*.

According to Winkler, "In Greek satry plays and comedies the phallos was used as a primary symbol of men's social role, expressing and testing their authority vis-a-vis other social groups: women, children, slaves, animals, gods.

"But it was not a straightforward display of power and might: more often it expressed the joking realization that male authority is a public fiction, a norm of behavior which supports, conceals and exonerates the detumescent identity of individual men."

The slide-lecture will illustrate the Dionysian playfulness during public holidays honoring Dionysos.

A faculty fellow in the Stanford Humanities Center, Winkler is completing work on his ground-breaking study of Apuleius, the Golden Ass.

Playwright-director Rush Rehm and "CYCLOPS/Nobody's Musical" composer Francis James Brown will be present at the lecture and available for discussion following Winkler's presentation.

Voice students to perform Feb. 11

Students of Stanford's newly appointed voice teacher Lila Stuart will perform at 8 p.m. Friday, Feb. 11, in Dinkelspiel Auditorium. The recital is free.

Singers will include Alexandra Coku, Nancy Kass, Sharon Paul, Cheryl Karinen, Charles Fidlar, Barbara Fausel, Benly Pierce, Robert Campbell, Bengt Post, Jane Boothroyd, and Richard Berlin performing solos and ensembles by Schubert, Purcell, Faure, Mozart, Brahms, Ives, and others.

Pianists Camilla Passarelli and Kay Bedenbaugh and clarinetist Joseph Limacher will accompany.

Stuart comes to Stanford after 13 years teaching at University of Redlands. Before that she was artist-in-residence and leading soprano with the Opera Theater at Indiana University's School of Music.

Stuart was a finalist in the Metropolitan Opera auditions and trained with the San Francisco Opera Merola program. She has performed with opera companies and symphony orchestras around the country.

Alaska travel film screening slated

Stanford University Events and Services will present "Inside Passage to Alaska," a travel documentary produced and narrated by Don Cooper, twice on Monday, Feb. 7.

The film will be screened at 2:30 p.m. in Kresge Auditorium and at 7:45 p.m. in Memorial Auditorium as part of the Discovery Film Series.

The film tells the story of the northwest coast from Seattle to the Bering Sea, nearly 3,000 miles up the inside passage to Alaska, and the Aleutian and Pribilof Islands. It touches on the history of Alaska, past and present, and includes glimpses of Alaska's dramatic scenery and elusive wildlife.

Tickets ($3 for matinee, $4 for evening) are available at the door or at Tresidder Ticket Office, (415) 497-4317.

Dramatists ready for *The Wager*

The Drama Department's production of *The Wager* opens Wednesday, Feb. 9, in the Nitery and runs through Saturday, Feb. 12.

The Wager was written by Mark Medoff who did his graduate work at Stanford, receiving his master's degree in English in 1966. He went on to write several successful plays including the 1980 Tony Award-winning *Children of a Lesser God*.

The Wager was first produced at Stanford by the Stanford Repertory Theatre in 1968. This year's production, directed by senior Christine Roum, will update the play for the eighties.

The play takes place in the apartment of two graduate students, Leeds and Ward, played by Joe Christiano and Orlando Ward respectively. The story revolves around the interrelationship with their neighbors, young professor Stevens, played by Steve Vineberg, and his wife Honor, played by Lisa Glass.

Admission is free and curtain is at 8 p.m. Passes are available at the door at 7:30 p.m. but it is recommended to come early as seating is limited.

Emanuil Sheynkman

Russian virtuoso Emanuil Sheynkman slates mandolin, balalaika concert

The Lively Arts at Stanford will present Russian virtuoso Emanuil Sheynkman, mandolin and balalaika, at 8 p.m. Friday, Feb. 4, in Dinkelspiel Auditorium.

Accompanied by Ksenia Sudarikova, pinao, Sheynkman's program will include works by Beethoven, Kreisler, Rachmaninoff, Borodin, and other Soviet and Russian composers, as well as traditional Russian pieces and Sheynkman's own works. One half of the concert will be devoted to each instrument.

A native of Leningrad, Sheynkman came to the U.S. in 1978. In Russia, he is regarded as the leading exponent of classical mandolin, as well as a prominent teacher and performer on the balalaika, a traditional Russian fretted instrument.

Sheynkman studied at the Rimsky-Korsakov Conservatory of Music and the Mussorgsky Institute in Leningrad. He won his first international instrumental competition at age 15 in Warsaw, and subsequently was First Prize Laureate in the Soviet Instrumental Competition.

He was a frequent soloist with the Leningrad Philharmonic, and recorded 15 albums on Melodiya Records.

Since his arrival in the U.S., he has performed at Carnegie Hall and with the Los Angeles Philharmonic. He served as visiting professor of Russian music at the University of Illinois, Champaign-Urbana for 1981-82. His first American recording, "The Art of the Mandolin," will be released by Nonesuch this year.

Tickets are $8.50 and $7.50. Student tickets are $3 off the regular price.

For ticket information, call Tresidder Ticket Office (415) 497-4317, BASS, and other Bay Area ticket agencies.

Hawley, Hagopian, Blaisdell to give flute, piano concert Sunday, Feb. 13

The Stanford Music Department presents flutist Alexandra Hawley with pianist Robert Hagopian at 8 p.m. Sunday, Feb. 13, in Dinkelspiel Auditorium. Joining the well-known duo will be flutist Frances Blaisdell. Both Hawley and Blaisdell teach flute at Stanford. Lawrence Granger of the San Francisco Symphony will play cello continuo parts.

Their Feb. 13 program will include a trio sonata by Quantz, Hummel's *Grand Rondeau Brillant*, flute duos and a sonata by Muczynski, sonatas by Bach and Franck, and Doppler's *Andante & Rondo for two flutes*.

Hawley and Hagopian have been performing as a duo for seven years, giving concerts and workshops throughout California, the East Coast, and the Midwest. They recently performed at the Metropolitan Museum of Art in New York and as part of the Myra Hess Memorial Series in Chicago.

Blaisdell is one of the foremost flutists and teachers in the country. She was solo flutist with the New York City Ballet for 15 years, and has soloed with symphony orchestras and chamber music groups around the country.

A *San Francisco Chronicle* critic wrote that a Hawley/Hagopian concert: "was as perfect as I have encountered. Programming, technique, musicality, all rated a 10. Hawley has every arrow available. But beyond mere control and mastery, she and Hagopian reached exceptional levels of classy musicianship."

Tickets for the concert are $4 general, $2 students and seniors, available at Tresidder Ticket Office (497-4317) and the door.

Emerson Quartet plays tonight in Dinkelspiel

The Lively Arts at Stanford will present the Emerson Quartet, with violinists Eugene Drucker and Philip Setzer, violist Lawrence Dutton, and cellist David Finckel, at 8 p.m. Wednesday, Feb. 2, in Dinkelspiel Auditorium.

The program will include Schubert's "Quartet in A Minor, Op. 29, No. 1"; Beethoven's "Quartet in F Major, Op. 135"; and Brahms's "Quartet in C Minor, Op. 51, No. 1."

Formed at the Juilliard School in 1976, the quartet won the Naumburg award for chamber music in 1978. They have appeared in virtually every major series in the U.S. and Canada, and will make their first major European tour this season.

They were recently appointed Resident Quartet of The Chamber Music Society of Lincoln Center, the first quartet so honored. They also maintain residencies at the Smithsonian Institution, the Spoleto Festival (in both Italy and the U.S.), Middlebury College, and the University of Hartford's Hartt School of Music.

The Emerson's broad repertoire embraces the complete cycles of both Beethoven and Bartok, as well as contemporary American works.

From the beginning of their association, the two violinists, both prize winners in the Queen Elizabeth competition in Brussels, have shared first chair equally.

Drucker is a graduate of Columbia and the Juilliard School, where he studied with Oscar Shumsky. He has toured with "Music from Marlboro," and is currently a member of the New York Chamber Soloists.

Setzer studied with Joseph Gingold and Raphael Durian, and earned his B.A. and M.A. at Juilliard with Oscar Shumsky. He has appeared as guest soloist with the Cleveland Orchestra and the National Symphony. He has participated in the Marlboro Music Festival, and is a member of the Madison Trio.

Dutton began violin and viola studies with Margaret Pardee, continued at the Eastman School with Francis Tursi, and earned his B.A. and M.A. at Juilliard with Lillian Fuchs. He has appeared as a guest artist with the Juilliard String Quartet, the New York Philomusica, and the New York Chamber Soloists.

Finckel has studied cello with Elsa Hilger, Bernard Greenhouse and Mstislav Rostropovich. A prize winner in the 1978 International Bach Competition and the 1979 Friday Morning Music Club International Competition, he has toured with "Music from Marlboro," and is a member of the Madison Trio.

Tickets are $10.50 and $9.50. For ticket information, call Tresidder Ticket Office, (415) 497-4317, BASS, and other Bay Area ticket agencies.

Snyder discusses student profiles

Rixford K. Snyder, professor of history and dean of admissions at Stanford from 1950 to 1969, will discuss "Changing Profiles of the Stanford Student Body" at 3 p.m. Sunday, Feb. 6, in History Corner, Room 2, at Stanford.

His talk is sponsored by the Stanford Historical Society.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Feb. 2 to cover the week of Mon., Feb. 14 through Sun., Feb. 20.

MONDAY, FEBRUARY 7

Biological Science Lecture: "Dispersed 5S Ribosomal RNA Genes in Neurospora. What Keeps Them Honest?," by Dr. Robert L. Metzenberg, University of Wisconsin. 12:05 pm. Room T-175, Herrin Hall, Dept. of Biol. Science.

The Bridge Lecture: "Winning the Type A Game: Coping with Stress at Stanford," with Carl Thoresen, Professor of Education & Psychology. 4 pm. Education 133, Cubberley.

Energy Policy Seminar: "The Project Development for a 100-Megawatt Photovoltaic Power Plant for Sacramento," with Mitchell R. Wool, Project Manager, Acurex Corporation, Mountain View, Ca. 4:15 pm. Skilling Aud.

Biological Science Lecture: Dr. Norman H. Giles, Dept. of Molecular & Population Genetics at the University of Georgia. 4:15 pm. Herrin Hall, Rm. T-175.

Numerical Analysis Group Lecture: "Convergent Regular Splittings for Singular M Matrices," by Don Rose, Bell Laboratories and Stanford. 4:15 pm. Room 380-C, Math Corner.

EE350 Radioscience Seminar: "Radiation from Pulsed Electron Beams in Space Plasmas," by Ken Harker , SRI International. 4:15 pm. McCullough Bldg., Room 134.

Stanford Jewish Appeal Lecture: "Everything You Wanted To Know about Solicitation." 7 pm. History Corner Rm. 34.

Film Society: "Double Indemnity" (1944) & "To Have & Have Not" (1944). 7:30 pm. Kresge Aud. $2.

Jean and Bill Lane Lecture Series: Wallace Stegner will be reading from his works. 8 pm. Annenberg Aud.

TUESDAY, FEBRUARY 8

The Bridge Panel Discussion: "The Fifty Hour WeekLiving through It," with Fred Hargadon, Carolyn Lougee, Marvin Herrington, Alice Supton, Don Bruce. Noon. Meyer Forum Room.

Bechtel International Center Lecture: "Nuclear Arms Control: Soviet and American Approaches," by Assist. and Assoc. Directors, Arms Control and Disarmament Program, Stanford. Noon. Dining Room, I-Center. $2.50 for lunch, however brown baggers welcome.

Stanford Museum of Art Lunch Hour Tours: "The Stanford Legacy". 12:15 pm. Stanford Museum.

Baseball: vs. USF. 2:30 pm. Sunken Diamond. General $2, students free.

Tower Talks Presents: "Nine Lies about America," by Arnold Beichman, visiting scholar. 3:30 pm. Lou Henry Hoover Room, Hoover Tower.

Communications Design Seminar: "Interference between Satellite Systems With Different Signal Modulations," by Ruming Chen. Visiting Scholar from China. 4:15 pm. McCullough Bldg. Rm. 128.

Biological Sciences Seminar: "Feedback Regulation of the Synthesis of Ribosomes and Ribosomal Components" by Dr. Masayasu Nomura, Institute of Enzyme Research, Univ. of Wisconsin. 4:15 pm. Herrin Hall, Room T-175, Dept. of Biological Sciences.

Music Guild "Learning To Listen" Lecture: "Computers and Music—A Rich Interaction," by Prof. John Chowning. 8 pm. Annenberg Aud. $4/$3/$2.

WEDNESDAY, FEBRUARY 9

CROW-Women in Performing Arts: "Black Women in Jazz," by Daphne Muse, Mills College Ethnic Studies Program. Noon. Terman Aud.

Stanford Museum of Art Lunch Hour Tours: "The Stanford Legacy". 12:15 pm. Stanford Museum.

Chemical Engineering Lecture: "Composite Reaction Injection Molding: Heat Transfer in Flow through Porous Media," by Professor Christopher M. Macosko, Univ. of Minnesota. 4:15 pm. Chemical Eng. Conference Room.

Electronics in Medicine Lecture: "Performance of a High-Speed Multi-slice Cine-CT Scanner," by Dr. Douglas Boyd, Physics Res. Lab. UCSF School of Medicine. 4:15 pm. McCullough 134.

The Bridge Lecture: "Understanding and Preventing a Suicide," by Perrin French, M.D., Professor of Psychiatry. 4:30 pm. Meyer Forum Room.

Music Guild Concert: Chamber music by the students of Margaret Fabrizio. 8 pm. Dinkelspiel Aud. Free.

Drama Dept: "The Wagner," by Mark Medoff. Directed by Christine Roum. 8 pm. The Nitery. Free.

Art Dept. Lecture Series: "Xi-an, Cultural Capital of China: a Survey of the Importance of this City from Neolithic Times of the Tang Dynasty (618-906 A.D.). 8:15 pm. Annenberg Aud.

THURSDAY, FEBRUARY 10

Stanford Geothermal Program: "Hydraulics of the Klamath Falls Geothermal System," by Edward Sammel, U.S. Geological Survey. 1:15 pm. Mitchell Bldg., Rm. B67.

Women in Science & Engineering Lecture: "Random Processes in the World—Three Perspectives". 4:15 pm. Building 420, Room 041.

Solid Mechanics Seminar: "Boundary-Element Methods for Transient Response Analysis," with Dr. Thomas L. Geers, Lockheed Palo Alto Res. Lab. 4:15 pm. Skillings Aud.

Industrial Engineering Lecture: "Risk Analysis as a Basis for Building Code Decisions," with Prof. Rudiger Rackwitz, Technical Univ. of Munich. 4:15-5:30 pm. Terman Aud. Free.

Drama Forum Series Lecture: "___ Or Are You Just Glad to See Me?" — Phallos and Festival in Ancient Greece by John J. Winkler of the Cl. 4:30 pm. Forum Room of Meyer Library.

Financial Planning Program: Financial counseling and free financial analysis by a financial specialist from Waddell & Reed, Inc. of San Jose. 7 pm. SLAC Auditorium. Restricted to Stanford faculty and staff.

Baroque music concert Saturday

The Music Department presents a free program of Baroque chamber music and the Baroque Orchestra at 8 p.m. Saturday, Feb. 5, in Dinkelspiel Auditorium.

Under the direction of Prof. George Houle, three chamber music works will be performed; *Divertimento No. 16 in E-flat Major, K. 271g* by Mozart; Aria *Floesst, mein Heiland* from *The Christmas Oratorio* by Bach; and Cantata *Goettlichs Kind, lass mit Entzuecken* by Telemann.

The Baroque Orchestra, under the leadership of violinist and graduate student Marmee eddy, will perform Haydn's *Symphony No. 67 in F Major.* Members of the orchestra will include Prof. Houle, Glenna Houle, Herb Myers, Deborah Barney, Marion Rubenstein, and Ruth Wenzel.

Quebec film at I-Center

The I-Center varies its usual documentary format this Thursday in presenting *Kamouraska*, a full-length feature film set in nineteenth century Quebec. The two-hour film, in French with English subtitles, will be screened at 7:30 p.m. Thursday, Feb. 3, at the International Center.

Kamouraska, produced by Carle-Lamy (Montreal) and the Societe Parc Film (Paris), is based on the famous novel of the same name. Genevieve Bujold acts the role of Elizabeth, a woman who becomes trapped by the folly of her passion for an American doctor. Their mutual plot to do away with her husband, the Lord of Kamouraska, results in her arrest and imprisonment. Though released from prison, her spirit and love remain confined by eternal brooding over a lost passion. It is a classic portrayal of 19th-century Quebec.

"Other Cultures" films are shown at 7:30 p.m. every Thursday at the I-Center. A 75 cent donation is requested at the door to help defray costs of the series. For further information on "Kamouraska" or future "Other Cultures" films, call 497-1831.

Latin American Film Series: "Chuquiago," a view of contemporary Bolivian society. 7 pm. Casa Zapata/Stern Hall.

Bechtel International Center Film Series: "Always for Pleasure" (New Orleans). 7:30 p.m. I-Center. .75 donation.

Drama Dept: "The Wagner," by Mark Medoff. Directed by Christine Roum. 8 pm. The Nitery. Free.

Spirit of Japan Lecture Series: "Will the Real Japan Please Stand Up," by Peter Duus. 8:15 pm. Annenberg Aud. Nonmembers $5 , Comm. for Art members & students $4.

FRIDAY, FEBRUARY 11

Material Science and Engineering Colloquium: "Ion Implantation and Metastable Materials," by Dr. T. Picraux of Sandia National Lab., Albuquerque, New Mexico. 3:30 pm. Peterson Laboratory, Bldg. 550, Room 550A.

Materials Science and Engineering Colloquium: "Low Density Aluminium Alloy Development", by Richard Lewis, Metallurgy Dept., Lockheed Research Laboratory, Palo Alto. 3:30 pm. Peterson Lab., Rm. 550A.

Associates of the Stanford Libraries Lecture: "Collector Bindings: My Approach," by Deborah Evetts, Hand Bookbinder and head of the Conservation Bindery, Pierpont Morgan Library, New York City. 4 pm. Annenberg Aud.

Stanford Hillel: Bring a Friend to Shul: a teaching service. 7 pm. Old Union Clubhouse.

Music Guild Concert: Vocal recital by the students of Lila Stuart. 8 pm. Dinkelspiel Aud. Free.

Stanford Law School Film Society: "Oliver". 8 pm. Kresge Aud. $1.50.

STARTS Great Directors Film Series: "Story of a Love Affair," by Italian director Michelangelo Antonioni. 8 pm. Geology Corner, Room 320. $2.50.

Drama Dept: "The Wagner," by Mark Medoff. Directed by Christine Roum. 8 pm. The Nitery. Free.

Coffee House Evening Entertainment: Music featuring many of the areas favorite new & up-and- coming performers. 9-12 pm. Coffee House. Free.

SATURDAY, FEBRUARY 12

Baseball: vs. San Jose State Univ. 12 noon. Sunken Diamond. General $2, students free.

Stanford Museum Weekend Tour: Rodin Collection. 2 pm. Stanford Museum. Free.

Black Liberation Month Film Festival: "The Harder They Come". 7 pm. & 9:15 pm. Terman Aud. $1.50.

Drama Dept: "The Wagner," by Mark Medoff. Directed by Christine Roum. 8 pm. The Nitery. Free.

Coffee House Evening Entertainment: Music featuring many of the area's favorite new & up-and-coming performers. 9-12 pm. Coffee House. Free.

SUNDAY, FEBRUARY 13

Stanford Museum Weekend Tours: Permanent Collection. 2 pm. Stanford Museum. Free.

ASSU Sunday Flicks: "Midsummer Night's Sex Comedy". 7 & 9:30 pm. Memorial Aud. $1.50.

Music Guild Concert: Alexandra Hawley, flute with Frances Blaisdell, flute & Robert Hagopian, piano. Quantz- Trio Sonata in C minor,Bach- Sonata in E minor, Hummel- Grand Rondeau Brillant, Muczynski- Flute duos, Sonata, Franck- Sonata, DopplerAndante & Rondo for two flutes. 8 pm. Dinkelspiel Aud. $4/$2.

Young Stanford Artists Classical Series: Gloria Cheng, piano. 8 pm. Tresidder Union, Rm. 280. $3 general, $2 students.

EXHIBITS

Recent Acquisitions. Paintings, drawings, sculptures and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. Jan. 11 - Feb. 20.

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

Photographs by Olivia Peterson. Coffee House/ Tresidder Union. Feb. 1 - Feb. 28.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Recent Expressionist Drawing Experiences by Barbara Scoledes. Tresidder Union, upper lobby. Feb. 1 - Feb. 28.

"Images in Bloom", by Sally Spence, watercolor paintings. I-Center. Feb. 3 - Feb. 28.

CAMPUS REPORT

Volume XV, Number 19 | A publication for Stanford University faculty & staff | February 9, 1983

SHANNON SEYMOUR GETS HER JUST REWARD—champagne in the face—for her part in earning $6,000 toward a new boat by rowing on the ergometer in White Plaza. The Crew received a challenge grant of $5,000 and took turns rowing for a 24-hour period to earn the rest. The boat was given in memory of Betty Kantor Chapman, '60, who died last year.

Quiet crisis of conscience: SSRL weapons work opposed

Fifteen faculty and about 280 staff members at the Stanford Linear Accelerator Center (SLAC) have quietly signed petitions objecting to proposed weapons-related research at the Stanford Synchrotron Radiation Laboratory (SSRL).

The proposal involves the development and testing of high speed x-ray detectors, used in the analysis of nuclear weapons tests. Similar detectors could be used in studies of how atoms rearrange themselves in biological and other materials—as muscles contract, for example.

No funding for the proposal was included in President Reagan's budget for fiscal 1984. Completely unclassified, the weapons testing proposal was developed by scientists at Lawrence Livermore, Sandia, and Los Alamos national laboratories, who seek about $5 million from the Department of Energy's Office of Military Applications.

Faculty from seven University of California campuses—San Francisco, Santa Barbara, Irvine, Los Angeles, Berkeley, Riverside and San Diego—are

Big indirect recovery loss

Stanford may forego as much as $20 million in research cost recovery over the next three years, President Donald Kennedy told the winter quarter meeting of the Academic Council Thursday, Feb. 3. *(See text page 23.)*

Full recovery of indirect research costs, "however realistic," would cause faculty researchers "to suffer a competitive penalty in the allocation of (research) awards," Kennedy said.

In addition, "the Executive Branch agencies and the Congress are both distressed by the rate of increase in overhead. In my judgment, that concern is based upon a substantial misunderstanding; but it is nonetheless a political reality.

"We are not anxious to have recent

Packards pledge $20 million

Gifts totalling $20 million for construction of the new Children's Hospital at Stanford have been pledged by David and Lucile Packard of Los Altos Hills, Stanford University President Donald Kennedy announced Monday, Feb. 7.

The gifts will be known as the David and Lucile Packard New Children's Hospital Fund and will be used by the board for the planning and construction of the new Children's Hospital. Under the terms of the pledge Stanford will provide an equal amount towards the project, primarily through additional fundraising.

"We want to help develop the finest Children's Hospital in the country and have it physically and intellectually connected to an outstanding university medical center such as Stanford," said Mr. and Mrs. Packard.

"The Packard commitment for this joint venture is the largest personal pledge either institution has received since their founding," Kennedy said. "It has given us a truly magnificent start for our comprehensive goal to consolidate all children's services in a new Children's Hospital."

The gifts, Kennedy added, will also complement the present efforts of the University to modernize Stanford Hospital and research facilities of the Medical School.

Packard, a Stanford alumnus and former trustee, is chairman of the board of Hewlett-Packard Corporation. Mrs. Packard, a Stanford alumna, is vice chairwoman of the current board of Children's Hospital at Stanford. Both have been known for their activities in support of education and community betterment.

The new Children's Hospital will be a $40 million building physically attached to Stanford University Hospital. It is expected to be ready for occupancy by a target date of May 1987. An agreement between Stanford and Children's Hospital has created a new corporation to operate a

Tuition up 9.8% to $9,027

Responding to the recession, Stanford will increase tuition 9.8 percent in 1983-84, to $9,027 from $8,220.

"Special effort has been taken to temper the rate of growth of tuition in general recognition of the tightness of the economy," according to documents considered by the Board of Trustees, which approved the increase Tuesday, Feb. 8.

The increase compares with a 15.1 percent hike this year and a 12 percent gain projected in the University's long-range forecast last December. A year ago, the 1983-84 forecast was 14 percent.

Harvard recently announced an 8.7 percent increase in tuition, room and board charges, to $13,150 from $12,100 the smallest percentage increase there in four years. Princeton announced a 12.6 percent increase, to $12,910 from $11,468. Brown boosted tuition 12.8 percent.

Stanford will continue to meet the calculated financial need of all those admitted as freshmen and maintain its "aid-blind" admissions policy, making decisions without regard to financial need.

At present, 46 percent of all un-

Research fund competition up

Major private universities face growing competition for research funding, a new Stanford report suggests.

A background paper on indirect costs, circulated to the Board of Trustees by President Donald Kennedy, notes that "the capacity to do good research is becoming more and more widespread in this country.

"This is due largely to the fact that graduate programs at the best institutions have been turning out people with doctorates faster than this same class of schools can absorb them as faculty members.

"The average quality of faculty at a

People

Shultz to give graduation talk June 12

Secretary of State George P. Shultz, on leave as professor at the Stanford Graduate School of Business, will be featured speaker at the University's 92nd annual commencement Sunday, June 12.

Scheduled for 10 a.m. in Frost Amphitheater, the commencement program is open by ticket only. Each degree candidate obtains three tickets.

A Stanford campus resident, Shultz was appointed to a part-time professorship in the Business School in 1974, where he taught in the public policy program until he was named to the Cabinet last June.

Former dean of the University of Chicago's Graduate School of Business, Shultz was a fellow at the Center for Research in the Behavioral Sciences at Stanford in 1968-69.

He was the unanimous first choice of the commencement speakers panel, an advisory group to President Donald Kennedy which includes students, faculty and staff.

Members include Senior Class Presidents Kevin O'Beirne and Katie Dore, Profs. Alberta Siegel, psychology, and Bliss Carnochan, English; Robert Hamerton-Kelly, dean of the chapel; Larry Horton, director of government relations; and Marlene Wine, special assistant to the president.

George Shultz

Capacity crowds of 12,000 filled Frost to the brim in 1981 and 1982, when the speakers were two Stanford alumni, Deputy Secretary of State Warren Christopher and U.S. Supreme Court Justice Sandra Day O'Connor.

Reagan names Trent ambassador

President Ronald Reagan has appointed Hoover Institution Senior Research Fellow Darrell M. Trent as chairman of the U.S. delegation to U.S.-European civil aviation conference negotiations on multilateral pricing (U.S.-ECAC). The President has also announced his intention to nominate Trent for the rank of Ambassador.

Currently on leave from Hoover, Trent will continue his duties as deputy secretary of the U.S. Department of Transportation, a position he has held for the past two years.

The U.S.-ECAC agreement sets up a multilateral civil aviation pricing arrangement with the long-term aim of permitting U.S. and international air carriers to set fares without government intervention.

The six-month pricing agreement, which began on Aug. 1, 1982, was subsequently extended an additional nine months in order to permit work on a permanent understanding.

The agreement constitutes a step in further loosening government control of international air carriers. It provides for zones of flexibility within which governments have agreed to permit pricing without intervention.

Countries bound by the agreement include: Belgium, France, Germany, Greece, Ireland, Italy, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, The United Kingdom, and Yugoslavia.

Trent has held numerous public policy positions throughout his career. He has deputy assistant to the President and staff administrator from 1969-70; deputy director and acting director of the Office of Emergency Preparedness in the Executive Office of the President from 1970-1973; associate director of the Hoover Institution, from 1974-1980.

Ely receives top book prize

John Hart Ely, the Richard E. Lang professor and dean of the Stanford Law School, was one of two recipients of the triennial award of the Order of the Coif, the nation's highest accolade for scholarly work in law.

He was presented the award—shared with Dean Jesse H. Choper of the Boalt Hall Law School—in Cincinnati during the annual meeting of the Association of American Law Schools on Jan. 7.

Ely was chosen by a panel of lawyers and legal educators to receive the award, which is made every three years in recoginition of the "authorship of a written book evidencing creative legal talent of the highest order." Ely was recognized for his book, *Democracy and Distrust* (1980).

This is the third time a Stanford law professor has been its recipient. The late Prof. Herbert L. Packer shared the award in 1970 for his book, *The Limits of the Criminal Sanction* (1968), and Lawrence M. Friedman, the Marion Rice Kirkwood professor of law, received the award in 1976 for his books, *A History of American Law* (1973) and *The Legal System: A Social Science Perspective* (1975).

John Roberts

Graduate School of Business Prof. John Roberts, 37, has been elected a Fellow of the Econometric Society, the worldwide professional association of theoretical and statistical economists.

Roberts was one of 12 scholars elected to the society. Others are a member of the mathematics department at UC-Berkeley, six other Americans, two Britons, and a Hungarian.

Roberts, who joined the Business School faculty in 1980, holds the Jonathan B. Lovelace Professorship in Economics at the School.

The Fellows are a select group of 300, drawn from within the 5,000-member Econometric Society. Two other members of the Stanford Business School faculty, David Kreps and Robert Wilson, are also Fellows in the society.

Paul Mosher

Paul Mosher, Stanford University Libraries' director for the collection development, has been appointed a Senior Fellow in the second year of the Senior Fellows Programs of the Graduate School of Library and Information Sciences at UCLA.

Coordinated by UCLA Dean Robert M. Hayes and funded by the Council on Library Resources, the program brings together top level academic library administrators from across the country in an intensive six-week summer program, followed by a year's study of a specific issue or problem in library management and a follow-up session in June 1984. Mosher will explore theories of organization development as they apply to academic research libraries.

Miriam Miller

Miriam Miller has joined the staff of the Stanford Alumni Association as editor and manager of The Portable Stanford book series.

Editor of a number of books, both while living in New York and since returning to the Bay Area in June, she has done work for Macmillan, Columbia University Press, Hawthorn Press, W. H. Freeman, and Newmarket Press.

A native of Connecticut and a graduate of the University of Michigan, she began her career in marketing and merchandising with Macy's in New York and San Francisco. Before entering the publishing field, she worked on her doctorate in English at UC-Berkeley and taught there and at the University of Minnesota.

Faculty openings

EE statistical signal processing

The Department of Electrical Engineering invites applications for faculty positions in the general area of statistical signal processing and system identification, with interests in applications in telecommunications, including hardware and/or software aspects, especially as related to efficient VLSI or other practical circuit implementation.

One position is available at the (tenure track) assistant professor level. Candidates for the more senior position of research professor are also sought.

Interested persons should apply before May 1, 1983, including a resume, statement of interests, copies of publications, and names and addresses of references to: Prof. Joseph W. Goodman, chairman, Search Committee, Dept. of Electrical Engineering, Stanford, Calif. 94305, (415) 497-3304.

Stanford is an Equal Opportunity, Affirmative Action Employer, and welcomes nominations of women and minority group members and applications from them.

Feb. 15 deadline for frosh/soph seminar plans

The deadline for submitting course proposals to the Freshman/Sophomore Seminar programs is Feb. 15. All faculty are encouraged to submit a course proposal. If you need a proposal form, please contact Kathy Thoelecke in the Academic Information Center, 497-2426.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Robots, high-tech machines, come to help of the disabled

BY DONALD STOKES

L to R: Machiel Van der Loos, program engineer; Larry Leifer; K.G. Engelhardt,Veterans Administration specialist.

Robots are coming to the aid of quadriplegics, the blind, the disabled, and nearly all those who suffer the loss of limbs or bodily functions.

It is happening in a crowded, noisy building on the grounds of the Veterans Administration in Palo Alto.

Here, 27 young engineers, scientists, physicians and therapists are pushing into new fields which have such names as orthopedic biomechanics, man-machine integration and neuromuscular rehabilitation.

Robots are only one of their score or more of projects. Others seek to:

* Help the blind to "read" books and daily printed material by hearing them electronically spoken;
* Study the feasibility of making those with spinal-cord injuries walk again;
* Probe ways to electronically augment the workings of the nervous system; and
* Use advanced computer graphics to facilitate cognitive rehabilitation.

The work is a collaborative effort between the V.A. Rehabilitation Research and Development Center, several departments at Stanford University, six in the Veterans Administration Medical Center Services, and a variety of institutions in the Bay Area.

Projects are also conducted in various parts of the country with other R&D centers.

The Rehab R&D Center, as it is often referred to, is directed by Larry Leifer, professor of mechanical engineering at Stanford.

Leifer, aged 42, has spent more than 16 years on research related to the application of engineering science to the understanding and functional correction of nerve and muscle function.

During the past six years his work has focussed on the application of engineering in rehabilitation. Though involved in several projects, his contribution to rehabilitation robotics is probably the reason for his reputation as a world leader in helping the disabled.

His manner is deceptively mild, his appearance youthful.

Leifer explained that the thrust of his team's work is to seek generic solutions, to understand a class of functional disabilities, rather than individual problems. "We try to define assistive devices that will satisfy a range of needs.

"Otherwise, we would remain in the historical rut of making expensive custom fixes for each individual problem. We try to define and answer functional questions which apply to the problems encountered by people of varied impairment.

"For example, if a person has an arm but cannot use it, what should we do for him? In most cases we choose not to look for an anatomical replacement. That has been the bias of the last 100 years, a very understandable one.

"People have been made to hope that they will get their arm 'replaced' in working order. That is just not possible, with current or foreseeable knowledge.

"Our team attacks the functional problem: how can we help you perform the functions you once did with that arm. That is where the robotic concept takes shape. We try to make a machine, not constrained to look human, which will perform comparable functions.

"As the machine is not part of one's body, the disabled user is more free to interact critically with the machine.

"One way to control such a machine is by voice command. Curiously, we have found that it is important for the machine to talk back to the user, if spoken to. We also have to realize that in ordinary human communication a great deal is left to inference.

"If I say to you 'Get me a drink of water' you infer what a cup of water is, where it is and how to fetch it.

"This means that we must create a way for the patient to control the machine, rather like a pilot flying a spacecraft. The machine must be given as many built-in features as possible. But, when the stage is reached where the limits of the machine's capabilities are reached, then a human must take over and guide the machine."

Leifer demonstrated an experimental clinical model. It consisted of a small, almost humanoid metal arm, a two-fingered hand and a collection of 12 micro-computers which control the arm.

A young quadriplegic veteran was being trained to use the robot. In sequence, the young man asked the robot to wake up; "move to glass"; "pick up glass"; and "bring it to me."

The robot repeated each request and obeyed each instruction.

Slowly, delicately the metal arm lifted a glass containing water.

"Give glass to me" came the next order. Slowly, the arm brought the glass to the lips of the quadriplegic.

"Repetitive tasks are easy for the robot," Leifer commented. "Our challenge lies in making the robot interactive, able to follow every change in the operator's objectives, as might happen if helping the user to play chess, or to cook.

"This is only a beginning. This will develop in the coming decades. We can imagine robot servants able to carry out many useful tasks in the home or the factory."

While robotics is the most visually comprehensible project at the Rehab R&D Center, there are many other important projects where space age technology is being adapted to aid the handicapped.

A flight simulator, one of the expensive and elaborate machines that helped astronauts to prepare for venturing into space, will now be helping the handicapped to venture into the everyday world. The task is formidable and requires a team effort with board expertise in electro-mechanical systems design, computer software, human information processing and clinical evaluation.

The flight simulator will first be applied to the design of vehicles for the handicapped. "With this simulator we can find the limits of what people can manage with wheelchairs, and measure what needs to be built into wheelchairs so that they can be more effective and serve more people.

"We aim to make such vehicles more usable by those who have lost vision, have severe motor disability or have cognitive losses."

The basis of all the work at the Center is a profound shift away from the manner in which machines are normally used. Most people adapt to their autos, household utensils and office apparatus, but the R&D Center tries to adapt the machine to the user.

In this effort, the computer is invaluable; it is the vital link between the capabilities of the user and the machine that works at his command.

Leifer expressed concern that because of societal influences and habits, the handicapped may fatalistically accept handicaps for which remedies can be found if enough effort is harnessed.

His own mother, for example, is extremely hard of hearing. He has talked with her and the rest of the family about assistive devices that are now available to help, but Mrs. Leifer and the rest of the family have never felt like pursuing the matter.

"Many people with major disabilities tend to accept their situation and do not seek technical solutions. With the passage of time, if one does not do something about a physical impairment or disability, the time comes when it cannot be ameliorated. This is especially true where brain or muscle function is concerned."

Leifer described the work of Sally Wood, an electrical engineer who, in one project, is building a mathematical model of the transmission of electrical signals in human nerves.

In a second project, she is working on a reading machine for the blind, in which a camera scans the characters printed in a book, then delivers the images to computers which translate them either into synthesized voice, Braille, or computer-readable files.

"This unusual blend of theoretical and applied research is characteristic of many people in our center.

"Considerable work has been done on computer synthesis of human speech, but a vast amount remains to be done. At the moment synthesized speech sounds very mechanical. There is no inflection, no pacing.

"If the computer is going to talk to you, it should have a little personality. Richard Steele is studying how to inject those features into machine-made speech.

"His second task is to tell the computer what to say. He is studying better ways of coupling verbal thought to the machine—synthesized speech.

Katsufrakis's Antarctic research hampered by sunspot surge

Stanford scientists in the Antarctic have found unusually violent sunspot activity this year which has hampered their research into magnetosopheric phenomenon.

Since sunspot activity is supposed to be on a downward cycle, the frequency and severity of the storms was unexpected, according to John Katsufrakis, adjunct professor of electrical engineering and project director for Stanford's project at Siple Station in the Antarctic interior. One storm was the worst he ever saw, he said.

"1982 was a disaster from our point of view," Katsufrakis said. "There was just so much solar activity, they were averaging one event a week at Siple.

"July 13th, they had a blood red aurora which covered the entire sky. You could see shadows," he said.

"They had between three and five flares from last Friday to Saturday, so it's continuing. We hope it kind of quiets down so we can go about our business."

These storms block out radio transmissions sent from Siple to Stanford's station in Roberval, Quebec. The transmissions follow the magnetic field of the

John Katsufrakis

earth. Stanford scientists can study the relationship between the magnetosphere and the atmosphere by listening to the transmissions. They also monitor the natural radio activity of the magnetosphere, usually called "whistlers."

Katsufrakis said that the peak of the sun's 11-year cycle should have been 1979, and that solar activity should last two or three years, decrease, and reach its low point around 1990. The pattern is not being followed during this cycle.

He said 1980 was unusually quiet, 1982 unusually active.

The storms also break up high frequency radio transmissions between the bases "on the ice."

"We were just fortunate that a lot of the bad weather and the 'comm' problems were essentially in parallel," he said. This meant that no one was travelling (usually by air) when communications were disrupted. Such a disruption could constitute a safety hazard to travellers.

Katsufrakis said that during the storms it was easier to communicate to Siple from the engineering building here using a satellite than it was for the men at Siple to talk to McMurdo or the other American bases on the continent.

Several changes have been made at Siple this year, Katsufrakis said. The length of the antenna which transmits the radio signals to Roberval has been doubled so that researchers can now send high-powered, low frequency signals, as low as one kilohertz (one thousand cycles per second).

He said that was a useful regime for the research.

Siple reopened two years ago after a one year shutdown caused by budget cutbacks. Thirty-five men were there during the recent austral summer period, mostly construction workers. Katsufrakis, who has been to the Antartic more times than anyone in history, was there again this year.

When the station ends its summer research this month eight men will "winter-over," including two from Stanford, John Green, a recent masters candidate, and Dave Shafer, a graduate student.

There will also be a researcher from Utah State University, and five support personnel, including a Navy paramedic, two life-support engineers, a cook and a radio man.—**Joel Shurkin**

French studies fellowships available

The Georges Lurcy Educational and Charitable Trust is making available two fellowships for full-time graduate study or research. One fellowship is for research or study in France, the other for research or study as a resident fellow.

To be eligible, the graduate student must be a citizen of the U.S. or a permanent resident. The fellowship may not be held simultaneously with any other fellowship. The stipend is $7,500 (minus TGR fees) for an academic-year period. Applications will be judged on academic performance and promise of the candidate and the quality of the proposed program.

The Lurcy Trust has indicated a preference for applicants whose projects involve contemporary French culture. Applicants should arrange for separately submitted letters in support of their applications from their academic advisors and department chairman. A curriculum vitae, proof applicant can speak French, and a local and permanent address must also be included with the application.

Applications are due in Building 10 by **March 1, 1983.** They will be reviewed by a faculty committee and the two selected will be nominated to the Foundation for appointment.

The recipients *will be notified by the Foundation soon thereafter.*

If you have questions, please contact Shirleyann Shyne at 7-3904.

Robotics...

continued from page 3

"One of his studies centers round the use of a stenographic keyboard. Under ideal circumstances, by using a stenographic machine a person can proceed at 220 words a minute, which is faster than the average human range of 100 to 200 words a minute.

"We are aiming for the time when a speechless person can 'talk' at a normal rate."

Another researcher, Fred Lakin, is working on the development of a graphic language for those who have lost ability to manipulate words and their meaning.

"The human consequences of not being able to understand normal language are profound," said Leifer. "The cost in human terms is extraordinary. Fred is trying to create an environment for communicating graphically. It includes extensive use of computers and computer-generated images.

"A person may be so injured that he cannot relate letters and words to objects or messages. But he may be able to make some sort of squiggle that stands for something he is trying to convey.

"By recording this, and working closely with the patient, it may be possible to build an individual language for that individual. The computer becomes his/her personal translator. The language is idiosyncratic to the user."

Thousands of potential wheelchair users need a means to control the vehicle without coming into physical contact with the control interface. The answer, say researchers, is ultrasonic rangefinding.

Using this, the user would not have to wear any part of the device nor make any special accommodations for it to operate adequately. In combination with voice command, the wheelchair would be easy to use, and safe.

The work of the Rehab Center is aimed not only at relieving the handicaps of many thousands of people. It is also hoped that research will lead to a reduction of costs in the care of the handicapped.

For example, some 4,000 quadriplegics are being cared for by the Veterans Administration, and it costs $50,000 a year to maintain each one, making an annual bill of $200 million. As they may be expected to live another 40 years (many are young veterans of Vietnam) that makes a potential cost of $8 billion for that group of injured alone.

There are many thousands of people with lesser disabilities. In all cases, there are direct and indirect cost incentives to reduce the handicap associated with any disability. There is also a clear opportunity to be helpful.

Good design, new technology, attention to the user and a philosophical commitment to building machines that adapt to people are key factors in Leifer's belief that the disabled can have a better life cost-effectively.

It all began for Leifer when, as an undergraduate at Stanford, he grew restless with the study of engineering, as he found it.

"I felt I wanted direct involvement with human problems," he said, "so I took courses in physiology and psychology. I enjoyed work with machines but primarily as they are used directly by humans. I am also drawn to the dynamic properties of both people and machines.

"I admire a bridge and its builders, but I would rather see people dance and build machines that are an extension of the human will to dance.

"At the graduate level this became focused for me. I became interested in the human body itself as a machine. This led me further into the physiology of human movement. Curiously, I am now more involved with the development of machines that can augment lost human movement."

Leifer gained all his degrees at Stanford and did his doctoral work in the Neurology Department between 1965 and 1969. His work centered on the application of engineering techniques to physiology, particularly the study of nerve conduction and muscle contraction during voluntary movement.

From Stanford he went to the Ames Research Center, where he became a staff scientist in the Human Performance branch. He worked in a psycho-physiological laboratory where the objective was to measure human information processing physiologically.

Next came a year at MIT, where he did similar work. Then came a significant transition. In 1973 he went to Switzerland where he joined a former Stanford professor, Max Anlicker, in the Biomedical Engineering Institute of Zurich. Leifer did research in and taught biomedical systems analysis.

In 1976 he came back to Stanford as an associate professor of mechanical engineering, with a courtesy appointment in biomedical engineering in the Department of Neurology.

In his second year he and several faculty from the School of Engineering, the School of Medicine, and the V.A. Medical Center joined in the proposed establishment of a rehabilitation research and development center.

"Most of the people were senior, and already committed to their own particular projects and teaching. I was still uncommitted and the Center was exactly the direction in which I wanted to go. Franklin G. Ebaugh, associate dean of the School of Medicine asked me in 1979 to direct the fledgling center."

Leifer works very closely with three other engineering faculty members—Felix Zajac, Dennis Carter and Robert Piziali.

There is currently a staff of 27 researchers and support people, and some 12 Ph.D. students. All projects are carried out in collaboration with physicians at Stanford and the V.A. Medical Center.

The team is the only funded center in the U.S. which is developing robotics to help the disadvantaged.

In 1980 the team moved into its present facility. "We are still in the growth stage," says Leifer, "and will need a couple more years before we are a mature R&D group of approximately 40 persons."

In an important evolutionary step, the Center will be adding three medical program directors to augment the current technical leadership. More specific information may be had from the following individuals:

R R&D Center: Larry Leifer, Ph.D.; Franklin Ebaugh, M.D.;

Orthopedic biomechanics: Dennis Carter, M.D.; John Csongradi, M.D.;

Nerve and Muscle Systems: Felix Zajac, Ph.D.; Leslie Dorfman, M.D.;

Man-Machine Integration: Larry Leifer, Ph.D.; Robert Chase, M.D.; and

General Information: Pat McCarty (415) 493-5000, ext. 5465.

Stuck head first on rocks, barnacles eat with their feet

Today we are going to talk about barnacles.

The barnacle is confronted early in life with an existential decision about where it is going to live. Once it decides, it can never move again; it spends the rest of its life hanging with its head cemented to a rock, trying to eat with its feet.

"Being a barnacle is not an easy life," points out Mark Denny, assistant professor at Stanford's Hopkins Marine Station in Pacific Grove. Denny is an expert on barnacles, which he says is a more interesting creature than one might assume.

Consider barnacle cement. It is one of nature's strongest glues, a mixture of still-unknown substances that is so strong it is easier to chip the rock the barnacle is attached to than it is to pull off the barnacle. Dentists would love to have it synthesized so they can use it to fasten false teeth; orthopedic surgeons would adore it for gluing together broken bones.

Consider sex. Barnacles have, for the size of their bodies, one of the largest male sexual organs in all nature. Since barnacles are also hermaphroditic, well. . . .

While Denny speaks of the little critters with some informality, they are complex and fascinating creatures, with several mysteries still unsolved. Denny studies the mechanical design of organisms, how they are built to withstand the sometimes violent environment in which they live.

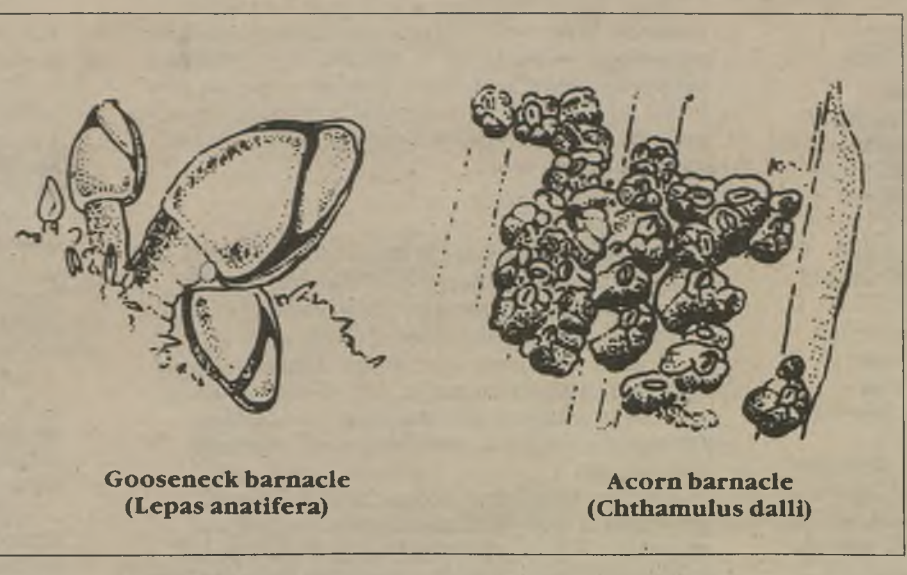
"Once you know something about how the animals are designed in a mechanical sense, you can start looking at their ecology in a different light," he says.

Barnacles, for instance, must go about their business in the strong ocean surf. The forces they must endure are the equivalent of a man trying to stand up in 300-400 mile an hour winds. They apparently are capable of doing this because the glue is so strong.

Barnacles are crustaceans, subclass Cirripedia. Two of the most common barnacles on the California coast are the so-called gooseneck barnacles (Lepas anatifera), and the acorn barnacle (Chthamalus dalli). The gooseneck has a stalk that holds the working parts of the animal away from the rock.

There are about 1,445 barnacle species, many of them first described by Charles Darwin, who found so many he referred to an "Age of Barnacles." Most of the sediment of the Florida shelf is made up of barnacle shells.

Not all barnacles attach themselves to rocks. Some pick fish or whales to hang on. They are very particular. A barnacle species that selects the grey whale would not be caught dead on a humpback, and the humpback's barnacles would lament the neighborhood if they accidentally found themselves attached to a grey.



Some barnacles like the bottoms of boats, to the chagrin of boat owners who find the drag doubled when enough barnacles call their boats home. The barnacles must be scraped off to get the ship running properly. Poisonous copper-based paint serves as some protection from barnacle blight.

Two metamorphoses

Barnacles go through two metamorphoses, and employ two different kinds of cement.

Their life cycle is complex and replete with unknowns to marine biologists, Denny says.

Barnacle babies are born in large batches, Denny says. "They kick out thousands per adult. They're just released in the water." The babies are about a millimeter long.

Gooseneck barnacle (Lepas anatifera)

Acorn barnacle (Chthamulus dalli)

Being a barnacle is not an easy life. Once it decides where to live, it can never move again.

—Mark Denny, Hopkins Marine Station

Where they go and how far they swim is totally unknown. It is possible they stay in the neighborhood and attach themselves to the same rock as their parent; it is also possible they are carried thousands of miles.

"If you take those 10,000 younguns and try to follow them in this kind of water, there just isn't any hope. People have tried putting dye traces out. The larvae are active things; they can decide where in the water column they want to be.

"You can tell when barnacles are releasing their larvae into the water, and you can tell when larvae settle on the rocks, but the two may come from two entirely different populations. The ones that settle on the rocks may start out in Japan for all anybody knows," Denny says.

Somehow or other the barnacle larvae find their way to the vicinity of a rock and metamorphose to something that looks a little like a clam.

The barnacle must decide if the rock (or ship or whale) is likely to be a good place to feed and live. It must have strong currents to bring in plankton for food.

The barnacle then attaches itself to the rock using a relatively mild form of glue, one that enables it to move around a bit by shuffling on its antennae. The animal usually selects a rock with other barnacles on it.

When the barnacle decides that it likes the homesite, it settles down permanently and begins to change yet again to the form commonly seen as a barnacle.

Two weeks later it starts producing the adult cement. This cement becomes almost solid. The barnacle will never be able to move from its position again. If it has chosen well, there is plenty of food passing by, life is long. If it has chosen poorly, it starves to death.

"Once they're glued down with the adult stuff, that's it."

The barnacle grows a shell to protect itself from other creatures. The shell opens at the bottom and two feet-like organs, called cirri, can be stuck through the bottom to wave in the water. The fan-shaped cirri catch the plankton and shovel it into the barnacle's mouth appendages.

Barnacles that attach themselves to boats just ride along with their heads cemented to the hull, their feet waving in the passing water, trolling as it were.

"It takes more energy to sit there and beat your feet all the time than it does to just stick them out and wait for something to come to you," Denny says. "There's a trade-off between finding an area where you aren't at any risk of being knocked off, and finding an area where the cost of feeding yourself isn't particularly high."

The cement has never been synthesized, Denny says. Scientists know a good bit about the ultimate composition but suspect that barnacle cement, like epoxy glue, comes in two compounds which form the glue only when they are mixed. Scientists have been unable to find out what those substances are, so they cannot reproduce the cement.

Dentists and surgeons are intrigued by it because the glue is made of protein and is not likely to be carcinogenic. It also works well on wet surfaces.

Televised attachment

One mystery Denny is working to solve is the brief period when the barnacle settles on a rock. This usually takes place in a violent surf. No one has actually seen this process in the ocean.

"They're in the water; it's torquing around. . . and they manage to get next to the rock, at some point when the water's still, and glue themselves down. How they manage to do that is mind-boggling. I just don't understand it."

Denny would like to rig a television camera to concentrate on a small area of a likely rock and photograph this process.

Duplicating the process in a laboratory would not work because no one can easily simulate the crashing waves.

"The problem is the water velocities. The accelerations out there are just whopping. The water, even on calm days. . . is coming in at 15 or 20 miles an hour. . . it's got turbulence in it, and it's really hard to come near to duplicating it in the lab."

Barnacle shells are strong if a bit brittle. They are composed of calcium carbonate like most crustacean shells.

Some barnacles, particularly the gooseneck, are good to eat, something Denny is not sure he wants to get around. The gooseneck has a muscle that runs up the shaft that tastes like lobster.

The Japanese have discovered this potential food source, and the going price for some barnacle muscles is $20-30 a pound delivered in Japan.

Fortunately, Denny says, you get so little meat from each barnacle it takes a lot of work to produce a barnacle cocktail.

His work is funded by the Office of Naval Research.—Joel Shurkin

Viennese Ball Saturday to climax Austria Week at Stanford

Austria will invade Stanford this week in full, festive Viennese style. The events began Monday, Feb. 7 and conclude with the gala event—the sixth annual Viennese Ball, Saturday, Feb. 12.

According to AnneMarie DeGeorge, head of the committee organizing Austria Week here, the entire week's events are planned "so people can learn about the culture of Austria." But probably nothing is more traditional or popular than the splendid Viennese Ball.

Tickets for the event sold out Jan. 31 after being on sale for only one and one half hours. This year 434 tickets were sold at $13 per ticket for the Roble Gym dance.

The Viennese Ball is no ordinary dance, however. Promptly at 8 p.m., the dance will open in true Austrian style, with guests of honor and members of the ball committee participating in a ceremony of pageantry. Special guests include the Austrian Consul and Hedwig Thimig, assistant director of the Stanford-in-Vienna program.

The ball will open with the entrance of the special guests, followed by the 22 waltzing couples. The women will be dressed in long white dresses and elbow-length gloves and the men will be wearing tuxedos. They will be dancing to the "Blue Danube Waltz."

Other events for the week include:

* Guest of honor Hedwig Thimig, who is a drama professor, speaking on theater in Vienna, 7:30 p.m., Monday, Feb. 7, History Corner, Room 2.

* "Heurigenabend," an evening of tasting wine, cheese and cold cuts in the Austrian "heurige" fashion. The German theme house on campus, Haus Mitteleuropa, 620 Mayfield, will host the event 8:30 to 11 p.m., Tuesday, Feb. 8.

* An orientation meeting for those students interested in Stanford-in-Vienna. The talk will be hosted by Thimig, 8:30 p.m., Wednesday, Feb. 9, at Haus Mitt. The meeting will be followed by a slide show and film on Austria open to anyone interested.

* A Kaffee Haus at Bechtel International Center, Thursday, Feb. 10. Coffees, pastries and cakes will be served.

* GastHaus Mitt, a complete German dinner served in Austrian style Friday night, Feb. 11, at Haus Mitt. Reservations are required.

Official Soviet announcements give clear view of events. . .

BY MILLICENT DILLON

The Russians themselves in their official announcements give the clearest indication of what is happening in their internal power struggles, says visiting Prof. Boris Gasparov, a Soviet emigre now teaching in the Department of Slavic Languages and Literatures at Stanford.

"In political statements it is very often much more important how something is said than what is said.

"What does it mean, for example, when *Pravda* chooses a particular syntactical structure in an official announcement? If one can answer this question, much is revealed. Here semiotics (the study of language as code) can be of great help."

According to Gasparov, in ideological articles the method of expression is very clearly defined, and the rules of the code are used quite unconsciously by the writers. If one analyzes the text, the hidden message becomes clear.

"You can rather easily obtain the basic rules that govern that official language by seeing what language is chosen, what the syntactical patterns are. It's amazing how strict these rules are, and once found out, how they reveal the meaning behind the text.

"Often I can obtain much more information reading *Pravda* than by reading American newspapers. On first glance the American newspapers seem to reveal more; they are loaded with facts, they are part of a free press. And *Pravda* is highly ideological and has almost no factual material at all.

"But in *Pravda* things are often amazingly clear.

"After the death of Brezhnev, for example, I read American newspapers and watched TV and saw there was much guessing about what was going on.

"Then I saw a Russian newspaper with an official announcement about a Central Committee meeting—just a few lines.

"From these seemingly meaningless lines, just from seeing the syntactical pattern of the sentence in which Andropov's name was mentioned, it was possible to understand what was going on: how much power he had.

"As to the announcement of Kirilenko's resignation and the question as to whether he really was sick or was ousted, that too was immediately clear. He had been ousted and in a rather rude way."

One of the most eminent linguists and semioticists in the Soviet Union, Gasparov emigrated to the U.S. in 1981. During his career the relationship between linguistics and ideology was never an impersonal one for him, but one that always had a deep bearing on his life as a scholar.

From his earliest days as a linguist he tried to evade the effects of official Soviet ideology upon his own scholarly work. Yet so complex is the interplay between external and internal forces in the life of a Soviet scholar, Gasparov himself is not sure when personal and when political factors determined his intellectual choices.

Gasparov was born in Rostov-on-the-Don in the Armenian settlement of Nakhichevan. His family, of Armenian origin, had fled from the Turks in the early 19th century to Russia.

"I am a sixth-generation ethnic Armenian living in Russia, without language. My original language and the language of my education was Russian. Perhaps that explains something about my later proceedings."

His own family had been educated for many generations, with Russian being the language of education. His grandmother and grandfather had graduated from a Russian university. His great aunt had been the only woman to graduate from Moscow University in her year.

"In my family's view the local Armenian vernacular spoken in Nakhichevan was a language of the lower class, the language of the streets. Nevertheless the style of our household life was very much traditional Armenian.

"So I had a paradoxical double personality, Russian in culture and language but absolutely non-Russian in my everyday habits and attitudes."

Gasparov entered the Russian primary system in the late 'forties and soon became an intellectual star.

The Russian educational system, he notes, remains a very conservative and traditional one, based on the old-style German system. "The aims and substance have changed with the years, but the pure form has remained conservative."

All classes are assigned, there is no possibility of a free choice for any student. From the fourth year on each student is subjected to a series of very stringent final examinations.

"It is vital to obtain a high grade on these exams," says Gasparov, "in order to be able to go on."

All examinations are based on a ritualized form of expression, standard devices which allow for no room to express individual thought. All final examinations are checked by a higher authority in the education district office, the equivalent of our county board of education.

In the primary years the strongest emphasis is put on math and science. "Perhaps 10 percent of the children are able to understand the very difficult theoretical level at which these subjects are presented. But those 10 percent do get a superb education."

Gasparov won many mathematics competitions and so it was expected of him that he would go on to mathematics at the university.

"It somehow happened differently. I was very young, 16, when I graduated from the high school. It was 1956, a very exciting year. It was the year of the 20th Party Congress at which Stalin was denounced for the first time.

"Everybody was excited. Attention to history was very great. We had just studied Soviet history in one way and now there were these changes after the Party Congress. Maybe this atmosphere, this excitement caused me to suddenly choose humanities."

In the mid-1950s, the humanities were regarded as unimportant. "Basically the understanding that people had was that those who went into the humanities were those who could not manage science or math.

"The additional stigma the humanities had, of course, was that many of the disciplines, like literature and history, were highly ideologized. The imperatives and taboos were very strong.

"There were relatively small fields, however, in which you were somewhat freer. Linguistics, because it was so abstract, was one of these."

Gasparov entered the Russian Department at the University of Rostov-on-the-Don. There he found a very strong emphasis on theory. "In our exams on literature we almost didn't deal with texts. It was taken for granted that we knew these.

"The main emphasis was on general linguistics theory, the theory of grammar and the theory of poetics."

Gasparov finished his master's thesis on the history of Russian syntax. As Rostov had no doctoral program he went to Moscow, where he enrolled in the Moscow Pedagogical Institute, a small state university.

At MPI, according to Gasparov, there was an underground linguistic circle, underground in the sense that the scholars worked quietly on a continuation of Russian formalism and structuralism, a movement of the 'twenties, founded by Nikolai Trubetskoy, Roman Jakobson and Victor Schklovsky, which had been banned in the early Thirties by the Stalinist government.

"No," says Gasparov, "the formalists were in no way political. But the state was constantly producing ideological enemies and cracking down on them. The same thing happened with the geneticists in the 'forties."

As the result of both external and internal pressures, Gasparov found himself very dissatisfied with his scholarly studies.

"At that time I felt I could not be satisfied with

Stanford investment return averaged 8.2% during past decade...

During the past decade, Stanford's total investment return was 8.2 percent per year, compounded, Vice-President William F. Massy declares in the University's annual financial report for 1982.

This includes interest, dividends, rents and capital appreciation. It compares with an annual growth rate of 4.8 percent in the Standard and Poors' index of common stocks.

"Stanford is in the top decile (10 percent) of endowment funds in terms of total return for the decade as a whole, and the top quartile (25 percent) of endowment and pension funds taken together," Massy says. "We are optimistic about the state of the investment climate."

The estimated market value of Stanford's endowment totalled $770 million at the end of the fiscal year Aug. 31, 1982. The recorded value rose to $692 million from $665 million a year previously.

"Currently, Stanford's target investment mix is 80 percent equities and 20 percent debt," Massy adds.

The equity includes 47.5 percent domestic stocks; 9.0 percent international; 6.5 percent venture capital; 5.0 percent small companies; and 12 percent real estate. The debt includes 15 percent bonds and 5 percent real estate.

"Our commitments to domestic companies with small capitalization and to international companies are relatively new," Massy says.

"Stanford has been active in venture capital since the early 1970s. Recently that commitment has been reaffirmed and expanded as a result of market opportunities and our success in earlier investment rounds.

"Our equity position in real estate consists mainly of the Stanford Shopping Center and mortgages on faculty homes. Plans exist for expanding Stanford's real estate holdings, with stress on geographic and line of business diversification. The Investment vehicles probably will be land ownership with participating ground leases and mortgages on improvements.

"Stanford was among the first institutions of its kind to develop detailed written investment guidelines, couched in terms of modern portfolio principles. They include general instructions with respect to admissable types of securities, diversification targets, and also, where appropriate, the portfolio's risk factor."

Professors in the Graduate School of Business helped develop and monitor these guidelines.

In the past decade, total current funds operating expenditures grew by about 11 percent annually, about 2 percent faster than inflation, as measured by the consumer price index.

Tuition grew at about the same rate, about 1.5 percent faster than the CPI. This was about the same as other private universities.

Financial aid trailed tuition growth by about 2 percent, reflecting the growth of state and federally funded programs. Recent changes in federal and state policies "have reinstated the burden on colleges and universities to assure that access remains open to all, regardless of economic background," Massy observes.

"The growth of research expenditures—some 5 points greater than the rate of inflation during the past decade—was another favorable financial force that may well be coming to an end.

"The past 10 years saw very strong growth of sponsored research, especially in the biomedical, physical science and engineering areas which are among Stanford's greatest strengths. . . . The University ranks among the top five institutions in the receipt of federal research funds.

...provided you're skilled in linguistics, as is Boris Gasparov

continued from page 6

my education in this form, in any form which the Soviet Union could offer to me. I felt the need to change perspective, to obtain a view from a different angle, to enter an entirely different field."

In 1963 while still working on his dissertation in linguistics, Gasparov entered the Music Conservatory in Moscow. For two years he worked on both programs simultaneously.

Attempting to combine his linguistic studies with musicology, he produced a theory of music as a language. "I analyzed musical texts and produced a set of grammatical rules for the language of harmony."

Gasparov completed his Ph.D. in linguistics in '65 and his M.A. in music soon after.

In '66 he was appointed to a post at the University of Tartu in Estonia. "I call this my first emigration," he says. "It was the best place for me to be.

"Comparatively, the Estonians were less influenced by the Soviet government. They spoke their own language. All teaching at the university was done in Estonian, though in the Russian Department we did teach in Russian.

"It was a place very well entrenched against official ideology."

Gasparov experienced this intellectual movement as "a kind of spiritual emigration from traditional scholarly fields. We were entrenched not only against official ideology, not only against everyday Soviet realities there in Tartu, but also against the traditional institutions and values of academia.

"We all felt at ease with each other. We were people of different backgrounds, mathematicians, linguists, scientists, and philosophers, all unified by this semiotic approach."

At just about this time a shift began to take place in Soviet society, according to Gasparov. Among the changes was a major breakthrough for the humanities. "They became suddenly prestigious."

As part of this shift, the study of semiotics was greatly expanded nationwide. "To many scholars semiotics offered a model for studying any science, any cultural phenomenon, which could be broken down into a code, in the broad sense of the word.

"Every literary text, for example, could be regarded as the application of a system of rules, upon which was superimposed the author's individual variation. In this way one could also study the semiotics of dance or of iconology or of fashion.

"The applications of semiotics in all areas of life was soon a very popular and prestigious study."

Was this kind of study, with an emphasis upon form and rules rather than content, a way of evading the pressures of ideology?

"Yes," says Gasparov. "It was a very effective way of constructing an institution in the humanities which enabled people to proceed without the influence of ideology."

But the very success of semiotics began to destroy its potentiality as an anti-ideological technique.

"Beginning in the early 1970s, a few of us began to feel uneasy with what was being done by others and also with what we ourselves were doing. The movement had developed so broadly throughout the country that there were frequent huge conferences on semiotics.

"This mass production, we saw, led to some kind of stagnancy and to a new kind of institutionalization which we hated. After all, the whole movement had been very much conscious of its anti-institutional character and now it was being turned into an institution."

By the early 1970s, after the Czechoslovakian invasion, the entire political climate began to harden, says Gasparov. Once again the humanities were deposed from their position of prestige.

"What happened to us in the field of semiotics? What I am fond of thinking was that it was not just the external pressure which drained this movement of its appeal and power. It was our inner hesitancy as well.

"Some of us had come to recognize that we could not go on the same way because the positive potentials of the applications of linguistic techniques to cultural phenomena had been exhausted.

"We finally began to see that it had become a rather restrictive way of understanding the phenomena of culture, emphasizing only one aspect. We had been closing our eyes to many other sides of the problem.

"None of us knew what to do. By us I mean the three or four or five scholars who shared this feeling.

"I myself stopped publishing and did not write a paper for over two years.

"We came to the conclusion that it was necessary to return to more traditional values, to elaborate less formalized but more complicated models.

"There was a very strong desire for a reconciliation with philology and traditional linguistics and philosophy.

"But it also became clear that something further was required. The reconciliation would not only have to be with the traditional values of the field and with the traditional institutions but with the whole Russian way of life.

"Some of us were able to bring about this reconciliation. For others, emigration was the only answer."

Gasparov emigrated to the U.S. in January, 1981, and was given a scholarship at the Russian Institute at Columbia. In June of that year he came to Stanford, where his wife, Irina Paperno, is working on her doctorate in Slavic languages and literatures, and an M.A. in psychology.

Some of us were able to bring about this reconciliation. For others, emigration was the only answer.

—Boris Gasparov

Gasparov's work at Stanford is primarily concerned with literary texts and their analysis. He teaches courses on literary studies and on language and culture.

This summer he will be working at the Hoover Institution, with the support of a fellowship, on a "small" book on the language of Soviet newspapers.

. . . .University ranks in top 10% of endowment fund performance

continued from page 6

"Stanford also is coming to rely heavily on research grants and contracts from private firms. They not only provide needed dollars, but also add a sense of perspective and coverage of certain important scientific fields that are not a high priority with federal agencies. . . .

"Federal support for university research is under very great pressure. . .and it may well decline faster than the private sector can or will pick up the slack. The federal government also is raising questions about the continued payment of the full indirect costs of the research it supports. . . . Hence sponsored research must be regarded as an area of serious financial vulnerability."

Private gift support and endowment income remain two bright spots and were "strong performers" in the past decade, Massy notes.

"Stanford closed this recession year with a gift total of $77 million. This was second in size only to last year's record-breaking performance of $79.5 million and kept us a leader among universities nation-wide.

"Stanford's academic reputation plus the strength of our professional and volunteer fundraising organizations lead us to be optimistic about the gift possibilities for the future, despite continuing worry about the possible effects of recent and potential changes in the tax laws."

A professor in the Graduate School of Business and coauthor of a major book on *Planning Models for Colleges and Universities* (Stanford University Press, 1981), Massy notes that, paradoxically, "the better we (in universities) do our job, the more expensive we become relative to other goods and services in the economy."

Massy explains the apparent paradox as follows:

"On average, over time, real wages in a free economy tend to rise with the growth of productivity. A university like Stanford has 60 percent or more of its operating budget as direct labor.

"Universities must pay wages that are competitive with those in the external economy. If we fail to do so, we lose in the short run faculty and staff members who are in fields with high external demand. In the long run we deter those who might have chosen to train themselves for an academic career.

"Despite the need to pay wages that reflect productivity (improvements), universities are unable to apply the benefits of productivity gain to their own operations at the economy-wide average rate. THe areas available for productivity improvement are limited to administration and some support services.

"To alter the fundamental relation of students to faculty in ways that seem to increase productivity would, we believe, alter the educational experience in undesirable ways.

"The confluence of these facts means that the operating budgets of colleges and universities are under great pressure to grow at more than the rate of inflation.

"The irony of this relationship is worth mentioning. Institutions of higher education contribute to the growth of productivity through education and research—through the enhancement of human capital and the discovery of new knowledge.

"These productivity increases improve real wages, which push up the institutions' budgets. These increases, in turn, must be made up by revenue sources such as tuition and the direct and indirect costs of sponsored research."

Both university planners and public policy makers need to pay greater attention to this "strategic issue," he suggests.

Perl, Hanson start work on first experiment for new linear collider

Physicist Martin L. Perl will continue his search for new subatomic particles as part of a group whose experiment proposal has been accepted as the first for the future Stanford Linear Collider.

"We're going to be looking for two things," says Perl. One is the "Z" particle, a theoretical counterpart to the recently discovered "W" particle.

"We are, more than ever, confident of making it," he continues. "And once you make that, that will then degenerate into a whole world of new particles."

In preparation for the new experiments, Perl and colleague Dr. Gail Hanson will be rebuilding the drift chamber, the most important piece of equipment.

The chamber was previously used in a successful 1975 experiment, in which Perl first detected a subatomic particle called the tau. The discovery recently earned him a one-half share of the prestigious $100,000 Wolf Award, for "outstanding contributions on behalf of mankind."

With the discovery of the tau, Perl says, "We hope to understand the nature of matter, the nature of energy, and the nature of time."

The tau is the newest member of and

We're just at the beginning of the big adventure.

an anomaly in the "lepton" family of particles. The name, which means "light ones" in Greek, was given because leptons have the smallest mass of all atomic particles. The tau is an exception because it is 3,600 times heavier than the lightest particle, the electron.

The other known members of this family are the electron, which was discovered 100 years ago, and the muon, which was detected in the 1930s. They are called simple particles because they are the basic subatomic units, and contain no other particles within their structure. With the addition of the tau to the lepton group, scientists' conceptions about the nature of subatomic particles is changing.

"Now we find out that they can be heavy and simple; before, they thought that the simplest components of the atom were light and simple," says Perl.

Although the complexity of something which has only been seen indirectly by computer-recorded photographs of events lasting one-millionth of one-millionth of one second is not surprising, it is surprising that the 55-year old Perl says he doesn't "do very well thinking about complex things."

Perl's office on the grounds of the Stanford Linear Accelerator (SLAC) is as simple as the half mile, $78 million PEP (Positron-Electron Project) ring where he conducts his experiments is intricate. Without so much as a throw rug to clutter the room, the bare floor and spare furnishings reveal Perl's preference for practical physics.

"I'm a hands-on physicist, so I spend a lot of time with the apparatus and building that apparatus. I'm not theoretically inclined," he says.

The discovery of the tau was not "so much theory as instinct," he continues. "The thing I enjoy best is getting the equipment working and getting it to work well."

Of course theory had a role in the discovery of the tau. In 1974, Perl first began musing about the nature of muons. This led to the idea that there might be other particles.

According to Perl, the process was somewhat serendipitous. "You have to keep flexible and not get too fixed at what you're looking for," he says. "I try to find something that hasn't been measured or looked for, and then I try to find a way to do it."

In 1974 completion of the 80-meter SPEAR electron-positron storage ring gave Perl the way to test his hypothesis. Beams of electrons and positrons were sent spinning around the ring in opposite directions so that they would be forced to collide with one another. Every few seconds, two of the approximately 100 billion particles in each ring would collide, causing a high energy reaction in which the original particles disintegrated.

New particles were created in the place of the old. Sometimes electrons or muons resulted; other times, the new tau particle was detected.

Although he thinks that "a new view will come out as to what these are"—a view that may unlock some of the many perplexities about matter. Perl says he is pleased that he went out on a limb in a new direction, and was right.

"It's the uniqueness and importance in it. We're just at the beginning of the big adventure."

—Amy Bernhard

Rebholz outlines advantages of semester system prior to Feb. 17 debate

Following is a statement in support of the semester system submitted by Prof. Ronald H. Rebholz, English:

The Academic Senate began a discussion on Thursday, Feb. 4, of a report by an ad hoc committee on the academic calendar. The discussion will presumably be resumed and completed on Feb. 17, when the Senate decides to accept the **ad hoc** committee's recommendation that we retain the quarter system or reject the recommendation and switch to the semester system or some other academic calendar.

This question has come before the Senate twice in the last 10 years, and each time the vote was in favor of staying with the quarter system. I think the time has come, especially in a period when the University community is concerned with improving the study of the humanities, for the Senate to adopt the semester system.

My arguments in favor of this change, the result of my own experience as a teacher in the humanities for 22 years at Stanford and of many conversations with colleagues in the humanities and social sciences, rest on three assumptions:

1) The change, if made, would be to the kind of "Early Semester" system in which the first semester begins in late August or early September and ends shortly before Christmas, and the second semester begins in mid-January and ends in May. In the current academic year, and in any typical year, that system would yield about the same number of weeks (roughly 30) involved in the present quarter system. According to the **ad hoc** committee, this system, used by about 26 percent of colleges and universities in 1970, was used by 55 percent in 1970.

2) Students, currently required to take 15 units each quarter, average about 3.5 courses per quarter for a total of about 42 courses during their undergraduate career. The number of courses taken by graduate students would vary more significantly according to departments and disciplines. In the semester system, in which undergraduates averaged about four courses per semester, they would take about 32 courses in their career. Again, graduate students' programs would vary more.

3) Members of the faculty who prefer the semester system would not increase substantially the amount of material they treat in any course, but they would continue to meet the class for the same number of hours each week as in the quarter system. For example, in my current quarter-course on Shakespeare's plays, we study eight plays; in a semester course I would not increase the number by more than one or, at the most, two.

I see several advantages in a change to the semester system answering to these assumptions:

1) Reduction of the number of courses without substantial increase in the material covered or substantial decrease in the number of classroom hours should entail greater time and energy, both in and out of the classroom, devoted to the study of what would, over four years, amount to less material. This change would create the opportunity to treat the material in much greater depth than at present and with a much richer attention to the method or methods employed by students of the subject. Consequently, students would learn better how to continue being students of the subject, should they choose, for the rest of their lives.

2) Students could write essays or papers or more essays and papers than they currently write in those disciplines in which writing is essential to learning. Colleagues in some of the social sciences have complained to me that they cannot assign essays or papers at all because of the restraints on time imposed by the quarter system. Colleagues in the humanities have complained to me that, for the same reason, they can only assign a few short essays or one longer paper. Those who complain about our students' inability to write should realize that writing in the quarter system is an educational luxury not easily afforded.

The graduate students in the humanities with whom I have spoken on this issue loathe the quarter system precisely because it does not allow them time to write substantially on a subject, or it leads them toward nervous breakdowns because they are writing substantially on three subjects for three courses each quarter, or it yields a pile of incompletes. I predict that the number of incompletes, taken by both graduate students and undergraduates, would diminish radically in the semester system.

3) The semester system would make possible a genuine "dead week" or reading period and the consequent opportunity to reflect on the material, absorb it, and relate it to the material and methods encountered in one's academic and intellectual life on other occasions.

"Dead week" in the quarter system is a sham as a period of study. Indeed, in the spring quarter, exams begin in "dead week." Students hustle through their notes or the lines in books colored with their magic markers in their mad dash to the vomitorium called "final examinations."

4) Reduction of final examinations from three to two would make those examinations true opportunities to learn. This advantage is intimately linked with a real "dead week." Examinations in the quarter system have to be short because grades must be submitted to the Registrar's Office within 92 hours of the exam. For the same reason teachers cannot comment very fully on them. As a result, most students do not take them seriously enough to pick them up. It is also my impression that the absence of dead week and the frequency of exams in the quarter system produce in students a tendency to think of a course of study as something "finished" and "done with," to be forgotten in preparation for the next quarter's hustle, not to be part of their ongoing lives as students and human beings.

5) As Lee Zeigler, the director of Bechtel International Center, pointed out in a memo to the **ad hoc** committee, the Center "has responsibility for the administration of many external fellowship programs such as Fulbright, Marshall, Rhodes, German Academic Exchange, Churchill, etc. Deadlines for these programs are early to mid-October. It is frantically difficult to handle applications when students do not return to school until the end of September in order to meet the deadlines which are inflexible."

The committee chose to ignore this argument, but Mr. Zeigler's point helps me understand Stanford's poor showing in the one scholarship program of which I have direct experience—the Rhodes. Having read 94 applications to the California Rhodes Committee this autumn, I found the applications from Stanford students uniformly inferior to those from Yale, on the "Early Semester" system, or Harvard, on the system in which the first semester ends in January. Our applications suffered by comparison in conception, sense of purpose, prose, and the quality of letters of recommendation. Sadly ironic are those front-page boasts in Stanford publications about the one or two winners of the scholarship (sometimes there are none to boast about) when one thinks about the regularity with which Yale and Harvard have five or six winners. I am sure that the less frantic semester system accounts in part for their success.

6) A dissent to the **ad hoc** committee's report was registered by Prof. Elizabeth Cohen of the School of Education. From the findings of a CROW study of Chicanas in higher education, she concludes that the pace of the quarter system does not serve the learning of minority students: they go to class without doing the assigned reading and turn in papers late much more often than students on the semester system. Prof. Cohen wisely asks: "How many other students besides the ones in this study are unable to keep up with the peculiar pressures of the quarter system?" My guess is **many**, including some of the most talented graduate students in this country.

7) If we move to the semester system, the faculty will have to rethink their courses and, in the case of lecture courses, their lectures (not a bad exercise in itself).

When I examine the **ad hoc** committee's list of the quarter system's "advantages," only one strikes me as substantive: "students can achieve better breadth by exposure to more subjects and faculty members over a year." I realize that in some disciplines, especially engineering, breadth is more important than depth. But I cannot believe those disciplines outnumber those in which depth is more important than breadth, and I know there are universities on the semester system, like MIT, with excellent programs in engineering. If the change to semesters is made, the engineers might accommodate by the creation of several half-semester courses taught with great intensity.

The alternative which the engineers always suggest to the humanists and which the **ad hoc** committee echoes in its only positive recommendation—that we teach continuing courses which, for all practical purposes, span two quarters—overlooks the students' perceptions that two quarters are too much time to devote to a course.

My impression of the discussion in the Senate on Thursday was one of bored reenactment of a ritual: Stanford has been on the quarter system for 75 years, we yawn through a reconsideration of the educational values which it enshrines every now and then, there isn't really enough at stake to warrant the effort required for a change, so "we're all right, Jack, thank you."

We are not all right. I hope my colleagues will inform their Senators of that fact before Feb. 17.

Karinen: from bank officer to Stanford freshman music major at age 28

Starting college at age 28 isn't easy, but that's what Stanford senior Cheryl Karinen did after 10 very successful years in banking.

Karinen is a music major (voice) who left the Black Hills of South Dakota immediately after high school graduation to seek her fortune in California. She headed for Sacramento "because it was the capitol" with $300 and one suitcase. There she found a part-time job as a teller with Bank of America.

"Originally I had planned to come for the summer. I had a scholarship to go to college in South Dakota in the fall. But when fall rolled around, I knew I didn't want to go home.

"My parents didn't like it. They thought of California as full of violence and crime, not a good place for their daughter to live. Neither of them went to college, and they were very disappointed at my decision to postpone my education."

After a year and a half in Sacramento, Karinen decided San Francisco was the place to be. She landed a job with United California Bank as an installment credit clerk. Eight years later she left UCB as a corporate banking officer to enroll as a freshman at Stanford.

"When I decided to go to college, friends at the bank said 'How can you do it? You're throwing your career away!' At that point I was operations officer for the San Francisco Metropolitan Division, selling cash management services to large corporations headquartered in the state—among them Stanford University. But I realized I was at a point where my lack of a college degree would eventually prevent me from continuing up the corporate ladder.

"It's hard to take a four-year chunk out of your life and go to school, but it seemed that if I didn't, I'd be in the same spot four years later. The bank was supportive of my decision. I looked at my long-term career plans with the bank, and it wasn't what I really wanted to do. I was looking for a change. The challenge, creativity, feeling that you're helping people—it just wasn't there."

Karinen applied to Stanford and UC-Berkeley, and was accepted by both.

"When I initially contacted Stanford, a counselor advised me to go to UC or another college for a couple of years, then apply for transfer to Stanford. She didn't know how much a 10-year-old high school diploma from a tiny town in South Dakota was worth. So I went back to South Dakota and collected transcripts and recommendations from my high school teachers. Most of them were still there and they remembered me—Belle Fourche is a very small town.

"I also got recommendations from a couple of my bosses at the bank. I wanted to let Stanford know that even though I'd been out of school for 10 years, I *had* been learning something."

Returning to California, Karinen was faced with taking tests high school juniors and seniors normally tackle for college admission.

"Can you imagine?" she exclaims. "I couldn't remember a thing! When you don't touch subjects like math and science for 10 years they go right out the window. But I studied and scored well.

"I picked Stanford over Berkeley partly because I knew I'd have to move down here and I wanted a complete break from my career. If I'd gone to Berkeley I would have stayed in San Francisco and probably worked part-time for the bank. It would have meant a double existence. Also, Stanford does not offer an undergraduate business degree, so I knew I'd be forced to explore new areas."

As a freshman Karinen lived in Mirrielies, rooming with a grad student. Since then she's roomed with sophomores and juniors. "It hasn't been a problem. In fact, it's made me feel younger and more carefree," she says.

"Initially I felt I couldn't compete academically. Stanford students are so bright and directed. I had to study harder than other freshmen because they were fresh from high school. I was out of the habit of studying. They had been writing in school for years; I had written only letters for 10 years. The first few times I took tests I panicked to the point of becoming physically ill. Several years behind the times, I went to my first chemistry test without a calculator. I was the only one figuring everything longhand!

"At first I tried to keep up my social life—going up to San Francisco on weekends, skiing—but all of that collapsed, little by little. School became my overwhelming priority.

"My first contact with music at Stanford was singing in the Church choir sophomore year. I had sung a lot in high school, but not a note the 10 years I worked for the bank. Greg Wait (choir conductor and voice teacher) suggested I study privately, and I got hooked.

"I started taking the foundation courses for a music major. They were difficult because I had no formal training in music. I never thought I'd be able to complete the major, but I just took it in chunks. After a year I was so entrenched that it was the only thing I could do!

"Music was something to do for myself. Some day I'd love to sing semiprofessionally and support myself, at least partially, as a musician. Greg has been very supportive; he brought me out of the closet."

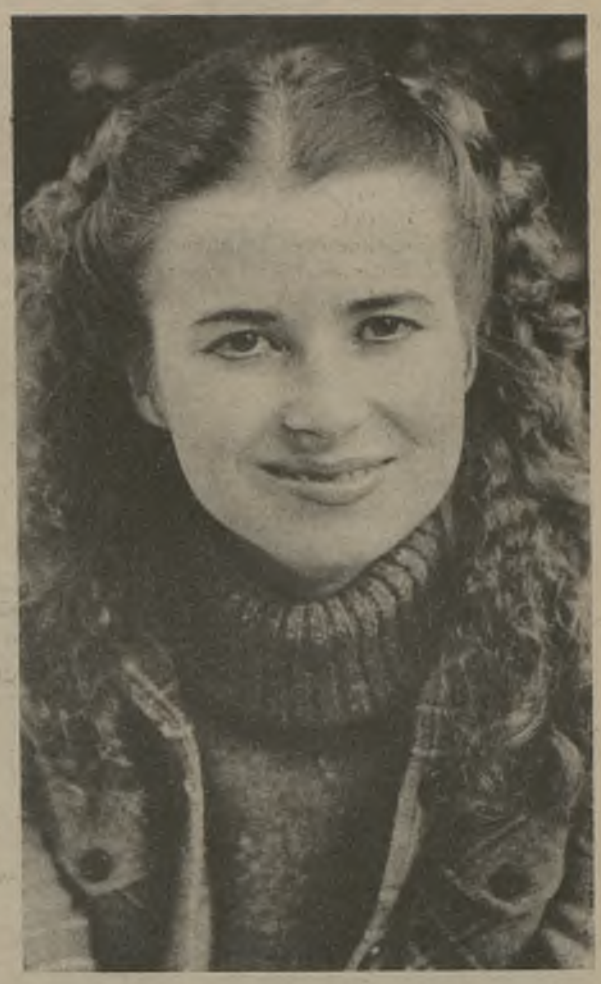
As an older student, Karinen says:

"I'm at Stanford to learn, not just to get grades. It's stupid for me to pay money to take a class I'm not going to get anything out of, so I've tried to do all the reading and everything the instructor suggests to really benefit from each course.

"Some students at Stanford just want to get good grades as a stepping stone to graduate or professional school. But for me, it's been learning for learning's sake. That's why I chose music—because I love it. I don't know if I'll ever be able to make a living at it, but the knowledge is very valuable.

"If I'd gone to college right after high school, I don't think I would have enjoyed music as much. I would have been thinking: "I've got to get a good job and music doesn't pay."

Karinen has received financial aid from Stanford and a generous grant from the state. She's worked two summers and breaks for UCB and one summer for Stanford Savings & Loan. "I'm not in nearly as much debt as I thought I would be. I tried to work part-time during school, but it detracted too much from my studies."



Karinen will spend her final quarter at Stanford-in-Florence studying Italian and voice. "I want to check out the Italian opera scene and travel a bit in Europe. Then I'll probably return to work in business for a year. I need to pay off debts and devise a new game plan. . .decide where to go from here. I don't know if I want to go to grad school, but I know I want to go on singing and studying music.

"Even a year ago I thought I would do music just for fun, then return to the business world. But now I've incorporated music into my life and I don't want to give it up. I've got to find a way to keep music in my life.

I've enjoyed majoring in music at Stanford because the department is so small, and I like the people. You get a lot of personal attention here. Most of my music classes have had less than a dozen students, and one had only three! You try to do well in class because you don't want to embarrass yourself and you *know* the professor will know your name!

"By contrast, my Human Bio core classes had hundreds of students and there wasn't a chance of getting to know the professor."

Karinen studied voice for five quarters with Greg Wait. "He's a wonderful teacher. . .he has so much compassion. He pushed me to get involved in music and sing; otherwise, being basically chicken, I probably wouldn't have been brave enough."

Even a year ago, I thought I would do music just for fun, then return to the business world. . . . But now I've got to find a way to keep music in my life.

—Cheryl Karinen

This year Karinen is studying with newly appointed voice teacher Lila Stuart. "Lila is a positive addition to the department—she has lots of energy, a dynamic personality, and while performing she's a rock of composure."

Under Stuart's coaching, soprano Karinen will give a recital with baritone Charles Fidlar at 8:30 p.m. Thursday, Feb. 17, in Tresidder Lounge. Fidlar is a graduate student in choral conducting. They will perform Purcell duets, arias from Mozart's *Don Giovanni*, Schumann lieder, and songs by Fuare.

Karinen will also perform with Lila Stuart's voice students Friday, Feb. 11, and with the Stanford Chorale Tuesday, Feb. 15. On March 5 she makes her opera debut in the lead role of *The Necklace*—a one-act opera by Music Department Prof. Leonard Ratner.

Reflecting on her move to Stanford, Karinen says: "If nothing else, I've learned that change is possible. It is hard. Sometimes I say to myself: 'Why are you putting yourself through this? What is it worth?' But I hope I never feel that change is too difficult because it's so rewarding. . .you grow so much.

"But the growing pains. . . .!

"I actually feel younger now than I did four years ago. I think I've even gone though a personality change. I would suggest that more people work and then go to school."

—Julia Sommer

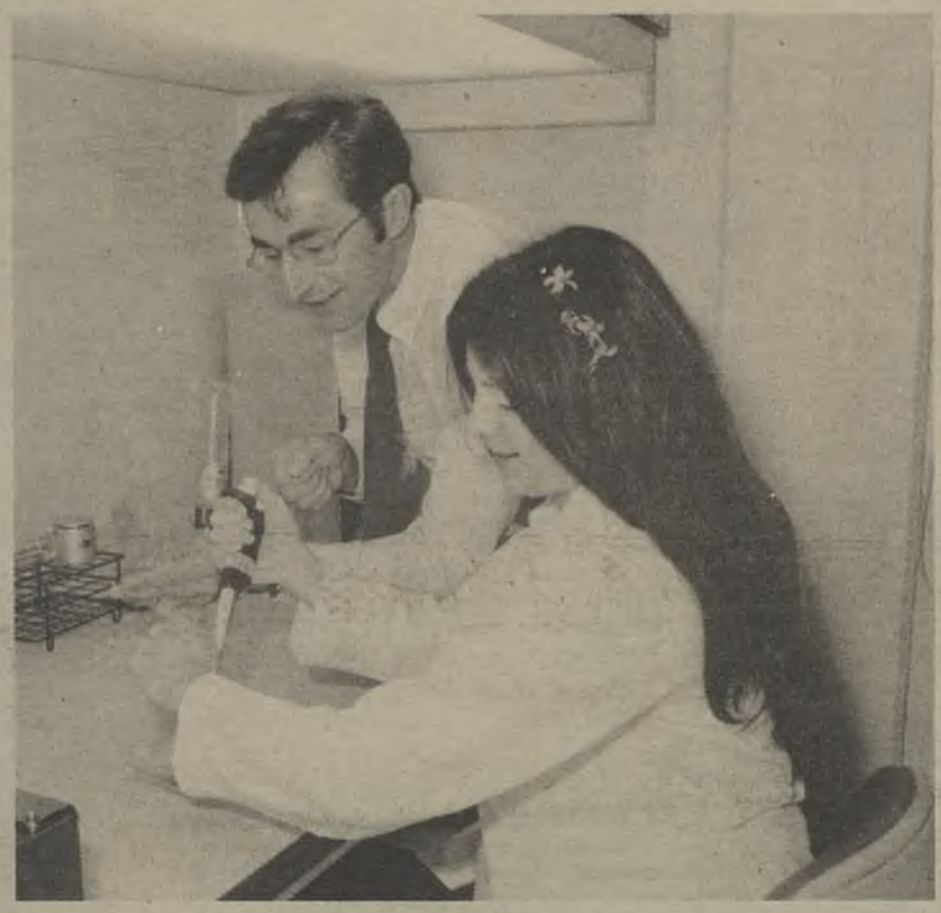
Compound aids in killing cancer cells

A drug developed by scientists at Stanford and SRI International which boosts the potency of radiation in shrinking cancerous tumors gained approval from the Food and Drug Administration last week for testing in cancer patients.

Called a "radiosensitizer" because it enhances the ability of radiation to kill tumor cells, the compound was first made and tested in 1978 by Dr. Martin Brown, associate professor of radiology, and Dr. William Lee of SRI International in Menlo Park, California.

Subsequent extensive testing proved the drug to be "highly effective" in eliminating certain tumors in laboratory animals without the usual toxic side effects of similar drugs, Brown said.

The FDA has now commissioned five U.S. medical centers to test the compound, named SR-2508, in human patients.



The drug works by mimicking oxygen, which plays a key role in radiation therapy, Brown said. In traditional therapy, beams of X-rays knife through cancerous tissue, tearing holes in DNA, the genetic material that enables the cell to live and reproduce. By locking onto the broken DNA, the oxygen, which is abundant in most cells, ensures that the damage will be permanent, and the tumor cells die.

But scientists realized 25 years ago that a kernel of cells that don't contain oxygen lurk within many, if not all, tumors, and these cells remain resistant to radiation.

"When you're dealing with cancer, killing 99 percent of the tumor isn't enough," Brown said. "You have to get it all."

To overcome the problem, some physicians have placed patients undergoing radiation therapy in chambers with pure oxygen at three times the normal atmospheric pressure, in hopes of coaxing more oxygen into the troublesome cells.

Another method involves using a different kind of radiation (for example, neutron or pi-meson radiation) that doesn't rely on oxygen to kill cancerous cells. Both methods improve the tumor eradication rate, Brown said, but are too expensive and, in some cases, dangerous.

Brown and Yvonne Taylor, postdoctoral fellow in the Cancer Biology Program, combine radiosensitizer with tumor cells. Shown to aid radiation therapy in shrinking animal tumors, the radiosensitizer has now been approved for testing in humans.

In 1974, British scientists developed a compound that seemed a potential solution. The drug, named Misonidazole, mimics the effects of oxygen in the tumor cells, sensitizing them to radiation without affecting normal tissue. But animal and human studies show that doses of the drug high enough to be effective poison brain and nerve cells. Painful tingling in the hands and feet, hearing loss and disorientation have been prohibitive side effects of the drug.

Brown and Lee found that they could reduce the toxic side effects by modifying Misonidazole so that it was almost completely insoluble in fat. The new compound is thus unable to cross the blood-brain barrier, the fatty tube that encases and protects the brain and nervous system.

Studies in animals and human tissue cultures showed that the new drug is just as effective as Misonidazole in enhancing the death of tumor cells, but is five to ten times less toxic to nervous tissue.

"This drug is effective as a radiosensitizer in animals, there's no question about that," said Dr. Norman Coleman, the assistant professor of radiology who will lead the clinical study at Stanford. "But it's not easy to tell how predictive that will be in human patients."

Approximately 150 volunteer patients across the country will be studied in the first phase of clinical testing, Coleman said. The centers collaborating to study the drug are five members of the Radiation Therapy Oncology Group: Stanford; Washington University, St. Louis, Mo.; University of California, San Francisco; the National Cancer Institute, Bethesda, Md.; and the Cross Cancer Institute, Edmonton, Alberta.

—Deborah Franklin

SUH offered contract for Medi-Cal

Stanford University Hospital officials were notified Friday, Feb. 4, that the Hospital will be offered a contract to continue to provide care for Medi-Cal patients.

Stanford is among six hospitals on the Peninsula notified by telephone by the office of special negotiator William Guy that a contract will be sent for hospital review and signature. When signed by Hospital officials, the contract will be effective March 1.

The specific conditions of Medi-Cal contracts are not made public.

In a joint statement issued Friday, Dr. Lawrence Crowley, president of the Hospital; Sheldon King, executive vice president and director; and Dr. Donald Kennedy, chairman of the Board of Hospital Directors, said, "We are pleased that care can continue for Medi-Cal patients. We have long served patients who require the highly specialized services and treatment available at Stanford."

Hospital administrators had submitted a formal proposal for a Medi-Cal contract to the state negotiator last November. Under a law passed last year, the negotiator determines from the cost bids submitted which hospitals will be reimbursed for care of Medi-Cal patients.

Major services utilized by Medi-Cal patients at Stanford include high-risk obstetrical services, neonatal and pediatric intensive care, cardiovascular surgery and oncology/hematology and radiotherapy. In addition, SUH operates an emergency transport center for obstetrical patients, infants, and cardiac patients at risk.

About 15 percent of the Hospital's total admissions are Medi-Cal patients. A high percentage are acutely ill referred from beyond the Peninsula area.

(Editor's note: Other Peninsula hospitals awarded contracts, according to the state negotiators office, are: Sequoia Hospital, Community Hospital of Los Gatos, O'Connor Hospital of San Jose, Santa Clara Valley Medical Center and Alexian Brothers Hospital in San Jose. Children's Hospital at Stanford is exempt from the Medi-Cal negotiations.)

Balding men needed to test drug as possible treatment

A drug that stimulates hair growth will be studied for its safety and efficacy as a treatment for baldness by the department of dermatology at Stanford University Medical Center.

One of several sites in the country for conducting the study, the department announced its involvement to attract volunteers.

"This is not necessarily a cure for baldness. There are still a lot of unknowns," warned Dr. Elaine Orenberg, one of the coordinators of the study.

Specifically, the department is looking for up to 100 men in good health from ages 18-49 with thinning hair or baldness to participate, at no cost, in testing Minoxidil, the active ingredient in Upjohn Company's antihypertensive drug, Loniten.

Stanford's study will last at least one year, beginning Feb. 14. Participants will be required to make monthly visits to the department for check-ups and evaluation. Preliminary physical testing will take place before individuals begin receiving the treatment, Orenberg said.

Investigators began considering the possibility of Minoxidil's effectiveness in treating baldness during clinical testing of Loniten, which was approved by the Food and Drug Administration (FDA) in 1979. One side-effect of the orally-administered drug is hair growth, as reported by about 80 percent of the patients taking the drug for hypertension.

Once they stopped taking the drug, hair growth stopped. Investigators could not determine, however, who would experience hair growth, where they would experience it, or what type of hair would actually grow.

Investigators began to develop a topical ointment containing Minoxidil in 1977, to find out just how effective and how safe it is for use by balding men. With the FDA's approval, it is now being tested by applying it only to the bald areas.

At Stanford, the study will be randomized and double-blind, with one group receiving the Minoxidil ointment and one group receiving a placebo ointment. The placebo will be replaced with the drug after four months.

Following completion of the studies—at Stanford and elsewhere—Upjohn Company will determine if FDA approval of the drug should be sought. Jan Auferdehide, spokeswoman for Upjohn Company, cautions men from hoping for a cure for baldness, however. "The FDA approval process takes 8-10 years on the average," she said.

Interested volunteers should call the Department of Dermatology at 497-7964 between 1 p.m. and 4 p.m., Monday, Tuesday, and Friday.

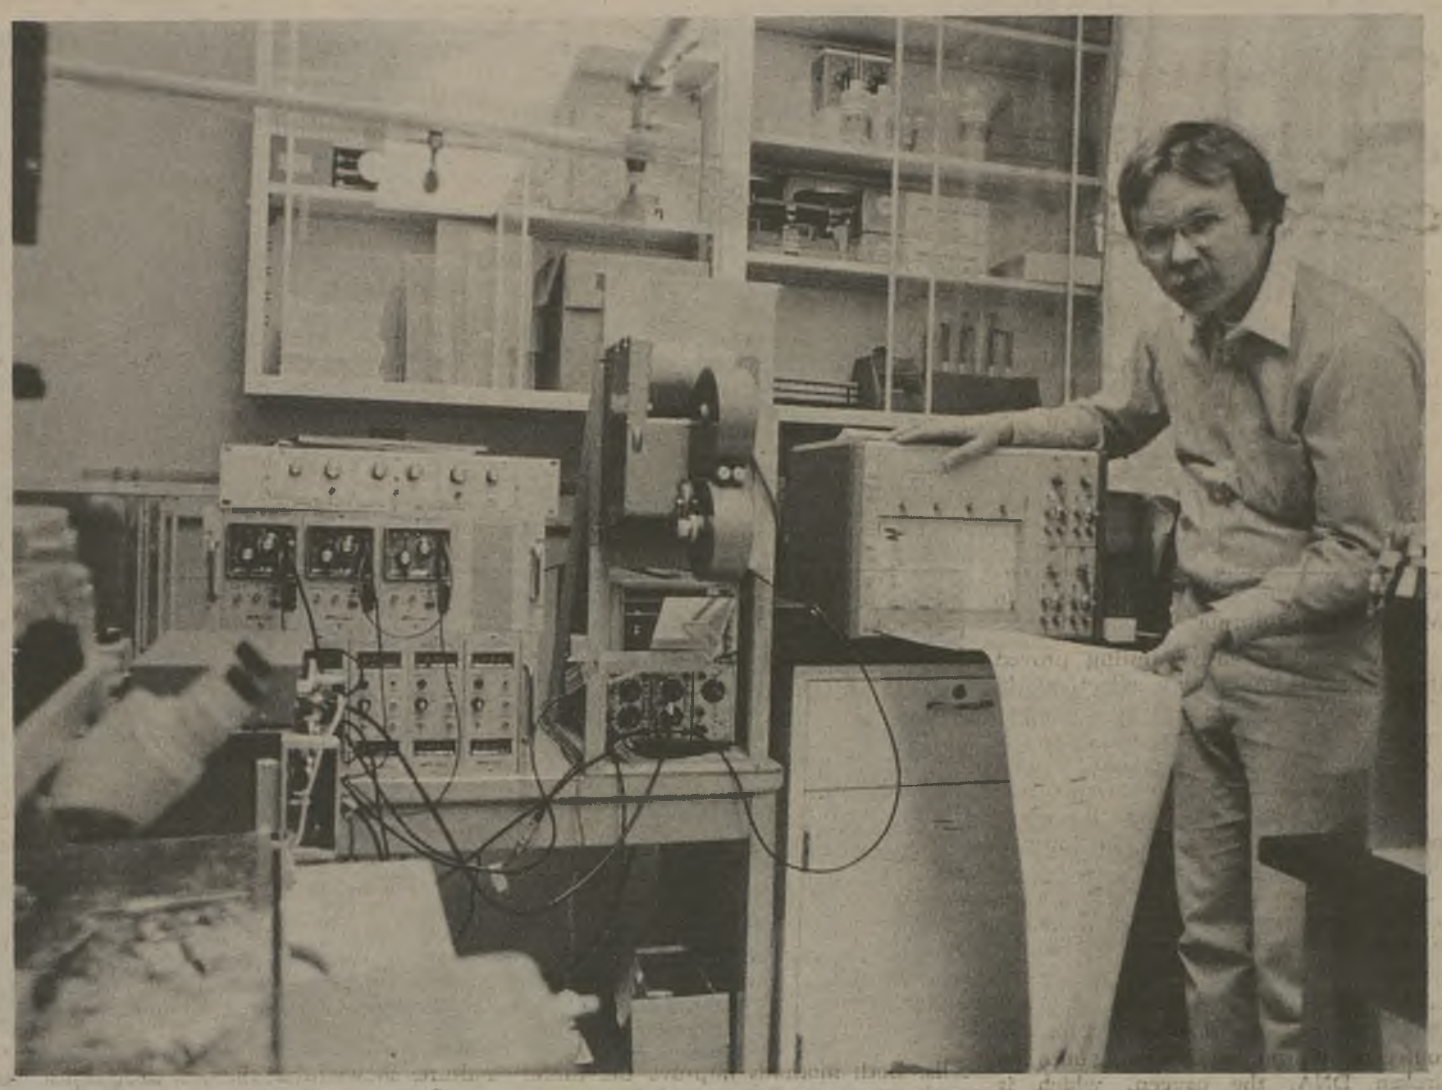
—Shirley Kraus

Preventive drugs may make cardiac arrest less likely

A scientist who has probed deeply into the molecular structure of human heart muscle believes that drugs could help prevent a sizeable proportion of the 500,000 yearly deaths caused by sudden cardiac arrest.

"In a sense," said Dr. William Clusin, "our research indicates that it is possible via medication available on the market today to make heart attacks 'safe.' At least we would be able to reduce sharply the occurrences of ventricular fibrillation (VF), which usually come without warning and often are nearly instantly fatal."

Clusin, a physician specialist in cardiology, has learned along with colleagues that drugs such as beta blockers and calcium blockers can actually protect the heart from going into VF. This condition is characterized by uncontrolled spasms of the heart muscle and the subsequent failure of the organ to pump blood effectively.



Results of the Stanford scientists' research was published Feb. 5 in *Lancet*, a British medical/scientific journal.

"Beta blockers are administered routinely to relieve chest pains for persons suffering from heart disease. But our research has led us to believe that these drugs—or perhaps similar medication—should be given routinely to persons at risk of having a heart attack whether they have symptoms or not," Clusin said.

Past clinical studies have shown beta blockers—among the most widely prescribed drugs in the United States today—are effective at relieving the chest pain associated with a heart condition.

But what Clusin and his colleagues believe might be their most important potential was not known until very recently.

He said these drugs act to alter the movement of calcium within the cells to prevent the formation of abnormal electric currents which are the cause of VF. These injury currents have been known since the 19th century and can be recorded accurately on heart monitoring equipment.

Clusin studies the electrical impulses recorded in individual cells. He believes that drugs commonly given for heart disease symptoms could prevent fatal heart attacks if administered to high-risk persons before symptoms occur.

Calcium the key

For many years it was known that persons whose blood vessels became blocked by disease were prone to injury currents. But Clusin said it was not realized until recently that the injury currents may be triggered by abnormal accumulation of calcium within the heart muscle cells.

More importantly, the scientist said, research has shown that beta blockers and probably other drugs alter the flow of the calcium, thus decreasing the likelihood that an injury current will be generated.

Clusin and his colleagues observed the movement of calcium and the patterns and effects of injury currents by monitoring beating clusters of electrically coupled chick embryo heart cells in tissue cultures. Then they confirmed their findings using live animal models in the lab and by reviewing available statistics about the effects on human patients of beta blockers.

"We must keep in mind that these drugs do relatively little to change the underlying cause of common cardiac illness—blockages in the arteries which arise because of diet, genetic factors or other causes. But by controlling the calcium movements in the heart, we are lessening substantially the possibility that an injury current will occur, triggering VF."

Prophylactic doses of medication offer a more practical solution for many patients than dealing with blockages surgically.

The risks of surgery pose their own problems, and in any case it may not be practical to identify the precise location of blockage in every patient, Clusin explained.

"In the past, researchers believed incorrectly that the only way to prevent the consequences of coronary artery blockages was either to relieve the blockages or to reduce the amount of oxygen consumed by the heart.

"We now realize that when the calcium content of the heart muscle cells is reduced by a drug, the muscle may tolerate a reduced blood supply without producing the abnormal electric currents that precipitate cardiac arrest.

"Therefore, it might appear prudent to administer such drugs to persons who appear statistically at risk of having a heart attack, even though they have no active symptoms."

Side effects

Beta blockers can have side effects, such as fatigue or shortness of breath.

"However, there is another category of drugs called calcium blockers, which might avoid the side effects for some patients," said Clusin, adding that more research is needed before calcium blockers are administered routinely.

"But I think we do have enough research now to offer the possibility that doctors might prescribe prophylactic doses of beta blockers to their patients who are at risk."

The recent studies of injury currents at Stanford were conducted, besides Clusin, by Dr. Michael Bristow, a physician specialist, and by postdoctoral fellows Maurice Buchbinder, Avery Ellis and Hardwin Mead. Collaborating was Dr. Donald Harrison, professor and chief of the division of cardiology.

—Mike Goodkind

Packard gift. . .

continued from page 1

consolidated children's medical center, and a joint board was named recently to begin planning for construction. Mrs. Packard is also the vice president of the new board.

Kenneth Sayre of Menlo Park, chairman of the original Children's Hospital board and treasurer of the new board, said:

"This most generous gift caps a 15-year commitment that Lucile Packard made as a member of the board. That commitment is to develop superlative care for severely ill and disabled children.

"The Packards' contribution assures a successful beginning for the new Children's Hospital at Stanford."

Stanford and Children's Hospital have been running their pediatric programs from separate locations for years under the direction of the department of pediatrics of Stanford University School of Medicine. About 2,500 patients yearly are shuttled one mile across a busy thoroughfare between the hospitals for specialized treatment at Stanford.

"The separateness results in inconvenience to patients, duplication of services, and higher costs," explained Dr. Lawrence G. Crowley, chairman of the new Children's Hospital joint board and a University vice president for medical affairs.

"The consolidation will alleviate these problems and allow the two institutions to mount a comprehensive approach to the care of children in the community and region."

The new hospital will consolidate the 60 beds of Children's Hospital and the 44 pediatric acute medical-surgical and pediatric intensive care beds of Stanford Hospital. It will also house the Stanford-Children's Ambulatory Care Center, which provides 27 separate clinic services, including such specialties as cardiology, birth defects, oncology and child psychiatry.

The new Children's Hospital will continue to provide inpatient services in the 15 specialties now offered by both hospitals.

The existing Children's Hospital at 520 Willow Road in Palo Alto will continue to operate until the new building is completed.

The consolidation must also undergo the review process of state and local agencies

Head of Jamison's lab has hands full with work—and outdoor fun

Nephrology research assistant Kristina Blouch recalls the curious path that led her to her present occupation in the world of medical research.

"In college I majored in German and minored in biology, and hoped to teach German when I got out. But there was an oversupply of teachers, so instead I got a lab job at Harvard Medical School, where I stayed for six years," Blouch explained.

Then the Michigan native thought it would be interesting to change her surroundings once more and migrate to California. Blouch has worked at Stanford since 1978 under the direction of Dr. Rex Jamison, chairman of the division of nephrology.

And after about a decade in the field of renal physiology, she feels that "research has become an important part of me and I wouldn't want to leave it completely.

"Although lately," the newly licensed pilot confided, "I have been considering the possibility of someday becoming a flight instructor."

Blouch said most of her lab work, and that of her associates, involves collecting samples of fluid from different segments of individual kidney structures of rats, using a surgical technique called micropuncture.

"We then analyze these samples for their concentrations of several key electrolytes and some other compounds of interest. For example, we are now developing a micro-technique for measuring urea," she added.

Blouch said the samples taken from rats are extremely small, "barely visible to the human eye"—a trait which makes some of the researchers' tasks tricky.

But the four people who work in Jamison's laboratory (of which Blouch is director) see their efforts pay off in furthering a basic understanding of kidney function. (All mammalian kidneys are similar to humans', explained Blouch.)

The Center for Materials Research is a resource department on campus to which Blouch regularly takes samples for analysis by an electron microprobe.

The way the microprobe works, Blouch explained, is to shoot beams of electrons at her crystalized samples, exciting their atoms and causing each of their elements to emit X-rays of different wavelengths. "This enables us to see what elements there are and how much of each in a sample," she said.

The freezing point osmometer is an instrument that allows Blouch to read the temperatures at which different kidney fluid samples melt.

This is the part of her work Blouch enjoys most—the actual research. "I get involved with the administrative aspects of running the lab as little as possible," she confessed, "though I do play a role in the budgeting, personnel, and paperwork."

Blouch said she's enjoyed the people she's met in Nephrology over the years, "but my exposure to the people here has been sort of limited to the lab area, not the clinical."

In their weekly group meetings with Jamison, Blouch said, "we review the results of the past week's experiments and discuss their interpretation; organize upcoming projects and distribute the workload—though we all know pretty much what we are to do; we hash out any problems we're having, and sometimes we're treated to a pep talk from Dr. Jamison—concerning our productivity," she smiled.

Blouch, who lives in downtown Palo Alto with a Siamese cat and her flute, said she likes to get away by backpacking in the High Sierras at least once a year for a week, with friends.

"My favorite kind of vacation would be some warm tropical island with a beautiful beach. But I really do love the mountains. There's something great about being up high, away from civilization."

Maybe that's also why she took up flying lessons last summer. "I've always enjoyed flying, and I thought maybe now I could afford it after all," she explained.

Blouch intends to fly for fun, and take herself places—"with any friends who have the nerve to come along." Any hesitations? Apparently not. "I never feel frightened or nervous when I'm up in a plane," she said.

—Lisa Ames

Clinical Scholars Training Program gets funding renewal

A two-year fellowship that permits physicians to expand their skills in fields ranging from law and economics to ethics and education was recently granted more than $1.1 million in a three-year funding renewal by the Robert Wood Johnson Foundation of Princeton, New Jersey.

Stanford and the University of California, San Francisco share both funding and administrative responsibilities for the Clinical Scholars Training Program.

Studies of the ethics and economics of clinical decision making, and computer modeling as an aid to cancer diagnosis are two projects newly funded by the fellowship.

Since its inception in 1974, the program has trained 41 physicians who are committed to clinical medicine, but have sought broader training related to the organization of health services, improvement of medical practice, and public policy in health, according to Dr. Halsted Holman, professor of medicine and director of the Stanford portion of the program.

Participants in the program attend seminars in such subjects as information sciences, sociology, cost-benefit analysis, anthropology, and systems analysis to lay the groundwork for subsequent research with faculty advisors from the Stanford, UCSF and UC Berkeley campuses.

Currently, seven Clinical Scholars training programs are funded by the Foundation across the nation.

Former participants are involved in academic medicine, government, and in the practice of medicine, according to the Foundation.

"The purpose of the program is to allow young physicians to develop skills in non-biological disciplines pertinent to the improvement of health care," Holman said.

"Introducing non-biological disciplines into medical thinking and practice will not by itself resolve the problems of health care. Nonetheless, these disciplines provide understanding and methods which are essential to the search for better solutions."

County reviews animal facility plans

Stanford University School of Medicine's design for a $12 million animal research facility will go before the Santa Clara County Architecture and Site Approval Committee in March for the final approval needed before construction begins next summer.

The County Planning Commission approved plans for the 32,000 gross square foot facility in a unanimous vote last week.

The new building will be connected to the main center by an underground tunnel, and will replace about half of the existing animal research facilities of the Medical School, which do not meet present codes.

Three-quarters of the School's principal investigators make use of laboratory animals in their research. The School houses more than 50,000 laboratory animals, mostly rodents, for the vast variety of biomedical research projects.

The proposed facility is expected to permit improved quality of animal care, and centralized operations, with greater efficiency.

Progress in Medicine series to explore ethical dilemmas

"Who Shall Live? Progress and Ethical Dilemmas of Intensive Care" will be the focus of the winter/spring 1983 Progress in Medicine lecture series, a community outreach program sponsored by the Stanford University Medical Center.

The season's presentations are:

- Feb. 16—"Intensive Life Support Systems: Present Practice and Moral Issues," featuring Dr. Thomas Raffin, assistant professor and assistant chief of medicine. His lecture will follow an introduction to the series by Dr. James Silverman, associate professor of radiology and chief of staff at SUH;
- Feb. 23—"Who is Saved?" with Dr. Myer Rosenthal, associate professor of anesthesia, medicine and surgery, and director of the intensive care units at SUH;
- Mar. 2—"Impact of the Intensive Care Unit on the Critically Ill Patient with Chronic Lung Disease," with Dr. Andrew Newman, clinical instructor of medicine at Stanford and director of the Bay Area Pulmonary Rehabilitation Program; and "Impact of the Intensive Care Unit on the Critically Ill Patient with Heart Disease," with Dr. Robert Sladen, assistant professor of anesthesia and associate director of the intensive care units at SUH;
- Mar. 9—"Newborn Intensive Care: Survival—What Price?" with Dr. David Stevenson, assistant professor of pediatrics and associate director of the Intensive Care Nursery;
- Mar. 16—"Who Suffers More—the Health Care Team or the Family?" with a panel including Silverman, Raffin, Jean Bronstein, R.N., assistant director of Nursing Service for the critical care region, and Aaron Smith, M.P.H., L.C.S.W., chief social worker in cardiology; and
- Mar. 23—"Ethical and Emotional Issues in the Care of the Dying Patient and Family," with Reverend Dr. Ernle Young, chaplain to the Medical Center and senior lecturer in medical ethics.

The Progress in Medicine lectures were initiated at Stanford in 1966 by Dr. Joshua Lederberg, then professor and chairman of the Department of Genetics, to provide an opportunity for leaders in academic medicine to share their insights and perspectives with the community.

Lederberg had observed: "The community has little opportunity to be informed of the exciting developments in medicine. Public understanding of these developments is of the utmost importance to social decisions."

All upcoming Wednesday evening presentations will take place in the Medical Center's Sherman Fairchild Auditorium, at 7:30 p.m. Admission is free, and seating is limited. There are no reserved seats, and no tickets will be issued. Early arrival is recommended to permit the best choice of parking and seats.

For further information, call the Medical Center's office of public events, at 497-6389.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, FEBRUARY 9

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Performance of a High Speed Multi-Slice Cine-CT Scanner"—Dr. Douglas Boyd (UCSF). 4:15 p.m., McCullough 134.

Basic Science Research Colloquium: "Heterogeneity of Mycosin Structure and the Development Origin of Fast and Slow Twitch Muscle Cells"—Dr. Frank Stockdale. 5 p.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "B-Z Transition in Poly-d (AC) d (GT)"—Larry McIntosh, Ph.D. candidate (Max Plank Institut, W. Germany). 4 p.m., M316.

Div. of Hematology Conference: "Acute Leukemia"—Dr. Charles Linker (UCSF). Noon, L201.

THURSDAY, FEBRUARY 10

Blood Drive: All Medical Center staff and faculty are invited to join the students in giving the gift of life. 11 a.m. till 3 p.m., Medical Student Lounge.

Dept. of Pharmacology Seminar: "What Do the Structures of Acetylcholine Receptor-Containing Membranes and Purple Membranes Tell Us About Function?"—Dr. Robert M. Stroud (UCSF). 4:15 p.m., Pharmacology Library, R358.

"The Loving Heart: Sex After a Heart Attack"—sponsored by Nursing Services. 7-10 p.m., Fairchild Auditorium. Speaker is Richard Sharon, M.A., Ph.D. Program is open to the public. Fees required. For further information, call Katherine Barnett, R.N., at 494-8074.

FRIDAY, FEBRUARY 11

SMASH Lecture Series: "The Heart of the Matter—The Matter of the Heart: Endomyocardial Biopsy"—Dr. Margaret Billingham. 4:30 p.m., Fairchild Auditorium.

FEBRUARY 12 AND 13

Dept. of Anesthesia Workshop: "Hemodynamic Monitoring/Pulmonary Artery Catheterization Workshop." 7 a.m. till 5 p.m., Fairchild Auditorium. For further information, call 497-7662.

MONDAY, FEBRUARY 14

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Clinical Applications of ABR/ECOG"—Holly Hosford-Dunn, Ph.D. 7:30 a.m., R117.

TUESDAY, FEBRUARY 15

Div. of Surgical Pathology Conference: "Electron Microscopy of Small Round Cell Tumors"—Dr. Richard Sibley. 8 a.m., L201.

Dept. of Dermatology Grand Rounds: "Deep Fungal Infections"—Dr. Barbara Egbert. 10 a.m., R136.

FRIDAY, FEBRUARY 18

Registration deadline: for Nursing Educational Services Pediatric Critical Care Course Level II to be held Feb. 28 and Mar. 1. The course aims to promote understanding of the impact of critical illness and its management on child and family, in order to enhance quality of care to the critically ill pediatric patient. Advance registration and fee required. For further information, call Carole Kidder at 497-6366.

Nursing Educational Services Workshop: "Selected Concepts in Surgical Nursing" 8 a.m. till 4:30 p.m., Hyatt Palo Alto. Advance registration required. For further information, call Carole Kidder at 497-6366.

FEBRUARY 21 THROUGH 25

Office of Postgraduate Medical Education: "Basic Science for Clinicians." Advance registration required. For further information, call 497-5594.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Margaret Billingham

SMASH lecture of the week

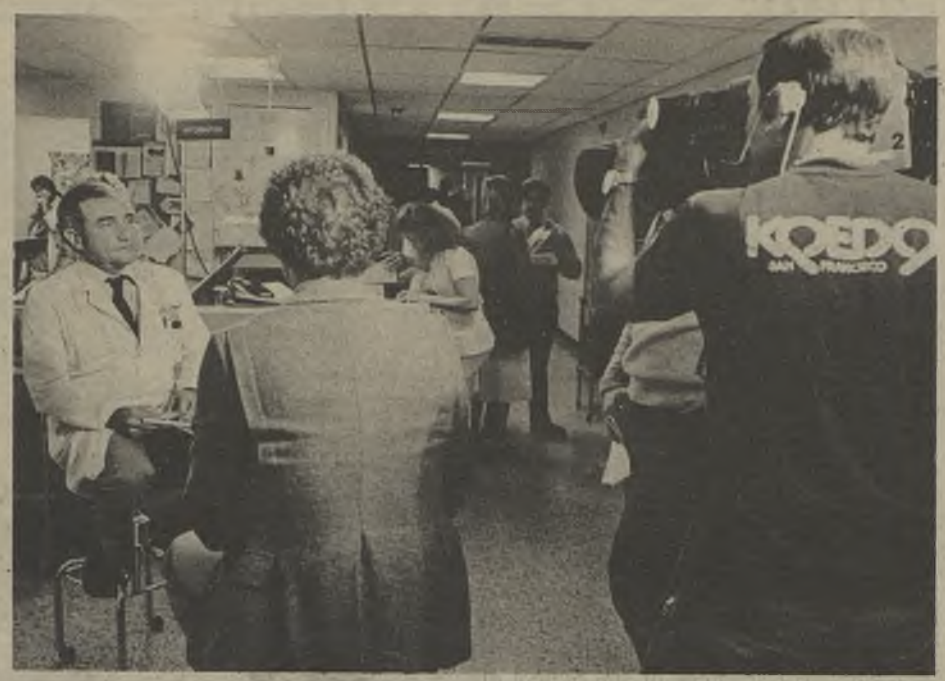
"The heart of the matter—the matter of the heart: Endomyocardial biopsy" is the title of this Friday's S*M*A*S*H lecture, to be given 4:30 p.m. Feb. 11 in the Fairchild Auditorium, by Dr. Margaret Billingham, associate professor of pathology.

All interested members of the Medical Center community are welcome. A TGIF gathering in the lobby will follow the presentation.

Health communications enhanced by cable programming

Cable television has the potential for providing quick, cheap communication—a system that's better than the telephone, speakers told a community audience of health professionals recently.

Community groups across the country, hospitals among them, are negotiating for access to cable television channels that will link hopsitals, homes and schools and offer a range of educational, entertainment and public service programming, said Tom Browne, associate director of public information for the California Hospital Association.



Browne spoke Jan. 29 at a program on the medical and health care uses of cable television, sponsored by the Palo Alto Medical Foundation and Stanford University Hospital.

Two-way or interactive cable systems enable people in separate locations to see and talk to one another. A conference at Stanford Medical Center, for example, could not only be seen in hospitals across the country, but could also allow the participants to talk to one another.

Robert Hecht, Stanford division coordinator of Instructional Media, and Michael Yonchenko, Stanford audiovisual director and producer, showed samples of medical television uses. A televised surgical procedure performed in a Sequoia Hospital operating room, for example, was watched by students at a conference at Canada College. Conference participants could ask questions of the surgeon during the procedure.

Another example was a mass visual screening test developed by Stanford's department of ophthalmology and used to test television viewers' eyes throughout the country.

Cable systems, said Browne, have an originating station, the "head end," which picks up programs from local commercial broadcast television, from microwave relays from distant cities, other cable connections and from national satellite companies. The cable company filters and amplifies the signals and sends them throughout the community in cables similar to telephone lines.

Dr. Kenneth Melmon (left), chairman of the Department of Medicine, was interviewed by Watts last year for *Health Notes*. With the advent of interactive cable technology, the potential uses of medical television are rapidly growing.

Most existing cable systems are one-way, to subscribers. New technology allows access by institutions, such as schools and hospitals, and two-way communication for teleconferencing and educational uses.

Browne cited the need for careful community and institutional participation as older franchise agreements come up for renewal and new ones are established. (Ninety percent of the present 300 cable franchise agreements in California will be coming up for renewal soon, he said.)

"Make sure the specific services you want are written into the agreements," he said. "If health channels and cables between hospitals are required in the franchise agreement, there will be little direct cost, but adding the service after the system has been installed will be difficult and expensive."

In health care fields, cable and satellite technology could mean shared grand rounds and inservice programs for hospital staff, preventive health programs for the community, emergency paramedic access to patient's medical histories, and international teleconferencing that could save on hospitals' travel budgets, he said.

Some cable agreements provide training courses and video equipment for people to use. Such services are funded out of the profits made by the cable company.

"It costs millions to lay the cables for a system, but there are vast amounts to be made too," Browne said.

Programming communicated by satellite, from one "dish" device to a satellite, then to a receiving "dish" antenna, was described by Tom Rasmussen, director of satellite operations at the Hospital Satellite Network in Los Angeles.

Today, such a receiver costs about $10,000, and a transmitter about $500,000. More than 30 hospitals in the U.S. have these receivers now, he said. Five national networks are planning health and medicine programming that could be used by hospitals for their patients and staff.

"None of the systems are up now, but the first will be ready this year. This will mean a way to bring news to hospitals much faster than any way we have now. Wtih video publishing, information about a new procedure, for example, could be spread across the country in a matter of hours," Rasmussen said.

These capabilities are being examined, he said, in light of what they will mean for the present system of peer review, or review by professionals in the field before publication of a scientific paper.

Dr. David Watts, who hosts and writes "Health Notes" for KQED television, cited the "tremendous need for accuracy in reporting health and medical information via television. The information has to be understandable and balanced in its interpretation."

Watts found from his own experience that health professionals expecting to become involved with video programming "may need to take some lessons, to learn to be more alive and upbeat in front of the camera, and to speak clearer."

—Barbara Battino

Construction Corner

Department of Medicine Offices: Construction will be under way this week in the Department of Medicine offices located at S102. This project will provide the department with remodeled office areas and a new conference room. The renovation will occur in three phases with the conference area as the first phase.

The project was designed by Christina Anaya of the SUMC Facilities/Projects Office. Construction will be coordinated by Richard Booth.

General Surgery Offices: An existing laboratory and a storage area are being renovated, as well as existing office space, in order to provide an office suite for the Division of General Surgery. The construction in rooms S059 and S067 is in progress and scheduled for completion by May 1, 1983.

The SUMC Facilities Office project team responsible for the work consists of Norm Berge, construction coordinator, and Phillip Eubanks, architectural planner.

Fume Hood at the Loading Dock: Construction will soon be in progress to repair and upgrade the fume hood at the loading dock. This fume hood is one utilized by the Radioisotope Inspection Station which receives and inspects such material for departments throughout the Medical Center.

Construction coordinator for this project is Dave Dominguez of the SUMC Facilities Office.

Boswell Renovation progress made during January: The contractor, E.J. Amaroso and Sons, moved into the Pasteur Drive parking strip space. Excavation and removal of debris was completed, to prepare the site for the footings of the new columns that support the external walkways. Jackhammer testing, tree removal, and other necessarily noisy tasks were accomplished without significant disruption of work schedules.

Boswell Renovation activities for February:

- Demolition of walls and ceilings on the first floor south to begin. A barrier will be constructed which will eventually close the entire corridor as well as a portion of the front Boswell lobby.
- A crane to lift the steel into the courtyard to arrive mid-February for two to three weeks. It will be positioned in the area between the fountains and the front of the Boswell Building. The crane has a 140-ton capacity and a boom length of 260 feet. The contractor will maintain a minimum of 16 feet clearance for vehicles. Four parking spaces will be temporarily lost while the crane is here. Appropriate safety measures will be taken.
- Temporary signage to be installed to help reduce the confusion for patients during the renovation process. The temporary signs have light blue background and white lettering.
- Clinic registration will be accomplished in the individual clinics, and the centralized registration area will not be functioning.
- The steel support structures will be attached to the existing building by bolts. This is expected to produce a great deal of noise as holes are drilled for the bolts.

Watch future **Construction Corners** *for updates on the progress and plans of the Boswell Renovation and other projects.*

Medical faculty opening

Stanford University is an affirmative action employer and welcomes nominations of women and minority group members and applications from them.

Applications are invited from surgical pathologists with strong academic orientation for the position of assistant professor in the department of pathology at Stanford University School of Medicine.

Respondents must either be eligible for or possess California licensure and must be certified in anatomic pathology by the American Board of Pathology. Applicants must have a comprehensive knowledge of and a strong background in general surgical pathology, prior experience in research and teaching, and diagnostic expertise in hematopathology.

Duties will include teaching medical students and housestaff, diagnostic and supervisory responsibility in general surgical pathology, and participation in the diagnostic, teaching and research programs in hematopathology. A record of prior publications is essential.

Applications should be dated no later than April 1, 1983, for an appointment to commence Sept. 1. Applicants should send curriculum vitae and the names of at least three referees to David Korn, M.D., chairman, Department of Pathology, Stanford University Medical School, Stanford, CA 94305.

...News Notes...

Jordan Maple was appointed administrative service manager in the Department of Neurology effective Jan. 17, announced Dr. David Prince, professor and chairman of the department.

Maple has had a great deal of experience, most recently as controller of the Foundation of California State University, Sacramento, and prior to that in Ohio and West Virginia where he was executive manager of a university medical corporation.

The volunteer arm of the Community Relations Department, the patient relations associates of SUH have been nominated for the President's 1982 Volunteer Action Award by the Junior League of Palo Alto, Inc. The award honors a select number of volunteers across the nation.

The goals of the patient relations associates are to meet the personal and comfort needs of patients; to improve interactions between patients, their families and Hospital staff; to provide problem-solving services; and to recommend changes in Hospital policies and procedures to eliminate problems.

The purpose of the Junior League, which serves the mid-Peninsula, is to promote voluntarism and to demonstrate the effectiveness of trained volunteers in their communities.

Director of Community Relations Jeanne Kennedy remarked, "We're very excited that these dedicated volunteers at the Hospital have been honored in this way by the Junior League."

"Got a minute, doctor?"

Incomplete charts, a concern reported here and at a sampling of Bay Area hospitals, have declined at SUH, reported the director of medical records.

Marion O'Brien-Adineh, the director, reported that as of early January, there were 283 delinquent charts—incomplete charts for patients who had been out of the Hospital for at least 14 days.

"We're pleased with the progress, but the situation still could be better," said O'Brien-Adineh. A year ago, SUH was faced with approximately 1,500 delinquent charts.

"The decline is largely to the credit of Administration working very closely with the Medical Staff and its leaders to alleviate what had been an extremely acute problem," she added.

Fifteen staff members had been suspended during the past year, said Bunny Blake-Gray, manager of the chart completion unit. The action came during a concerted campaign which was conducted to reduce incompletions.

Meanwhile, at nearby hospitals, medical record directors indicated parallel concerns with potential or actual delinquencies.

Dr. Thomas Gonda, chairman of the Department of Psychiatry and Behavioral Sciences, has been appointed to a two-year term as the representative of the Council on Medical Education of the American Medical Association to the Residency Review Committee for Psychiatry.

* * * *

"The Healing Force," an 80-minute documentary film about writer/editor Norman Cousins and his unique personal experience of recovery from a life-threatening heart attack, will premiere at 7:30 and 9:30 p.m., Tuesday, Feb. 15, at the New Varsity Theater, 456 University Ave., Palo Alto.

Cousins is adjunct professor in the department of psychiatry and biobehavioral sciences of the School of Medicine at UCLA. He was formerly editor for 35 years of the Saturday Review magazine, and is the author of 16 books including Anatomy of an Illness.

Cousins based his healing process on forming a partnership with the medical community to optimize his recovery. He believes that treatment for any disease has twin requirements: the availability of the best that medical science has to offer, and the patient himself becoming fully involved in the recovery effort.

Proceeds of the film will benefit Touchstone, an emotional support group for children with life-threatening or chronic illnesses and their families. Touchstone and the Midpeninsula Health Service, both nonprofit organizations, are sponsoring the presentation.

Tickets at $4 each can be purchased as tax-deductible donations at the Touchstone office, 605 Cowper Street in Palo Alto during business hours, or at the theater the night of the performance, or by calling 328-4495.

Touchstone was established in 1981 by some members of the medical staff of Children's Hospital at Stanford. For more information about the group, call the phone number listed above.

* * * *

New members have been appointed to the Medical School Staff Affirmative Action Committee. Those who have accepted two-year terms are: Ali Lampert of Pediatrics; Harold Spencer of Lab Animal Medicine; Droni Moo of Family, Community and Preventive Medicine; and James Taskett of Instructional Media. Richard Placone of Radiology has been reappointed for a one-year term.

Outgoing members include Clare Phillips, Marie Casey, Peter Stangl, and Elwood Pierce.

* * * *

The Human Resources Group now has available new resource binders expected to be of interest to many in the Medical School. Staff members should feel free to visit the Group in M118 and browse through these, which include a child care referral and information binder; a recreation, events and discounts binder; a training and development binder; and a binder with Medical School staff profiles run in the Medical Center Memo.

For further information about these helpful resources, call Catherine at 497-6295.

The Hospital's new dining room in P1060 received finishing touches on its wall design last week from Oscar Briones, associate project manager with the HMP. Located between the PATs Lounge and X-ray North, the new facility opened yesterday, Feb. 8. It is the renovated section of a shell space formerly used for storage, and will seat about 150 persons, almost doubling the current capacity of the main cafeteria. This extra room has come about largely due to the efforts of the Committee on Cafeteria Crowding, which has worked out several strategies to alleviate the daily lunchtime congestion. The operating hours of the new dining room will be 11:30 a.m.-1:30 p.m. weekdays. Flatware, napkins, and tray disposal will be provided, but food service is still restricted to the main cafeteria. Visitors will be restricted from both dining areas during the peak lunch hour, to allow Medical Center staff time and space to enjoy their meals comfortably. The wall design in the new dining room was conceived by freelance designer Tami Bruce.

New committee to help plan future

Five senior administrators and one University trustee will serve on the Stanford University Medical Center's newly created Strategic Planning Steering Committee, Dr. Lawrence G. Crowley, vice president for medical affairs, announced Monday.

"The committee will provide a framework within which the Center's resources can be allocated in a coordinated and planned manner," Crowley said.

The purpose of stategic planning is to determine the direction and character of an enterprise well in advance of shifting circumstances, the vice president explained. Otherwise forces outside the institution become the determining factors, and the future of an organization is no longer within the control of its management.

Strategic planning is a relatively new phenomenon in the operation of academic medical centers, Crowley said. "Unless resources are treated on an integrated basis, an organization may resemble a federation of separate entities," he explained.

Stanford University Medical Center consists of Stanford University Hospital, Stanford University Clinics which form the base of the full-time faculty's medical practice, and the School of Medicine, one of the seven schools of the University. The three entities in the Medical Center are fiscally and organizationally independent, but they share goals, buildings and personnel in carrying out their mission of teaching, research, and clinical care.

The committee will serve in an advisory capacity, Crowley said. It will review and recommend the strategic plans as formulated by the units of the Medical Center for the purpose of sustaining a balance among programs and resolving possible contradictions before implementation.

Members of the committee are Linda Clever, M.D., member of the Board of Trustees Ad Hoc Committee on the Medical Center; Sheldon King, executive vice president and director of Stanford University Hospital; Kenneth Melmon, M.D., chairman, Faculty Practice Program executive committee; Dominick Purpura, Dean of the School of Medicine; and Donald Tower, executive director of the Faculty Practice Program. Crowley will serve as chairman.

The committee will be staffed by David S.P. Hopkins, director of the Center's office of Analysis and Planning, and David O'Brien, financial management analyst.

Nearly 300 oppose unclassified, weapons-related research proposal for SSRL

continued from page 1

seeking $1 million in UC research funds for a 50 percent share of the same project. None of their work would be weapons-related. It includes biological, chemical, materials science, and physical sciences research using synchrotron radiation.

The Department of Energy funds SLAC entirely and is the principal funding source for SSRL, an administratively independent organization at Stanford which uses beam lines from SLAC's storage ring, SPEAR, for its fast-growing research program.

"Our electrons are their electrons," said SLAC Prof. Gregory Loew, spokesman for 15 SLAC faculty who petitioned the University's Committee on Research early in January expressing their concern.

Openness an attraction

SLAC's openness and noninvolvement in weapons research have helped attract many high energy physicists, other scientists, technicians and administrators, from the U.S. and around the world. Several SSRL scientists personally opposed weapons-related work, except in national emergencies, including SSRL's director, Stanford Prof. Arthur Bienenstock, applied physics and materials science.

"But I've looked back through history at people who've used their position to try and stop research—and 50 years later, it never looks good," he said in a telephone interview. Bienenstock has worked for and consulted with the Defense Department, but never on weapons.

University research rules require that any SSRL project have a Stanford faculty member as principal investigator. If the proposed project were funded and approved and if Bienenstock declined to serve as principal investigator, it remains uncertain whether others would assume this responsibility.

The SSRL proposal review panel, a group of 10 experts outside the University, has raised several questions concerning the proposal which may take months to resolve. The panel is headed by Columbia Prof. Charles Cantor.

Neither the panel's questions nor Stanford research policy governing SSRL would bar the research on the basis of its application to weapons testing.

Besides funding, key questions concerning the proposal involve the availability of a beam line and the terms of its use.

The high demand for synchrotron radiation research already has resulted in three proposals for beam lines to be adopted by SSRL. Only one more simply adopted, straight-line beam site remains. Further lines would be more complex to build, according to Bienenstock.

As initially submitted, the national laboratories-UC proposal would divide the beam line use equally between these two groups. On past SSRL projects, the University Committee on Research has required at least one-third time be devoted to general scientific research. SSRL's proposal review panel believes it would not be appropriate for the Lawrence Livermore-UC groups to have 100 percent use of any new beam line.

These and other questions have been referred back to the proposing group, whose spokesman is Lloyd Multhauf, of Menlo Park, group leader in the L division of Lawrence Livermore, which works primarily in weapons. . . .

He said about two dozen UC researchers have expressed interest in using synchrotron radiation. "No proposal from UC has anything to do with weapons," he said in a telephone interview.

Synchrotron work can "accommodate many users," he said. "It doesn't make sense to have dedicated sources; it make a lot of sense for the government to fund centers regionally."

SSRL already has about 400 users and is only partially developed, he added. "Weapons detectors are probably not ideal for other users."

But there's increasing recognition that very short x-ray pulses could have useful applications in biological research. Biological research might benefit from the instrumentation done for weapons.

Weapons work important

"Everything we do would be unclassified," he said. "Any work we do would be published. Offhand, I don't see this in any different category than other work done at Stanford.

"Weapons work is important, should be done, and it's important to do the work well," he added. Stanford is conveniently located and "our testing program would be more effective if we have access to a ring like SSRL." Both Lawerence Livermore and Los Alamos have also expressed interest in using a synchrotron light source now under construction at Brookhaven National Laboratory in New York. "We will continue to explore that," he added.

As submitted to SSRL in December, the Lawrence Livermore-UC proposal did not specifically mention weapons, but did identify the funding source. The funding application to the Department of Energy emphasized the weapons testing potential.

On Dec. 16, Bienenstock met with the SLAC faculty and explained the proposal. "We thought it would hurt the image of the lab," Loew said in a telephone interview. "SLAC has 10,000 visitors a year, including school kids. There are tours every day.

"Inevitably, someone asks, 'Is SLAC a place to make bombs?' and the answer is 'no, we're not involved in weapons, we try to understand the basic laws of nature.'

"The idea that we could no longer answer that question in a straightforward way. . . (was) something we felt very uncomfortable with. . . .

"We thought without the consent of the entire staff, we would be captive to some activity we were not hired for.

"We're not interested in publicity. We want the problem solved in an amicable way. We don't particularly want controversy."

The letter asked the Committee on Research to find a way to not have the work done at Stanford. Other signers included Profs. Joseph Ballam, Richard Blankenbecler, Stanley Brodsky, Karl Brown, David Burke, John Jaros, David Leith, Roger Miller, Joseph Murrary, Richard Neal, Pierre Noyes, Michael Peskin, Charles Prescott, and Perry Wilson.

SLAC has 31 faculty. Several nonsigners were off campus or had potentially conflicting committee assignments within the University.

Mary James, SLAC engineering physicist, drafted a staff petition to SLAC Director Wolfgang Panofsky asking him to work with University President Donald Kennedy and the Committee on Research to amend existing policies to prevent the possibility of nuclear weapons motivated research involving SLAC. Friends collected 280 signatures in four days in mid-January.

"Large parts of the staff never saw the petition," she said in a telephone interview. "We were concerned about the image of the lab in the community at large and in our own minds. We think of SLAC as truly dedicated to pure research, and see the high energy physics community as a whole as an example of the positive effects of world-wide cooperation in science."

She personally was "wary" that "with weapons labs picking up 80 percent of the cost, they'd settle for 10 percent of the time." While different uses of technology may overlap, "as a person trying to make moral decisions, I have to look for intent."

Schedule 44 of the Lawrence Livermore proposal to the Department of Energy made it clear "this will directly and immediately benefit weapons programs," she said.

Since the proposed weapons research was "not the primary concern of (SLAC), it is unnecessary and unfair to put us in this position" of having to help the project. Public discussion of the proposal surfaced briefly during Panofsky's "all hands" talks at SLAC Feb. 1.

SLAC continued operations last fall during a four-week strike by about 300 workers. But Bienenstock observed that "we can't function" without beams provided by the two-mile long accelerator.

"Both SSRL and SLAC are trying to do things which are very challenging and difficult—at the forefront of our respective fields," he added.

"These require not that people just do their job, but test the extremes of their intelligence, creativity and enthusiasm.

"We've been helped a lot by the SLAC people, and we're very sensitive to their feelings on this issue. They have contributed ideas we haven't thought of at many different levels."

How does he think the issue will be resolved? "It's inappropriate to speculate, because I ultimately have to make the decision," he replied.

He currently is in the East, attending previously scheduled meetings at the Cystic Fibrosis Foundation and the National Academy of Sciences.

Any final decision appears months away.

Synchrotron radiation is the electromagnetic radiation, including visible light and x-rays, emitted by high energy electrons following curved paths due to the influence of magnetic fields.

An electron going straight ahead does not radiate. An electron going through a magnetic field follows a curved path. Motion in curved paths represents acceleration, and acceleration results in the emission of radiation.

There are four other U.S. centers for synchrotron radiation research besides Stanford—Brookhaven, Wisconsin, Cornell, and the National Bureau of Standards in Washington.

—Bob Beyers

Stanford has $17 million in indirect cost 'carryforwards' from 1980-82

continued from page 1

proposals by the National Institutes of Health for an arbitrary 10 percent reduction in overhead rates resurrected, nor do we wish to encourage imposed caps (or ceilings) on particular rate components. . . .

"In the political arena, we plan to work as hard as we can to retain the concept of partnership with the federal government in research, and to gain understanding for the reality of indirect costs.

"In the meantime, we intend to 'price' our indirects at a level consistent with political and competitive forces, while trying to ameliorate both.

"In addition, we intend to (move) 'back up' toward full recovery by reducing indirect expenses as much as possible consistent with our other responsibilities.

"These measures should enable us to return toward full overhead recovery, and we think that ought to be a significant institutional goal.

"In the meantime, it will limit the risks to our own principal investigators (on research projects) and also limit the political risks to private research universities as the indirect cost rate is being debated in Washington.

"This course represents, however—and there should be no mistake about this—a significant budgetary sacrifice for our academic enterprise. By taking corrective steps. . .I hope we shall minimize the need for future sacrifices of the same kind."

Buildings and equipment, including operations and maintenance, and general and departmental administration account for about 85 percent of the overall rate of indirect costs. "Organized research accounts for about half the costs of our buildings and equipment and for 40 to 45 percent of our general and departmental administrative costs," Kennedy noted.

In the past, Stanford has vigorously pursued full cost recovery on research. Total costs for research exceeded payments from the federal government by $7 million in 1980-81 and $10.5 million in 1981-82, Kennedy said.

To recover these large "carryforwards" from the federal government would require Stanford to have indirect costs rates of 82 percent in 1983-84, 86 percent in 1984-85 and 86 percent in 1985-86, Kennedy said. This compares with a current indirect rate of 69 percent.

Moving away from full cost recovery on research places pressure on other parts of the University's operating budget. The University currently is engaged in a three-year $10 million belt-tightening effort.

Stanford flute teachers Frances Blaisdell (left) and Alexander Hawley, mother and daughter, perform with pianist Robert Hagopian at 8 pm Sunday, Feb. 13, in Dinkelspiel Auditorium.

Academic deans should promptly investigate any alleged faculty fraud

Academic deans at Stanford should conduct an initial investigation of any charges of academic fraud involving Stanford faculty members within four weeks, University Provost Albert Hastorf declares in a memorandum circulated to the deans Feb. 3. *(See text below.)*

"Several instances of academic fraud by faculty members at other universities have come to light recently," Hastorf said. "They have prompted us, as well as such organizations as the American Association of Medical Colleges and the National Institutes of Health, to review our methods of dealing with academic fraud."

Hastorf said "the initial investigation (by the academic dean) must be conducted as quickly as possible and every effort must be made to preserve confidentiality.

"Only those directly involved in the investigation are to be aware that it is under way or to have access to any information obtained. . . . Of course, the faculty member being investigated is always free to disclose the information should he or she wish to do so."

The dean may consult with others on a confidential basis, as needed, in conducting a review "complete enough for the President to determine whether or not a formal charge is warranted."

If the President finds charges are warranted, existing procedures in the Statement on Faculty Discipline take effect. If these involve the Advisory Board—a group of seven professors elected by their colleagues on the Academic Council—the board is urged to make every effort to conclude its proceedings within 60 days.

Normally, the President will wait for a final outcome before deciding whether information about the charges and their disposition shold be disclosed either publicly or to specific parties, such as the research sponsor, if any. This decision should be made following consultation with the Advisory Board.

If at any time during the process, after consultation with the Advisory Board, the President is persuaded that the need for disclosure is so urgent that it should not be deferred, the President may disclose such information as is deemed necessary without awaiting a final determination.

Hastorf said timely responses to allegations of academic fraud are needed to protect the interests of all those concerned, including those who might be misled by publication or communication of fraudulent data or harmed by fraudulent actions. He noted that gross negligence by faculty in supervising others in work for which the faculty member is responsible is also chargeable as professional misconduct.

Text of Hastorf memo to deans details procedures for initial investigation

Following is a Feb. 3 memo to the Deans of Schools and W. K. H. Panofsky, director of SLAC, from Stanford Provost Albert H. Hastorf concerning Academic Fraud.

Dear Colleagues:

Several instances of academic fraud by faculty members at other universities have come to light recently, and they have prompted us—as well as such organizations as the American Association of Medical Colleges and the National Institutes of Health—to review our methods of dealing with academic fraud.

I do not propose to define the term, but some examples of academic fraud include deliberate distortion of research data, falsification of research results, and plagiarism in research publications—all of which constitute professional misconduct in the University.

In the event that such cases arise at Stanford, we need a way to make timely responses to allegations of such misconduct that will protect the interests of all the parties involved—including those who might be misled by publication or communication of fraudulent data or harmed by fraudulent actions.

Our current policies, as set forth in Stanford's Statement on Faculty Discipline, outline steps to be taken **after** the president has brought formal charges against a faculty member. But the Statement does not describe the steps which should be taken to determine if there are sufficient grounds for a formal charge of misconduct. Nor does it speak to issues of confidentiality in cases where others might be affected by the disclosure of such allegations, or the failure to disclose them.

Hence this memorandum. Its purposes are 1) to outline the procedures to be followed in cases where evidence exists or allegations have been made regarding academic fraud prior to making a formal charge and investigation; and 2) to clarify the obligations of University officers involved in investigations of academic fraud with respect to confidentiality.

Individuals who believe an act of academic fraud has occurred at Stanford should inform the dean of the school in which the alleged fraud has occurred. The dean shall immediately begin an inquiry and shall so inform the president or the provost.

(In the event that allegations of academic fraud against a member of the Academic Council are received directly by the president or me, the issue will be immediately referred to the faculty member's cognizant dean. The dean is then responsible for conducting an immediate informal review of the charges.)

The dean will notify the involved faculty members of the charges, and discuss their nature. The dean may consult with others on a confidential basis as needed, depending on the nature of the allegation. The dean's review shall be complete enough for the president to determine whether or not a formal charge is warranted.

The dean will provide me with a summary of the charges and results of the findings no later than four weeks after the issue was brought to the dean's attention. The president will then decide whether formal charges will be filed under the faculty discipline procedures.

In the course of obtaining the necessary information in this initial review process, it is essential to protect the professional reputation of the faculty member involved, as well as the interests of the public and those who might be harmed by the alleged fraud. Accordingly, the initial investigation must be conducted as quickly as possible and every effort must be made to maintain confidentiality.

Only those directly involved in the investigation are to be aware that it is underway or to have access to any information obtained in the course of the investigation. Of course, the faculty member being investigated is always free to disclose the information should he or she wish to do so.

In the event the president finds that charges against a faculty member are warranted, the process set forth in the Statement on Faculty Discipline shall be followed. If the matter is referred to the Advisory Board pursuant to the Statement, the Board is urged to make every effort to conclude its proceedings within 60 days.

Under normal circumstances, the president shall wait until a final determination of the matter has been reached before deciding—after consultations with the Advisory Board—if information about the charges and their disposition is to be disclosed either publicly or to specific parties such as the research sponsor, if any.

However, if at any time during the process, the president, after consultation with the Advisory Board, is persuaded that the need for disclosure is so urgent that it should not be deferred, the president may disclose such information as is deemed necessary without awaiting a final determination.

The above procedures apply to faculty members who are allegedly personally responsible for an act, or acts, of academic fraud. Faculty members are, of course, also responsible for the behavior of staff and students involved in their research enterprises.

Although there are other University disciplinary procedures applicable to staff and students, gross negligence on the part of a faculty member in supervising others in work for which he or she is responsible is also chargeable as professional misconduct.

State support results in lower indirect costs for public universities...

continued from page 1

broad spectrum of colleges and universities, both public and private, has been growing significantly in recent years. Principal investigators at relatively unknown institutions are becoming increasingly competitive for sponsored research support."

Recently ranked with Berkeley and Harvard among the top three universities nationally in overall strength of its graduate faculty, Stanford generally ranks among the top five universities in federally funded research volume. This totals about $136 million annually, excluding $61 million for the Stanford Linear Accelerator Center.

At many public universities, the Stanford report notes, the costs of administration and facilities used in research are part of the core funding supplied by the state. Accordingly, these indirect costs need not be recovered from federal contracts and grants.

"Even more important, most states require that recovered indirect costs go back into the state treasury, rather than to the university research enterprise," the report adds. "Research administrators at these institutions freely concede that they simply do not expend resources on cost accounting (for research) because they see no benefit in doing so. Someone else is getting the money."

At Stanford, in contrast, "we have vigorously pursued a policy of fully allocating research costs and fully recovering them. . . .

"Thus we have a two-tiered 'price system' among the universities for sponsored research, just as we do for the tuition paid by students, and for the same reason: the difference is subsidized by state taxes."

The combination of federal funding shortages for many areas of research and rising indirect costs around the country have led key officers in the Department of Health and Human Resources, and particularly the National Institutes of Health, to seek reductions in overhead rates "by administrative fiat if necessary," the report notes.

Full cost recovery

Where some people believe indirect rates should be based on full cost recovery, others regard them as a "price," like tuition, based on subjective judgment, conditioned by market factors.

"These two views. . .have vied with each other for nearly 20 years," the report notes. "No set of issues has led to greater ill will between research faculty and university administrators across the country, and even between faculty members in sponsored research-intensive fields and those in other disciplines. This has been true especially in the private universities."

A government decision to "cap"—or set ceilings on—indirect rates based on the relatively low figures of public universities "would be catastrophic for the privates," the report notes.

"Experience with the effects upon teaching hospitals of caps on medical cost reimbursement does not make one sanguine about a world where the same philosophy is applied to indirect cost rates for research.

"There is no doubt that high quality private research universities, which rely heavily on indirect cost recovery to fund their operating budgets, would be the hardest hit.

"The result would be a significant downsizing for those institutions, plus an increase in the full average cost of all their activities—including research—which would have to be made up from already scarce general funds."

Faced with increased competition and curtailed funding on research, growing indirect costs for energy and wages, and large "carryforwards" earned in previous years, the report suggests Stanford should:

1) "In the political arena, work as hard as we can to retain the concept of partnership with the federal government" in research;

2) "Set aside, at least for the time being, our policy of full recovery. . .(and) 'price' indirects at a level consistent with political and competitive forces;"

3) "Reduce indirect expenses as much as possible;"

4) "Establish firm policies to prohibit consideration of potential reimbursement of overhead. . .as an enabling fctor (on) proposed new indirect expenditures or as an inhibiting factor with. . .investments aimed at reducing or avoiding future overhead costs.

5) "Set the return to full overhead recovery as a major institutional goal," preferably over a three- to five-year period.

Last year, based on full cost recovery, the negotiated rate for indirect costs at Stanford was 69 percent, an increase of 11 points over the 1979-80 rate.

The major reasons for the increase were:

1) Higher energy costs (about two points);

2) New rules permitting the intensity of space use to be taken into account, correctly attributing more costs to research (more than three points);

3) Higher operations and maintenance costs on new buildings and renovation of old ones (less than one point);

4) Charging major maintenance projects to current year expense rather than depreciating them several years into the future (about one and a half points);

5) Accelerating depreciation on equipment used in research (about four points).

"In general, institutions similar to Stanford have had rather similar histories of change in indirect rates," the student notes. "Yale, Columbia and Rochester are all about where we are, and have risen significantly in the past five years.

"Some—Chicago, Princeton, Brown—are just a few points below.

"Cornell's rate was unusually high due to an unusually large carryforward, and has now come down somewhat. The rate at MIT is down, too, but that is an artifact of broadening the base of direct costs to which it is applied.

"By contrast, the publicly supported research universities all tend to have significantly lower rates, although within this category too there is a considerable spread."

Long range forecast

At present, Stanford's long-range forecast assumes that research volume will increase at a rate of five percent from 1982-83 through 1985-86, or one percent less than the projected inflation rate.

In recent years, the University projected research volume would rise at the inflation rate or one percent year. In 1981-82, the actual increase was only four percent—two points below the inflation rate. The latest estimate for the current year is 3.5 percent—or 2.5 below inflation.

The slower than expected growth of research volume has been described as the prime factor in the University's recently announced plans for a three-year $10 million belt-tightening program.

Stanford still attracts able, diverse student body...

continued from page 1

dergraduates receive scholarships or grants in aid. When those receiving only loans are added, the proportion on financial assistance totals 71 percent.

"Stanford continues to attract strong and growing interest of the most academically able students from all economic backgrounds," the board report noted:

* The number of applicants for next year's freshman class is currently running at an all-time high;

* Entering freshmen come from virtually the same economic backgrounds as five years ago;

* The percentage of students accepting Stanford's offer of admission remains "consistently high at 64 percent, a figure comparable to. . .the past decade";

* This "yield" rate continues to be strong among the highest ability students whose families are just able to qualify for financial aid;

* A majority of those admitted to Stanford but enrolling elsewhere chose similar high cost private institutions—Harvard, Princeton and Yale, in that order—and not lower cost public institutions.

The current freshman class of nearly 1,600 includes 141 blacks and 137 chicanos, an all-time high.

Even so, "we are concerned that sustained high levels of increases in tuition may, at some point, affect the actual or perceived affordability of Stanford," the report said.

"A tuition increase of this magnitude will be consistent with public expectations in a strained economy and will not jeopardize either the continued affordability of Stanford or our ability to maintain the quality of the academic program."

The University currently is engaged in a three-year $10 million belt-tightening program.

In a recent public forum on tuition, Stanford Vice Provost Raymond F. Bacchetti noted that college costs nationally during the past decade rose at approximately the same rate as the personal income of parents with children in college.

"It's a close call as to whether Stanford costs more in relation to income now than in 1970," he added.

The trustees approved an 11.4 percent increase in the basic undergraduate room and board rate, to $3,812 from $3,423. This compares with a 15.5 percent increase last year and brings the combined tuition, room and board rate hike for 1983-84 to 10.3 percent.

Foreign culture experience available for high schoolers

The third anndual "Experience Another Culture at Stanford" workshops for midpeninsula high school students will take place from 9 a.m. to noon Saturdays, Feb. 26 and Mar. 5, at the Bechtel International Center on the Stanford campus.

This year the workshops are directed to advanced level students of French, Spanish, German and Japanese. Stanford students and family members from the countries where these languages are spoken will lead high schoolers through a series of small group discussions, music and dance, slides and information about travel and study abroad, all conducted in the language of the cultures represented.

For example, at the French language workshop representatives from Quebec and Francophone African countries, as well as France, will represent aspects of their cultures and engage participants in conversation in French.

High School language teachers of public and private schools in Los Altos, Mountain View, Palo Alto, Menlo Park, Atherton, Redwood City and San Carlos have been invited to select students for the workshops and will be accommodated on a first-come, first-served basis as space is limited.

Priority will be given to students in fourth year and above level classes. Workshops in Spanish and Japanese will take place on Feb. 26, those in French and German will be presented on Mar. 5.

"The past two years we have presented all day workshops on specific nonwestern cultures with great success, involving several hundred high school juniors and seniors" according to Gwyn Dukes, the project coordinator from the International Center staff.

"This year, in an attempt to address somewhat different needs, we are focusing on language interaction as a means of cultural exchange."

In 1981 the pilot program was funded by a grant from the National Association for Foreign Student Affairs. Last year the Rotary Club of Palo Alto covered all expenses. This year, the Center is requesting modest support from a number of midpeninsula service organizations.

"As our experience in the community builds, we hope to provide many kinds of enrichment to local schools and their students through the sharing of the rich cultural backgrounds of our several thousand students, post-doctoral scholars and family members from all parts of the world," said Lee Zeigler, International Center director.

Colleges nationally face steep decline in top talent

Colleges nationally face a steep decline in top student talent as measured by aptitude and achievement tests, says Stanford Admissions Dean Fred Hargadon, head of the College Board nationally.

Since 1972, the number of students scoring 650 or higher on the verbal scholastic aptitude test has declined from 53,794 to 29,236—a 45 percent drop. The number taking the tests declined only 3 percent.

Similarly, the number of students scoring 650 or higher on the math SAT dropped from 93,868 to 71,916, or 23 percent.

"There are similar drops at the high level, no matter where we set it," he added. "The relatively good news (for Stanford) is that we appear to have attracted a slightly larger percentage of those high scorers, at whatever level."

Whatever their limitations, Hargadon said, these standardized tests are the only way to approach a common standard in measuring student achievement. Otherwise it would be represented only by "the widely varying course content and grading practices of some 20,000 secondary schools."

The Stanford Admissions Office practice of carefully examining individual student transcripts and "obviously favoring those students whose academic programs appear to have been the most rigorous, goes some way toward offsetting whatever limitations the test scores might have," he added.

The distribution of test scores and high school grade point averages for the 1981 freshman class was as follows at right:

Scholastic Aptitude Test Scores

Students scoring	Total	U.S.	Apply	Stanford		Stanford share
	1972	1982	1972	1982	1972	1982
Verbal SAT 650, above	53,794	29,236	3,872	5,260	4%	7%
Verbal SAT 700, above	17,560	8,240	1,164	823	7	10
Verbal SAT 750, above	2,817	1,479	241	168	9	11
Math SAT 650, above	93,868	71,916	3,872	5,260	4	7
Math SAT 700, above	37,067	29,528	2,220	2,973	6	10
Math SAT 750, above	9,966	8,351	875	1,057	9	13
Achievement tests, 750, above						
English composition	2,918	1,302				
Mathematics I	5,679	2,218				
American history	1,757	719				
French	1,884	839				
Biology	1,690	681				
Chemistry	3,285	1,558				

SAT scores, GPA's of 1981 Stanford freshman applicants

Verbal SAT	Number of applicants	Number offered admission	Math SAT	Number of applicants	Number offered admission
700 - 800	1,024	463	700 - 800	2,913	986
600 - 699	3,681	1,121	600 - 699	5,051	1024
500 - 599	4,636	672	500 - 599	3,361	391
Below 500	3,252	212	Below 500	1,267	67

H.S. GPA	Number of applicants	Number offered admission
4.0	2,033	901
3.9	1,046	355
3.8	1,373	382
3.7	1,048	199
3.6	989	170
3.5 & below	4,603	409

Commenting on the recently enacted National Collegiate Athletic Association (NCAA) legislation on student athletic eligibility, which is scheduled to go into effect in 1986, Hargadon said:

"Lord knows, they needed to do something in this area. The requirement of a 2.0 grade point average in high school was a minimal step in the right direction.

"The 700 total SAT requirement, while well intended (contrary to the assertions of those who took objection to it), seems to me to have been the wrong step taken for the right reason.

"Our concern should be that no college enrolls a student to play athletics unless that student's academic credentials (a) are reasonably within the range of the academic credentials of the college's student body as a whole, and which (b) are the kinds of credentials from which successful pursuit of that college's academic program can be reasonably predicted. This will vary from college to college, and it should not be hard to devise a formula by means of which it would be clear when a student was being enrolled largely for athletic reasons and with little hope of graduation.

"Surely, that will mean some colleges can enroll students with lower academic credentials than can other colleges. That is now the case for all students, regardless of whether they participate in athletics.

"Some sort of rule whereby colleges would be allowed to award athletic scholarships to new incoming students only in some proportion to graduating seniors who had been on athletic scholarships would help ensure the students' educational needs and interests were not overlooked.

"Further, it might help if instead of those NCAA halftime pictures of college science labs, which perhaps too few college athletes have ever seen, were replaced by student-athlete graduation statistics for each of the schools, giving the viewers an idea of the role athletics plays within the context of the respective colleges being represented by that particular event."

His views were developed in a report to the fall quarter meeting of the Stanford Academic Council Feb. 3.

$1 million gift to renovate inner courtyard

The inner courtyard of Stanford's architecturally significant Quadrangle will be renovated using $1 million in anonymous gifts donated for that purpose.

The Board of Trustees Feb. 8 approved the renovation concept and authorized development of specific design alternatives and cost estimates.

A Planning Office report on the Inner Quad Courtyard submitted to trustees calls for improvements in paving, seating, lighting, and landscaping consistent with the original—but never completed—plans for the courtyard.

But, the report adds, there is considerable support for "some enhancement rather than a strict restoration." Enhancements should make it a place to "stop, ponder, pause, sit, chat, and relax."

Making the courtyard more of a "people space" would include:

* providing more seating areas;
* enlarging the planting circles to encourage interior use for seating and to create a more generous ratio of planting to pavement;
* changing the paving surface to add color and texture and to provide a smooth surface for bicyles;
* providing more lighting;
* modifying circulation patterns by adding paths; and
* replanting the circles based on landscape schemes emphasizing a special theme or intended use.

For years, people have complained about the poor condition of much of the courtyard's surface.

Against the advice of Frederick Law Olmsted, the University's designer, a large part of the Quad was paved in bitumen, a forerunner of asphalt in the 1890s. It was later covered with gravel.

Olmsted wanted the area paved with artificial paver blocks resembling granite.

In 1914 Olmsted's son suggested that the loose gravel and bitumen be replaced with red brick, red tile, or cement tiles, but for lack of funding, no improvements have ever been made.

Olmsted's plans also called for seat-height edges around the planting circles.

The Planning Office suggests adding seating along the arcade or in the interior of the planting circles to encourage use of the courtyard.

It also recommends removing old trees and shrubs and vigorously pruning plants in the circles. "In replanting the circles, we anticipate an opportunity for some very creative enhancements which can modify the quality and character of the entire courtyard," the report says.

Stanford's Inner Quad courtyard is to be renovated using $1 million in gifts donated for the purpose.

States subsidize indirect costs at public institutions

Private universities face growing competition for research

Following is a background paper on indirect costs circulated to the Board of Trustees last month by President Donald Kennedy:

I
HISTORY AND STATUS

This year, Stanford has experienced a significant reduction in the recovery of indirect costs associated with organized research projects. This pressure has brought about, in turn, a significant effort at expense reduction, internal reallocations of funds, and increased upward pressure on other sources of revenue—especially tuition.

But these are not the only effects of the reduction in our indirect cost recovery. Because of the relationship between research volume and the **rate** of indirect cost recovery, already-existing pressures that tend to drive that rate upward will be increased. Two important kinds of secondary effects are likely to follow.

Locally—on this campus and others—there may be increased tensions between principal investigators and the administration—the former anxious to keep indirect cost rates low in the belief that this will make their projects more competitive, the latter eager to recover all the funds to which they feel the institution is entitled.

On a more national level, further increases in rates are likely to fuel the claim, already made in some quarters, that indirect costs have risen to unacceptable levels and must be contained.

The circumstances in which we find ourselves are, of course, a product of history; Indirect cost rates **have** risen sharply over the past 10 years; and the negotiated rates **do** vary widely between institutions, particularly between public and private universities. These events are not easy to explain, nor is it immediately obvious why the indirect cost recovery rate should be so sensitive to research volume.

The trends that are apparent in this history, as well as the complexities inherent in the relationships that tend to raise rates, have both contributed to the confused and unfortunate political climate in which this issue is being resolved, on the campuses as well as in Washington.

It is extremely important for faculty members, trustees, and others at Stanford to understand this issue thoroughly, despite its complexity. A number of groups have looked carefully at this problem—national committees of scientists, private accounting firms, and the GAO among others.

Each has concluded in the end that the costs are real, the rates based on sound general accounting principles, and the recovery essentially fair. That does not mean that, as a result of careful discussion of the issue here and elsewhere, we may decide on political grounds **not** to press for the full recovery of costs to which we are entitled.

But if that is our decision, it ought to be made with the full understanding of the principles involved, and a realization of what we are giving up. In what follows, we want to expand on other explanations of the indirect costs problem recently provided by Stanford administrators—most recently by the vice provost and dean of graduate studies and research in his December report to the Faculty Senate.

Direct and Indirect Costs

Sponsors of organized research in universities pay two different kinds of costs to get the work done: direct and indirect. Direct costs are for items whose benefits can be seen to flow directly to an identified project—for example, the salaries of workers, laboratory supplies and equipment. Indirect costs are for items whose costs, benefits, or both cannot be firmly associated with the particular project.

For example, money spent on administering the University aids research in general, but neither these costs nor the benefits they generate can be associated with any specific program. When a research project occupies a defined set of rooms in a building, the benefits associated with its being in that space are clear enough—but the costs of constructing and maintaining the space usually cannot be allocated precisely to it.

How are Indirect Costs Figured?

Indirect costs are added up—pooled—and then allocated to individual research projects by means of an overall indirect cost rate applied to most direct costs expended, commonly called "overhead." The complicated part of this procedure, of course, is the cost-accounting by which the allocations are performed. That is done by the application of generally accepted accounting principles to the particular universe that characterizes sponsored research in universities.

The manual governing this process is the famous (or notorious) OMB Circular A-21, a document on which the universities and the government have been working and negotiating for years. The principles set out in A-21, and studies conducted by the University and government auditors, are used in negotiating an indirect cost rate that establishes the permitted level of recovery.

The Components of Indirect Cost

That rate at Stanford is currently 69 percent of net total direct costs. Table 1 sets out the cost pools—that is, the categories of indirect costs—for this year, shows the amount and fraction of each of these pools allocated to sponsored research, and gives the contribution of each pool to the overall overhead rate. The rate that actually results from these pools is 71.54 percent—about two points higher than the rate negotiated with the federal government. The difference occurs because actual experience—that is, what the costs really are, and what the volume really is—often differ somewhat from the predictions.

Stanford is entitled to collect a positive variance (and must pay a negative one!), but this is done by an adjustment in the overhead rate for projects funded two or three years hence. Thus if our negotiated rate is too low—likely if it remains in place for very long—we may develop a substantial carryforward, due to excesses of unrecovered costs. That, as we shall see, is a problem; for as the carryforward accumulates, it necessitates still further increases in the indirect cost rate to recover the money already owed us.

Table 1 shows that buildings and equipment (including operations and maintenance) and general and departmental administration are responsible for all but about 15 percent of the overall rate. Organized research accounts for about half the cost of our buildings and equipment, and for 40 to 45 percent of our general and departmental administrative costs.

These figures are arrived at by actual studies, in which we measure the fraction of space utilized by different kinds of activity, or calculate the amount of other costs that are associated with organized research projects as compared with instructional activities and the auxiliaries. In total, a little over 40 percent of our aggregate indirect costs are allocated by these studies to organized research.

Even though we and the government have both been firmly wedded to a policy of "full recovery," Stanford is not actually allowed to allocate all indirect costs to the organized research projects sponsored by the government. Federal rules prohibit us from taking overhead on the costs of fund-raising, certain interest costs, and the like.

Corporate sponsors of reseach, by contrast, pay for these things; that is why the indirect cost rate on such projects is higher. (Foundations often insist on paying even less than the government overhead rate, and sometimes decline to pay indirect costs at all. Grants for new research projects from such foundations—of which we can afford only a few!—thus really resemble gifts more than they do government grants.)

Changes in the Overhead Rate

In recent years, the rate of indirect cost recovery has gone up considerably at Stanford and most other private research universities. In 1979-80, for example, the negotiated Stanford rate was 58 percent—within a point or two of that prevailing through the '70s. But the **actual** rate for that year, as audited after it was over, was nearly two points higher.

The estimates of volume and costs for 1980-81 (determined in 1979-80) favored a continuation of the 58 percent rate; and due to unusual circumstances Stanford and the government agreed to continue it for still another year, through 1981-82. That negotiation was not based on cost studies; because uncertainties about the revision of OMB Circular A-21 left the methodology for such studies in doubt, Stanford and the government agreed simply to apply the prior year's rate and deal with any variance in the usual way—by carrying it forward.

Thus, when cost studies were done for 1982-83 using the **new** A-21 principles, Stanford's overhead rate had been held at a fixed level for an unusually long time. When something is held constant for a long period and the rules are then changed, it is not surprising that it jumps.

We did get a jump in the overhead rate of 11 points, to 69 percent. Why was the jump as large as it was? These are the main reasons:

* Energy costs have risen much more sharply than the direct costs of research; this meant that the operations and maintenance component of indirect cost was larger by about two points in the rate.

* A number of new buildings have been built, and older ones renovated, between 1979-81 and 1982-83. The added space has been heavily utilized for research; again, the allocations of O&M and depreciation have gone up, but in this case by less than a percentage point.

* There was a change of university policy to charge major maintenance projects to the current year's expense rather than capitalizing them and applying a depreciation charge to future years' rates. This change applies to the overhead on both instruction and research; during the years in question it had the effect of increasing the research overhead rate by about 1½ percentage points.

* New A-21 rules permit universities to weight various allocations according to the intensity with which utilities and other services are used. Research demands are usually more intensive than instructional demands, so the more precise allocation process the government now allows correctly attributes more of the costs to research. This added a little over three points to the research rate.

* A-21 rules allow accelerated depreciation to be taken on buildings and equipment associated with research. Stanford began using this method for equipment only in 1982-83 (we have used it for buildings since 1962); it added about four points to the rate.

In general, institutions similar to Stanford have had rather similar histories of change in the indirect cost rate. Yale, Columbia, and the University of Rochester are all about where we are, and have risen significantly in the last five years.

Some (Chicago, Princeton, Brown) are just a few points below. (Cornell's rate was unusually high due to a large carryforward, and now has come down somewhat. The rate at MIT is down too, but that is an artifact of a broadening of the base of direct costs to which it is applied.)

By contrast, the publicly supported research universities all tend to have significantly lower rates, although within this category too there is considerable spread.

This divergence, perhaps more than any other feature of indirect cost recovery, has produced doubt and even suspicion on the campuses and in Washington. How, it is asked, can a system that runs according to a single, carefully-derived formula produce such divergent results in similar places?

The answer is that institutions really are dissimilar in the way they operate their internal economies, and in their capacity to do the studies, the cost accounting, and ultimately the negotiation that are required to justify to the government a particular rate.

At Stanford we have vigorously pursued a policy of fully allocating research costs and fully recovering them. Institutions also differ in the balance of teaching and research investments they have made—including investments in administrative systems as well as in facilities. Those, like Stanford, that have tried actively to support research ventures find that the ratios between research and instruction pools are tilted toward research, thereby increasing the rate.

There is, in short, no reason to suppose that two institutions, even equally distinguished ones, will have the same indirect cost recovery rate.

For the low rates prevalent at public institutions, there is a special explanation. At many state universities, the costs of administration and facilities are part of the core funding supplied by the state, and accordingly these costs need not be recovered from contracts and grants.

Even more important, most states require that recovered indirect costs go back into the state treasury, rather than to the university research enterprise in which they were incurred. Research administrators at such institutions freely concede that they simply do not expend resources on cost accounting because they see no benefit in doing so; someone else is getting the money.

Thus we have a two-tiered "price system" among the universities for sponsored research, just as we do for the tuition paid by students, and for the same reason: the difference is subsidized by state taxes.

II
PROSPECTS AND POLICY CHOICES

Indirect Cost Recovery in the LRFF

The overhead rate negotiated with the federal government for organized research projects is 69 percent this year, up from 58 percent a year ago. The LRFF assumes that the rate will remain at 69 percent in 1983-84. It goes to 75 percent in 1984-85, and 81 percent in 1985-86.

The increase from 58 to 69 percent was, as explained earlier, caused by rising energy costs, new buildings, and changes in the government rules for allocating the costs of operations, maintenance, and depreciation. The predicted further increases in the rate are driven by the first two factors, significant declines in direct sponsored research

continued on next page

Indirect costs...

continued from page 20

volume, and positive carryforwards. None of the rates assumed in the LRFF are at the full recovery level, given the indirect expenses and research volumes that are being projected.

Major gaps between total income and total expense for the operating budget are projected in the LRFF. The gap is $6.3 million in 1983-84; there is an additional $2.1 million in 1984-85, and another $0.7 million in 1985-86. The gaps are caused mainly because the projected overhead rates are not at full recovery.

The gap between our present overhead rate and the future rates needed for full recovery is alarmingly large. It is widened by the twin forces of reduced rates of volume increase, and carryforward.

The LRFF projects that annual research volume will increase from 1982-83 through 1985-86 at the rate of inflation minus one percent, or five percent nominal. This is less than was predicted in past years' forecasts, where growth at the inflation rate or inflation plus one percent seemed likely. It is greater than the actual volume increase from 1980-81 to 1981-82, however. That figure was four percent nominal, or about minus two percent real.

Our latest estimate of the volume increase from 1981-82 to 1982-83 (the current year) is only 3.5 percent, or minus 2.5 percent real. A low rate of volume growth results in an upward pressure on the indirect cost rate, other things being equal. So do the positive carryforwards that have been carryforwards for 1980-81 and 1981-82 amount to about $7.0 million and $10.5 million, because the **actual** rates for the two years exceeded the negotiated rates. The first sum would become available for recovery in 1983-84 and the second in 1984-85.

Our current forecast is that an additional $9.0 million of carryforward will be generated in the current year, which could be recovered beginning in 1985-86.

Recovery that Would be Expected with Higher Rates

Table 2 presents four scenarios for negotiated overhead rates during the period of the LRFF, together with the effective recovery rates that are estimated to flow from the negotiated rates. Total indirect cost recovery (including the School of Medicine) and recovery applicable to the LRFF (which excludes Medicine) for each scenario are shown in the lower portion of the table.

Experience has shown that, even with a policy of full indirect cost recovery, all sums that are theoretically available cannot be collected. This problem is particularly significant in a time of rapidly escalating overhead rates. The lead times between proposal, award, and expenditure of funds (which is when the overhead is actually collected) are such that long lags develop between the authorization by the government of a new rate for use in proposals and its actual application to all grants and contracts. Hence the effective rate lags the negotiated rate.

Stanford tries to renegotiate realistic rates on existing projects, but there are limits. Moreover, when a renegotiation results in an authorization by the government to transfer funds from the direct to the indirect category, but there is no increase in total funding for the project, it is our policy to rebate a portion of the "hurt" to the principal investigator. This practice is reasonable but it does reduce the amount of recovery available to the operating budget.

Scenario "A" is the one used in the LRFF. Scenario "B" achieves full recovery, including carryforwards, by 1986-87. (Recovery of each year's carryforward is assumed to be spread out over four years, starting with the first year of eligibility.)

Scenario "C" sets the rate at the full recovery level for that year's allocated costs (the "base rate"), but does not collect any carryforward. Finally, Scenario "D" is full recovery including carryforwards, year-by-year.

The differences in recovery among the scenarios are significant. Though relatively modest for 1983-84 because of the lag in the effective rate, they become quite large in subsequent years. Some $20 million of recovery during the three years of the forecast rides on the variation in rates between scenarios "A" and "D." The annualized difference in 1985-86, the last year of the LRFF, is about $10 million—which is more than the cumulative budget gap.

Could we possibly push the rate high enough to recover everything? That policy decision depends on some political factors, and on different views of what overhead really is.

Political Factors

The combination of rising indirect cost rates around the country and the shortage of federal funds for many areas of research are fostering negative attitudes regarding overhead recovery within certain government agencies. Key officers in the Department of Health and Human Services, and particularly the National Institutes of Health, have become convinced that the overhead charged to grants and contracts should be reduced—by administrative fiat if necessary.

A proposal to reduce the overhead charged to NIH grants, in the current fiscal year, by 10 percent (as compared to the amount determined by the institution's negotiated indirect cost rate) was defeated in the Congress last summer.

We understand that a similar proposal may be considered for inclusion in the president's budget for fiscal 1984. Such an action would represent a unilateral abrogation of OMB Circular A-21 by NIH. Still other proposals for unilateral reductions in overhead have been mentioned as instruments for stretching the number of grants that can be awarded from NIH budgets.

A joint NIH-university task force was proposed by Congress to study indirect costs for research and, if possible, to find methods for limiting these costs. The AAU will represent the university community if and when the study gets under way.

The situation is clouded because of the possibility that the 10 percent cut may surface again for 1984. Whatever the outcome, however, a further large increase in the overhead rates of the major institutions would increase the likelihood of an unforeseen political outcome.

Two Views of Overhead

Some of the negative attitudes about overhead recovery, on the campus as well as in Washington, stem from a lack of shared understanding about the fundamental principles that should govern the allocation of indirect costs to organized research.

There are two quite different views on what overhead rates should represent.

1. The prevailing "official" view holds that the rate is set to recover the full average cost of the work in question as determined by generally accepted accounting principles. The applicable costing principles are negotiated between the higher education community and the federal government, and their application to individual institutions is negotiated with the school's cognizant agency and then applied uniformly to the projects of all agencies. The facts and figures for each school are subject to audit by the government.

The proponents of this view argue that rate-setting should be an objective process of recovering the costs to which the institution is entitled. While the models used for assigning flows of indirect benefit and allocating joint costs are necessarily imprecise, the use of judgment in their application is constrained to a relatively narrow range.

2. The alternative view is that the overhead rate is essentially a "price," like tuition. Accordingly, it should be based on subjective judgment conditioned by market and equity factors—including willingness and ability to pay.

Proponents of the second view understand that the overhead rate is based in part on cost accounting calculations. But they argue that the subjective component in these calculations is very large, citing the relatively low rates of the public institutions as evidence that alternative interpretations of "full recovery" are possible. They say that the process amounts to price setting, with the most aggressive possible cost accounting posture establishing only one end of the feasible range of prices.

The two views of indirect costs have vied with each other for nearly 20 years, ever since overhead rates became significant factors in the funding picture for grants and contracts. The matter is of more than passing interest since, as we shall see, the approach to a number of important policy questions depends upon which view is accepted.

No set of issues has led to greater ill will between research faculty and university administrators across the country (and even between faculty members in sponsored research-intensive and those in other disciplines). This has been true especially in the private universities. The dispute has now become a major factor in the Washington scene, as noted earlier.

Underlying Philosophies

The conceptual basis for recovery of full average cost on federally sponsored projects is the proposition that the government and the universities are in partnership with respect to instruction and research. The university engages in higher education and maintains faculty resources, facilities, and the administrative infrastructure needed to conduct high quality research.

The government decides what research is to be done, by choosing among faculty proposals on the basis of scientific merit in relation to national goals. (Some of these goals are purely scientific and others are related to the missions of the funding agencies.) Each partner, the government and the university, pays its proportionate share of both direct and indirect costs.

The most polar competing theory of federal research support is that grants and contracts should be considered as "add-ons" to the basic mission of the universities. The latter, it is argued, would exist and pursue their present goals even it there were no federal funding for research. The logical consequence of this theory is that sponsoring agencies should pay only incremental research costs. (This is precisely the view taken by most private foundations.) Since it is easiest to associate incremental costs with direct costs, a large direct cost rate is immediately suspect.

While is is correct to say that all direct costs of organized research are variable, the converse is **not** true for indirect costs. **Some** of the latter are fixed, like the salary of the president. But many others are variable, like the cost of processing accounting transactions and those of employment and compensation staff work in the Personnel Department. The costs of building space may be fixed or variable, depending on whether the appropriate space is in short supply. Indirect costs thus reflect a mixture of fixed and variable expenses.

Does the University "make money" on sponsored research projects? If one believes that overhead is just the recovery of full **average** costs to which the institution is entitled, the answer to the question is clearly "no."

But if one thinks of overhead as a price, it is easy to believe that the University does indeed make money work—if for no other reason than because the last project accepted always pays more than its **marginal cost**. (This, in turn, leads to the demand that part of the money collected be returned to the principal investigators who "earned" it, to further support their professional activities.

An incremental sponsored project that pays full overhead does indeed make a contribution to the institution's fixed costs, thus reducing the average cost of all other activities. Yet the project still pays only "its share" of costs. Whether this situation should be viewed as "making money" depends on whether one feels that research sponsors are full partners in the enterprise or supporters of an add-on.

Because the average costs of all academic programs are reduced when sponsored research volume increases, there is room to redistribute funds via the University's central resource allocation process. The converse is true as well: shortfalls must be made up when sponsored research volume falls.

Ideally, the resource allocation process should be viewed as effective in furthering shared institutional goals and equitable with respect to the distribution of funds among disciplines and programs. This is much easier said than done, however, and it is likely that the matter can never be solved to everyone's satisfaction. And, clearly, the difficulties will be greatest in times like the present, when resources are scarce for both the universities and the sponsors of research.

Efficiency Considerations

Other questions about overhead rates are motivated by concerns about efficiency rather than disagreements about philosophy.

Budget-makers in research universities know that a substantial fraction of costs in the indirect category will eventually be paid by research sponsors. According to some critics, this knowledge leads to scrutiny of these costs that is less rigorous than it would be if the university were paying for everything with funds from tuition, gifts, and endowment return.

The analogy to the problems connected with full reimbursement of hospital costs by Medicare and MediCal comes to mind: while the activities in question are worthwhile in absolute terms, they are pushed further than may be deemed desirable.

Some observers also believe that management decisions are "biased" in the direction of maximizing overhead recovery—much as financial decisions in the private sector are affected by tax considerations. Examples include decisions about capitalizing or expensing the acquisition of certain assets, or purchase versus leasing.

The effects of the "externality" of cost reimbursement on management decision-making may reduce the economic efficiency of institutions' administrative and support activities. By treating overhead as a price which is subject to market constraints, it may be argued, indirect costs will be treated the same as all other costs—thus insuring evenhandedness and improving economic efficiency.

Effects of Proposed Changes in the Recovery Rules

The recent proposals by NIH for a 10 percent reduction in overhead rates or caps on certain rate components are motivated by a combination of the arguments given above. The proposed actions would not necessarily have the desired effects, however, and some of them would have disastrous consequences for higher education and research.

These consequences, and indeed the very prospect of moving to the add-on model of sponsored projects, are difficult to square with the concept of a partnership between the government and the universities with respect to national research goals.

The fractional reduction is analogous to a proportionate tax on a commodity. Taxing at the 10 percent level will raise some revenue, but it will have little effect on the demand for the commodity. In the case of overhead, a 10 percent "tax" would save some money for the NIH but it would do little to improve the efficiency of the system. A much larger tax would be needed to cure any "bias" in the decisions of academic administrators, if such a bias does indeed exist, but this could be done only at an impossible cost to the universities. The 10 percent reduction is simply a device for transferring the financial burden of research from one class of payers to another.

Indirect costs...

continued from page 21

Caps on overhead rates would place the marginal responsibility for the affected classes of indirect costs entirely in the hands of the university. Where the caps operate, symmetry in the treatment of different kinds of costs would be achieved.

Unless the caps were set in a very refined way, however, both the effect on incentives and the financial impact would vary enormously from university to university. It is doubtful that a set of caps that would take legitimate institutional differences into account can be constructed. Without this, the system would be arbitrary, discriminatory and damaging.

A decision to set caps at levels based on the relatively low overhead rates of the public universities would be catastrophic for the privates. We noted earlier that those rates are usually well below "full recovery" as defined by a close reading of OMB Circular A-21. There is a two-tiered system of overhead rates, just as is the case for tuition, with some of the indirect costs of research being paid by state taxpayers in the case of public universities.

Experience with the effects upon teaching hospitals of caps on medical reimbursement does not make one sanguine about a worldd where the same philosophy is applied to indirect cost rates for research. There is no doubt that the high-quality private research universities, which rely heavily on indirect cost recovery to fund their operating budgets, would be the hardest hit. The result would be significant downsizing for these institutions, plus an increase in the full average cost of all their activities—including research—which would have to be made up from already-scarce general funds.

Effects of Market Forces

The operation of market forces is beginning to inhibit further rapid growth of overhead rates. This represents an alternative solution to the problems perceived by government officials, though it does add to the pressure on the established research-intensive private universities. Generally, however, a "market" solution would seem to be preferred to dramatic changes in the rules for overhead recovery.

A number of public universities have very high rankings in terms of the quality of their graduate and research programs. These institutions tend to have lower overhead rates than their private counterparts. As research funds become more and more scarce, part of the public-private competition for research grants and contracts is likely to work itself out in terms of price.

The capacity to do good research is becoming more and more widespread in this country. This is due largely to the fact that graduate programs at the best institutions have been turning out people with doctorates faster than this same class of schools can absorb them as faculty members.

The average quality of faculty at a broad spectrum of universities and colleges, both public and private, has been growing significantly in recent years. Principal investigators at relatively unknown institions are becoming increasingly competitive for sponsored research support. Many of these institutions have relatively low indirect cost rates.

The effects of increased competition for scarce research dollars, especially from the federal government, will mean a hitherto unknown degree of pressure on overhead rates. There are some who believe that this pressure is with us already, and that Stanford's recent decline in research volume is partly due to these price effects.

Stanford's Strategy

In conclusion, while some upward shift of the rate (in relation to the LRFF) may be feasible as a gap-closer, there is little possibility of achieving anything like full recovery during the next few years. Moreover, we do not believe it would be in Stanford's best interest to try to raise the rate to the levels needed for full recovery according to the assumptions of the LRFF.

We face the "triple whammy" of declining direct research volume due to federal cutbacks and increased competition, growing indirect costs due mainly to escalations in wages and energy, and positive carryforwards due to the action of these factors in prior years.

All this is occurring in the context of hardening attitudes against large overhead payments on the part of some important government officials. Full recovery is a casualty of this combination of forces.

The situation has many implications for Stanford's strategy with respect to overhead on organized research projects. Our proposed strategy is set forth below. Needless to say, conditions are volatile—so the strategy may need to change from time to time. Also, a number of important constituencies within the University have a stake in the outcome, and we will want to consult extensively with them before reaching final conclusions.

The strategy:

1. In the political arena, work as hard as we can to retain the concept of partnership with the federal government with respect to research. Attempt to defeat proposals for the unilateral imposition of fractional reductions in or caps on overhead rates. If successful in the above, work jointly with other universities and the government to understand the causes of the recent rapid increases in overhead rates and to identify and implement reasonable mitigations.
2. Set aside, at least for the time being, our policy of full recovery on sponsored research projects. "Price" our indirects at a level that is consistent with political and competitive forces. Learn as much about these forces as we can, so as to do the best possible job of balancing the needs of our operating budget with the realities of the external environment.
3. Reduce indirect expenses as much as possible, consistent with institutional needs and responsibilities.
4. Establish firm policies to prohibit consideration of potential reimbursement of overhead on grants and contracts as an enabling factor with respect to proposed new indirect expenditures, or as an inhibiting factor with respect to any investment aimed at reducing or avoiding future overhead costs. For potential large projects, such as new buildings, include a projection of the effect on the indirect cost rate in the data that informs the decision about whether to proceed.
5. Set the return to full overhead recovery as a major institutional goal. This should be done as soon as possible.

Stanford's record with respect to the control of overhead costs in the operating budget has been very good. For example, the budget cuts in BAP and BEP were disproportionately in the administrative and support areas and a strong discipline has been maintained by the provost ever since. There has been little if any tendency to consider reimbursement effects in making operating budget decisions. Nevertheless, the policy proposals in strategy (4) would provide a useful reminder and safeguard, and also extend the principles to capital projects.

Assuming that the rules are not changed, we hope that a combination of cost reductions and, if conditions warrant, gradual overhead rate increases will return us to full recovery in three to five years. Success will depend, also, upon the faculty's ability to maintain high levels of research volume in the face of increasing competition. We hope that our continued efforts to maintain volume and control costs will result, over the long run, in a full recovery rate that is consistent with political and competitive factors.

TABLE 1

INDIRECT COSTS: 1982-83
(for on-campus research, in thousands of dollars)

	Total allowable indirect cost pools*	Allocation to organized res.	Fract. allocated	Overhead rate
Depreciation:				
Buildings	$ 6,407	$ 3,128	.49	3.84
Equipment	10,462	5,201	.50	6.44
Improvements	990	459	.46	0.56
Operations & maintenance	39,975	19,409	.49	24.11
General & administrative	27,636	11,486	.42	13.08

d. Full recovery every year	52,105	61,465	70,360

Political pressures curb full recovery of research costs, Kennedy says

Following is the text of President Donald Kennedy's Feb. 3 Academic Council talk on indirect costs:

History and Status

This year, Stanford has experienced a significant reduction in the recovery of indirect costs associated with organized research projects; and this pressure has, in its turn, brought about significant efforts at expense reduction, internal reallocations of funds, and increased upward pressure on other sources of revenue—especially tuition.

These are not the only effects of the reduction in our indirect cost recovery. Because of the relationship between research volume and the **rate** of indirect cost recovery, already-existing pressures that tend to drive that rate upward will be increased. Two important kinds of secondary effects are likely to follow. Locally—on this campus and others—there may be increased tensions between principal investigators and the administration—the former anxious to keep indirect cost rates low in the belief that this will make their projects more competitive, the latter eager to recover all the funds to which they feel the institution is entitled. And on a more national level, further increases in rates are likely to fuel the claim, already made in some quarters, that indirect costs have risen to unacceptable levels and must be contained.

The circumstances in which we find ourselves are, of course, a product of history. Indirect cost rates **have** risen sharply over the past 10 years; and the negotiated rates **do** vary widely between institutions, particularly between public and private universities. These events are not easy to explain, nor is it immediately obvious why the indirect cost recovery rate should be so sensitive to research volume. The trends that are apparent in this history, as well as the complexities inherent in the relationships that tend to raise rates, have both contributed to the confused and unfortunate political climate in which this issue is being resolved, on the campuses as well as in Washington.

It is extremely important for faculty members, trustees, and others at Stanford to understand this complex issue thoroughly. A number of groups have looked carefully at indirect costs—national committees of scientists, private accounting firms, and the GAO among others.

Each has concluded in the end that the costs are real, the rates are based on sound general accounting principles, and the recovery essentially fair. That does not mean that, as a result of careful discussion of the issue here and elsewhere, we may decide on political grounds **not** to press for the full recovery of costs to which we are entitled. But if that is our decision, it ought to be made with the full understanding of the principles involved, and a realization of what we are giving up. In what follows, I want to expand on other explanations of the indirect costs problem recently provided by Stanford administrators—most recently by the vice-provost and dean of graduate studies and research in his December report to the Academic Senate.

Direct and Indirect Costs

Sponsors of organized research in universities pay two different kinds of costs to get the work done: direct and indirect. Direct costs are for items whose benefits can be seen to flow directly to an identified project—for example, the salaries of workers, laboratory supplies, and equipment.

Indirect costs are for items whose costs, benefits, or both cannot be firmly associated with the particular project. For example, money spent on administering the University aids research in general, but neither these costs nor the benefits they generate can be associated with any specific program. And when a research project occupies a defined set of rooms in a building, the benefits associated with its being in that space are clear enough—but the costs of constructing and maintaining the space usually cannot be allocated precisely to it.

How are Indirect Costs Figured?

Indirect Costs are added up—pooled—and then allocated to individual research projects by means of an overall indirect cost rate, commonly called "overhead." The complicated part of this procedure, of course, is the cost-accounting by which the allocations are performed. That is done by the application of generally accepted accounting principles to the particular universe that characterizes sponsored research in universities. The manual governing this process is the famous (or notorious) OMB Circular A-21, a document on which the universities and the government have been working and negotiating for years. The principles set out in A-21, and studies conducted by the University and government auditors, are used in negotiating an indirect cost rate that establishes the permitted level of recovery.

The Components of Indirect Cost

That rate at Stanford is currently 69 percent of net total direct costs. But the rate that actually results from the cost pools is 71.54 percent—about two points higher than the rate negotiated with the federal government. The difference occurs because actual experience—that is, what the costs really are, and what the volume really is—often differ somewhat from the predictions. Stanford is entitled to collect a positive variance (and must pay a negative one!), but this is done by an adjustment in the overhead rate for projects fnnded two or three years hence. Thus if our negotiated rate is two low—likely if it remains in place for very long—we may develop a substantial carry-forward, due to excesses of unrecovered costs. That, as we shall see, is a problem; for as the carry-forward accumulates, it necessitates still further increases in the indirect cost rate to recover the money already owed us.

What do the cost pools look like? Buildings and equipment (including operations and maintenance) and general and departmental administration are responsible for all but about 15 percent of the overall rate. Organized research accounts for about half the cost of our buildings and equipment, and for 40-45 percent of our general and departmental administrative costs.

These figures are arrived at by actual studies, in which we measure the fraction of space utilized by different kinds of activity, or calculate the amount of other costs that are associated with organized research projects as compared with instructional activities and the auxiliaries. In total, a little over 40 percent of our aggregate indirect costs are allocated by these studies to organized research.

Even though we and the government have both been firmly wedded to a policy of "full recovery," Stanford is not actually allowed to allocate all indirect costs to the organized research projects sponsored by the government. Federal rules prohibit us from taking overhead on the costs of fund-raising, certain interest costs, and the like. Corporate sponsors of research, by contrast, pay for these things; that is why the indirect cost rate on such projects is higher.

Changes in the Overhead Rate

In recent years, the rate of indirect cost recovery has gone up considerably at Stanford and most other private research universities. In 1979-80, for example, the negotiated Stanford rate was 58 percent—within a point or two of that prevailing through the '70s. But the **actual** rate for that year, as audited after it was over, was nearly two points higher.

The estimates of volume and costs for 1980-81 (determined in 1979-80) favored a continuation of the 58 percent rate; and due to unusual circumstances Stanford and the government agreed to continue it for still another year, through 1981-82. That negotiation was not based on cost studies; because uncertainties about the revision of OMB Circular A-21 left the methodology for such studies in doubt, Stanford and the government agreed simply to apply the prior year's rate and deal with any variance in the usual way—by carrying it forward.

Thus, when cost studies were done for 1982-83 using the **new** A-21 principles, Stanford's overhead rate had been held at a fixed level for an unusually long time. When something is held under artificial restraint and then finally released, it is not surprising that it jumps; and we did get a jump in the overhead rate of 11 points, to 69 percent. Apart from this release phenomenon, why was the jump as large as it was? These are the main reasons:

* Energy costs have risen much more sharply than the direct costs of research; this means that the operations and maintenance component of indirect cost is larger.
* A number of new buildings have been built, and older ones renovated, between 1979-81 and 1982-83. The added space has been heavily utilized for research; so again, the allocations of O and M and depreciation have gone up.
* Changed policies allowed us to charge major maintenance projects to current year's expenses rather than capitalizing and then depreciating them.
* New A-21 rules permit universities to weight various allocations according to the intensity with which utilities and other services are used. Research demands are usually more intensive than instructional demands, so the more precise allocation process correctly attributes more of the costs to research.
* A-21 rules allow accelerated depreciation to be taken on buildings and equipment associated with research. Stanford began using this method for equipment only in 1982-83.

In general, institutions similar to Stanford have had rather similar histories of change in the indirect cost rate. Yale, Columbia, and the University of Rochester are all about where we are, and have risen significantly in the last five years. Some others (Chicago, Princeton, Brown) are just a few points below. By contrast, the publicly supported research universities all tend to have significantly lower rates, although within this category too there is considerable spread.

This divergence, perhaps more than any other feature of indirect cost recovery, has produced doubt and even suspicion on the campuses and in Washington. How, it is asked, can a system that runs according to a single, carefully-derived formula produce such divergent results in similar places?

The answer is that institutions really are dissimilar in the way they operate their internal economies, and in their capacity to do the studies, the cost accounting, and ultimately the negotiation that are required to justify to the government a particular rate.

At Stanford we have vigorously pursued a policy of fully allocated research costs and fully recovering them. Institutions also differ in the balance of teaching and research investments they have made—including investments in administrative systems as well as in facilities. Those, like Stanford, that have tried actively to support research ventures find that the ratios between research and instructional pools are tilted toward research, thereby increasing the rate. There is, in short, no reason to suppose that two institutions, even equally distinguished ones, will have the same indirect cost recovery rate.

For the low rates prevalent at public institutions, there is a special explanation. At many state universities, the costs of administration and facilities are part of the core funding supplied by the state, and accordingly these costs need not be recovered from contracts and grants.

Even more important, most states require that recovered indirect costs go back into the state treasury, rather than to the university research enterprise in which they were incurred. Research administrators at such institutions freely concede that they simply do not expend resources on cost-accounting because they see no benefit in doing so; someone else is getting the money. Thus we have a two-tiered "price system" among the universities for sponsored research, just as we do for the tuition paid by students, and for the same reason: the difference is subsidized by state taxes.

So much for the history and present status of the indirect cost problem. What policy choices now confront us?

Here is the difficulty we face:

First, we expect annual research volume to increase at a lower rate than we previously expected: the actual rate as we now forecast it will be at about a percent less than inflation. All things being equal, a low rate of volume growth results in an upward pressure on the indirect cost rate; that is because that fraction of indirect costs that are **fixed** are spread over fewer projects.

Second, the last few years have resulted in large positive carryforwards, amounting to $7 million for 1980-81 and $10½ million for 1981-82. That is because the actual rates for these two years exceeded the negotiated rates.

To recover all of the carryforward and all of the estimated new indirect costs each year based on present accounting policies, would require us to move to rates of 82 percent for 83-84, 86 percent for 84-85, and 86 percent for 85-86. Let me be clear about this: these rates would be perfectly justifiable according to present federal policy and past Stanford practice—that is, insisting upon full recovery. According to the view that rate-setting should be an objective process that seeks to recover all costs to which the institution is entitled, that is exactly what we should do.

But there is a second view of overhead rate, one to which the principal investigators on our faculty are understandably more inclined. According to this view, the overhead rate is essentially a "price," like tuition. It should therefore be based on judgments about market and equity factors, including the competitive status of our own principal investigators versus their counterparts in other institutions, and the political climate in Washington against which future indirect cost policies will be worked out.

These two views of indirect costs have vied with one another constantly over the past couple of decades. The difference between them has produced significant alienation between research faculty and university administrators in many places.

The amount of money at stake in the choice between them is substantial. For example, the full-recovery scenario for the next three years would produce some $20 million more support for the Stanford operating budget than the numbers we have in the long-range financial forecast.

In pressing for **full** recovery, we would face two significant difficulties. First, it is believed by many principal investigators here—with, I must say, more probable cause than in the past—that overhead rates, however realistic, will cause them to suffer a competitive penalty in the allocation of awards. Second, the executive branch agencies and the Congress are both distressed by the rate of increase in overhead. In my judgment, that concern is based upon substantial misunderstanding; but it is nonetheless a political reality.

We are not anxious to have recent proposals by NIH for an arbitrary 10 percent reduction in overhead rates resurrected, nor do we wish to encourage imposed caps on particular rate components.

In conclusion, I think it likely that we will recommend to the Board that it may not be possible, at least in the short run, to stick with our policy of full recovery. The indirect cost rate is being pushed inexorably upward by three forces: declining direct research volume due to cutbacks, escalations in wages and energy, and positive carryfor-

Financial aid formulas penalize frugal families—Hargadon

College Scholarship Service formulas for calculating student financial need "too often reward spendthriftness and penalize frugality," says Stanford Admissions Dean Fred Hargadon, chairman of the College Board nationally.

The present system "takes a one-year snapshot of a family's financial situation," he told the Stanford Faculty Senate Thursday, Feb. 3.

"If a family has conscientiously saved for their children's college education, so be it. If, on the other hand, they have chosen to spend it on other luxuries rather than save it, they may well be eligible for financial aid under the present system."

The resulting contrasts can be "quite startling," he observed. An immigrant family with no previous college education may have set aside $40,000 toward tuition, while a bank vice president with a large home mortgage could qualify for financial assistance.

"The problem is the system," he emphasized. The dilemma is how to avoid penalizing students for the choices made by their parents. The challenge is to devise a way for rewarding lifetime saving for college, rather than relying entirely on a one-time "snapshot."

For several years, Hargadon has maintained that *willingness* to pay for college may have changed more than *ability* to do so. While student costs have risen rapidly in the past few years, national studies indicate that college expenses now are still about the same fraction of family income they were a decade ago.

"There has been a rather drastic—and from my viewpoint unwarranted—shift in attitude toward financial aid offered students in college," he told the Senate. Where aid was once "gratefully received," now it is "not only expected as some sort of right but...not fully appreciated," even when given.

Stanford is one of the few universities which continues to make undergraduate admissions decisions on a "need-blind" basis, a policy Hargadon strongly supports. About 46 percent of Stanford's undergraduates receive scholarships or grants-in-aid. When those assisted only through loans are included, the proportion receiving some form of aid tops 70 percent.

Since 1966, he noted, the proportion of blacks, Chicanos, and native Americans in the Stanford freshman class has risen to 18 percent. The proportion of women has increased to 42 percent from 32 percent.

Applications have risen to an all-time high of about 14,500, compared to 7,700 in 1966. Class size has remained stable around 1,500, but the number of secondary schools from which it is drawn has risen to 991 from 653.

"When the alumni parents of present applicants applied, perhaps 40 to 50 percent of prospective students were offered admission. Now we offer admission to about 18 percent of applicants," he noted.

During the past decade, the proportion of transfer student applicants offered admission has dropped to 8 percent from 23 percent. A "surprisingly stable" and high enrollment rate of those freshmen offered admission (about 64 percent) and a probable decrease in the number of Stanford students "stopping out" for a while have restricted openings for transfers.

Hargadon said he's "not sure" what the relationship is between tuition rates and those who apply and enroll at the University. But he offered these "hunches:"

1) Since costs at all colleges have risen, there may be a point beyond which parents become a little less sensitive to increases.

"In other words, the difference between $1,000 and $5,000 may appear sufficiently severe so that, oddly, the increment to $10,000 from $5,000 appears less so.

"There is also a point at which some people equate price and quality."

2) The fact that Stanford intends to follow a "need-blind" policy "will undoubtedly attract applicants."

If the University kept its tuition artificially low, the quality of education—and eventually the quality of the applicant pool—would suffer. "The University must walk a tightrope here, and I believe Stanford is doing that with agility and sensitivity."

The basic student budget at Stanford this year totals $12,738. This includes tuition, $8,220; room and board, $3,423; books, $350; and personal expenses, $745.

Bassist Courtney Purrington will give a free concert at 8 pm, Saturday, Feb. 12, in Tresidder Lounge. Joining him will be Jennie Abrahamson, flute; Curtis Smith, cello; and keyboardists Arno Mundt, Jeff Sugarman, and Lee Cosart. Included in the program are works by Lorenziti, Monteverdi, Koussevitzky, Eccles, Handel, Rossini, Bach, Mahler, and Claude Bolling.

Here's an updated summary of copyright laws as they affect Stanford

Following is the text of a preliminary statement on copyright law circulated Jan. 4, 1978 by then Provost William F. Miller to deans, department chairmen, and principal officers of the University.

The first paragraph under "Section II: Course Reserves" was modified by the Legal Office in November, 1978, to read as shown here.

Questions about general provisions of copyright law should be directed to Iris Brest at 497-1324. Questions about library policy and course reserves should be directed to Dale Canelas at 497-2016.

On Jan. 1, 1978, substantial revisions to the U.S. copyright law, embodied in the Copyright Law Revision of 1976, became effective. The law modifies prior copyright law in many respects, including changing the duration of copyright, bringing all copyright under federal law, and modifying certain exemptions from the general rule that a copyright owner has exclusive rights in a copyrighted work.

Of particular importance to teachers and researchers are:

1) A provision that codifies the doctrine of "fair use," under which limited copying of copyrighted works without the permission of the owner is allowed for certain teaching and research purposes.

2) A provision, which is being implemented in the libraries but is not described here, providing special limitations and exemptions for the reproduction of copyrighted works by libraries and archives.

I. Fair Use for Teaching and Research

In respect to the reproduction of copies of copyrighted works for limited purposes associated with scholarship, the law codifies the existing "fair use" doctrine. The fair use provision, Section 107 of the new law, acknowledges that the fair use of a copyrighted work, including reproduction, "for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research," is not an infringement of copyright. The law includes the following factors which will be evaluated by a court in determining whether a permitted "fair use," rather than an infringement of the copyright, has occurred:

"1) The purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes;

2) The nature of the copyrighted work;

3) The amount and substantiality of the portion used in relation to the copyrighted work as a whole; and

4) The effect of the use upon the potential market for or value of the copyright work."

The Congressional reports which accompany the new copyright law include two sets of guidelines developed by representatives of publishing groups and educational organizations: a) guidelines for classroom copying in nonprofit educational institutions, and b) guidelines for the educational uses of music. The guidelines set forth specific provisions reflecting the principles that usage must be "spontaneous," limited as to extent of the particular work copied, limited as to its cumulative effect, and limited in not having the effect of depriving the copyright owner of the benefits (royalties) which copyright confers. The guidelines are reproduced in full below, and should be reviewed by persons intending to duplicate a copyrighted work without the copyright owner's permission. The purpose of the guidelines is to state the minimum and not the maximum standards of educational fair use.

Where a deviation from the guidelines is foreseen, permission to use a copyrighted work should be obtained from the copyright owner. Permission to use a copyrighted work may in some instances be given without charge, or a royalty may be required by the copyright owner. A request to copy a copyrighted work should be sent to the permissions department of the publisher in question. Permission request should contain the following facts:

1. Title, author, and/or editor, and edition.
2. Exact material to be used, giving page numbers or chapters.
3. Number of copies to be made.
4. Use to be made of the copied materials.
5. Form of distribution (classroom, newsletter, etc.).
6. Whether or not the material is to be sold.

II. Course Reserves

Libraries at Stanford will accept multiple photocopies or make photocopies of copyrighted materials needed for course reserve if the instructor supplies the permission of the copyright owner.

Lacking such permission, such items will be provisionally accepted while the library seeks permission. When response from the copyright holder is received and the fees are assessed, they will be paid if reasonable. If permission to copy is denied, or if the permission price is unreasonable, we will withdraw the copies and notify the instructor immediately of the withdrawal. (A single photocopy may be made under "Fair use," section 107, without permission.)

Obtaining permission sometimes takes a good deal of time; experience in obtaining permission over the past eight years has shown that, frequently, inquiry of a journal produces information that the copyright is actually held by the author, and four weeks is often quite inadequate to obtain such permission. Four to six weeks may be considered a norm.

Permission may be obtained in several ways. One, a library may be asked to obtain materials for course reserve and writes to obtain permission to photocopy or to purchase reprints; two, written permission may be obtained by the academic department; or, three, oral permission may be obtained by faculty, departmental secretaries or library, in which case a written record is needed of that action. Since use often extends beyond one quarter, the library will, in all cases, request extended use privileges.

Note that filling course-reserve requirements may require two or three months before the quarter begins if the library does not already have the one copy of the publication, if the publication is out of print, or if the copyright holder is not readily available.

Report gives rationale for lowered growth rate of tuition

Following is a background paper on tuition, room and board rates for 1983-84 circulated to the Board of Trustees.

In developing the proposed increase for 1983-84, the several factors taken into consideration in recent years remain essentially the same.

As has been the case in the past, particular attention is paid to the role of tuition in maintaining the quality of the academic program, to our long standing commitment that Stanford continue to draw the best students from a wide range of socio-economic backgrounds, and to charges at comparable institutions.

But this year special effort has been taken to temper the rate of growth of tuition in general recognition of the tightness of the economy. The 9.8 percent recommended increase in general tuition is a drop from the 12 percent figure discussed in the Long Range Forecast presentation in December.

Of principal concern in proposing a tuition increase are maintaining the existing academic program and, further, improving the current program by selectively funding new ventures.

Tuition provides about half the income to the Operating Budget and is the largest single source. Consequently, there is considerable pressure on tuition to meet the costs required to maintain academic quality.

The need to keep faculty salaries competitive with peer institutions is one important example of the cost of maintaining quality. Another is staff salaries. The local labor market in which we compete for staff has not sustained the same kind of dislocation experienced in some parts of the country, although there has been a noticeable slowdown.

Maintaining campus facilities and services adds additional costs that put pressure on tuition. The pressure is moderated, but not significantly lessened, by efforts made this year and in plans developing for next year to cut some costs and keep others from increasing.

With respect to keeping Stanford accessible to a wide range of the most able students, we evaluate the impact tuition increases have had on past student behavior, on the affordability of Stanford in a strained economic period, and on the continued availability of student financial aid.

The studies that are conducted annually to monitor student response to Stanford show findings consistent with those from previous years. Stanford continues to attract the strong and growing interest of the most academically able students from all economic backgrounds.

* The number of applicants for next year's freshman class is currently above what it was last year at this time.
* Entering freshman students come from virtually the same economic backgrounds as was the case five years ago.
* The yield rate for this year (the percentage of students accepting our offer of admission) remains consistently high at 64 percent, a figure comparable to the experience of the past decade.
* The yield rate continues to be strong among the highest ability students whose families are just able to qualify for financial aid. This indicates that the cost of Stanford does not appear to discourage the families who are pinched the hardest—those who pay a large part of college cost and receive the least financial aid.
* A majority of students who were admitted but did not enroll at Stanford chose similar high cost private institutions instead. As in past years our competition is Harvard, Princeton, and Yale (in that order) and not lower cost public institutions.

According to these indices, the applicant pool is large and diverse, and we continue to enroll the kind of students whose characteristics meet the rigorous requirements of the Admissions Office.

Although this information suggests that economic considerations do not deter students from applying and enrolling here, we nonetheless are concerned that sustained high levels of increase in tuition may, at some point, affect the actual or perceived affordability of Stanford.

In this light, we gave considerable weight this year to the general state of the economy. It is our view that a tuition increase of this magnitude will be consistent with public expectations in a strained economy and will not jeopardize either the continued affordability of Stanford or our ability to maintain the quality of the academic program.

About 70 percent of the undergraduates at Stanford receive some form of financial aid—either a loan, a job, a scholarship, or some combination thereof. Slightly less than half of our undergraduates (46 percent) receive scholarship aid through Stanford or through federal and state programs or a variety of outside sources.

Stanford grants (from general funds, gifts, and endowments) total approximately $13.7 million this year, an amount almost double that from 1979-80. State and federal sources have remained virtually constant in terms of absolute dollars over the last year: the California State Scholarship Program provides approximately $2.5 million in grants, and federal grant programs total approximately $1.4 million.

The state grant program may be reduced next year, as the state is cutting budgets to trim its deficit. Our best estimate is that federal sources are more likely to continue at current levels. The bulk of next year's increase in financial aid, approximately $1.8 million, will come from unrestricted funds from the Operating Budget.

Next year the availability of a new state guaranteed loan program, the California Loans to Assist Students Program (CLAS), will also help students meet their educational costs by providing them and their families with a new financial resource.

Stanford's Parent Loan Program will continue, as well. The accessibility of these loan programs along with incremental additions to the financial aid budget will insure adequate financial aid for Stanford students.

The policy of need-blind admissions is growing more expensive as student budgets rise and greater institutional resources are required to meet the demonstrated financial need of all undergraduates. However, determined and creative efforts (such as developing the CLAS Program and monitoring our interest in Sacramento and Washington) have enabled us to remain one of the shrinking number of institutions committed to this important policy.

The following table shows the rate of growth in tuition last year at comparable institutions.

School	1982-83 Tuition Fees	Percent Increase Over 1981-82
Harvard	$8,820	17.8%
MIT	8,700	17.6
Brown	8,427	15.0
Princeton	8,380	15.6
Wesleyan	8,370	13.9
Stanford	8,220	15.1
Yale	8,190	14.5
Dartmouth	8,190	16.2
Northwestern	8,085	17.4
Cornell	8,000	13.5

The average percentage increase for 1982-83 at these other institutions was 15.7 percent over 1981-82 levels. Stanford's tuition increase, at .6 percent below average, was squarely within the range of these comparable institutions, both as to absolute dollars and to rates of change.

Though there has been no prior consultation between us and the listed institutions, it is not surprising to observe this cluster of tuition change within a narrow range. Universities that are similar in so many of their institutional characteristics can be expected to share common features in their cost and income make-up and, thus, in their tuition.

A few concluding background notes are in order regarding the recommendations for Medicine (MD), Law, and Business.

Although Medicine (MD) sets its tuition separately, it is growing next year at the same rate as the general University tuition.

The tuition for the School of Law is $150 higher than the University's general rate, rounded to the nearest even number to be divisible by two for accounting purposes. This differential was established during the Budget Equilibrium Program and made effective in 1976-77.

The Graduate School of Business is recommending that tuition for that School follow the model of the School of Law. Its tuition, beginning next year, is recommended to correspond to the University's general rate, plus a $150 differential. The added revenues from the $150 differential will be used to support innovative teaching and research projects.

Room and Board Rates for 1983-84

. The Committee on Finance and Administration and the Committee on Academic Affairs and Development recommend that the basic undergraduate room and board rate for the academic year 1983-84 be set at $3,812, an increase of 11.4 percent; that the basic room rate for undergraduate residences with full University services be set at $1,729, an increase of 14.5 percent, and the basic board rate for 19 meals per week be set at $2,083, an increase of 8.9 percent. Further, they recommend that the vice-president for Business and Finance be and is hereby authorized to approve a complete schedule fo specific rate increases, averaging 11.4 percent for apartments, residences, and food services.

Background:

In February, 1982, the Board approved a 1982-83 basic room and board rate of $3,423, an increase of 15.5 percent over 1981-82. Room rates for the current year vary from $1,460 for self-operated houses and fraternity clusters to $1,687 for full-service theme houses with self-operated kitchens. Escondido Village rents currently range from $351 per month for one-bedroom apartments to $457 for four-bedroom apartments.

In Governor's Corner, the new student housing complex, 460 spaces have been occupied during the current year. The remaining 360 spaces, still under construction, will be activated in September, 1983. The assumption of nearly $4,000,000 annual debt service on these spaces over a two-year span will produce planned operating deficits of $646,000 in 1982-83, $1,258,000 in 1983-84, and $46,000 in 1984-85. Financial planning for this growth in housing has provided for the accumulation of reserves sufficient to offset these deficits.

For the past six months, a student-staff task group has been examining the internal equity of housing rates, i.e., residence halls vis-a-vis cooperative houses vis-a-vis trailers and apartments. The recommendations of this group call for some modest downward adjustments (0-6 percent) in some rates and for upward adjustments (0-25 percent) in others.

It is expected that the administrative review of these recommendations will be concluded by March 1, 1983, culminating in approval by the vice-president for Business and Finance of a complete schedule of rates for all housing and food service options for 1983-84.

The proposed 8.9 percent increase in board rates will produce a small deficit in the Food Service budget ($52,000 on total expenses of $9,704,000). While food costs are projected to increase at six percent, debt service allocated to the Food Service Department will increase almost four-fold, from $160,000 in 1982-83 to $631,000 in 1983-84, accounting for 2.5 percentage points of the 8.9 percent increase.

Our peer institutions are charging the following for room and board in 1982-83:

School	Room & Board	Over 1981-82
Yale	$3,600	12.9
MIT	3,550	11.6
Harvard	3,280	7.5
Dartmouth	3,307	9.0
Stanford	3,423	15.4
Brown	3,135	7.5
Cornell	3,050	8.2
Princeton	3,150	12.7
Wesleyan	3,080	11.2
Northwestern	3,060	14.2

A comparison of combined rates of tuition, room and board for 1982-83 among those institutions comprising our principal independent sector competition yields the following table.

School	1982-83 Tuition Room & Board	Percent Increase over 1981-82
MIT	$12,250	15.8%
Harvard	12,100	14.8
Yale	11,790	14.0
Stanford	11,643	14.4
Brown	11,562	12.9
Princeton	11,530	14.8
Dartmouth	11,497	14.0
Northwestern	11,145	16.5
Cornell	11,050	12.0.

A summary of the 1983-84 tuition recommendations

Type	From 1982-83	To 1983-84	Dollar Increase	Percent Increase
General Tuition	$8,220	$ 9,027	$807	9.8%
School of Medicine	9,591	10,530	939	9.8
School of Law	8,370	9,178	808	9.7
Graduate School of Business	8,220	9,177	957	11.7

Senate report

Senate to continue discussion of academic calendar Feb. 17

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 8

Summary of Actions Taken 2/3/83

At its meeting on February 3, 1983, the Senate took no action.

Minutes of the Fifteenth Senate
of the Academic Council
February 3, 1983
(Subject to approval)

A meeting of the Fifteenth Senate of the Academic Council was held on Thursday, February 3, 1983, beginning at approximately 3:20 p.m. in Room 290 of the School of Law. Present were 35 Representatives, 7 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 1/6/83 were subject to one addition for the record: the entire text of the CIT report was published in the *Campus Report* of 1/19/83, one week after the minutes were published. The minutes were accepted as submitted, subject to this addition for the record.

Report of the Steering Committee

The Chairman reminded Senate representatives that there was an Academic Council meeting scheduled for 4:15 and urged them to remain for it.

Report of the President and the Provost

The President indicated that his report would be given in the next hour to the Academic Council.

The Provost reported that he had recently sent to the Deans of Schools a statement on academic fraud. He had previously consulted with the Advisory Board and the Council of Deans about this statement. The statement will be published in *Campus Report* and the Provost welcomes any questions after its publication.

Report of the *Ad Hoc* Committee
to Study the Question of the Length
of Academic Terms

Chairman Fetter opened the discussion of the major item of business by saying that debate would have to be closed by 4 p.m. because of the upcoming Academic Council meeting. The Steering Committee was not certain how much debate there would be, given the recent discussion on an interim report from this *ad hoc* committee. If necessary, closure on the question could be postponed until the next meeting.

Professor Good, in introducing the report, reminded the Senate of the sole recommendation made by the committee:

> The Committee recommends that Deans and departments consider experimenting with the calendar in such ways as arranging continuing courses and sequences, together with calculating equitable means of faculty teaching assignments. Such experiments must take great care to avoid impeding access to courses by students from outside the School or department.

He pointed out that the committee had considered a number of alternatives to the quarter system, none of them so compelling as to result in a recommendation for change. He also called attention to the minority report prepared by E. Cohen, which presents data challenging one assumption on which the committee report is based, viz., that students learn well on the quarter system.

He then introduced two other members of the committee who were prepared to respond, as he was, to questions on the report: A. Markevich, graduate student in Physics and S. Mahoney, Registrar.

As the discussion began, the question was asked if the committee had considered the technical problems of implementing calendar changes, e.g., how to compute sabbatical credits or the problems of phasing in a new system. Professor Good responded that such problems had been considered, but since no change was being recommended, no planning for implementation had been done.

Professor Good was then asked if the committee had solicited information about the use of the Golub system from the School of Business at Carnegie-Mellon University. He responded that the committee had not done so, primarily because the program had been adopted within a single School there with apparently no impact upon other Schools within that university. If the system were adopted here, it would affect other Schools and would result in different problems.

The comment was made that the Golub system would indeed demand considerable planning and good advising, but it does not appear to be unworkable; for that reason it is regrettable that the committee did not pursue the opportunity to discover conditions at an institution which has adopted the system.

Some variety in course planning within the quarter system was reported for the Medical School. Specialized clinical clerkships, for example, are planned as four-week classes. Biochemistry and Anatomy run for two quarters; Pathology runs for three quarters, with a final exam at the end of the third quarter and examinations at other times to check student progress. The Medical School offers courses both shorter and longer than a quarter, but they all coincide with the quarter schedule.

It was pointed out that in the Humanities and Sciences, partial-quarter courses would be impossible unless the system provided for a compatible set of alternative offerings to finish out the remainder of a partially committed quarter. The committee was charged with having not taken seriously any alternative to the quarter system, and with making its recommendation for experimentation within the quarter system as a compensation for the lack of a recommended alternative.

Professor Good denied the charge, and defended the committee's recommendation as a recognition of the problem and a serious proposal that those who are dissatisfied with the quarter system explore possible ways to get around the problem within the system.

In another comment, the committee was commended for its recommendation that units be used more flexibly to arrange for varied schedules. This suggestion was thought to be a practical and attractive option, making good use of the flexibility that the unit system provides.

There was some discussion of two-quarter courses and why that pattern hadn't proven more popular. There is a concern that such courses result in lower enrollments, either because students don't continue for the second quarter or because they do not enroll initially because of the multiple-quarter requirement. Registrar Mahoney pointed out that for two-quarter courses which are announced as such in advance, the predominant pattern is that students who register in them stay with the course. In many others, the use of either letter grade or N grade indicates that instructor and student have reached an understanding about continuation.

The observation was made that one of the principal reasons the Law School opted for the semester system was that the quarter system resulted in so many two-quarter courses that curriculum planning was inhibited. In order to offer a richer curriculum, the Law School shifted to the semester system and adopted the rule that there would be no sequences, i.e., no two-semester courses. This both provided a time period greater than 10 weeks to cover a substantial body of work and also made it possible to enrich the curriculum enormously. The question was then posed: to what extent is it possible for a School or department at Stanford to conform to the quarter system by registering three times a year (if required to do so) and at the same time conducting all operations essentially on the semester system.

Professor Good pointed out that this is not, apparently, prohibited now and that the committee's report does not explicitly recommend prohibiting it. The report does, however, caution against any action which adversely affects students in other departments and Schools, especially those with sequences of courses required under time constraints.

President Kennedy commented that such unilateral action is much more acceptable for a School like Law which is essentially self-contained. Common sense would indicate that a department or a School with more external interaction would find such a position far more troublesome.

Registrar Mahoney reinforced the point that the issue is really one of fairness to students with rights of access to the curriculum. Decisions made by homogenous groups with highly structured, self-contained curricula are of interest to others, but not of real concern. Independent initiative exercised by other units would raise serious questions involving advising and coherence of programs, especially for the first undergraduate years. This is why the committee suggested experimenting within the quarter system for courses for which it is appropriate, not making independent changes by academic unit.

Student complaints were reported about prohibitive irregularities in course scheduling even within the present quarter system; the fear was expressed that a "looser" system, e.g., the Golub system, might make that problem even worse.

Registrar Mahoney emphasized that the more variations there are in a calendar schedule, the more stringent the requirement that the system be planned and announced definitively in advance. That is not typical of Stanford at present. The variations and late amendments in course scheduling which are characteristic of Stanford under the present system may well be of concern to the new Curriculum Committee of Humanities and Sciences. Adopting a calendar system which features variation would commit us to a prior definitive curriculum.

It was pointed out that in institutions with semester systems (e.g., Yale), faculty may be teaching no more than 25 weeks a year as opposed to about 33 weeks (counting exam weeks) at Stanford. The traditional reading period may extend faculty duty on the semester system, but even so there is some feeling that quarter-system faculty typically spend more time in the classroom and consequently have less time for research. The committee report doesn't indicate that such issues received any consideration by the committee.

Allocation of the work load over the quarter is another issue. Courses with daily homework assignments seem to fit well into a quarter system; project or term paper courses, on the other hand, have problems because the work load peaks later and the start is slower.

Professor Good was asked if the committee had addressed the question of the calendar dates of the beginning and end of the year as had been requested in 1981, since a June commencement is felt by some to put students at a disadvantage in competing for summer employment. He responded that the committee had not considered that question; to his knowledge, it had not been a part of the charge to the committee that it should do so.

President Kennedy commented that he had discussed academic calendars informally with a considerable number of students from time to time over the past year. He found the students he talked to overwhelmingly in favor of keeping the quarter system. Some students are sensitive to the problem of losing early summer job opportunities; others feel that the capacity to work later in the fall is just as valuable for many jobs as the capacity to start earlier in the summer.

Professor Good expressed the view that the only way a substantial change could be made in beginning and ending dates of the academic year would be to go to the early semester system.

With respect to courses in the Humanities, especially those with term paper requirements, the view was expressed that one quarter is felt to be too short a time and two quarters too long a commitment. Even a sequence of five units plus three units is regarded by students as a two-quarter course. For these kinds of courses, the semester system seems ideal and the recommendation of extended unit courses within the quarter system is inadequate to deal with the problem.

The observation was made that systems tend to persist in the patterns in which they began. The problem of dissatisfaction with the academic calendar is real for an important segment of the University. Within that segment there are those who do not believe that the committee's recommendation can ever be implemented in such a way that it will relieve their problems with the quarter system. This observation led to the suggestion that the committee reconsider the problem and come back to the Senate with alternatives.

Upon being asked by Chairman Fetter if his committee was prepared to undertake that task, Professor Good responded that the committee had considered alternatives and was able to recommend none. The Golub system came closest, but even that system did not win majority support.

It was pointed out that the committee was not being asked to propose an alternative to the quarter system, but rather to offer some concrete suggestions on alternatives to ease the problem within the present system.

That might better be accomplished, Professor Good responded, if Senate representatives were to explore the question with their departments and exchange views in the Senate about alternatives.

The view was expressed that the problem is an old one with a long history of debate, that the committee had worked long and hard and seriously to come up with a recommendation that some don't like, that people tend to vote this question mostly on their established values and are not very susceptible to persuasion by debate, and that it would be unjust to send the matter back to the committee.

Though the report had come moved and seconded from the *ad hoc* committee, there were strong differences of opinion expressed about whether or not debate should be closed. Chairman Fetter commented that it seemed reasonable to continue the discussion at the next Senate meeting before taking a vote on the acceptance of this report.

On a motion made and seconded, the meeting adjourned at approximately 4:10 p.m.

Evolution of San Francisco Bay studied by research scientists

Fifteen thousand years ago the San Francisco Bay did not exist. Ocean waves lapped up against the shoreline located near the site of the Farallon Islands, and the Golden Gate was only part of a river channel that emptied the Sacramento and San Joaquin rivers out to sea.

This is the theory documented by Brian Atwater, a 1974 graduate of Stanford's masters program in geology, who now works as a geologist for the U.S. Geological Survey in Menlo Park.

Atwater is part of a research team of 20 scientists at the survey, working in cooperation with Stanford's Civil Engineering Department, to study the evolutionary history of San Francisco Bay by examining samples of sediment that are dug up from beneath the bay.

"This project. . . is the first truly scientific and comprehensive study of the Bay as it has changed over time," said John Conomos, director of the study.

Specifically, Conomos has joined together the talents of chemists, biologists, and oceanographers from around the Bay Area to research and document the influence of mankind upon the history of the Bay.

In geological terms, the Bay Area is defined as a "natural estuary"—a dip in the coastline into which a sizable river runs. Both the Sacramento and the San Joaquin rivers flow down to the bay from the Sierra Mountains.

The San Francisco Bay has evolved into the form it takes today because of two major global developments during the past one million years:

1) Movement in the crust of the earth has transformed the Bay from a flat foundation of bedrock into continental hills and valleys, and

2) Worldwide sea-level fluctuations during this time have resulted in the submergence of low-lying valleys.

In a recent book called *San Francisco Bay: the Urbanized Estuary*, Atwater explains that these shifts in the earth's overall geography have brought about the creation of four separate estuarine systems in the Bay Area.

The most recent estuary, which began about 15,000-18,000 years ago, evolved into the San Francisco Bay as we see it today.

At about this time, the Pacific coastline was many miles west of the area that San Francisco occupies today, said Atwater. In order to meet this shoreline, the combined Sacramento and San Joaquin rivers must have flowed through the Golden Gate and traversed an exposed continental shelf.

Only during the past 30 years, Conomos explained, have geologists really explored the natural evolution of the bay at all. "We're trying to understand just exactly how man has modified the bay, and the problems that have resulted because of our presence here," said Conomos.

By studying "core samples" (chunks of sediment that are dug up by engineers to help them in designing bridges and buildings), these scientists are finding that man's settlement around the bay has drastically altered its geography because of four main factors:

* The construction of river diversions;
* The "infilling" of the Bay;
* The increasing number of sewage discharges;
* The effect of channels that are dredged in the Bay's floor for shipping travel routes.

Certain political issues, such as the modification of river channels in the Sacramento Delta, have recently become a threat to the natural evolution of the bay. "These problems might backfire on us in the future," said Conomos.

His group has found that if man were to continue maintaining an efficient system for flushing out the increasing amount of sediment that is being brought down by the rivers, serious problems could result.

"If we choose not to deal with this problem at all, the sedimentation and pollution would someday build up so much that the bay would fill in completely," he said.

According to the results of research work done by Conomos' group, the increasing population of the Bay Area has resulted in rising industrial and domestic waste production. Despite large expenditures on larger and improved wastewater treatment plants, the total volume of pollutants is increasing and the trend is expected to continue into the 21st century when it will have increased two- to three-fold.—**Craig LaGrow**

Spring reserve lists due Feb. 18

Reserve Lists requesting Undergraduate Course Reserve items for Spring Quarter are due in Room 210, J. Henry Meyer Memorial Library on Feb. 18.

Reserve packets, including blank reserve lists and guidelines for placing material on reserve, were sent to department secretaries and faculty Feb. 1.

If you have not received a reserve packet in the mail, please contact the Meyer Reserve Unit at 7-2201, between 8 and 5 p.m. Monday through Friday, so that a packet can be mailed to you. Or you may come to the office to pick up your packet and meet the Meyer Reserves staff. Your prompt return of completed reserve forms increases the potential for materials being available at the beginning of the quarter, particularly for those materials which the Library must order or for which the Library must obtain copyright permission to photocopy.

You can facilitate this process by directly securing permission to photocopy a published article or book from the copyright holder. A copy of written permission secured in this manner must be supplied to Meyer Library.

Financial series still open

Jeannie Thomas, manager of benefits and records, announces that the remaining two of the series of financial planning seminars will be held 7-9:30 p.m. Thursday, Feb. 10 and 17, in the SLAC Auditorium.

Faculty and staff members who missed the first meeting Feb. 3 will still benefit from attending the last two.

For more information, call Mary Simonton, benefits specialist, 7-9393.

The Credit Union: business as usual

The Stanford Federal Credit Union is in a very stable position, says Operations Manager Richard Leigh, who has been acting manager since Ray Brathwaite left the position.

Credit Union members have been worried about their savings, but Leigh emphasizes that "Every nickel of deposit is insured under NCUA federal share insurance."

As to the question of the ill-fated investment in Penn Square Bank, which was taken over by FDIC in July, 1982, "That involved only 2 percent of our assets. We have written down part of that already. The entire investment is being paid out under the control of FDIC. We've lost the earnings, but the total amount of investment is being recovered."

The Credit Union, with a current $12 million in liquidity, is now increasing its loan service to members.

"Members have had to wait for more than two or three weeks for loan approval," said Leigh. "We're trying to reduce that time interval."

Kendall to give doctoral recital

Yvonne Kendall, graduate student in early music and flute, will give her D.M.A. (Doctoral of Musical Arts) recital at 8 p.m. Sunday, Feb. 20, in Dinkelspiel Auditorium.

With pianist Gloria Cheng (A.B. '76), she will perform 20th-century sonatas for flute by Dominutti, Prokofiev, Hovhaness, and Muczynski.

Kendall received her master's degree in flute from the New England Conservatory, where she took master classes with Harvey Sollberger and John Heiss. Before that she studied in New York for a year with Judy Mendenhall.

Kendall is from Tennessee, where she received a degree in music education from Austin Peay State University. She then taught music at an elementary school for two years at Fort Campbell, Kentucky.

At Stanford, Kendall has performed with Alea II, the contemporary music ensemble, and soloed at CCRMA (computer music) concerts. She was a finalist in the National Association of Composers-USA competition in May; Cheng was the winner.

Kendall is also proficient in early dance. Her dissertation will be on 16th-century Italian dance.

Cheng teaches piano in Los Angeles.

How to beat the phone problems

A rash of incoming call-cutoffs has been affecting the University Centrex Telephone System and other high-volume telephone customers in the local area for the past few weeks. Pacific Telephone has been unable to locate the faulty equipment causing the problem and has called in special technical teams to test the lines and circuits in all the local Palo Alto switching centers.

The problem follows a definite pattern of cutting off within the first 15-20 seconds of conversation, affecting incoming calls only, and will, generally, repeat two or three times in a row. The trouble does not seem to be concentrated in one area of the campus, but instead moves around from day to day.

This type of problem is very difficult to locate and your assistance will be appreciated. If you encounter this problem, please ask the caller for the area code and telephone number they are calling from. This is not always possible when the calls continue to cut off, but when you do have the information please report the problem and the originating number to the special Stanford Repair number, 855-1157.

Kennedy on indirect costs...

continued from page 23

wards due to the action of these forces in prior years. In the political area, we plan to work as hard as we can to retain the concept of partnership with the federal government in research, and to gain understanding for the reality of indirect costs. In the meantime, we intend to "price" our indirects at a level consistent with political and competitive forces, while trying to ameliorate both. In addition, we intend to "back up" toward full recovery, by reducing indirect expenses as much as possible consistent with our other responsibilities. We will also give careful consideration to the indirect cost impacts of new projects.

These measures should enable us to return toward full overhead recovery, and we think that ought to be a significant institutional goal. In the meantime, it will limit the risks to our own principal investigators, and also limit the political risks to private research universities as the indirect cost rate is being debated in Washington. This course represents, however—and there should be no mistake about this—a significant budgetary sacrifice for our academic enterprise. By taking corrective steps at the same time, I hope we shall minimize the need for future sacrifices of the same kind.

Volunteer for 'space shuttle flight'

Volunteers are needed for a joint NASA-Ames/Stanford Medical Center study of the role exercise conditioning and health regimen plays in the experience of space shuttle crew members.

The project is recruiting healthy men, 35-50, who are either sedentary or aerobically conditioned. They will spend 54 days sometime after Memorial Day next summer living at the NASA-Ames research facility under conditions that simulate shuttle flight.

Not only will the study be very interesting for participants—they will learn a lot about the space program—but they will be paid for their time.

Those who are interested should call NASA-Ames at (415) 965-5118 and ask for Gail.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

Drawings by Barbara Lynn Scoledes of Los Altos will be shown in the Tresidder Union second floor gallery during the month of February. She has exhibited her expressionistic work widely in the U.S. and also in Canada.

Isaacs piano recital set at TMU

Music doctoral candidate Nicholas Isaacs will present a recital of piano music by Bach, Mozart, Kodaly, and Chopin at 8 p.m. Sunday, Feb. 20, in the Tresidder Union Lounge on the Stanford campus.

The concert is part of the Young Stanford Artists series sponsored by Student Arts at Stanford (STARTS) to celebrate Tresidder's 20th anniversary. Admission is $2.

Isaacs is active as a performer and teacher in the Bay Area, and will also tour with this program in California, Oregon, Vancouver, New Mexico and Oklahoma.

A citizen of Great Britain, Isaacs was for several years professor of music at the United World College of the Atlantic, and a regular recitalist and accompanist in festivals and concert series throughout England and Wales.

He has studied with Adolph Baller, Gerald Moore and Edith Vogel, holds a performer's diploma from the Guildhall School of Music, London, a master's degree in Medieval history from St. Andrews University, Scotland, and is one of several scholars selected by the English-Speaking Union for advanced studies in the U.S.

Nicholas Isaacs

Weilerstein to conduct master class on violin

Violinist Donald Weilerstein will conduct a master class at 7 p.m. Tuesday, Feb. 15, in Dinkelspiel Auditorium.

Weilerstein, a violinist with the Cleveland Quartet, is on the faculty at the Eastman School of Music and teaches at the Aspen Music Festival.

The students in the class will be: Robin Sharp of Palo Alto High School playing Mendelssohn's Concerto in E minor; Michael Moon, of Los Altos High School, playing Mozart's Concerto in A Major; Cristina Ruotolo, of Stanford University, playing Mozart's Concerto No. 4 in D Major or a Wieniawski Concerto. Additionally, Robin Sharp and Michael Moon will play the Bach Double Concerto in D minor.

Tickets at $3 are available at Tresidder Ticket Office and at the door. Stanford students can attend free.

Jazz Band concert in Dinkelspiel Feb. 19

Stanford's Jazz Band, under the direction of Stanford junior Jose Bowen, will perform at 8 p.m. Saturday, Feb. 19, in Dinkelspiel Auditorium.

Presented by the Music Department, the Jazz Band will play tunes by Don Menza, Phil Woods, Les Hooper, and Bowen. Special guests will be Bay Bop and a new jazz quintet.

The Jazz Band will preview their concert outside Tresidder at noon Wednesday, Feb. 16.

Tickets for the Feb. 19 concert are $4 general, $2 students and senior citizens.

Keohane keynote to cover women in communities

Wellesley College President Nannerl Keohane will keynote a scholarly conference on "Communities of Women" at Stanford Sunday, Feb. 20.

Former professor of political science at Stanford, Keohane will speak at 10 a.m. in Annenberg Auditorium.

Made possible by a grant from the Rockefeller Foundation, the conference is sponsored by *Signs: Journal of Women in Culture and Society*, the Center for Research on Women (CROW), and the Stanford Humanities Center.

Editors of *Signs* will serve as facilitators at seven workshops throughout the day. They include Associate Editor Estelle Freedman, assistant professor of history; Editor Barbara Charlesworth Gelpi, associate professor of English; Associate Editor Carol Nagy Jacklin, senior research associate in psychology; Associate Editor Myra H. Strober, director of CROW and associate professor of education; Associate Editor Barrie Thorne, visiting professor in sociology and feminist studies; and Associate Editor Margery Wolf.

The conference is intended for students, scholars, and teachers of women's studies; participants in women's political, cultural and spiritual communities; and the interested public.

Workshop topics

Workshop topics will include: "Bonds and Divisions Among Women in the Workplace," " Cultural Forms and Women's Bonds," "Women's Communities Within Larger Social Movements," "Communities of Single Women," "Networks: Artistic and Political," "Schools as Communities," and "Communities as Survival Strategies."

Commentators will include Lila Abu-Lughod, of the Harvard Department of Anthropology; Sister Joan Chittister, O.S.B., prioress of Mount St. Benedict, Erie, Pa.; Cheryl Townsend Gilkes, Boston University Sociology Department; Sondra Hale, California State University-Long Beach Women's Studies Department; and Paula Harper, University of Miami Art Department.

Also: Emily Honig, UC-Berkeley Center for Chinese Studies; Joan M. Ringelheim, Wesleyan University Center for the Humanities; Leila J. Rupp, Ohio State University Department of History; Kathryn Kish Sklar, UCLA History Department; Martha Vicinus, University of Michigan Department of English Language and Literature; and Luise White, University of Southern California Department of History.

Elizabeth Fitting is conference coordinator. Others helping include Susan Johnson, editorial associate of *Signs*; Helen Neally, Stanford graduate student in political science; Clare Novak, managing editor of *Signs*; and Sylvia Yanagisako of the Stanford Department of Anthropology, associate editor of *Signs*.

Preregistration advised

Due to limited seating capacity, preregistration for the conference is advised. Suggested donation is $5 general, $2 student, and $1 seniors.

Further information may be obtained by calling Fitting at (415) 497-2412. CROW is temporarily located in Room 42, Old Chemistry Building, Stanford, Ca. 94305.

Leslie Friedman

Friedman to be dancer in residence

Dancer-choreographer Leslie Friedman will be in residence at Stanford Feb. 16 and 17 to give a series of workshops and a performance.

Friedman's residency inaugurates the new performance space in the recently constructed Elliot Program Center. According to Alice Supton, assistant dean of student affairs, "This fine new facility will enable residential education to promote more music and dance concerts, poetry and dramatic readings, and faculty-student programs."

Friedman's free public workshops will be held at Otero and Burbank residence halls. The performance will take place at 7:30 p.m. Thursday, Feb. 17.

Based in San Francisco, Friedman has toured her concerts of solo dance nationally. The California Arts Council selected her for its Dance Touring Program, 1981-82, and she is on the Board of Directors of the S.F. Bay Area Dance Coalition.

Friedman received her Ph.D. in history at Stanford. She taught here, at Vassar and Case Western Reserve before leaving academia to devote herself completely to dance.

In her performance, Friedman will present her new full-length work, "Johannes Kepler's Dream," composed of four dances choreographed to Bartok's "Music for Percussion, Strings, and Celeste." Her work has been described as "fresh, witty and inventive, pervaded by a sense of urgency and the unexpected."

Jerusha Stewart will show her designs at 1 and 3 pm Sunday, Feb. 13, at Tresidder.

Chamber Orchestra concert Feb. 18

The Music Department will present the Stanford Chamber Orchestra, under the direction of Andor Toth, in concert at 8 p.m. Friday, Feb. 18, in Dinkelspiel Auditorium.

Featured on the program will be two 1982 student soloist award-winners: Patricia Mikishka, mezzo-soprano, and Yuri Ito, flutist. Chris Christensen, assistant conductor of the Chamber Orchestra, will make his Stanford conducting debut.

Opening the program, Ito will perform the *Flute Concerto in G Major* by Stamitz. Ito is a senior at Stanford majoring in Asian Languages. She studies flute with Frances Blaisdell and is winner of the undergraduate humanities music award.

The beautiful *Les Nuits d'Ete* by Berlioz will be sung by doctoral student Patricia Mikishka. The work is particularly challenging because of the wide range of the *tessitura*.

Mikishka received her bachelor and masters degrees in both vocal performance and music history from the Hartt School of Music in Connecticut. She has soloed with the Stanford Baroque Ensemble, Renaissance Wind Band, and the Stanford Chorus. She studies voice with Lila Stuart.

Closing the program, Christensen will conduct Mozart's *Symphony No. 41, "The Jupiter."* A graduate student in the D.M.A. instrumental conducting program at Stanford, Christensen is also conductor and musical director of the Peninsula Chamber Players and the San Francisco Dance Theatre, and assistant conductor of the San Francisco Ballet spring season. He has conducted SFB performances of *The Nutcracker Suite*.

Tickets are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

Black groups plan show on design

The Black Liberation Month Committee, in coordination with the Omega Foundation, will hold an Art and Clothing Design Show from 1-5 p.m. Sunday, Feb. 13, in Tresidder Union.

Various forms of art by Bay Area artists will be displayed all afternoon in the Union's upstairs lobby, where a reception will also be held.

A clothing design show featuring Stanford designer "Jerusha" will be held at 1 and 3 p.m. in Tresidder Room 270. Admission is $3.

Jerusha Stewart is a third-year Stanford Law Student who emphasizes color and movement in her designs. Her work is much influenced by African dress and costume. She also has a collection of unusual handknitted sweaters which will be available in Bay Area stores this spring.

Israeli folkdance

The Israeli Student Organization will sponsor an Israeli Folkdance Workshop and Party from 7:30 to 11 p.m. Sunday, Feb. 13, at the Cubberley High School Pavilion, 4000 Middlefield Road, Palo Alto.

Participants should bring clean, soft dancing shoes and expect lots of good food. Admission is $1.50.

The Cleveland Quartet

Cleveland Quartet plays Feb. 16

The internationally acclaimed Cleveland Quartet will perform at 8 p.m., Wednesday, Feb. 16, in Dinkelspiel Auditorium at Stanford.

The Quartet will perform "Quartet in D Major, K. 499 ("Hoffmeister")" by Mozart; "Quartet No. 1 (1935, revised 1943)" by Tippett; and "Quartet in E-flat Major, Op. 74 ("The Harp")" by Beethoven.

Founded at the Marlboro Music Festival in 1969, the quartet has since toured the world giving nearly 100 concerts annually. They have appeared at the White House, on local and national television, and were the first classical artists ever to perform on the Grammy Awards telecast.

Their RCA recordings have received four Grammy nominations and numerous Best of Year awards from *Time* and *Stereo Review* magazines.

In 1982 the Corcoran Gallery of Art in Washington, D.C., awarded the quartet the use of its "Paganini Strads"—a matched set of Stradivarius instruments once owned by Paganini in the 19th century.

The members of the quartet are Peter Salaff and Donald Weilerstein, violins; Atar Arad, viola; and Paul Katz, cello. All four are on the faculty of the Eastman School of Music and make their summer home at the Aspen Music Festival.

For more information, call Tresidder Ticket Office, (415) 497-4317.

Piano recital by Gloria Cheng

Pianist Gloria Cheng will give a recital at 8 p.m. Sunday, Feb. 13, in Tresidder Union's second floor lounge.

The program will include works of several contemporary composers—Barkin, Martirano, Druckman, and Satie—as well as those of Beethoven and Debussy. Prof. Arthur Barnes of Stanford's Music Department will narrate the Satie.

Cheng received her bachelor's degree at Stanford, where she studied with Nathan Schwartz and Naomi Sparrow, and her master's degree at UCLA under the guidance of Aube Tzerko. She is an experienced solo recitalist, chamber musician, and accompanist whose most recent award was first prize in the first annual Young Performers' Contest of the National Association of Composers-USA.

The program is the second in the four-week Sunday Festival Series sponsored by STARTS in honor of Tresidder's 20th anniversary. Admission is $3 ($2 students and seniors).

Ramsey directs Chorale concert

The Stanford Chorale, under the direction of William Ramsey, will perform at 8 p.m. Tuesday, Feb. 15, in Memorial Church.

University organist Herbert Nanney will join the select vocal group to celebrate the recently installed organ console in Memorial Church.

Featured works on the program will be Haydn's *Missa brevis Sti. Joannis de Deo (Kleine Orgelmesse)* and Britten's *Rejoice in the Lamb*.

Also on the program will be Haydn's *The Musical Clocks* for solo organ; *Psalm 2* and *Ave Maria* by Mendelssohn; *O Sing Unto the Lord* by Mathias; two works by Vaughan Williams: *The Voice Out of the Whirlwind* and *Lord, Thou Hast Been Our Refuge*; two works by Ives: *Psalm 90* and *Circus Band*; and *At the River* by Aaron Copland.

Prof. Ramsey recently returned from a sabbatical, during which he conducted the Philippine Philharmonic and appeared in recital on Philippine national TV.

Tickets for the Feb. 15 concert are $4 geeneral, $2 students and senior citizens, available from Tresidder Ticket Office (497-4317) and the door.

How Rehm, Brown created modern musical 'Cyclops'

Euripides wrote his satyr play "Cyclops" more than 2,400 years ago, but his message is even more valid today: What people do to one another when one says, "I'm No. 1, and don't get in my way."

And in the intervening 2,400 years, the French described it neatly: *Plus ca change, plus c'est la meme chose*.

The connection for Rush Rehm, Stanford Ph.D. candidate in drama, classics and humanities, began in Athens as it did for Euripides. For Rehm it was in 1976, when he met composer Francis James Brown, who lives there, and began talking about possibilities for a modern musical based on "Cyclops."

They've been working on "Cyclops/Nobody's Musical" ever since, often across continents. On Feb. 16 their musical drama will have its premiere in Stanford's Little Theater, as a Drama Department production. Rehm wrote the books and lyrics, and Brown wrote the music.

It's a bold approach to theater, with a jazz-blues-Broadway score, with costuming that dates back to the earliest Greek comedies; and yet offering a story that transforms the musical comedy into a darker mode of revenge and triumph, and man's never-ending inhumanity to man.

"It's very funny, and not heavy-handed," says Rehm. "But while it employs elements of Broadway musical comedy, it's handled in a way that Euripides might approve—setting up expectations in the audience, then undermining and transforming them. The material is substantial, and demands just a little bit more from the audience."

Very free adaptation

Rehm's very free adaptation of Euripides' story of the one-eyed monster named Cyclops and the visitor to his island, Odysseus, provides a disturbing parable of modern times.

Cyclops, a sort of "natural man," has a group of satyrs working as his shepherds. The satyrs, having been shipwrecked, desperately want to get off the island, and call on Dionysus—god of wine, women, joy and sexuality—for help.

Dionysus comes through via theatrical magic, turning the sheep into women, and the women into men. The men are sailors back from the war, looking for food and water. Led by Odysseus, they indeed bring lots of wine. Then mutal duplicity begins as the tale twists.

When Cyclops returns, he feels his island world threatened by the strangers and eats two crew members. Odysseus demands vengeance because, in Rehm's view, "Odysseus is an opportunist who corrupts the pastoral life of Cyclops, a stranger coming to corrupt and destroy a natural world. This has obvious political parallels of invaders and self-appointed bearers of "civilization"—through the centuries and right down to today.

"At first, Cyclops appears to be the victimizer, but turns out to be the victim. At the same time, Odysseus, the manipulator, moves from victim to victimizer. The theme of metamorphosis is central to the play.

"What Euripides is talking about is the double edge of life, the underside of desires, and man's insistent failure to perceive the simple joys of the world, with the result corruption of everyone's dream."

Andre Braugher as Cyclops

The "Nobody" of Rehm's title really is somebody. "Nobody" is what Odysseus calls himself to fool the Cyclops. " 'Nobody,' " explains Rehm, "is the 'they' or 'them' who always are doing something to us, and all too often this 'nobody' is ourselves."

One of the key songs of the production is "Basic Necessities," which relates to food and water, but also, Rehm says, "to other 'basic necessities'—vengeance and triumph. Thus Odysseus justifies himself, as those who would dominate others have justified themselves, confusing selfishness and conquest with real needs. Euripides' day was no different than ours in that respect."

Brown, composer of the score for Christopher Miles' recent film, "Priest of Love," will come to Stanford from his home in Athens for the premiere.

Rehm is directing the production. Costuming and setting are by William Eddelman, past winner of the Bay Area drama critics award for scenic design. The play's theme of male politics and domination is emphasized, as it was in early Greek comedies, by costuming caricature: the satyrs sport oversize phalli.

Musical direction and orchestration are by Steven Ullman, and lighting by John Rathman. Choreography is by Stacey Greenburg.

Performance dates are at 8 p.m. Wednesday-Saturday, Feb. 16-19 and 23-26, with a special matinee at 2 p.m. Feb. 26. Tickets are available at Tresidder Ticket Office, (415) 497-4317.

The production has been made possible by assistance from the Classics Department, Stanford Humanities Center, and the Graduate Program in Humanities, in addition to the Drama Department.

Last year, in discussing the revival of interest in classics at Stanford, Rehm said "There is a tremendous vitality in Greek literature. It's not of a cool order, but extremely alive and kicking. Everything is relevant to today. We are now in a period of political and social fragmentation, and so was 5th century Athens.

Euripides, adds Rehm, still has an important story to tell today.

—Harry Press

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Feb. 9 to cover the week of Mon., Feb. 21 through Sun., Feb. 20.

MONDAY, FEBRUARY 14

African & Afro-American Studies Lecture: "The History of the Afro-American Intellegentsia and Future Trends," with Prof. Emeritus St. Clair Drake. 4 p.m. Bldg. 200, Rm. 30.

Biological Science Seminar: Dr. J. Michael Bishop, Dept. of Microbiology, Univ. of California Medical Center å San Francisco. 4:15 p.m. Room T-175, Herrin Hall, Dept. of Biological Sciences.

Energy Policy Seminar: "The Changing Relationship of Reactor Regulation to Reactor Safety," with Robert J. Budnitz, President of Futures Resources Associates, Inc. Berkeley, Ca. 4:15 p.m. Skilling Aud.

Numerical Analysis Seminar: "On the Nearest Defective Matrix," with James Wilkinson, National Physical Laboratory, England, and Stanford. 4:15 p.m. Rm. 380C, Math Corner.

EE350 Radioscience Seminar: "Computer Simulation of Wave-Particle Interactions," by Hiroshi Matsumoto, Kyoto University, Japan. 4:15 pm. McCullough Bldg., Room 134.

TUESDAY, FEBRUARY 15

Bechtel International Center Film-Lecture: "Acid RainRequiem of Recovery," with commentary by Vance Kennedy, U.S. Geological Survey. Noon to 1 p.m. I-Center. $2.50 for lunch, brown baggers free.

Women's Tennis: vs. UOP. 1:30 p.m. Varsity Courts.

Stanford Museum of Art Lunch Hour Tours: "The Challenge of Modern Art". 12:15 p.m. Stanford Museum.

Baseball: vs. Stanislaus State. 2:30 p.m. Sunken Diamond. General $2, students free.

Communications Design Seminar: "The Use of Spread Spectrum Modulation in Small Satellite Earth Stations," by Rolf Dyce of Equatorial Communications. 4:15 p.m. McCullough Bldg., Room 128.

Applied Physics Colloquium: "Convective Pattern Evolution in Fourier Space & in Color: New Concepts & Experimental Methods in Fluid Dynamics," by Professor Jerry P. Gollub, Haverford College & Univ. of Pa. 4:15 p.m. Applied Physics 200.

S.O.A.R: Meeting for X-Country Ski Clinic to Peter Grubb Hut, Feb. 19-21. 7 p.m. Tresidder Union, Rm. 263.

Music Guild: Violin Master Class, with Donald Weilerstein. 7-10 p.m. Dinkelspiel Aud. General $5, Stanford students free.

Music Department Concert: Stanford Chorale, William Ramsey, conductor & Herbert Nanney, organ. Haydn, Missa Brevis Sti. Joannis de Deo; Mendelssohn: Psalms 2 and 22, Ave Maria; Britten: Rejoice in the Lamb; Vaughan Williams: The Voice Out of the Whirlwind, Thou Hast Been Our Refuge; Copland: At the River; IvesPsalms 90, The Circus Band. 8 p.m. Memorial Church. $4/$2.

Music Department Concert: Voice Recital by Cheryl Karinen. 8:30 p.m. Tresidder Lounge. Free.

WEDNESDAY, FEBRUARY 16

Latin American Studies Bag Lunch Series: "The End of Food Self Sufficiency in Mexico," with Prof. David Barkin, Economist, Universidad Autonoma (Xochimilco). Noon. 582 Alvarado Row, Bolivar House.

Stanford Museum of Art Lunch Hour Tours: "The Challenge of Modern Art". 12:15 p.m. Stanford Museum.

African & Afro-American Studies: Third Annual Black Community Reception. 4-6 p.m. Ujamaa Lounge.

Chemical Engineering Lecture: "Fluorescence Studies of Polymers in Dilute Solutions," by Professor Curtis W. Frank. 4:15 p.m. Chemical Engineering Conference Room.

Electronics in Medicine Lecture: "Artificial Intelligence Consultation System for Clinical Oncology," by Dr. Edward Shortliffe, Dept. of Medicine, Stanford Univ. Medical Center. 4:15 p.m. McCullough-134.

Basic Science Research Colloquium: "Sex and the Single Worm: Reproductive Biology of Schistosome Parasites," by Dr. Paul F. Basch, Dept. of Family, Community and Preventive Medicine. 5:00 p.m. Fairchild Aud.

Men's Volleyball: vs. USC. 7:30 p.m. Maples Pavilion.

Lively Arts at Stanford: Cleveland Quartet featuring Mozart: Quartet in D Major, K. 499, Tippett: Quartet No. 1, Beethoven: Quartet in E-flat Major, Op. 74. 8 p.m. Dinkelspiel Aud. $10.50, $9.50.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

THURSDAY, FEBRUARY 17

Stanford Geothermal Program: "Use of Gravity in Evaluating Reservoir Characteristics of East Mesa," by Tsvi Meidav, Trans-Pacific Geothermal. 1:15 p.m. Mitchell Bldg., Room B67.

Solid Mechanics Seminar: "Aeroelasticity of the Verticle Axis Wind Turbine," with Fred Nitzsche, Grad. Student Aeronautics and Astronautics, Stanford. 4:15 p.m. Skillings Aud.

Financial Planning Program: Financial counseling and free financial analysis by a financial specialist from Waddell & Reed, Inc. of San Jose. 7 p.m. SLAC Auditorium. Restricted to Stanford faculty & staff.

Bechtel International Center Film Series: "Juggernaut" and "Rhythm of Kerala," plus "Glory of Pratishtan" (India). 7:30 p.m. I-Center. .75 donation.

I-Center film on Mardi Gras

Mardi Gras, a high-lighted event in New Orleans and around the world, is the theme of "Always for Pleasure," an hour-long film to be screened at 7:30 p.m. Thursday, Feb. 10, at the I-Center.

The Other Cultures Film Series presents this beautifully photographed and keen observation of Mardi Gras and its musical traditions in New Orleans as part of its regular series at the International Center.

A variety of musical and dance celebrations are depicted, including a jazz funeral, "practice" parades, and a St. Patrick's Day parade. The Black West Indian traditions are explored as well. Particularly colorful sequences show working class blacks competing with one another in dancing, talking, and parading in spectacular hand-sewn Indian costumes of their own design.

The film was finely edited, and the music was recorded live on location by Les Blank. A 75 cent donation is requested at the door for admission to cover the cost of the film series. For further information, please phone the I-Center at 497-1831.

Bechtel to show acid rain film

Acid Rain: Requiem or Recovery, a film distributed by the National Film Board of Canada with commentary by Vance Kennedy of the U.S. Geological Survey, will be presented at noon Tuesday, Feb. 15, at Bechtel International Center.

The film depicts the effect on lakes in eastern Canada and the northeastern U.S. of industrial smoke and automobile exhausts which are injecting sulphur dioxide and nitrogen oxides into the air, traveling hundreds or thousands of miles from their sources, becoming transformed chemically into acids, and coming down to earth in the form of acid rain.

Vance Kennedy was chairman of the first federal agency charged with studying acid rain in 1976 and presently serves on a federal task group which monitors the phenomenon.

The presentation is one of the I-Center's series of Tuesday Luncheon Lectures. Tickets for the lunch are $2.50, available one week in advance and at the door as they last. Brown baggers are welcome at no charge. For more information, call 497-1831 or stop by the I-Center for intercultural hospitality.

The Winter Nuclear Weapons Film Series: "The Ideological Cornerstones of the Nuclear Arms Race". 7:30 p.m. Meyer Forum Room.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

FRIDAY, FEBRUARY 18

Mathematics Dept. Lecture: "Overflow Traffic from a Telephone Trunk Line with Many Channels," by Prof. G. F. Newell, Dept. of Mech. Engineering, UC-Berkeley. 3:15 p.m. Room 380-C, Math Corner.

Materials Science and Engineering Colloquium: "Materials Aspects of High Power, Slab Geometry Solid State Lasers", by Prof. Robert L. Byer. 3:30 p.m. Peterson Lab. Building 550 ,Room 550A.

Music Department Concert: Stanford Chamber Orchestra. Stamitz: Flute Concerto in G Major; Berlioz: Les Nuits d'Ete, Mozart- Symphany in C Major, K. 551, "Jupiter". 8 p.m. Dinkelspiel Aud. $4/$2.

Stanford Law School Film Society: "Lawrence of Arabia". 8 p.m. Kresge Aud. $1.50.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

Coffee House Evening Entertainment: Music featuring many of the areas favorite new & up-and- coming performers. 9-12 p.m. Coffee House. Free.

SATURDAY, FEBRUARY 19

Baseball: vs. UOP. Noon. Sunken Diamond. $2 general, Stanford students free.

Men's Lacrosse: vs. Santa Barbara. TBA. Lacrosse Fields.

Women's Soccer: vs. Humboldt State. 1 p.m. Football practice field.

Women's Tennis: vs. Long Beach State. 1 p.m. Varsity Courts.

Bio. Bridge/S.O.A.R: Jasper Ridge Interpretive Walks. 10 a.m. Jasper Ridge. Free.

Music Department Concert: Stanford Jazz Band. 8 p.m. Dinkelspiel Aud. $4/$2.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

Coffee House Evening Entertainment: Music featuring many of the area's favorite new & up-and-coming performers. 9-12 p.m. Coffee House. Free.

SUNDAY, FEBRUARY 20

The Center of Research on Women: "Communities of Women," a conference to discuss recent scholarship on women's communities. Registration 9:30 a.m. Annenberg Aud. $5 general, $2 students, $1 seniors.

Men's Rugby: vs. Univ. of British Columbia. 1 p.m. Maloney Field.

ASSU Sunday Flicks: "Fast Times at Ridgemont High". 7 & 9:30 p.m. Memorial Aud. $1.50.

Lively Arts at Stanford: Marya Martin, flute. 8 p.m. Kresge Aud. $7.50.

Music Dept. Concert: Yvonne Kendall, flute with Gloria Cheng, piano. 8 p.m. Dinkelspiel Aud. Free.

STARTS concert: Doctoral candidate Nicholas Isaacs will perform piano works of Bach, Mozart, Kodaly, and Chopin. 8 p.m. Tresidder lounge. $2.

EXHIBITS

Recent Acquisitions. Paintings, drawings, sculptures and prints, works of Oriental, Native American and African art grouped by themes. Stanford Art Gallery. Jan. 11 - Feb. 20.

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

Photographs by Olivia Peterson. Coffee House/ Tresidder Union. Feb. 1 - Feb. 28.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Recent Expressionist Drawing Experiences by Barbara Scoledes. Tresidder Union, upper lobby. Feb. 1 - Feb. 28.

"Images in Bloom", by Sally Spence, watercolor paintings. I-Center. Feb. 3 - Feb. 28.

CAMPUS REPORT

Volume XV, Number 20 | A publication for Stanford University faculty & staff | February 16, 1983

Plan to renovate the Farm's historic Red Barn approved

The Red Barn adjoining the Stanford Golf Course, the most significant vestige of Senator Leland Stanford's once world-famous Palo Alto Stock Farm, is slated for restoration.

The Stanford Board of Trustees Feb. 8 approved a renovation concept that calls for preservation of the 37-stall barn and its continued use as stables. The project is estimated to cost between $750,000 and $900,000. Private gift support will be sought. Development of specific restoration and financing alternatives now will proceed.

The University currently is seeking a tenant who will operate the stables and provide equestrian instruction to Stanford students and the public. The paddocks, tracks, paths, outbuildings and land immediately surrounding the barn will be leased on a long-term basis to the tenant. Income from this source may help fund the restoration.

Additional land along Searsville Road will be leased short-term for grazing and riding. That parcel eventually may be needed for other University purposes.

The structure, which one student of Stanford history terms "as much a part of Stanford as Paul Revere's house is of downtown Boston," most likely was built between 1878 and 1880, a search of historic documents in the University's Archives indicates.

The Development Office is "presently assessing the feasibility of fund raising from a small group of interested people principally from the local area," says David Fulton, Development's director of communications.

Fulton expressed hope that the University could tap new or additional gift sources rather than divert money from gifts made for academic purposes.

Stanford alumnus Bill Lane, publisher of *Sunset* magazine, says restoration of the barn provides a "unique opportunity for the University to preserve a heritage and maintain a sense of its roots." Lane said he would be willing to contribute and to encourage others to do the same "assuming that the restoration is architecturally and economically feasible."

If sufficient gifts are received by June, construction will begin this summer and be completed before the next rainy season.

A patched and leaking roof is one of the barn's major problems. The building was closed by the University and horses moved to a smaller barn nearby last November because of the serious leaks. The roof is to be replaced. During earlier rains, water accumulated in horses' stalls and mold

Students from an equitation class pose in front of Red Barn. Photo dates from about 1948.

Because at this time there is an insufficient number of agenda items to justify the Senate meeting originally scheduled for February 17, 1983, the Steering Committee has asked me to announce the cancellation of that meeting.

The discussion of the report of the **Ad Hoc** Committee to study the question of the length of academic terms will be continued at the next meeting of the Senate, scheduled for March 3, 1983. The usual notification and agenda papers will be mailed to you in advance of that meeting.

Sale of state bonds provides new loan source for students

A new program which will provide loans of up to $3,000 at 12 percent interest soon will be available to help Stanford students and their parents finance college costs. Unlike most other loan programs, no proof of financial need will be required.

The California Loans to Assist Students (CLAS) are available statewide to graduate students, independent undergraduates, and parents of dependent undergraduates. They are funded by a California Student Loan Authority bond issue of $121 million.

Approximately $97 million in proceeds from the bond sale will be available for loans during the next two to three years for students who are residents of California or studying in the state.

Graduate students and parents of undergraduates will be able to borrow

Personnel task force reports findings, recommendations

Stanford should adopt a human resource philosophy, decentralize personnel responsibilities where appropriate, expand its supervisory training program, and recognize supervision as a principal responsibility.

These recommendations come from a University Task Force on Personnel Policies and Administration.

In a report submitted to the Administrative Council Feb. 2, the task force said there is need for a "broadly shared belief that effective human resource management is everyone's responsibility and that the continuing excellence of the University depends on it."

Recommendations covering human resource philosophy, balance between central and local responsibility, supervision, pay and classification, staff development, affirmative action and employment, and problem solving are included in the long-awaited report.

The task force also seeks adoption and distribution of a statement of human resource philosophy calling for a "culture in which there is harmony between achievement of University goals and regard for each individual's aspirations and capacity to contribute."

The University should continue to maintain a single University-wide pay and classification structure, but should decentralize individual nonbargaining unit classification decisions, the report recommends.

Department heads "often feel they cannot fulfill their responsibilities because of the bureaucratic maze they must travel in dealing with personnel matters," the report says.

Administrators in central offices, on the other hand, "are frustrated because they see departments willing to take actions which, while locally expedient, are without apparent regard for broader institutional interests and commitments. Consequently, they construct an elaborate administrative mechanism in an attempt to safeguard the University from itself," the task force says.

Following presentation of the report, the Administrative Council instructed the Personnel Department and vice-presidential senior staff members to assess the recommendations' likely impact and ways to implement them.

The assessment will take about three months.

The Administrative Council will discuss the proposals with the Deans' Council before deciding, probably in June, which of the 23 recommendations to implement.

The task force of senior officers and faculty members, appointed in August 1981, met 31 times, sponsored an opinion survey of 1,300 nonbargaining unit staff conducted by SRI International, and

James Ware elected trustee for five years

W. James Ware, 36, partner in the Palo Alto law firm of Blase, Valentine, and Klein, has been elected to a five-year term on the Stanford University Board of Trustees, effective immediately.

A 1972 Stanford Law School graduate, he has been active in fund-raising for the University, served on the Law School Board of Visitors during 1977-79, and is a member of the Stanford Commission on Investment Responsibility.

He is vice-president of the board of the Stanford Midpeninsula Urban Coalition and a board member of the Midpeninsula Citizens for Fair Housing, the Santa Clara County Bar Association, and California State Bar Civil Litigation Consulting Group.

He has been president of the California Lutheran College Alumni Association since 1981. He received his bachelor's degree there in 1969, serving as student body president and being chosen most outstanding senior.

At Stanford, he was president of the Black Law Students Association, served on the Stanford Judicial Council, and was a member of the Stanford Legal Aid Society.

He also taught undergraduate courses on "Understanding Racism and Prejudice" and on "Legal Aspects of Campus Unrest" through the Stanford Workshops on Social and Political Issues (SWOPSI). He was a teaching assistant to Prof. John Kaplan in the undergraduate course on the criminal justice system.

He became an associate of Blase, Valentine and Klein in 1972 and a member five years later. His practice is primarily civil litigation in state and federal court, in cases involving trade secrets and unfair competition, breach of contract and other business laws.

Honored by the American College of Trial Lawyers and the International Academy of Trial Lawyers for his moot court activities, he served as president of the Stanford Moot Court Board in his final year at Law School.

He is a member of the bar for the California Supreme Court, the U.S. District Court for both Northern and Central California, and the U.S. Court of Appeal for the Ninth Circuit. He is a member of the Palo Alto, Santa Clara and Charles Houston bar associations.

Born Nov. 2, 1946 in Birmingham, Ala., he was the son of a coal miner. He graduated with highest honors from Carroll W. Hayes School in 1965.

He is married to Susan (Stoll) Ware, a Stanford Law School classmate and attorney. They have two children, Jeremy Patrick, born July 8, 1974 and Carlie Ann, born July 18, 1978.

W. James Ware

Physicists seek nuclear arms limit

The American Physical Society, through its elected Council, has called on the U.S. and the Soviet Union "to intensify substantially, without preconditions. . .efforts to achieve an equitable and verifiable" agreement to limit nuclear arms.

Its position was drafted by Profs. Sidney Drell and Wolfgang Panofsky, both of Stanford University; Hans Bethe, of Cornell; Marvin Goldberger, of Cal Tech; and Herbert York, of UC-San Diego.

Both the U.S. and the Soviets should "reduce significantly" the number of nuclear weapons and delivery systems, the APS said. It urged both sides to:

1) conduct negotiations to restrict the use and limit the deployment of battlefield and intermediate range nuclear weapons;

2) resume negotiations to prevent the spread of nuclear weapons in outer space; and

3) initiate serious discussions to ban the testing of nuclear weapons in all environments for all time, as called for in the Non-proliferation Treaty.

Both sides should avoid military doctrines and deployments that treat nuclear explosives as ordinary weapons of war, APS added. Both should take "all practical measures" to inhibit further proliferation of nuclear weapons to additional countries and to reduce the risk of nuclear wars by accident or miscalculation.

Scott, Sandler win Boothe prizes

Darieck B. Scott of Ft. Leavenworth, Kan., and Susan E. Sandler of Lafayette, Calif., have been named first recipients of the Boothe prizes for excellence in writing at Stanford.

Two prizes, each worth $250, will be awarded each quarter for the best essays in freshman English and in Western Culture, respectively.

Selected by a faculty committee, the awards are named for their donors, Mr. and Mrs. D. Power Boothe, Bay Area residents who have supported the humanities at Stanford.

Scott's essay, entitled "The Devil We Know," was written for English 1D, Section 1, also listed as LAC 8. The essay analyzes D. H. Lawrence's "The Rocking Horse Winner" and concludes that the mother in that story arouses empathy rather than hatred because she is "the villain in us all."

Sandler uses the topic of human frailty in her Western Culture essay to draw comparisons between the works of Thucydides, Aristotle, Homer, Plato, and the Bible. In the characters and philosophies of each of these works, she connects the causes of frailty with some kind of division—between man and the powers beyond him, between man and other men, and within man between the separate parts of the self.

Seven runnersup will receive $25 gift certificates usable at the Stanford Bookstore. Finalists in freshman English were Elizabeth Cheatham, Bradley Chen, Jim McMillan, and Ken Schum. Finalists in Western Culture were Susan E. Rice, Geoff Hindall, and Laura Joy Edelstein.

An inaugural reception celebrating these awards is planned at 4:30 p.m. Tuesday, Feb. 15, 4:30 in the Dean of Humanities andSciences office,Bldg One.

For more information, call Jacqueline Bryan, 7-9784.

Care to exchange faculty position?

A listing of faculty members interested in exchanging positions with colleagues in other institutions for all or part of an academic year is now available from the Western Interstate Commission for Higher Education (WICHE).

The publication, *Faculty Exchanges*, lists over 200 higher education faculty members at western institutions who would like to exchange positions with faculty at other western schools for a semester or longer during the 1983-84 academic year or for the summer.

Individuals may obtain copies, without charge, by writing to: Faculty Exchanges, WICHE, P.O. Drawer P, Boulder, Colorado 80302. For further information contact Karen Fisher at WICHE (303) 497-0273.

Summer housing in dormitories

Summer housing in University residences is available to visitors, guests, and students, according to manager of conferences Lois Fariello.

Stern Hall offers single and double rooms (twin beds) with maid service, blankets, and linens. Bathrooms are shared. Rates vary from $18.50 per night for short-term stay in a single room to $10 per night for a long-term stay in a double room.

Mirrielees Apartments are sometimes available for a minimum stay of four nights. They have one bedroom (twin beds), living room, bath, and kitchenette (no utensils). Cleaning service, blankets and linens are provided. These apartments are only for single persons or married couples without children.

Rates vary from $42 per night for two people staying a short time to $20.25 per night for one person staying for a long period.

Laundry facilities and parking are provided, and other campus facilities—libraries, swimming pools, tennis courts, and golf course—are available for use.

For further information contact the Conference Office, 123 Encina Commons, 497-3126.

Faculty openings

Opthamology needs researcher

Retinal Electrophysiologist. Research Associate or Postdoctoral position available immediately to study the c-wave as a clinical tool in man and investigate responses of the retinal pigment epithelium in mammals.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

McBride:Computer matching cuts fraud $2 billion annually

Savings to the taxpayers of up to two billion dollars a year may be possible by matching computerized records in the various government data-banks.

The ability to detect fraud in the 200 federal and state projects that cross-check computerized information is increasingly effective.

But it should not be left to bureaucrats to decide on the safeguards to individual privacy in this process. It should be decided by Congress.

So says Tom McBride, the man who saved large sums for the public while he was inspector-general of two major U.S. departments, Labor and Agriculture. He was personally cited by President Reagan, in March 1982, as an example of an outstanding manager.

McBride headed the President's Computer Matching Project, a key element in the Administration's anti-fraud and waste campaign. Earlier he had prosecuted 20 major corporations and scores of individuals. Among his successful targets were corrupt government and union officials, big-time illegal contributors to politicians, and backstairs purchasers of ambassadorships.

McBride now has a new task, as associate dean of Stanford Law School, a post he took up last October.

In a campus interview he explained how computer matching helped to catch cheaters in government programs of all types, from kickbacks and bribery in government to agriculture corporations which tried to double-dip in farm relief programs.

"Let's talk first of those programs which are most visible to the taxpayers," suggested McBride. "This is where the public is most worried.

"There are 58 government benefit programs in which eligibility for participation depends on financial need as determined by the applicant's income and assets. In addition, there are the large insurance programs, such as social security and unemployment compensation.

"Social security retirement benefits are now running at about $150 billion a year, while federal and state costs for unemployment compensation total some $26 billion. There are also tremendous government expenditures involving such areas as highway construction, public works and defense contracts.

"Audits and investigations have amply demonstrated that fraud and waste occur in all of them, and that modern computer applications can be employed effectively to help contain costs, prevent fraud, and detect overpayments."

The Computer Matching Project, he said, was sponsored by the President's Council on Integrity and Efficiency. It was established to promote the use of computer matching and related applications of modern information technology, to help detect and prevent fraud and overpayments in government programs.

Tom McBride

Losses from mismanagement and criminal activities preying on the programs amount to billions of dollars a year. The General Accounting Office estimated that overypayments from major benefit programs amounted to $867 million in fiscal year 1979.

The GAO estimated that by 1982, without corrective action, overpayments in federal expenditures would exceed $1 billion.

"Most people realize that this is going on, but they don't know the extent," said McBride. "It is apparent that the public is increasingly aware that cheaters are successfully exploiting the nation's taxpayers, and that management countermeasures have been insufficiently effective.

"This undermines not only support for the continuation of government programs, but also respect for the government itself."

An interviewer asked McBride to comment on fears that computer matching may lead to possible invasions of privacy and violations of individual rights.

"That has been a principal concern of the Computer Matching Project people right from the start. In fact, the project work plan characterizes its overarching purpose as expanding the use of computer matching and related techniques 'with effective safeguards to protect the rights and privacy of individuals.'

"What we are talking about is, in effect, drawing a balance. On one hand, government managers must responsibly employ the most modern and effective means available to ensure that taxpayers' money is not being wasted through fraud or error. on the other hand, safeguards must be built in to make sure that privacy rights are protected."

A concern often expressed about computer matching is that it will incrementally lead to the development of a national data base which contains complete information on each citizen, a source which could be freely tapped and used.

McBride does not agree with this concern.

"That is patently impossible," he said. "The rules are that as soon as a 'match' of data from the computer records is made, the file that was used must be returned to the agency that supplied it, or be destroyed. Lists of the matching items, or 'hits,' have to be destroyed as soon as investigations have been conducted. Thus, no files accumulate."

Who gets access to the files while the investigation proceeds?

"There are administrative, technical and physical security safeguards for all files matched in order to prevent unauthorized access. Files cannot be duplicated or disseminated within or outside an agency performing a match. They can be used or accessed only to match the files previously described and agreed to in writing.

"Furthermore, files cannot be used to extract information concerning individuals that has nothing to do with the match being performed. In this way, fishing expeditions are precluded."

Last year the Administration authorized the IRS to help the social security and selective service agencies. Legislation was passed covering other areas so that private debt collection agencies working for the federal government could get tax-return information. It was also made easier for law enforcement agencies to gain access to tax data in criminal investigations. What did McBride feel about this?

"The safeguards are as I explained earlier. You have to balance the privacy interest against legitimate governmental interests. We cannot blink at the fact that there is a substantial amount of fraud, that unfortunately people do lie and cheat, and that many of the government programs, because of the lack of adequate verification, are little more than self-certification programs."

McBride believes strongly that government administrators should not be expected to ıe perform the balancing between governmental needs on the one hand, and the on requirement for individual privacy on the other.

"This should be decided by Congress," he said. "If, for example, Congress is concerned about cheating in certain of the welfare programs—where a very poor job is done, in my opinion, in verifying elgibility—then Congress should direct the administrators of the program to gain access to wage and other data."

What about tracking down defaulters in government debts?

"That is a legitimate concern. There are about $30 billion outstanding in delinquent government debts, ranging from student loans to VA loans, and the government has had a lot of problems in trying to collect this. Now that I am in a university setting I realize what a problem the student loan defaults are."

What about the use of IRS records to track down draft resisters?

"That is essentially a political and ideological question, It is one thing to get IRS data to go after someone who owes the government money. It is quite another to use that data for totally unrelated (and non-financial) investigative purposes, such as violations of the selective service laws.

"I am not clear whether Congress has authorized this, and personally, I don't think they should."

So McBride's position was that in some cases the need for information by the government may outweigh concerns for individual privacy, but not in all cases?

McBride agreed with this summing up. He was

Asian Languages offers graduate students chance to study in Beijing

An opportunity to study in the Department of Chinese Language and Literature at Beijing University is available to advanced Stanford graduate students whose work would be enhanced by study in the department (language, linguistics, literature, and certain areas of philosophy and history).

This program is offered under the Chinese Language and Literature Department at Beijing University and the Department of Asian Languages at Stanford University. Applicants must have at least intermediate level Chinese language skills.

Students going to Beijing under this exchange will only be able to enroll in courses offered by the Beijing University Department of Chinese Language and Literature, not in other University departments.

Stanford students selected for this program will be registered at Stanford at the appropriate tuition rate for their level of study. They will pay, in addition to the Stanford tuition, a program fee of $4,500. This fee will cover the expenses of study or research and board and room at Beijing University. Full residence credit toward the Stanford University degree will be received for work in Beijing.

Any financial support for which the Stanford student would normally be eligible if in residence at Stanford may be applied to the program fee and tuition charges. Additional expenses beyond the program fee which should be anticipated are travel costs (mainly round-trip to the PRC), plus minimal miscellaneous costs.

Students interested in this exchange program should see Prof. John Wang, chairman, Department of Asian Languages, and obtain the necessary application forms from him. All material should be on file by March 31, 1983.

Selection will be made by a Stanford Ad Hoc Committee on PRC Exchange, and notification of nomination will be made by April 30. The credentials of those selected will be sent to Beijing University for final selection.

A deposit of $500 must be paid by June 15. The balance of the program fee is due by August 15. These funds are to be deposited in the Graduate Awards Office. In the event a student withdraws for personal reasons, all funds will be refunded up to August 15. After that date the $500 deposit will be retained. Students on Stanford fellowships may have these funds automatically applied on request.

In the event that the student is unable to go to the PRC because no placement is offered in Beijing University, the full payment will be refunded.

invited to give an example of results obtained by computer matching.

"In some early tests in Memphis and Nashville, we found over 1,600 cases of unreported income in the Food Stamp program, through computer matching. Nearly half of those people were also benefiting from other government programs. Losses from that sample of cases were over $3 million. Monthly savings for the food stamp program alone were over $80,000.

"Expected savings in New York State from matching wage records was over $114 million from 1979 to 1982.

"It has become more and more apparent that computer matching is a quick, efficient and highly effective means of detecting fraud and overpayments."

Is the information supplied by taxpayers on their income tax forms kept secret?

"The Tax Reform Act of 1976, and IRS interpretation of it, serve to make virtually all categories of tax information unavailable for verification and anti-fraud efforts. I believe this is a correct procedure.

"A valid distinction can be made, however, between information provided by the individual taxpayer and financial information routinely provided under the law by such third parties as employers, banks, insurance companies and stockbrokers.

"There is plenty of evidence that great savings would result to the public if third-party information on assets and income were made available and used to ensure integrity in claims on government programs."

McBride gave Massachusetts as an example, where by using such third-party information savings of up to $300 million were made in the aid for dependent children (AFDC) program alone. Total savings to all government programs there might reach as high as $9.8 billion.

"Failure to use information that is available deprives us of basic and necessary safeguards against deliberate fraud. There is no good reason why taxpayers whose payments make humanitarian government possible should be held to higher standards by the government than people who benefit from such payments.

"Taxpayers are well aware that their tax returns and the information submitted by third parties such as banks and brokerage houses are subject to computer matching to make certain that they are reporting their income.

"Why should beneficiaries of needs-based programs not be subject to the same sort of safeguards to ensure that they are complying with the laws that specify conditions of elgibility for participation in such programs?"

An interviewer referred to the argument that any lessening of confidentiality regarding tax information is dangerous, because effective tax collection depends on voluntary compliance by taxpayers, which in turn depends on complete confidentiality.

"That doesn't bear close scrutiny," replied McBride. "The information we have in mind is not taxpayer-supplied but reports submitted by third parties. It is hard to see how gaining access to third-party data could adversely affect taxpayer compliance.

"Congress has seen fit to permit release of taxpayer-supplied information to assist in the collection of debts owed to the government, and to assist locating absent parents for child support purposes. There is no evidence that this has undermined taxpayer compliance.

"Why then should not information supplied by third parties be made available to verify eligibility for benefit programs, and so save the immense sums which are lost through fraud?

Where can the fulcrum be found in this delicate balance between investigatory needs and privacy rights?

"Congress must resolve any problems that may develop. The legislators should specify both the degree to which data should be made available from tax authorities, social security records, employers records, banks and financial institutions, and also the procedures and conditions under which such availability takes place.

"These are not decisions that should be left to program administrators."

To what degree are the various government programs now safeguarded against fraud?

"During the time I helped to monitor the food stamp program that there was very little checking. If a person walked in and filled out the boxes on the application form in an apparently correct manner the chances were that nobody would check. No matter how false the answers, the applicant stood a good chance of getting the food stamps.

"I realized that by the regular use of good checking of eligibility we could save several hundreds of million dollars a year. Doing standard verification, particularly wage verification, by computer is very inexpensive. Why wasn't this checking done long ago? It was prevented basically by governmental fragmentation and lack of cost-saving incentives.

"Also, an attitude of mind had grown up during the Great Society years that the purpose of these programs was to pump out the money and the accountability and making sure that the money reached the right people, was secondary.

"The information is there, in the data-banks. There is a wide range of public programs such as food stamps, ADFC, welfare, student loans. They all depend on some criteria of eligibility, and the appropriate information exists within the respective data banks. There are also large banks which contain wage data on most employees."

Where are the largest savings possible?

"Probably in the welfare programs. I don't imply that welfare applicants are more inclined to cheat than other people, but the sheer size of the programs makes them the likeliest place to save money.

"AFDC probably costs $10 billion a year, food stamps cost some $12 billion, unemployment over $20 billion, and given the scale of these programs the potential savings are considerable.

"It is also important to scrutinize such areas as highway contractor fraud and fraud in other loan or benefit programs.

"I found in the Agriculture Department that some multi-million-dollar farm operators would take advantage of disaster programs. Some farm operators were getting their losses covered by both the Department of Agriculture and the Small Business Administration.

"Computer verification turned up many instances of massive bid-rigging in highway construction contracts, and there were well over 100 indictments in that area last year.

"If you get a lot of greedy people crowding in and getting money from the government to which they are not entitled, then the public perception grows that the programs are rampant with fraud. Then public support for the programs falls.

"Food stamps, for example, have been under fire for a long time because the public thinks there is a high level of cheating. Everybody has their own story of seeing food stamps laid out on a supermarket counter and then the bags being loaded in a late-model luxury car.

"I am a firm supporter of the food stamp program, but it can only run with public support, if it is tightly run and benefits go to those who are eligible.

"There are programs which are well run, such as Head Start, and as a result, this has enjoyed increasing support. There are other areas, such as the summer feeding program, which have been run poorly and characterized by a lot of fraud, and therefore face loss of public and political support and extinction."

After 20 years of going after frauds, racketeers, chisellers and cheats, why has McBride chosen to enter the academic life?

"By the fall of 1982 I was feeling jaded with Washington, D. C. I felt the need to seek new horizons.

"But I keep up my interest in bringing responsible management into the government. There is still plenty of room for improvement."—**Donald Stokes**

Jeanne Kennedy gives reporters preview of Queen's visit

Jeanne Kennedy welcomes Channel 7 news team at preview of Queen's visit.

Two women will shake hands on Mirada Avenue, Stanford at 12:30 p.m. on Thursday, March 3, and thereby begin an historic occasion for the University.

The Queen of England will be coming to lunch, accompanied by her husband, the Duke of Edinburgh.

Mrs. Jeanne Kennedy, wife of Stanford President Donald Kennedy, will greet the Queen as hostess at the Hoover House lunch. Inside the residence some eighty guests will be waiting.

This event, which will mark the first time a reigning monarch is the guest of Stanford, has attracted such wide interest that Mrs. Kennedy agreed to receive the media on Friday, in order to answer their inquiries about the arrangements.

Here are some of the questions she was asked, and her answers:

What special preparations are you making?

"We are planning this in the same manner that we do for all our entertaining for distinguished visitors who come to the University. These are quite frequent.

"We are using the same people to provide the meal as we normally do, the same person to arrange the flowers, similar people to serve, and so on."

What will happen when the royal pair arrive?

"After greeting the Queen and the Duke, the president and I will bring them inside the residence, and escort them as they move around among the guests, who will be gathered in several rooms and perhaps—if it is a fine day—on the terrace. The Provost, Al Hastorf, and other senior officers and their wives will escort other distinguished guests."

Are you treating the Queen any differently from other guests?

"Not really. We are using the same furniture and decorations and having the meal prepared in the same way as we always do.

"Of course, this is a very special occasion, as the Queen is the head of state of a thousand-year-old country from which we received much of our culture.

"I am of course excited, as we all are. This is an important event in Stanford's history. It is an honor and a pleasure."

Why Hoover House for the lunch?

"It is very appropriate that the lunch should be held here. Originally built by former U.S. President Herbert Hoover, it is the residence of Stanford's president, it is a State historical landmark, it is on the National Register of Historical Places, and at Stanford we care very much about it."

Menu secret

What will be served?

"The meal will be catered by a local firm (Victoria Emmons) which we have used very often. The menu will be simple and light, and will include California wines. I do not propose to announce in advance what will be served, as I would not do that in advance with any meal I was offering. We shall probably issue details afterwards if asked. Rumors of salmon mousse and caviar? Sounds delicious, but I'm not commenting!

"The total number of people sitting down will be 92. Detailed seating arrangements are not finalized, but probably there will be five tables in all. President Kennedy will have the Queen on his right and the Duke of Edinburgh on his left. I shall sit on the left of the Duke."

Who is on the guest list?

"We tried to make sure that each of the main components of the Stanford 'family' is represented, including trustees, faculty, administrators, staff, and students.

"We shall have about 20 students present. We asked those students who would like to be considered for an invitation to write in giving their reason for inclusion. We received about 200 replies. In addition there were a number of imaginative attempts by some students to draw their claims to our attention. These ranged from singing telegrams to delivery of baked goods.

"We tried to have a list which represents the great diversity of the student body, not just in intellectual achievement (although Rhodes Scholars were invited), but also in arts and athletics. We also tried to represent the diversity of backgrounds that our students have."

What would you most like to show the Queen in the residence?

"Perhaps the very fine Coramandel screen, which was brought here in the era when Wallace Sterling was president. The rug in the dining room is a very old and valuable Persian one, with poetry woven into its surround. The paintings come from the Stanford Museum, and are from the school of Joshua Reynolds."

What worries you most about the arrangements?

"I have no special worries. We will carry out our plans in much the same manner as we always have. I am perhaps a little worried about possible demonstrators, but the University has been here a long time and it is quite used to demonstrators."

What is the lunch going to cost?

"I don't think any hostess would expect to announce the cost of a meal she was going to give, and I don't propose to do so on this occasion. That is a private matter."

What chinaware and table setting?

"I remembered that I had my grandmother's silver, and thought how excited she would be to know that the Queen had used it. What I've decided to do is to mix a number of chinaware sets—some that belong to my family, others that belong to the residence.

"It will be pleasant for people to be able to say afterwards that so-and-so set of chinaware was used by the Queen of England.

"The table is a copy of a Chippendale, and the chairs are in antique style. The flowers will be arranged by the same talented person who usually does this for us. I expect she will have spring flowers and perhaps English bouquets, but I will leave it entirely to her."

Do you expect the lunch to be rather formal?

"Oh no. The royal visitors are known to enjoy a comfortable atmosphere where people are having a good time. Our people here at Stanford include some of the most brilliant, and our students are quite uninhibited, so I am sure we shall all have a good time."

Making conversation

What do you plan to talk about to the Queen?

"One tries to avoid controversial subjects. My husband will probably do most of the talking with the Queen, while I shall be talking mainly to the Duke of Edinburgh.

"I am sure I shall have a lot in common with the Duke because he is very interested in wildlife preservation, and Don and I visited, with Stanford alumni, the Galapagos Islands, which Darwin brought to the world's attention because of their remarkable wildlife."

Do you think the guests will wonder about protocol?

"We have just had a meeting of some of those invited to discuss arrangements. Some of them wanted to know such things as when and how to shake hands with the Queen; the answer is that you shake her hand if she extends hers to you.

"Some of the ladies wanted to know what they should wear. The answer was the clothes you would wear to any important lunch.

"Music? No, with 92 people there will be quite enough noise."

No time for tour

Is the royal party going to tour the campus?

"We hoped for quite a while that there would be time for the Queen to tour the campus and be seen by everybody. Our original hope was that the royal party could drive, for example, up the new Campus Drive extension to the Medical Center, up Palm Drive, round the Oval, right through the center of campus past Hoover Tower and Memorial Church.

"That is all a fond hope which won't be possible because of timing problems."

—Donald Stokes

Theresa Rhyne's collages shown

Collages by CIT long-range planner Theresa Marie Rhyne will be shown Feb. 28 to April 28 at the Palo Alto College Terrace branch library, 2300 Wellesley Street. Her work may also be seen throughout the year at the Old Town Art Center in Los Gatos.

Rhyne will attend the International Design Conference in Aspen, Colorado, later this year.

Petition to Committee on Research questions weapons work

Following is a Jan. 7 petition to Prof. James D. Meindl, chairman of the Committee on Research from 15 members of the SLAC faculty concerning nuclear weapons-related research at SSRL.

Background

It has come to our attention that SSRL, the Stanford Synchrotron Radiation Laboratory, has received and will soon be reviewing a proposal to build a new facility at SPEAR (SLAC) for work partially related to nuclear weapons tests.

We first became aware of this proposed work through a FY 1984 Budget Request by the Lawrence Livermore National Laboratory (LLNL) to the Department of Energy. . . . The facility which is to be added to SPEAR will be called the X-Ray Calibration and Standards Facility. Of the $6.35 million to be funded, roughly $5 million would be spent at SSRL over a period of three years for parts of a building, klystrons, magnets, two beam lines and four experimental ports.

To clarify our understanding of these activities, we invited Prof. Arthur Bienenstock, director of SSRL, to a SLAC faculty meeting on Dec. 16. At this meeting, Bienenstock gave us some information on the contents of the proposal which he had recently received.

The proposal, which has not been made available to us, was submitted jointly by the Lawrence Livermore National Laboratory (LLNL), the Los Alamos National Laboratory (LANL), the Sandia Corporation and members of the University of California faculty. It will be reviewed by an SSRL Review Panel in January, 1983 and Bienenstock informed us that a decision is expected within this month.

The work proposed for the facility contains a variety of projects and experiments, some of which are clearly identified as support tests for nuclear weapons research programs. We have been told that the proposal requests that 50 percent of the experimental time be allocated to the National Laboratories and 50 percent to the University of California groups.

This allocation is different from the allocation recently established by the guidelines of the Committee on Research for the SSRL-Exxon line which specifically reserves one-third of the experimental time for general use. Furthermore, it is our understanding that after the proposal is approved, time allocation and control of how the beam line is used will be in the hands of the proponents for a period of three years, without any SSRL review.

Undesirability of Nuclear Weapons Work at SLAC

While SSRL has clearly spelled out that research proposed and to be performed on its beam lines cannot be classified and must meet Stanford University's rules on proprietary research, quality of scientific work, etc., we believe that work motivated by and related to nuclear weapons on the SLAC site is both inappropriate and undesirable.

We wish to express this conviction while fully realizing that SLAC and SSRL have separate administrations. We have several reasons for this: some are fundamental while others have to do with our image in the outside world.

a) Fundamental Reasons

One of the features that has made work at SLAC so satisfying and successful has been our central motivation: pure research for the pursuit of fundamental knowledge and presumably for the betterment of mankind. While it is true that scientific knowledge can often have military spinoffs, the intent of our work here is to understand the fundamental laws of nature and not to help make better nuclear weapons.

Whether one feels strongly about contributing or not contributing to the development of nuclear weapons is of course a personal question. As a practical matter, however, if the nuclear weapons work is confined to a small group operating under a single principal investigator, one has the option as an individual to divorce oneself from it if one does not wish to contribute to it.

This option, on the other hand, does not exist for a large number of individuals at SLAC. Indeed, anybody who does theoretical or applied work related to operating, maintaining or improving the linear accelerator to fill the SPEAR storage ring with electrons, or work related to operating, maintaining and improving this storage ring to produce synchrotron radiation, has no choice but to contribute directly to the proposed nuclear weapons work.

This marked departure from our present mission is of serious concern to us because it will pose serious conflicts to some fraction of the 1,400 or so SLAC employees and might create morale problems. While one could argue that unhappy individuals always have the option of leaving the laboratory, it is also the case that when they came to work at SLAC, nuclear weapons-related work was not part of the program here. The sudden use of equipment and facilities for a purpose so different from the original mission of the laboratory seems to violate an unspoken agreement, even if it is not spelled out as written University policy.

b) Image Reasons

In all its history, SLAC has been a single-purpose laboratory. The fundamental research done here has not only been the source of much pride for our staff but it has created an image of our laboratory in the outside world.

For years, we have been able to tell visiting school children, students, engineers, scientists, laymen and the press that we are there to do basic research on the fundamental properties of matter and that we do not do any military work. We have always been able to answer the question whether we do work related to nuclear weapons by a clear "No." It would be most unfortunate if, as a result of this new work, we could no longer make this statement in good faith. Sooner or later, our involvement in this work will become known in the outside world and it will change our image. At best it will just tarnish it, at most it may have unfortunate practical repercussions which could hurt the laboratory.

For all the above reasons, we would like to strongly recommend that proposals to conduct nuclear weapons-related work not be authorized on the SLAC site.

Issues and Request for Action

We would like to make clear that our intent in this letter is not to oppose nuclear weapons-related research in the United States but to oppose its being done on the SLAC site, as a function of the laboratory. We do not wish to restrict the activities of SLAC staff as individual consultants.

We understand that a parallel proposal is being presented to the National Synchrotron Light Source (NSLS) at Brookhaven National Laboratory. Indeed, it would seem feasible for NSLS to also accommodate the fraction of work devoted to nuclear weapons research in the SSRL proposal.

Hence, preventing the work from being done at SLAC would not make it impossible for the government to get the information it wishes. However, any approval of work at SLAC specifically motivated by and dedicated to nuclear weapons research would create a situation which could only open the door to further and deeper involvement.

Whether the above solution is feasible or not, we believe that the issues we have raised in this letter should be thoughtfully examined by the University before the proposal submitted to SSRL proceeds any further. We request that your Committee on Research review whether research explicitly dedicated to nuclear weapons tests and instrumentation, whether classified or not, should be conducted on the SLAC site, or for that matter on the Stanford campus.

Any Jazz fans out there?

Jazz is an important, indigenous art form of the United States. There are many of us on campus that follow various aspects of this rich American voice. We are interested in finding out how many others there are on campus who might privately appreciate or even participate in jazz.

Those who connect with this statement please send a note explaining the extent of your interest—including which period of jazz, and, your status at Stanford (Faculty/Staff/Student). Send to JAZZ, Nathan Cummings Art Building, Stanford.

Letters to the editor

Everyone should bear overhead

Editor, *Campus Report*:

President Kennedy's recent report to the Academic Council concerning indirect costs is disappointing, because once again the subject is not really indirect costs in the University—only indirect costs on **sponsored research** in the University.

Once again we are led through the intricacies of cost pools, A-21, carry-forwards and the like; but no mention is made of the most fundamental characteristic of the system—namely that the University deploys a massive and sophisticated accounting process to collect indirect costs on outside sponsors' money, while continuing to budget and spend its own academic funds (tuition, gift and endowment income) in a manner that removes and even hides the realities of indirect cost from the deans, departments, and faculty who budget and spend those funds.

University overhead rates are said to be a political problem in Washington. Might this not have something to do with the fact that agency officials in Washington see the University aggressively collecting every last percentage point of overhead from government funds, while completely ignoring any concept of an overhead or indirect cost rate in budgeting and spending their own University funds?

Indirect costs are also said to cause problems in "faculty competitiveness." Might this in part also be a problem in faculty morale, when faculty members who raise sponsored funds to carry out their academic activities must confront the reality of indirect costs immediately and directly, while knowing that other colleagues who use University funds are totally buffered from indirect cost considerations?

Could it be, finally, that the recurring cycles of budget crises in which the University seems to find itself have something to do with the fact that indirect costs are not visibly or directly or immediately involved in the budgeting and planning of every single dollar spent on campus, by every single individual who budgets or spends such dollars?

To say it once again, the only effective way to make everyone equally aware of and concerned about indirect costs is to make **everyone** pay the overhead that supports those indirect costs.

Huh? Cohn's letter draws a response

Editor, *Campus Report*:

I'd like to comment on Robert Greer Cohn's letter, published in your issue of February 2. If you publish this letter, please headline it "Huh?".

Another word about headlines: His read, "Do computers add glibness to writing?" Though delightfully absurd, that headline also "says" a great deal about the concerns of his letter. Who would ask such a question? And why?

We must wink at Professor Cohn's expedient lumping of "scientists" and "humanists." After all, bad science and bad humanities (humanism?) usually are distinguishable, one from the other. On the other hand, good science and good humanism (humanities?) often are tough to pigeonhole; you don't know which they **are**, but you know they're **good**. I suggest that the good, more often than the bad, is created and performed by people who, consciously or not, have learned to make rather clear discriminations among "event, sign, symbol, word, fact, form, content, meaning, theory, truth." We may not know what those words, or the things they represent, **are**, but it behooves us to know they are **distinguishable**. That is trivially obvious, crucially important, meaningless, or some combinations thereof.

Thank you for publishing Professor Cohn's letter. Thank you, Robert Cohn, for writing it.

Mark Barnett
Programmer of Computers
SLAC

P.S. This letter was processed by a computer. There I was, pecking away, and it just happened.

Brittle books challenge librarians—valuable works literally crumble

Brittle books pose a growing challenge to librarians nationally, according to Sally Buchanan, conservation officer for the Stanford University Libraries.

In 1979, a survey of the 1.5 million volumes in the humanities and social sciences at Stanford's Green Library showed that 22 to 32 percent had become so brittle they required conservation attention.

The U.S. Library of Congress has estimated that up to 30 percent of its collections have become embrittled.

The problem originated around 1850, when world-wide demand for paper far exceeded the availability of rags then used for its production. Conversion to wood pulp required chemicals and sizings resulting in an acidic product.

Now librarians find that valuable holdings in 19th and early 20th century scholarship are literally crumbling before they can be saved.

The Library of Congress has established a *National Register of Microfilm Masters* to provide information about books already filmed, a process which costs about $40 per volume for those which have become brittle.

The Research Testing Office at the Library of Congress also is working on mass methods of deacidifying books before they become brittle.

The most promising process, according to Buchanan, uses diethyl zinc in a vacuum chamber.

Extensive testing of this method is now being undertaken at the Goddard Space Flight Center of the National Aeronautics and Space Administration. Stanford, Columbia and Yale have contributed books for this study, as have the National Archives, the New York Public Library, and the Northeast Document Conservation Center.

The target cost for deacidifying books on a mass basis is $3 to $5 per volume.

A national committee of publishers, paper manufacturers and librarians headed by Herbert Bailey, director of the Princeton University Press, has published standards for paper quality to be used in new books intended for permanent retention.

Paper manufacturers can produce high quality alkaline paper, which may even prove to be less expensive because of reduced Environmental Protection Agency restraints on its manufacture.

At Stanford, the brittle books program organized in the Libraries' Conservation Office concentrates on brittle materials which circulate, those which curators determine are unique, and those identified by library staff or users as requiring attention.

Once identified, these books are searched for other copies or editions in the libraries' current holdings. Standard reference works are checked for information about reprint editions or microcopies. If no commercial replacement is available, the Conservation Office may microcopy, photocopy, box or withdraw the volume from circulation.

Cooperative preservation programs have been initiated by the Research Libraries Group and the Association for Research Libraries. These include cooperative microfilming projects and an on-line index of master negatives.

"If 20 libraries could each save 2,000 different volumes a year, in a decade much would have been preserved," Buchanan notes.

Sally Buchanan

"But research libraries and their university faculties and curators must be willing to analyze carefully which materials are truly worth saving, and which can be allowed to deteriorate deliberately as part of a total collection conservation plan.

"Phased deterioration involves difficult choices about what should be allowed to disappear and, of the rest, whether to save only those items of great artifctual and aesthetic value or those of purely intellectual value.

"Given that not everything can be saved, a balanced approach—guided by those who are experts in scholarly fields and in library conservation—will make sensitive and objective inroads in the preservation of the vast numbers of brittle materials held in this country's research libraries."

Sabbatical leave is often a bittersweet experience

A sabbatical leave is often undertaken to further professional growth and development. It can be an enriching, rewarding experience.

However, it's important to put the sabbatical leave in perspective. It is not a magical time or a perfect time. Problems occur just as they do at any other time in one's life. Awareness of the potential for problems enhances rather than detracts from the sabbatical leave.

These were some of the conclusions from the workshop, "Sabbatical Leave, a Bittersweet Experience," sponsored by the Stanford Help Center last month.

The workshop included a panel which consisted of Prof. Bernard Siegel, anthropology; Charlotte Siegel, social worker at Counseling and Psychological Services; Tim Hayes, physicist at Xerox Corporation, and Linn Hayes, social worker at Stanford Help Center.

The need for preplanning was suggested to ease the transition process—that is, the leave-taking and settling into a new environment and routine. The amount of preplanning will vary according to the individual and his needs.

Each person going on sabbatical should participate in the planning process (spouse, children, significant other, and the person granted the sabbatical). Each must assess for himself or herself the costs, the gains, and what he or she personally hopes to derive from the experience.

The need to be flexible is as important as the need to preplan. Nothing ever goes exactly as planned, and one constantly has to make adjustments in daily life. At home we do this automatically, but somehow these adjustments seem more disorienting on sabbatical.

It is important to express one's negative and positive feelings about an impending sabbatical leave. There is a great deal of validation for positive feelings, but little or none for the negative and ambivalent ones that are both normal and inevitable. Voicing these feelings frees one to more fully participate in and enjoy the sabbatical leave.

McPherson gift for journalists: 20 computers

Stanford journalism students will work in an environment similar to the most up-to-date newspaper city room with the installation this month of a Computek computer system consisting of 20 keyboard-terminals and two high speed printers.

Made possible by a gift from members of the McPherson family, pioneer Santa Cruz newspaper publishers, this equipment is the first step in planned complete modernization of the Department of Communication's journalism, broadcasting and film teaching facilities. Lillian McPherson Rouse of Watsonville, Dr. Mahlon D. McPherson, and Fred D. McPherson, Jr., her brothers, joined in making the gift.

"The importance of this gift cannot be over-emphasized," said Prof. Henry Breitrose, chairman of the Communication Department.

"It brings state of the art technology to Stanford journalism instruction in an area where we previously have lagged badly. Now our students will be trained not only in the analytical and reportorial aspects of journalism, but also in the practical techniques that prospective employers are increasingly coming to require," he said.

Prof. Lyle Nelson, director of the Knight Professional Journalism Fellowship program and Thomas More Storke Professor of Communication, emphasized the importance of having the McPherson name associated with the Stanford department.

"It's one of the oldest family ownerships in California newspaper publishing. We're delighted that the McPherson name will continue to be associated with journalism in California and the West, in this case in the training of future reporters, editors and managers," Nelson said.

Medical Center MEMO

M.D.s' cosmos course finds exobiology alive and well

Physicians and biomedical scientists who attend Stanford University's annual course "Basic Science for Clinicians" will be in for a special treat Feb. 26 and 27 in Fairchild Auditorium.

After a week-long review of medical science on earth, the doctors will be exposed to a minicourse on "Life in the Universe," particularly the controversial search for extraterrestrial intelligence now sponsored by the National Aeronautics and Space Administration (NASA).

The special course has been organized by Dr. Edward Rubenstein, associate dean for postgraduate medical education, and Dr. John Billingham, chief of the Extraterrestrial Research Division at NASA's Ames Research Center in Mountain View, Calif. It is open to physicians and non-physicians, and tuition is charged.

Why should a course about life in the cosmos interest a group of medical specialists?

Out in the boondocks

By any yardstick earth is but a minor planet of a below-average star in the galactic boondocks, goes the reasoning. As far as science goes, life is simply the end result of a batch of chemicals excited by a star's energy and mixed in a certain way. If life can exist on earth, it can occur elsewhere.

"A course for clinicians shouldn't necessarily restrict the discussion of recent scientific advances to those issues directly connected with medical science," said Rubenstein. "Physicians have strong interest in areas of research beyond medicine, especially when they have deep biological relevance."

The program Feb. 26 will begin at 9 a.m. and will cover these topics: "The Biogenic Elements of Compounds: From Stardust to Planets," "The Search for Other Planetary Systems," "Chemical Evolution and the Origin of Life," and "The Origin and Evolution of Molecular Asymmetry."

Speakers from NASA-Ames Research Center will include Billingham; Sherwood Chang, chief of Extraterrestrial Research Division; and James Lawless of the Chemical Evolution Laboratory. The Stanford speaker will be William Bonner, professor of chemistry. (*Editor's note: Prof. Ronald Bracewell of Stanford's department of electrical engineering and author of* The Galactic Club: Intelligent Life in Outer Space, *originally listed on the program, will not appear because of illness.)*

The program Feb. 27 will deal with "Precambrian Biology," "The Evolution of Complex Life," and "The Search for Extraterrestrial Intelligence."

Speakers include Harold Klein, director of Life Sciences at NASA-Ames Research Center; Kevin Padian, assistant professor of paleontology at the University of California, Berkeley; and Bernard Oliver, retired vice president for research and development at Hewlett-Packard Corporation, Palo Alto.

Stanford is an especially appropriate locale for the course, Billingham said, "because of the many faculty links here."

It was Nobel Laureate Joshua Lederberg, now president of Rockefeller University, who back in the fifties coined the word *exobiology*, the search for extraterrestrial living organisms.

Lederberg's colleagues designed devices that would study chemical events on other planets, including possible life forms. They served as principal researchers on the Viking 1975 lander imaging team and the 1971 Mariner Mars mission.

"Physicians have strong interest in areas of research beyond medicine."

—Edward Rubenstein

"There's the innate curiosity that I think all human beings have about their own existence, their origins."

—John Billingham

Some of the instruments they designed are now used in the fields of biology and medicine.

Prof Allen Peterson of Electrical Engineering at Stanford is currently involved with NASA's Search for Extraterrestrial Intelligence program (SETI), according to Billingham.

Prototype machine

Peterson, he said, is building a special machine called a Multichannel Spectrum Analyzer to aid in the detection of radio signals that might be transmitted by other civilizations out in the galaxy.

"We don't know what frequencies to look for," Billingham said, "but we do know there's a region of the spectrum that's best to start in, called the Microwave Window."

This is a huge region with 10 billion channels, according to Billingham. There is no machine that can listen to so many separate channels all at once. To reduce the odds, a prototype 74,000 channel analyzer is being built in Peterson's laboratory. Using a sophisticated data processing system, the machine will aid SETI scientists in distinguishing radio signals which occur naturally in the galaxy from any that might be artificial.

After the prototype machine is tested, Billingham estimates that in five years six machines capable of distinguishing signals from 10 to 100 million channels will be built. They will be hooked up to radiotelescopes in California, Puerto Rico, Spain and Australia which are now tracking the Pioneer and Voyager missions that flew past Saturn and Jupiter.

The new SETI research, by conservative estimates, will be a million times more extensive than all other searches for space signals combined, he said.

Despite skeptics who doubt that extraterrestrial intelligence exists, Billingham asserts that the search is justified on its scientific merits. This is why the National Academy of Sciences and the International Astronomical Union

Hemodialysis proves beneficial to some lupus patients

Margie Sterner has nothing good to say about steroids.

"You bloat up like a fat pig when taking those drugs," said the slender, 35-year-old Foster City woman. "I never want to go back to them."

But until 1978, Sterner was dependent on large doses of the steroid "prednisone" to control her lupus erythematosus, a disease of the immune system that can lead to severe joint pain, loss of hair, and damage to the heart, liver and kidneys. When the illness severely damaged her kidneys, traditional therapy suggested that her already high steroid dose be upped even further.

Instead, under the direction of her doctors at Stanford University Hospital, Sterner stopped taking prednisone and began hemodialysis, an unorthodox treatment for lupus patients. Within a few months, her kidney disease subsided without the use of steroids.

Simultaneously, most of Sterner's lupus symptoms disappeared, though Dr. Robert Swenson, associate professor of medicine at Stanford, emphasized that the timing of the onset of dialysis and remission in lupus were not causally related.

Sterner is one of 28 patients with lupus and severe kidney failure that Swenson and Dr. Norman Coplon, a clinical faculty member, have studied in the last 13 years.

Results of the research, published in the Jan. 27 *New England Journal of Medicine*, point to hemodialysis as an unforeseen option in dealing with the double curse of lupus and renal failure.

Although hemodialysis is a routine treatment for most patients whose kidneys fail, most physicians have spurned its use in lupus patients because of expense and an assumption that the physical and psychological burden of dialysis would do more harm than good to a patient already suffering from chronic disease, Swenson said.

But the Stanford study showed that the lupus patients responded well to dialysis. Eight of the patients showed enough improvement in kidney function that they could be weaned from hemodialysis—some for long periods of time.

"What we're trying to do is to get physicians to stop giving prednisone to these patients once they reach a certain point in their renal failure," Swenson said.

"Previously, physicians were working so hard to beat renal disease with prednisone that the patients succumbed to severe infection."

Prednisone is a valuable tool when physicians seek to "turn off the immune system," said Swenson. Recipients of heart and kidney transplants, as well as patients whose diseases stem from an overzealous immune system, can benefit from the drug. But, by stripping away the immune defenses, high doses of prednisone leave patients dangerously vulnerable to infections, and other side effects such as brittle bones and fluid retention.

Like Sterner, 25 of 28 patients in the study lost their lupus symptoms subsequent to the blood cleansing.

"However, we are not in any way suggesting that dialysis be considered as a treatment for lupus," Swenson said. "Hemodialysis only removes waste products of renal failure. It doesn't remove lupus toxins."

Why the lupus symptoms disappeared remains a mystery, Swenson said, though the mechanism probably relates more to a chemical by-product of severe kidney failure than to dialysis.

About 110,000 Americans suffer from lupus, which most often affects women in their 20s and 30s. Only a small fraction of those, Swenson said, experience severe kidney failure, and would be candidates for hemodialysis.

—Deborah Franklin

Volunteers in medical research: why do they do it?!

BY LISA AMES

In one clinical study at Stanford, volunteers are instructed to have a little more ice cream, cookies, and soda than they're used to for about three days before coming in.

"The high carbohydrate intake primes the pancreas for optimum response to our metabolic testing," explained Dr. Mark Rosenthal, associate investigator in gerontology.

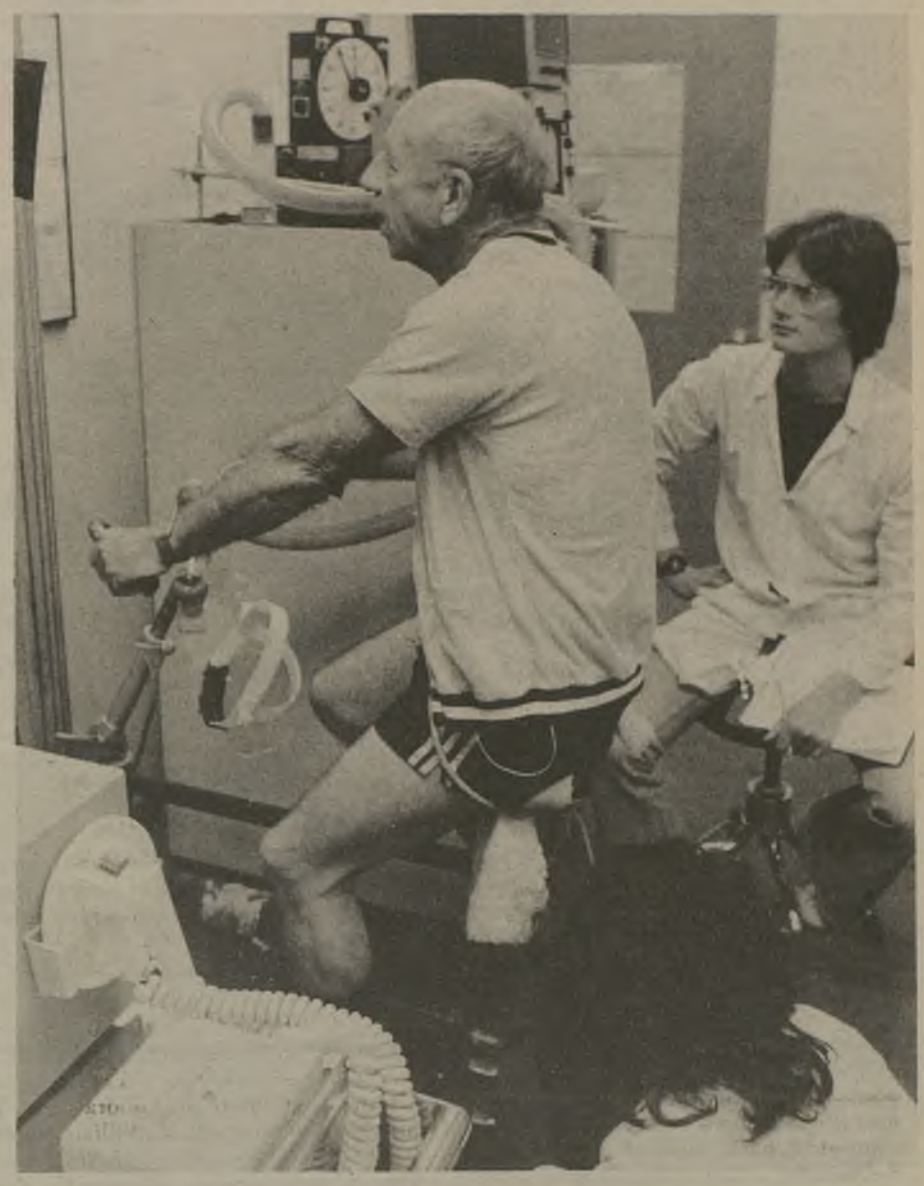
"But some of our volunteers hesitate to comply, since they're very concerned with their weight and health." Rosenthal is studying the relationship between metabolism and physical conditioning in the elderly, by comparing the glucose tolerance of sedentary and athletic older men.

Why do these men, healthy and active with many other things to do, bother to join a study that requires them not only to eat foods they don't want, but spend two nights and two mornings in the clinical research center (CRC) at Stanford?

And what prompts participants in the Medical Center's many other clinical studies to make that first call to researchers in which they generously offer their time and energies?

The answers vary, say both researchers and volunteers, depending on the nature of the study, benefits to participants, and other factors.

"In our study," said Rosenthal, "the well-conditioned men seem to want to prove the benefits of their active lifestyles, while the sedentary ones are curious, and have altruistic reasons for participating in medical research."



Altruism—and the wish to do something important with their lives—is often a motivation, concurred investigators, especially with elderly and well-educated volunteers.

"I have a pacemaker, and I figure that somewhere along the line someone volunteered for research that made this possible," explained Eleanore Evans, a recent volunteer for the control group in a diabetes study. "Now if I volunteer, maybe someone else will benefit in the future."

Dr. George Liu and his associates conduct many studies on the various treatments of diabetes, under the direction of Dr. Gerald Reaven at the CRC. Many people who volunteer for control groups, Liu said, are Stanford-affiliated and, knowing first-hand the difficulties researchers face, "want to help us out."

Diabetic volunteers, he said, are often unhappy with treatments they've received thus far, and come to the study hoping to find something better. "They frequently become much more informed about their role in controlling the disease after joining us," Liu explained, thanks to the intensive teaching provided by researchers during testing.

"And they keep coming back for other studies," he added.

An enthusiastic volunteer for a study on physical conditioning, Mr. Tom Donovan has his aerobic fitness tested while "riding" a bicycle ergometer at the Stanford Heart Disease Prevention Program. Research assistant Kurt Mueller (a Stanford University undergraduate) measures Donovan's oxygen consumption as his workload and exertion increase. The volunteer's blood pressure is monitored throughout. Volunteers like Donovan join clinical research projects in large numbers for a variety of reasons, ranging from altruism to the benefits of medical testing.

The studies that compensate volunteers are generally those in which no other personal benefits are offered. Often, for example, a study will provide its volunteers with a whole battery of medical tests and evaluations free of charge—an incentive that plays a large role in recruitment.

Liu, a physician specialist in the Division of Endocrinology, said some of his volunteers are people who have very early diabetes or lipid metabolism disorders, and the early screening and detection provided by the studies attract them.

Evans said she suspected she might have hypoglycemia when she first volunteered for the diabetes study. "But I found out I was fine and the doctors told me what I could do for the symptoms."

The investigators, she said, were very good about discussing her concerns and spending time with her. She said she probably wouldn't hesitate to call them again if she had a medical problem.

"We do build friendships with many of our volunteers and their families," said Liu.

He said all the studies his group conducts ask variations on the question: how much and in what combination will certain specific therapies help in controlling diabetes? Every protocol has its own time frame, he said, at the end of which the researchers evaluate how much improvement was made and what the next step should be.

What about risks to the volunteers? Under guidelines set by Stanford's medical committee for the protection of human subjects in research, volunteers for clinical studies must give "informed consent" as a requirement for participation.

Kathy Turner-Tamiyasu, R.N., now nurse manager of the gynecology/obstetrics clinic, previously held a position as research nurse in the Division of Clinical Pharmacology, under the direction of division chief Dr. Terence Blaschke. Ongoing research there examines age-related changes in the liver clearance of drugs metabolized by different pathways.

"It's not a dangerous study," she said, "but there *are* some risks associated with the drugs administered to volunteers."

The study includes compensation for the week a volunteer must spend in the CRC. "I found the money was the most common motivation," Turner-Tamiyasu said, adding that this could interfere with the informed consent process.

"People would decide in their own minds that they wanted to participate. So sometimes I felt they weren't listening attentively when I'd explain the details."

She described a similar interference that would occur when volunteers—especially older ones—had a "blind trust" in the medical establishment.

Turner-Tamiyasu also met people who needed a change in routine for a week, or to get away from a difficult personal situation. Some volunteers, she remembers, went so far as to spend their vacation time participating in the study—out of curiosity, perhaps, or because they needed the money.

"There's often an interplay of several motivations in the same individual," she said, adding that "clinical research is a very rough job. There's so much to go through with each person."

It starts with the initial screening, when potential volunteers first call the number they've probably read in a newspaper, heard on the radio, or obtained from a referring physician.

We ask for a medical history," said Liu, "and look for certain criteria. Usually we get a far greater response than we need, and less than half the people who call end up in the study."

Turner-Tamiyasu said she never had too many phone inquiries, since "most we had to screen out right away. In the whole time I probably recruited 100 people, after talking to about 500."

After the phone call, if the volunteer sounds right, a meeting takes place for further explanation and physical examination.

At any point during screening or even during the study, Turner-Tamiyasu explained, volunteers are free to change their minds about participating. "Or sometimes during the physical exam something is found that disqualifies them that they didn't even know about."

But most volunteers who stick with clinical research end up feeling pretty good about it, whatever their initial motivations. They've helped others, and it's likely they've also helped themselves.

Ed Souza, photographer with the Stanford University News Service, was generally concerned about the state of his health when he volunteered for one of Liu's studies last summer. "I seemed to fit the criteria they were looking for since my father had had adult-onset diabetes," he recalled.

Souza thought he might have the disease, but instead he left the study reassured "that I still belonged in the control group." Meanwhile, he'd helped researchers gather data important to bettering treatments for those less lucky.

William Watson

D. Craig Miller

Gordon Ringold

Faculty promotions at the Medical School

Dr. William Watson became a full professor and two of his Medical School colleagues received tenure by action of the Board of Trustees last week.

The new associate professors are Drs. D. Craig Miller, cardiovascular surgery; and Gordon Ringold, pharmacology.

Watson completed his residency in dermatology at Stanford in 1970 and then joined the faculty here in that field as an assistant instructor. After a brief absence serving on the faculty of the State University of New York, Downstate, Watson returned to Stanford. He became an associate professor of clinical dermatology in 1978.

He has pursued clinical research into the treatment of herpes, psoriasis and other ailments.

Last year he received the Arthur Bloomfield Award for Excellence in Teaching of Clinical Medicine at Stanford. In 1976 he was granted the Kaiser Award for Excellence in Teaching.

Miller received his M.D. training at Stanford. He joined the faculty in 1978, and currently serves as director of the peripheral vascular surgery division of the Department of Cardiovascular Surgery and as chief of the cardiac surgery section at the Palo Alto Veterans Administration Medical Center.

An active researcher, Miller is internationally recognized as an expert on the treatment of aortic aneurysms and of peripheral vascular disease. Current research includes a federally sponsored project entitled "Ventricular Dynamics from Surgically Inserted Markers."

Ringold is also internationally recognized for his research efforts. His primary area of interest is steroid hormones, which are important for treatment of arthritis, other inflammations, metabolic diseases and certain cancers.

He received his Ph.D. in microbiology from the University of California at San Francisco in 1976 and then served at his alma mater as a postdoctoral fellow. He joined the Stanford faculty as an assistant professor in 1978.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, FEBRUARY 16

Progress in Medicine Lecture Series: "Who Shall Live? Progress and Ethical Dilemmas of Intensive Care"—a community outreach program sponsored by SUMC. First of a six-part series scheduled for Wednesday evenings at 7:30 p.m. in Fairchild Auditorium. Tonight's topic, after an introduction by Dr. James Silverman, is "Intensive Life Support Systems: Present Practice and Moral Issues," with Dr. Thomas Raffin. For further information call the Office of Public Events, at 497-6389.

Div. of Hematology Noon Conference: "Erythropoetin in Red Cell Development"—Tanya Weiss, Ph.D. (Univ. of Chicago). Noon, L201.

Basic Science Research Colloquium: "Sex and the Single Worm: Reproductive Biology of Schistosome Parasites"—Dr. Paul Basch. 5 p.m., Fairchild Auditorium.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Artificial Intelligence Consultation System for Clinical Oncology"—Dr. Edward Shortliffe. 4:15 p.m., McCullough 134.

THURSDAY, FEBRUARY 17

Div. of Plastic and Reconstructive Surgery Lecture: "Salvage for Stage IV Oral Cancer"—Dr. Robert Ryan (Tulane University). 4 p.m., M112.

Dept. of Pharmacology Seminar: "Induction of Rat Liver Glutathione S-Transferase B and Cytochrome P-450 by Xenobiotics: Analysis of mRNA Levels Using cDNA Probes and *In Vitro* Translation"—Dr. Cecil Pickett (Merck Institute for Therapeutic Research, Rahway, NJ). 4:15 p.m., R358.

Dept. of Medicine Grand Rounds: "Vasodilators"—Dr. Ferid Murad. 8:30 a.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "The Role of Cations in the Interaction of RNA Polymerase with DNA"—Dr. M.T. Record (Univ. of Wisconsin). Noon, M316.

Dept. of Structural Biology Seminar: "Size Regulation in Protein Homopolymers: Pressure-Jump Studies on the Length-Regulation Kinetics of Myosin Filament Assembly"—Dr. Julien Davis (Johns Hopkins University). 4 p.m., Fairchild Bldg., D102.

FRIDAY, FEBRUARY 18

Nursing Educational Services Workshop: "Selected Concepts in Surgical Nursing." 8 a.m. till 4:30 p.m., Hyatt Palo Alto. To register, call Carole Kidder at 497-6366.

Div. of Surgical Pathology Conference: "Sclerosing Lesions of the Retroperitoneum"—Dr. Jeffrey Curtis. 8 a.m., L201.

Dept. of Gynecology and Obstetrics Grand Rounds: "Mesenchymal Tumors of the Uterus"—Dr. Michael Hendrickson. 8 a.m., A336.

Dept. of Neurology Seminar: "Pharmacological Properties and Spatial Distribution of Sodium Channels in Developing Nerve and Muscle"—Gary Strichartz, Ph.D. (Harvard University). 5 p.m., Neurology Conference Room, C364.

Dept. of Pediatrics Grand Rounds: "Accidental Poisoning"—Dr. Larry Hammer. 8 a.m., M106.

FEBRUARY 21 Through 25

Office of Postgraduate Medical Education: "Basic Science for Clinicians." To register, call 497-5594.

TUESDAY, FEBRUARY 22

Psychiatry Grand Rounds: "Psychohistory of the 1970s"—Dr. Peter Carroll, historian and author of *It Seemed like Nothing Happened.* Open to all. 11:30 a.m. till 1 p.m., M104.

FEBRUARY 26 and 27

Office of Postgraduate Medical Education: "Life in the Universe." 8 a.m. till 5 p.m. Saturday; 8 a.m. till noon Sunday, Fairchild Auditorium. To register, call 497-5594.

SATURDAY, MARCH 5

Dept. of Dietetics: "Trends in Nutrition 1983—A Symposium on Marketing your Profession in the '80s." This program addresses the reasons marketing is essential to the survival of health professional careers. Fees required; early registration recommended. Presented by the San Jose Peninsula Dietetic Association. 7:45 a.m. till 3:15 p.m., Fairchild Auditorium.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

News Notes

Materials Management has moved its administrative office from Trailer A to Trailer B, announced director Ron Kepner. Purchase requisitions and correspondence to Kepner or Deb McConnell should now be addressed to this new location. Telephone numbers remain the same.

Don Olson, central distribution manager, now resides in Trailer A at 497-7979 along with Cor Tamayo, technical coordinator, who can be reached at 497-7925.

* * * *

Jane Woeckener, R.D., M.S., assistant director of Dietetics/Nutritional Services, has accepted an invitation to become a member of the Professional Services Advisory Committee for Saga Corporation. Woeckener is the first non-employee (of Saga) professional to be extended this honor.

The national group, which meets twice a year, will convene in New York this March to discuss such issues as quality assurance, standards of care, new patient programs, policies and procedures, diet manuals and guidelines, and patient education.

* * * *

A program to acquaint new employees to the Medical School is scheduled to begin Feb. 23. The first "new employee welcome" sponsored and presented by the Human Resources Group, it will be offered three times annually in January, May and September.

The intention of the new employee welcome is to provide medical school employees with knowledge of the history, organizational structure, and services available to them. A tour of the medical school and parts of the hospital is included in the program, as well as a chance to have lunch with medical school administrators.

Invitations have been sent to employees who began working at the medical school from September through December. Employees should still attend the Stanford University New Employee Orientation.

* * * *

Dr. Margaret Chesney, consultant, and Nancy Houston Miller, B.S.N., program nurse coordinator at Stanford's cardiac rehabilitation program, are among the faculty for the tenth annual cardiovascular nursing symposium on "Heart Health Education: Developments and Strategies," to be presented in San Jose by the Santa Clara County Chapter of the American Heart Association March 16.
For fees, registration, program and other information, call (408) 247-8555. Prior reservations are required.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Miller elected Society president

Robert Miller, director of pharmacy services at Stanford University Hospital, has been elected to the office of president-elect of the California Society of Hospital Pharmacists, a professional organization of about 2,100 members and 15 regional chapters.

Miller has served in his current position at Stanford since March, 1978. Before

Robert Miller

that, he served for five years as director of pharmacy and central sterile supply services at Yale-New Haven Hospital. He was also an assistant clinical professor at the University of Connecticut's School of Pharmacy.

He was president of the Connecticut Society of Hospital Pharmacists in 1975.

From 1968-70 Miller was a hospital pharmacy resident at Ohio State University Hospital in Columbus. He holds a B.S. degree in Pharmacy from the University of Kansas and an M.S. degree in Hospital Pharmacy from Ohio State.

On the Society's board of directors for the past two years, Miller will start his one-year term as president in October, 1983.

Jogging at SUMC

Stanford University Hospital has received a $5,000 grant from Wells Fargo Bank to install a jogging course and exercise stations near the Medical Center.

The Gamefield will include a jogging course similar to the Gamefield near Angell Field and the Perrier Parcourse near Lake Lagunita.

An added special feature will be a 32-foot square cluster of exercise stations.

The aim is to provide a facility closer to the medical center complex for use by medical center employees.

"Physical fitness, employee well-being and productivity, and the long-term reduction of employee health problems are the primary factors that motivated this project," said Don Thomas, director of Personnel.

The project was developed by the hospital personnel department in consultation with the Stanford Health Improvement Program, the Heart Disease Prevention Program, the School of Education graduate program in physical education, and the Department of Athletics.

Total cost of the facilities is expected to be about $9,000 in addition to the grant. The project is in design stage now, with opening planned for later this year.

Crane arrives for short visit

Monday the Medical Center greeted a 280-foot-long crane to its premises.

As tall as some 30-story buildings, the crane will be used to lift steel into the Boswell Building courtyard as part of the renovation project. It will be here through mid-March.

Though clearance will be maintained for vehicles, at least four parking spaces will be unusable during crane operations and pedestrian traffic will be limited.

Patients and others may be dropped off in the temporary loading zones. Only emergency vehicles may stop in front of the crane.

New committee to help shape Hospital's future

Formation of a Stanford University Hospital strategic planning committee to establish future directions for the hospital has been announced by Sheldon King, executive vice president and director.

"The strategic planning process will be a deliberate and conscious approach to shape the hospital's future," said King. "Changes in federal, state and other third party reimbursement systems, and increasing competition among hospitals, are making strategic planning indispensable."

The new committee will meet quarterly and provide periodic reports to the Medical Center Strategic Planning Committee and to the hospital board of directors.

Members of the committee include members of the SUH board of directors, faculty and community physicians on the medical staff, and representatives of hospital and medical center administration.

King will serve as chairman, and the committee will be staffed by Roland Merchant, director of the Office of Management and Strategic Planning.

Members of the committee are: Dr. Malcolm Bagshaw, chairman of the Department of Radiology; Dr. John Collins, chairman of the Department of Surgery; Dr. William Fielder, Palo Alto; Dr. W. Leroy Heinrichs, chairman of the Department of Gynecology and Obstetrics; Dr. Robert Hill, Palo Alto; David Hopkins, executive assistant to the vice president for medical affairs; Dr. David Korn, chairman of the Department of Pathology; and Dr. William Massy, member of the hospital board of directors.

Also, Dr. F. Burt McDowell, Menlo Park; Linda Meier, member of the hospital board of directors; Dr. Kenneth Melmon, chairman of the Department of Medicine; Dr. Jonathan Parmer, Palo Alto; Dr. Dominick Purpura, dean of the School of Medicine; David Sakai, director of Finance; Dr. James Silverman, chief of staff; Geraldine Steinberg, member of the hospital board of directors; Donald Tower, executive director of the Faculty Practice Program; and Duane Walker, R.N., M.S., director of Nursing Services.

Med faculty openings

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

Stanford University School of Medicine and the Palo Alto Veterans Administration Medical Center seek a division chief for respiratory medicine. This is a senior level position, as an associate or full professor, with responsibility for coordinating clinical, educational, and research programs at Stanford University and affiliated hospitals.

Applicants should have expertise in clinical pulmonary medicine and in ongoing and funded research programs. Send curriculum vitae, bibliography, and covering letter to: Ferid Murad, M.D., Ph.D., chairman of the search committee, chief of medicine, Veterans Administration Medical Center, 3801 Miranda Ave., Palo Alto, CA 94304.

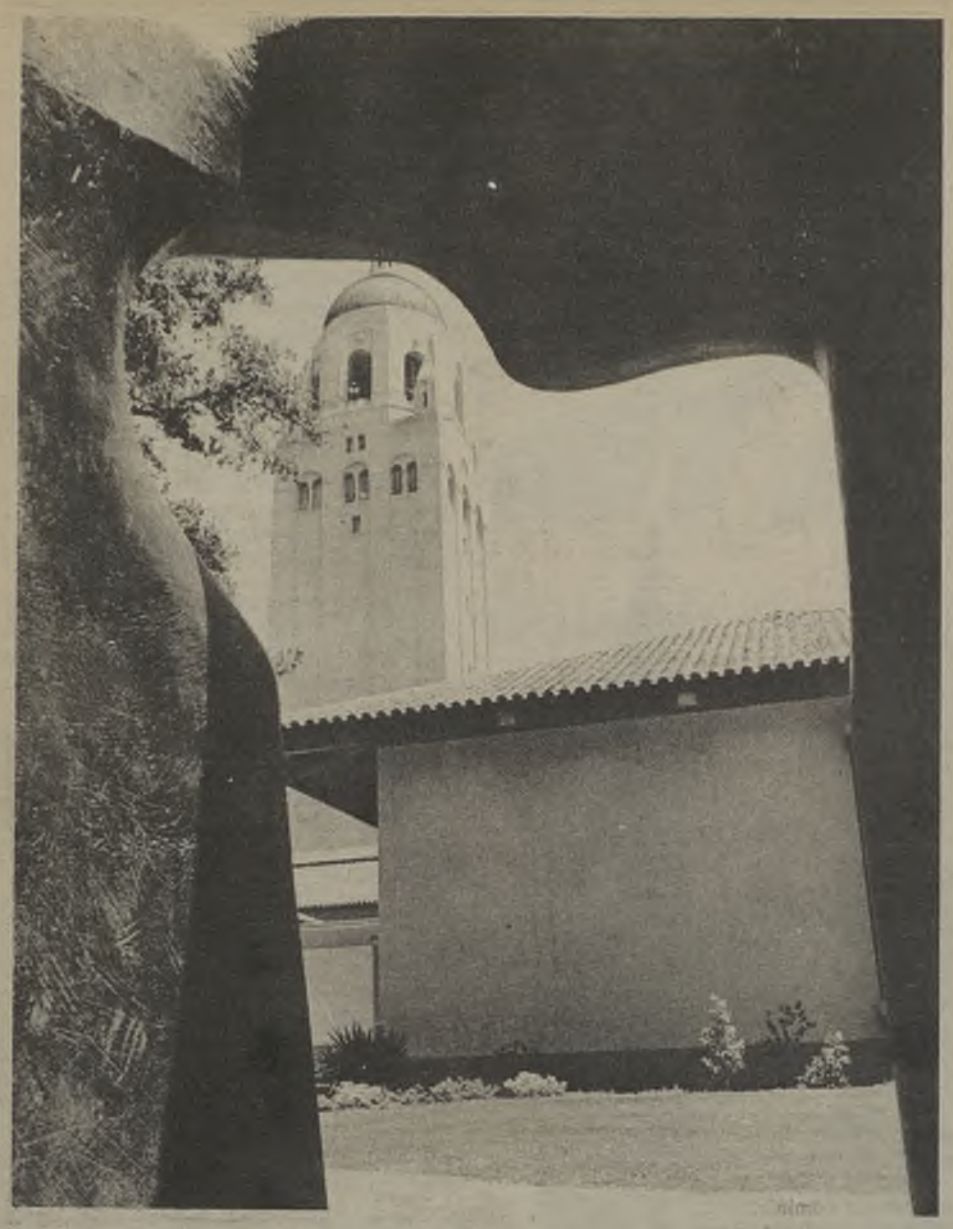
The division of plastic and reconstructive surgery at Stanford University School of Medicine is seeking an individual for a faculty position at the assistant professor level. Broad training in reconstructive surgery is a prerequisite, preferably including six to nine months of formal and separate hand surgery training, and an equal amount of time devoted to full-time research. Demonstrated ability as a teacher is desirable.

The successful candidate will be expected to devote clinical efforts to reconstructive plastic surgery and hand surgery, and to compete effectively for funds to initiate his or her own research program.

Letters of inquiry and curriculum vitae should be sent to: Lars M. Vistnes, M.D., head, Division of Plastic and Reconstructive Surgery, Stanford Uniyersity Medical Center, Stanford, CA 94305.

Exobiology. . .

continued from page 8



support the project, including the Congress which has provided initial funding of about $1.5 to $2 million a year for the next five years.

"Part of the reason for this support is based on the realization that we now have the technology to carry out a search for extraterrestrial intelligence," Billingham said. "There has been an absolute revolution in microelectronics, particularly with advances in large-scale integrated circuits and custom chips.

"And there's the innate curiosity that I think all human beings have about their own existence, their origins."

Individuals interested in enrollment information should contact the Office of Postgraduate Medical Education at 497-5594.

—Spyros Andreopoulos

Fire safety hazard closes Hoover Tower for 13 months

The observation deck of Hoover Tower has been closed to visitors because of inadequate fire safety mechanisms. It will remain closed until the University installs fire sprinklers in the tower which should be finished in March, 1984.

"There is no safe means of exit in case of a fire," said John Hughes of the Provost's Office.

The University currently is planning a $650,000 to $800,000 project to install automatic sprinklers, audible alarms, and smoke detectors in the tower. A standby generator for the elevator also may be added.

Construction could begin in September and last approximately six months, Hughes said.

Preliminary project approval will be sought from the Board of Trustees at its March meeting. If approved, detailed plans will be drawn and submitted to county officials for approval. Final approval could come from the trustees in May or June, according to Hughes.

Hughes said Hoover staff members who work in the top floors of the tower will not be barred from the building "because they know procedures that will afford them some degree of safety. Our particular concern is visitors who aren't aware of saftey procedures.

Approximately 45,000 visitors annually view the campus from the platform, which is 250 feet high.

Student guides will continue to staff an information desk in the lobby of Hoover Tower, according to Rene Cortinaz, director of the Guide and Visitors Service. Maps, booklets, postcards, and other information is available to visitors.

Two daily tours of the campus will continue to be offered by the service. They leave from the information booth at the main entrance to the Quad at 11 a.m. and 2:15 p.m. Tours of the Stanford Linear Accelerator, Art Museum, and Medical Center are available by arrangement.

Damis, Duignan see prolonged conflict between Morocco, Polisario front

Continued conflict between the Morrocan government and the Polisario national liberation front is likely to persist "for some time to come," John Damis suggests in a new Hoover Institution Press book on *Conflict in Northwest Africa: The Western Sahara Dispute*.

Little noticed in the U.S. since it started in 1975, the West Saharan conflict could become another example of "local festering wars that, left unresolved, eventually escalate into regional—and occasionally international—conflicts," he warns.

The conflict represents a fundamental struggle between two systems—a pro-Western monarchy and a liberal economy in Morocco versus an authoritarian, one-party regime and a socialist economy in Algeria. . . .

"There is little question that the Polisario movement is animated by a genuine core of. . .nationalists highly dedicated to a long and difficult struggle for an independent Saharan state. At the same time, however, the movement has virtually no material resources of its own.

"Unlike the National Liberation Front in Vietnam or the Popular Movement for the Liberation of Angola, the Polisario Front is heavily dependent on outside sources of support.

"While many outside observers have been struck by the ideological purity of the Polisario's cause, few have noted that the front would be rendered ineffective if Algeria and Libya ceased to supply military and economic aid as well as the necessities of daily life. It is one thing to capture weapons; it is quite another to produce food and purchase gasoline.

"Outside powers have only marginal influence in the Western Sahara conflict." The critical decisions have been made in Rabat, Algiers, and Nouakchott, not Paris, Washington or Moscow.

"Neither the U.S. nor the Soviet Union has anything to gain from a continuation of the military struggle in northwest Africa," he adds. Damis served as the U.S. State Department's foreign affairs analyst for North Africa between 1975 and 1977 and has visited the region in 1978, 1979, and 1981, including a visit to the Polisario camps. Damis is a political science professor at Portland State University.

In an editor's forward to the book, Peter Duignan, senior fellow at Hoover and coordinator of international studies, says the U.S. should continue to support King Hassan of Morocco.

"The U.S. requires a friendly ruler in control of the Strait of Gibraltar with a foothold both in the North Atlantic and the western Mediterranean," he adds. "The U.S. has used Moroccan territory for air bases and communications and will need to do so again if the Rapid Deployment Force is to become a reality.

"The U.S. will have to provide money, arms and food to help Morocco in the struggle against the Polisario. It is worth the price to keep Morocco friendly and stable."

New student loan program available

continued from page 1

$3,000 per year. The limit for independent undergraduates will be $2,500.

In most cases the loans are due in 10 years, but repayment begins within 60 days. Student borrowers will pay only interest until they graduate, while parents immediately begin paying both interest and principal.

CLAS will provide an "additional resource for those who have either exhausted their eligibility or are ineligible under other loan programs," according to Financial Aids Director Robert Huff.

In October 1982 a "needs test" was instituted in the federally subsidized Guaranteed Student Loan (GSL) program, requiring students whose parents earn more than $30,000 annually to justify their loan applications. Such justification will not be required for CLAS loans.

Approximately 3,800 Stanford students this year will borrow $13 million through the GSL program. The federal government subsidizes the nine percent interest payments while students remain enrolled in school. Undergraduates may borrow $2,500 and graduates $5,000 through GSL.

Students may supplement their GSL loans with loans from CLAS, as long as the amount borrowed from both does not exceed attendance costs less any other financial assistance received.

Stanford's financial aid administrators will begin processing applications after they attend a Feb. 22 workshop explaining program details, Huff said. Information about the program and applications will be available in the University Financial Aids Office.

CLAS will "help lots of parents hard pressed to deal with the rising costs of higher education," said Associate Provost Timothy Warner, who participated in the new state program.

CLAS loans will be made through financial institutions and other organizations. They will be guaranteed by the California Student Aid Commission.

Historic barn restoration project...

continued from page 1

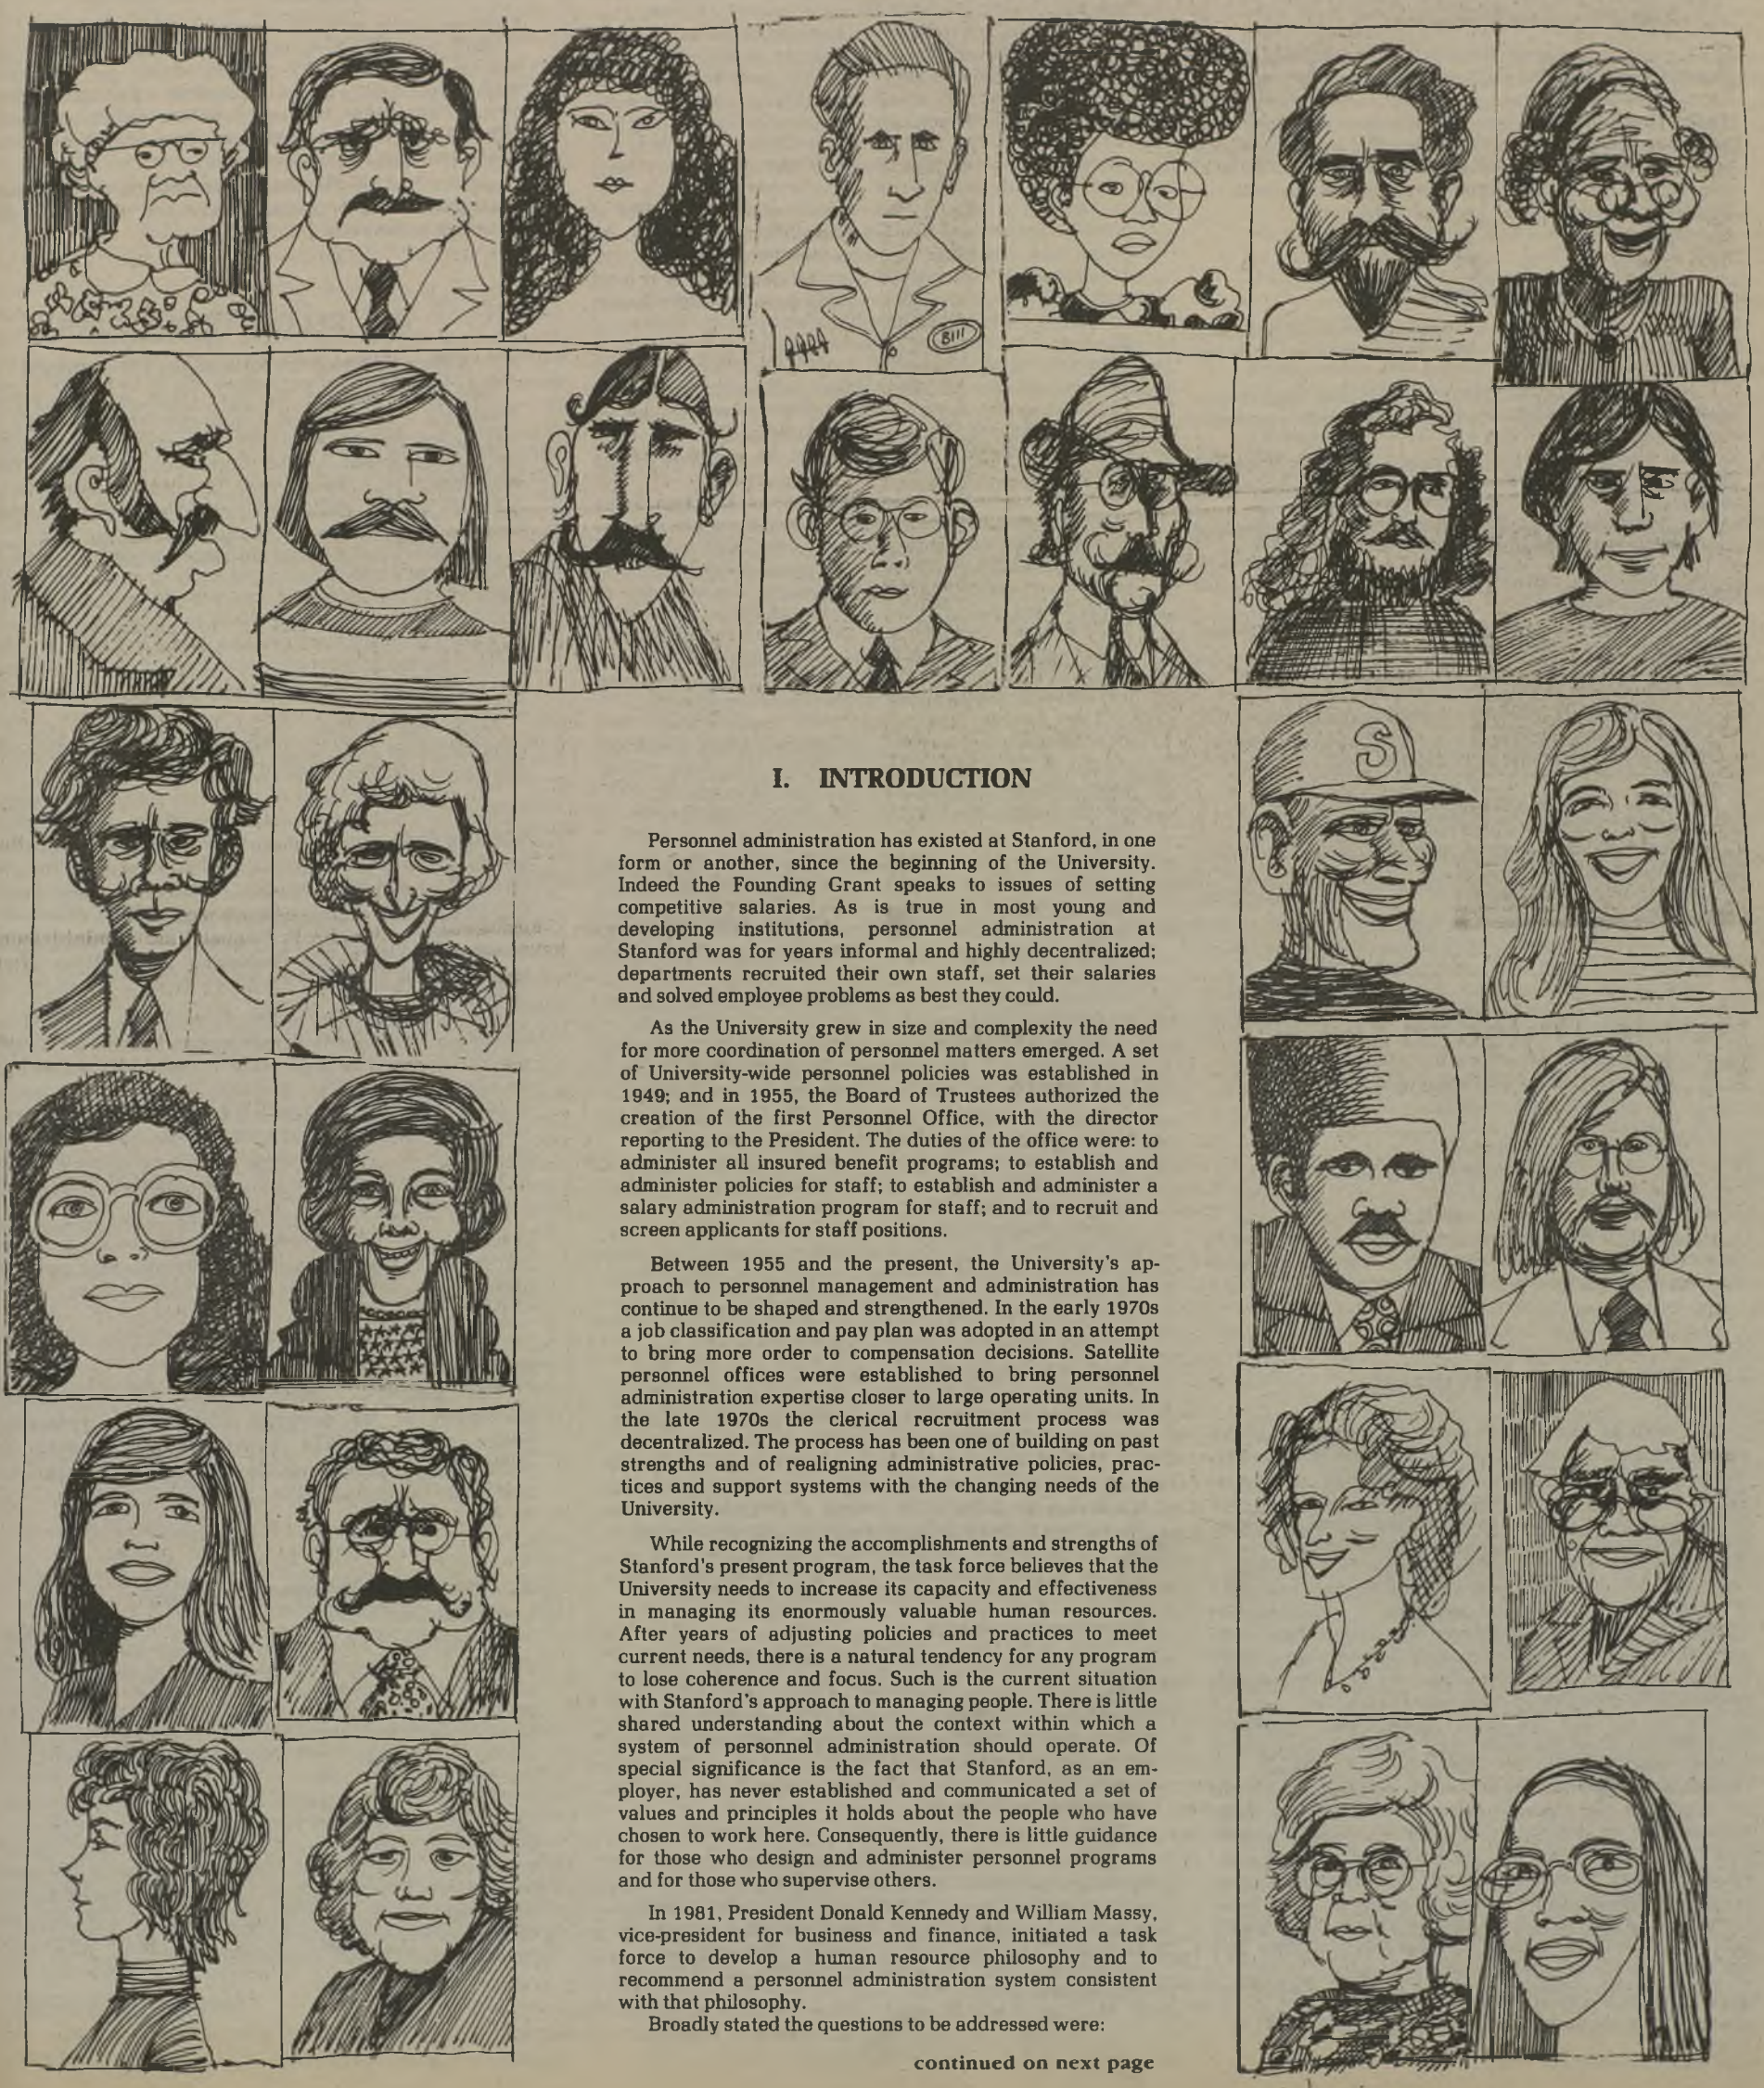
grew on hay stored in the loft.

Architectural consultants Esherick Homsey Dodge and Davis last summer told the University that the barn has sagged and the second floor walls should be straightened.

"Besides problems of dry rot, termites, and general deterioration, it is critical to entirely replace the existing wiring—it is substandard and represents a fire hazard." A new foundation is needed and the building should be painted, they said.

The barn was the training stable of the stock farm Leland Stanford built beginning in 1876 to test his innovative and controversial ideas about horse breeding and training.

Stanford believed speed could be bred into trotters by crossing them with thoroughbreds (English racing horses). He also thought breeding advances could increase the productivity of horses generally, which at the time numbered about 13 million nationwide, and that the U.S. economy would benefit as a result.



His theories about horse locomotion were tested photographically on the farm in 1878. The experiments proved a horse has all four feet off the ground at one point in its stride. This work also led to development of motion pictures. The site of the experiments was declared a California Historic Landmark in 1969. A plaque is to be placed soon by E. Clampus Vitus, a fraternal society with a long-standing interest in California history.

Between 1880 and 1895, 13 of Stanford's trotters set 19 world records, an unprecedented accomplishment that earned the Palo Alto Stock Farm acclaim as the leading horse breeding and training establishment in the world.

The farm, from which the University derives its nickname, went into rapid decline following Stanford's death in 1893. Horses were sold to support the University during the financial crisis caused by litigation over his will. The farm closed in 1903.

—Karen Bartholomew

Task Force Report on personnel policies

I. INTRODUCTION

Personnel administration has existed at Stanford, in one form or another, since the beginning of the University. Indeed the Founding Grant speaks to issues of setting competitive salaries. As is true in most young and developing institutions, personnel administration at Stanford was for years informal and highly decentralized; departments recruited their own staff, set their salaries and solved employee problems as best they could.

As the University grew in size and complexity the need for more coordination of personnel matters emerged. A set of University-wide personnel policies was established in 1949; and in 1955, the Board of Trustees authorized the creation of the first Personnel Office, with the director reporting to the President. The duties of the office were: to administer all insured benefit programs; to establish and administer policies for staff; to establish and administer a salary administration program for staff; and to recruit and screen applicants for staff positions.

Between 1955 and the present, the University's approach to personnel management and administration has continue to be shaped and strengthened. In the early 1970s a job classification and pay plan was adopted in an attempt to bring more order to compensation decisions. Satellite personnel offices were established to bring personnel administration expertise closer to large operating units. In the late 1970s the clerical recruitment process was decentralized. The process has been one of building on past strengths and of realigning administrative policies, practices and support systems with the changing needs of the University.

While recognizing the accomplishments and strengths of Stanford's present program, the task force believes that the University needs to increase its capacity and effectiveness in managing its enormously valuable human resources. After years of adjusting policies and practices to meet current needs, there is a natural tendency for any program to lose coherence and focus. Such is the current situation with Stanford's approach to managing people. There is little shared understanding about the context within which a system of personnel administration should operate. Of special significance is the fact that Stanford, as an employer, has never established and communicated a set of values and principles it holds about the people who have chosen to work here. Consequently, there is little guidance for those who design and administer personnel programs and for those who supervise others.

In 1981, President Donald Kennedy and William Massy, vice-president for business and finance, initiated a task force to develop a human resource philosophy and to recommend a personnel administration system consistent with that philosophy.

Broadly stated the questions to be addressed were:

continued on next page

Task Force Report

continued from page 13

A. Human resource philosophy

1. As an employer, what values and principles does Stanford hold about the people who work here?

2. How can those values and principles be expressed so that they will inform personnel administration, planning, and budgeting at Stanford? How can they provide guidance to all employees in their relationships with Stanford and to supervisors and managers in their relationships with the people they supervise?

B. Personnel Administration

1. To what extent is the present system of personnel administration consistent with the conclusions reached above?

2. Given the above, what changes are suggested to make personnel administration at Stanford more responsive and effective?

Rob Parker, director of personnel, and John Schwartz, university counsel, were asked to organize and cochair the task force.

In addition to the cochairs, the task force was composed of the following faculty and staff:

Ray Bacchetti, vice-provost, management, and director of university budgets;

Ken Creighton, associate vice-president, business and finance and controller;

David Korn, chairman and professor of pathology;

Sally Mahoney, registrar and associate provost;

David Mendelow, associate dean, School of Medicine;

Rene McPherson, dean, Graduate School of Business;

John Rees, associate director and adjunct professor, SLAC;

Santiago Rodriguez, affirmative action officer;

Elizabeth Salzer, head of Meyer Library;

Norman Wessells, dean of humanities and sciences and professor of biological sciences;

Robert White, professor and chairman of electrical engineering.

The task force began meeting in August 1981 and met 31 times between August 1981 and November 1982.

Information and opinions were sought from many sources throughout the University community. A partial list of those consulted includes:

* department staff affairs officers;
* senior staff to the vice-presidents;
* the administrative council;
* the deans;
* La Raza staff association;
* the staff affairs committee of the Stanford black
* community caucus;
* SLAC and campus personnel offices.

Information from these sources was supplemented by letters from individual staff members and an opinion survey of 1,300 staff members by SRI International.

II. FINDINGS

Our findings were of two kinds. One kind was of the systematic and, to a significant extent quantifiable variety. Here we had survey results, the carefully considered opinions of groups with which we met, and the expert testimony of those close to personnel policy and practices. Before we report on those findings we want to comment on findings of a more diffuse, but no less important, nature.

The task force had not been about its business long when it became aware of a general perception of over-regulation at Stanford. Though this feeling did not focus exclusively on personnel procedures, those procedures were often cited as examples of means that were excessively cumbersome with respect to the ends they were designed to achieve.

We did not find, we should quickly add, significant disagreement about the ends: open access to employment opportunities, equity in compensation, fairness in classification, the need for an orderly and understandable set of policies and a set of practices consistent with those policies. But we did hear vigorously expressed concerns that certain processes took too long to accomplish (e.g., reclassification recommendations), that some processes weren't accomplishing their intended ends (e.g., merit pay), and that a large part of the administration of personnel policies was too remote from the front line supervisor and her or his immediate supervisors.

The task force considered the changes of the past 15 years and the progress those changes helped achieve. From an institution with considerable unevenness in the way staff members were hired, classified, and compensated, Stanford has progressed to one which is in much better shape in regard to the way these functions are carried out and to how well they measure up to contemporary legal and institutional standards. Whatever changes are recommended and adopted should break new ground, not backtrack on the achievements that present policies have helped make possible.

We make this admonition because of the concern we have (and that was often expressed to us) that many of the natural tendencies in any university are toward concrete and immediate results and that policies and procedures whose function is consistency and continuity that interfere with achieving those results are at times not carefully and thoughtfully followed. To make this observation is to remark on the obvious.

One of the principal dynamics in universities—equal to them in age because it is inherent—is the tension between order and flexibility, between institutional policies and individual latitude, between central standards and local action. Because this dynamic is both obvious and profoundly important, how it is dealt with in those periodic reviews of the type our task force undertook is a crucial matter. In what follows, then, we shall be recommending change not because we espouse either polar position on the issue of institutional standards vs. local initiative, but because we believe that the optimum relationship between them requires periodic realignment with the evolution of the University.

Returning to the systematic findings, the task force received a wealth of information through the consulting and survey efforts mentioned earlier. A complete rendering of the findings here would make this report unwieldy and not particularly useful; instead what follows are highlights of the principal findings from the comprehensive SRI survey. More detailed information is available in the SRI survey report and in the reports we received from campus groups. Copies of the reports are available for review in the Green and Meyer Libraries and in the Personnel Department.

The survey measured staff satisfaction and dissatisfaction on a variety of subjects using a random sample of 1,300 regular staff members who were neither bargaining unit nor teaching or research academic staff. For the population surveyed the overall findings are as follows:

Staff tend to have **very positive** attitudes about Stanford as a place to work, job security, the types of work they do, their coworkers, their supervisors, the independence and flexibility they have in their jobs, the size of their workload, and the intellectual stimulation they receive working at Stanford.

Staff are **slightly positive** regarding advancement opportunities and their salaries.

Responses were **split fairly evenly** regarding satisfaction and dissatisfaction with management-staff communication and with Stanford's grievance procedure.

Staff are **slightly negative** about the job classification system and the quality of faculty-staff relationships.

Staff are **very negative** about parking and, among the relative few to whom it applies, about the availability of suitable, convenient child care facilities.

Some subjects covered in the SRI survey did not lend themselves well to the satisfaction-dissatisfaction summary. They include individual salary and classification, performance communication, benefits, personnel services and Stanford's problem-solving and grievance mechanisms. Principal findings with respect to these issues are:

Salary and classification

* Staff generally believe their salaries are slightly lower than salaries paid for similar work by other employers within the Bay Area.
* Staff favor a salary policy which keeps salaries up with inflation and provides a bit more to reward superior employees. Staff dislike the concept of giving all employees the same percentage increase regardless of performance.
* Thirty-three percent of the staff believe their jobs are not properly classified. The other two-thirds believe their jobs are properly classified, or they are not sure.

Performance evaluation

Most staff (64%) agree that their performance is evaluated fairly; however, 25% say they do not receive a formal performance evaluation at least once a year, and 13% report never having received a formal evaluation. Less than half of the staff report that they understand how their performance is evaluated. Overall, only half say they are mostly or very satisfied with the feedback they receive about their performance.

Benefits

In general the staff have positive attitudes about the benefits available to them. The most favorable responses were about holidays, sick leave, vacation, release time for personal business, health insurance, and tuition for dependent children. Less favorable, but still positive, ratings were given for retirement benefits and tuition for job-related courses.

Personnel services

Services receiving the most positive ratings by staff include staff development courses, communication about personnel policies, new employee orientation, service and advice about staff benefits and usefulness of the job posting system.

Less favorable responses include assistance in recruiting exempt and nonexempt staff, job reclassification and career or job counseling.

Problem-solving and grievance mechanisms

Only a small percentage of staff have used or are familiar with Stanford's problem-solving and grievance mechanisms, i.e., grievance procedure, affirmative action offices, Help Center, Employee Relations and Ombudsman's office. Of the staff who have used these resources, about one half rate them as not very useful.

Survey findings for staff subgroups and findings from the reports of other campus groups are reported in the Appendix of this report.

III. RECOMMENDATIONS

A. A Human Resource Philosophy for Stanford

The early work of the task force was devoted to developing a statement of human resource philosophy. It was agreed that any such statement must be linked to the enduring purposes of the University. Implied in this relationship is a belief that the ultimate purposes of Stanford will be fulfilled best when the people who work here are properly valued and treated by the University.

We believe that a stated philosophy is needed to provide a context for personnel administration. It should serve as a point of central reference and provide guidance for the entire University community. Such a philosophy, reinforced by intent and action over time, can create a culture in which there is harmony between achievement of University goals and regard for each individual's aspirations and capacity to contribute.

With this culture, Stanford's reputation and accomplishments as an employer can be as outstanding as those of its teaching and scholarship.

The task force appreciates that desired cultural changes happen slowly and then only with careful and sustained attention and commitment. The existence of the task force provides a special opportunity for beginning the effort. To that end we are recommending a statement of Stanford's purpose and its human resource philosophy. While the value of such a statement is that it endures over time, we recognize that it will need periodic review and modification to clarify it or make it more responsive to new University directions.

For such a statement to acquire the significance that we intend for it, it must be introduced and supported by the senior officers of the University, be distributed widely and be reinforced regularly. It should be a part of employee orientation, supervisory and management selection and training, performance appraisal and salary increase considerations, staff handbooks and other University publications and programs. In other words, it needs to be institutionalized and internalized by all.

These efforts, complemented by thoughtful policies and practices, have the potential to create a climate in which the University's work is well and faithfully done, people's abilities are developed and their expectations of job satisfaction are realized.

Accordingly the task force recommends that,

Recommendation #1:

The University should adopt the proposed statement of its purpose and human resource philosophy and take appropriate measures to distribute it widely within the University and to reinforce it regularly. *(See page 15.)*

B. The Balance Between Central and Local Responsibility

The proposed statement of Stanford's human resource philosophy emphasizes the importance of shared responsibilities and commitments. The concept of each employee's personal responsibility, joined with special responsibilities of supervisors and responsibilities of the University as a whole, suggests a context for successful personnel administration.

Such a context requires a blend of role and responsibility which is different from what currently exists. Local departments regularly conclude that matters are "out of their hands" and that the offices really making the final decisions are Personnel or staff to the vice-presidents. The department heads and administrators know they are accountable for the operation of their units but often feel they cannot fulfill their responsibilities because of the

continued on next page

Task Force Report

continued from page 14

bureaucratic maze they must travel in dealing with personnel matters.

Conversely, people in the central offices are frustrated because they see departments willing to take actions which, while locally expedient, are without apparent regard for broader institutional interests and commitments. Consequently, they construct an elaborate administrative mechanism in an attempt to safeguard the University from itself.

The people in these central functions believe that they are being held responsible for guarding the integrity of the University's principles. Hiring decisions are questioned in the interest of affirmative action, requests for reclassification are scrutinized in an attempt to preserve classification equity, and so on. And in the middle, of course, are the employees being affected.

The achievement of a better balance of role and responsibility is of special importance to the University if the human resource philosophy is to be meaningful. More people throughout the University should be involved in effective human resource management. Departments must feel more accountable for balancing local and University-wide needs. Central and local functions must be realigned in order that the various offices perform those functions best suited to them. At root is the need for a broadly shared belief that effective human resource management is everyone's responsibility and that the continuing excellence of the University depends on it.

Recommendation # 2 reflects the general theme of the need for greater local responsibility. It is the central notion from which many of the subsequent recommendations are derived. Some of the recommendations underscore the responsibilities that department supervisors and administrators already have for human resource management, e.g., performance communication, staff development and affirmative action. Other recommendations advocate a conscious and carefully managed shift in the balance of responsibility for some aspects of personnel administration from central to local functions, e.g., classification decisions.

For such changes to be successful, there must be a clear mutual understanding between central and local units regarding the intent of each change and the means by which it will be accomplished. Such changes require an evolutionary process, not a cataclysmic event. Those involved will need training, support, encouragement, and recognition. The form and timing of the changes should depend to a large extent on local capacity and readiness. Some organizations are prepared to accept a larger role immediately while others will require months or even years to prepare. To force such changes prematurely would undermine the entire concept of a culture of shared commitment.

On the other hand, the task force is not suggesting that the acceptance of greater local responsibility be a local option. It won't work for example, if supervisors in department "X" take the position that affirmative action or responsible salary administration is the provost's problem. We must all be involved to some extent in the shifting balance. How and when that shift is accomplished can vary from unit to unit. Our recommendations are intended to initiate that process and serve as a predisposing context within which other issues will be addressed in the future. Accordingly the task force recommends that,

Recommendation #2:

The University should increase local responsibility for personnel matters and, where appropriate, shift responsibility for personnel administration from central to local organizational units.

Increased decentralization cannot reduce institutional obligations regarding compliance with external regulations and with the University's own principles and basic policies. As local units take on greater responsibility for personnel matters, there should be explicit understanding as to the responsibilities of the line officers for the implementation of University-wide policies and principles and for the development of compatible local policies and practices. Evaluation and oversight mechanisms will be especially important to assure that this shift in responsibility is meeting its intended goals. Accordingly the task force recommends that,

Recommendation #3:

As local responsibility increases and decentralization occurs, the University should establish clear expectations of and understandings with line officers as to their responsibilities for the implementation of University-wide policies and principles, and the development of compatible local policies and practices. Evaluation and oversight mechanisms should be established to assure that University obligations and commitments are met and that the desired benefits of these changes are being realized.

During the work of the task force it became clear that persons throughout the University have fundamentally different perceptions about the role and effectiveness of the Personnel Department. Some see the department functioning in a strictly advisory role, while others are convinced that it has final authority on many personnel matters. Some see the department playing a vital and useful role, while to others it represents the epitome of unfettered bureaucracy. Similar confusion and attitudes exist about the roles of vice-presidential staff who are heavily involved in personnel matters.

As the balance between central and local responsibility is adjusted and as the other task force recommendations are implemented, we believe that the University needs to clarify the purpose and role of these functions. Accordingly, the task force recommends that,

Recommendation #4:

The University should clarify the role of the central Personnel Department and the roles of vice-presidential staff involved in personnel administration. Once clarified, these roles should be communicated to the faculty and staff.

C. Supervision

A necessary companion to greater decentralization of personnel administration is the greater need for broadly competent supervision throughout the University. The supervisor plays a critical role in any organization; in one that decentralizes functions and responsibilities previously centralized, supervision takes on added immediate importance as well as new longer-term dimensions. We believe, therefore, that supervision needs to be paid special attention so that its present strengths can be preserved, that its present weaknesses can be corrected, and that the further responsibilities that our recommendations will lay upon it can be handled with skill and confidence.

The survey conducted for the task force by SRI reflected, in general, a fairly high degree of satisfaction with supervision across a wide range of aspects of the supervisory relationship. Supervisors are generally perceived as knowledgeable, available, fair, and as setting high standards for both the quality and amount of work expected from those they supervise. Areas where survey respondents expressed a material, but in no case high, level of dissatisfaction about the supervisory relationship were career development, motivation, and performance evaluation.

The supervisor is a pivotal person. Situated organizationally between the University and other employees, the supervisor has a dual responsibility. As a representative of the University, the supervisor defines the tasks to be done and provides guidance on how to do them best; he or she reviews performance, provides feedback, and recommends salary increases; the supervisor has the obligation and opportunity to facilitate employee advice and comment about the workplace and its improvement; and the supervisor reflects the University's human resources philosophy in all other aspects of the supervisory relationship.

As colleague and mentor of those with whom he or she works, the supervisor is concerned with employees' growth in competence, with their career development, with providing assistance in problem solving, and with assuring both fair treatment and recognition of accomplishment.

The supervisory skills of defining work to be done, of delivering feedback (both positive and critical) at frequent intervals, of giving career advice, and of doing other things vital to the supervisory relationship do not come naturally to most individuals. Some supervisors are better than others; some supervisors are better at some parts of their job than they are at others.

Nevertheless, the several aspects of the role can be taught by example and by design. Further, supervisory skills work best when reinforced by attitudes that project an affinity to the University's philosophy and a confidence in one's ability to relate as a supervisor to one's staff. Accordingly the task force recommends that,

Recommendation #5:

The University should expand its supervisory training and general educational program for staff.

continued on next page

Stanford's Purpose and Its Human Resources

Stanford's special and enduring purpose—the creation, preservation, and transmission of knowledge—distinguishes it from most other places of work. The University is an academic culture in which a unique partnership exists between faculty, who are responsible for maintaining the standards of excellence in education and research, and staff, who provide vital direct and indirect support to that end.

Fulfillment of Stanford's purpose depends on a shared commitment between the University and its staff. Because the people who work here are Stanford's human resource, the University respects each person's worth, dignity, capacity to contribute, and desire for personal growth and accomplishment. In return, Stanford depends on its staff to share a common understanding of and commitment to work for the achievement of the University's goals.

This shared commitment provides the foundation and context for Stanford's personnel policies and their administration. The commitment will be realized if individual staff members:

*** understand how their work contributes to the University;**

*** know what is expected of them and whether they are meeting those expectations;**

*** perform their work with skill and dedication;**

*** have the opportunity to develop their skills and to grow in their careers;**

*** are appreciated and recognized for their work;**

*** treat one another with understanding, dignity, and respect;**

*** receive adequate and equitable compensation;**

*** have access to help in resolving work-related problems;**

*** work in a community which reflects society's cultural and ethnic diversity.**

In common and in different ways, everyone who works for Stanford shares responsibility for serving the University's purpose and for upholding its human resource principles.

Each person is responsible for understanding the University's purpose, for understanding how his or her own work contributes to that purpose, and for performing at a level which serves both the University and other employees well.

Because the relationship between employees and their supervisors or managers is a reflection of the University's regard for its human resources, those people who also manage, supervise, or guide others have special and additional responsibilities. Accordingly, Stanford recognizes its commitment to enable and encourage managers and supervisors to:

*** know how the work of the people they direct serves the University's purpose, and convey their understanding by communicating purposes, policies, plans and methods clearly and regularly to the people they direct;**

*** treat each person with dignity and with respect for individuality;**

*** strive for mutual understanding of performance expectations, and reinforce that understanding through regular performance reviews and training;**

*** encourage and consider employee input in decisions that affect the work and careers of those employees;**

*** encourage career development by helping individuals achieve their goals within the University, by encouraging self-development, by promoting from within and, when appropriate, by helping them move on to opportunities outside the University;**

*** provide the means for resolving work-related problems;**

*** administer wage and salary policies equitably, with recognition of the diversity of jobs, the nature of service, individual performance and achievement, and growth in the job;**

*** understand and fulfill the University's commitment to equal opportunity and affirmative action;**

*** respond with understanding and compassion to people experiencing personal crises;**

*** help mitigate the impact of work reduction on those employees affected;**

*** recognize the relationship of individual departments to the University as a whole.**

Task Force Report

continued from page 15

By themselves, however, supervisory skills are not enough. For supervisors to be effective, their roles need to be well defined and their performance carefully evaluated. In other words, supervisory responsibilities need to be well understood and communicated when performance expectations are established; and supervisory effectiveness needs to be a major element in the evaluation of those who have the supervision of others as one of their responsibilities. Accordingly the task force recommends that,

Recommendation #6:

Systematic recognition should be given to supervision as a principal responsibility and to the expectation that those who supervise others should be evaluated in part on their effectiveness at supervision.

The involvement and commitment of the University leadership will be crucial as local responsibility is enhanced and as supervision is strengthened. Despite the obvious nature of this observation, the task force has noted troubling examples of senior officers who are unaware of existing University personnel policies. Such a condition must be remedied if greater local responsibility and more effective supervision are to be realized. While no single measure is sufficient, several efforts in combination can be effective. Accordingly the task force recommends that,

Recommendation #7:

Prior to the appointment of a senior University officer, that person should be made aware of the University's philosophy of human resource management and the leadership role that that person would be expected to assume with respect to that philosophy. Following appointment the University should provide systematic orientation to acquaint the person more thoroughly with the University's human resource principles, policies, and practices.

In academic departments, supervisors are often faculty members. As members of the faculty, they are often neither trained nor inclined to give to supervision of staff the priority they assign to teaching and research. This is not inappropriate, for a faculty as distinguished as ours should not be diverted into unchosen administrative pursuits except as absolutely necessary. For this reason we propose an institutional supplement to the faculty member's supervisory role. We believe that by assigning a partnership role to nonacademic staff, such as departmental administrators, a productive division of supervisory responsibility can be worked out to the advantage of all concerned. Accordingly the task force recommends that,

Recommendation #8:

The role of appropriate administrative staff in assisting in the supervision of staff in academic and research areas should be increased.

Finally, the relationship between a supervisor and those supervised must be two-way. Getting the most out of one's job requires taking initiative, making suggestions, participating in the setting of objectives, evaluating strengths, and determining means and methods. While supervisors should make provision for such participation, staff members should also take responsibility for their parts in the dialogues through which difficulties are confronted, problems defined and solved, and progress made. Accordingly the task force recommends that,

Recommendation #9:

The University, in its training and orientation programs and in the other ways in which the institutional philosophy is communicated, should emphasize the expectation of joint participation and encourage dialogue between supervisors and those supervised with respect to the establishment of means and methods of accomplishing objectives and for the resolution of difficulties.

D. Pay and Classification

The task force devoted a significant portion of its efforts to the discussion of pay and classification issues. These discussions ranged from issues of broad compensation policy and administration to technical matters such as pay range and classification structures. While specific recommendations follow, the context in which they are set is crucial to understanding and implementing the recommendations and ultimately to the effectiveness of the compensation system.

The compensation system needs to reinforce the fact that Stanford is a single institution and a single employer. In so doing the system needs to include: a) a single, centrally maintained (**not** necessarily administered) classification and pay system with an articulated set of supporting policies and guidelines, and b) sufficient flexibility to recognize the differing needs of operating units and individual employees. Accordingly the task force recommends that,

Recommendation #10:

The University should continue to have a single, centrally established and maintained classification and pay system.

The compensation system must be built from, and dependent upon, a shared understanding of and commitment to a set of fundamental policies and principles. The task force believes that the basic principles and policies that have guided the present compensation system are sound and we set them forth explicitly as follows:

1. Within the context of the University's available resources, pay should be based on a combination of the requirements of the position, individual performance, amount and quality of experience, length of service and market factors. In applying these factors special efforts should be made to recognize the value and contribution of employees at least as much as market factors.
2. The classifications of individual positions should be based on the responsibility assigned to incumbents and not their performance in carrying out these tasks. Job title, the position of the person to whom an employee reports, and the volume of works are not determinants of classification. However, many of these factors may directly affect the nature of the assigned responsibilities which, in turn, influence the classification of a position, e.g., a person who performs very well may be assigned increased responsibilities thereby changing the job and possibly the classification.
3. Over time the source of funds (research, operating, etc.) should not be a factor in determining appropriate rates of pay for individual employees. If specific grants and contracts cannot support appropriate salary rates, staffing cutbacks or reductions in employees' work hours should be considered in order to maintain equitable rates of pay for continuing employees.
4. The University's compensation program must meet all essential external legal and contractual requirements (FLSA, OFCCP, EEOC, DOE, etc.).

Administration of the compensation system will result in significant classification differences among positions and salary differences among individuals. Such differences should be justifiable by reference to the principal determinants of pay and classification (1 and 2 above). Additionally, the compensation system must provide room for reasonable and justifable pay and classification exceptions. When exceptions are frequent, the associated policies or practices should be reviewed for either revision or reaffirmation. The task force recommends that,

Recommendation #11:

Within the context of available resources and with an understanding that the compensation program should meet all essential legal requirements: pay should be based on a combination of the requirements of the position, individual performance, amount and quality of experience, length of service and market factors; classifications should be based on the responsibilities assigned to incumbents rather than on their performance in carrying out these tasks; and the source of funds (operating or research) should not be a factor in determining appropriate rates of pay for individual employees.

Decentralization of Classification Decisions

The task force spent considerable time discussing the process by which compensation decisions are made. At present there appears to be substantial dissatisfaction: decisions take too long, there is too much paperwork, the process is often intimidating to employees, and there may be inadequate sensitivity to local needs. The source of these problems is that too many routine decisions require extensive review by a multitude of offices.

A small midyear adjustment in pay typically is recommended by a supervisor and then is reviewed, in laborious succession, by a departmental administrator, a dean's or director's office, a vice-presidential office, and finally the Personnel Department. The task force concluded that a reduction in unneeded bureaucracy is required and can be best accomplished by enhancing local control and simplifying approval processes.

The general area of pay and classification decisions is particularly well suited to this approach. Currently, some aspects of pay administration are already highly decentralized. For example, the system for setting individual exempt merit increases allows for substantial responsibility and control by supervisors; the primary constraint is budgetary rather than procedural or structural. Other aspects, such as the classification system, are closely monitored by the compensation section and vice-presidents' offices.

The task force believes that in certain of those areas which are currently highly centralized, heightened local responsibility will result in solutions better tailored to the unique circumstances of individual academic and administrative units and in an improvement in employee and supervisory morale.

The task force is not, however, recommending a return to the uncontrolled 'free market' of the '60s and before. The application of a decentralized decision-making process for compensation decisions must occur within the framework and guidance of centrally maintained policies and systems; individual units must not design and install their own pay and classification systems. A move toward decentralization also should not be imposed on ill-prepared units, and the form that such changes take should be adapted to each area according to its particular needs.

Classification determinations are well-suited to the process of decentralization, and many departments are already prepared to assume this responsibility. Implementation should occur as units are interested and able to support the process; the decision to decentralize classification decisions within a given unit, and its timing, should rest with the dean or director of the unit and the appropriate vice-president. Personnel should be involved in a consultative capacity to give advice on the timing and advisability of the action, as well as to suggest ways to make the change maximally successful.

Medium and large sized units (schools such as Engineering or the Medical School) may be best prepared for these responsibilities because of their administrative resources or their groupings of similar jobs. The addition of these responsibilities may also be feasible for smaller units; however some small units with similar staff compositions may need to pool their administrative resources in order to handle the responsibility of reviewing classification recommendations.

The implementation of decentralization may also vary; some units may focus first on nonexempt (clerical); many may include low- and mid-level exempt staff, and others may feel ill-prepared to deal with technical positions (programmers, engineers, and/or research assistants). It is presumed that there is a stratum of senior-level positions that will continue to require some form of central review. We also believe that bargaining unit positions should be administered as they are currently, given the greater need for consistency in the interpretation and administration of the bargaining unit contracts.

The success of this proposal rests heavily on the preparedness of the affected units. It is hoped, however, that within the next two years substantial changes will occur. Gradualism should not result in inaction.

In considering the proposal to decentralize classification decisions we reviewed a variety of opportunities and risks, and these are outlined below. The task force concluded that the balance was clearly on the side of opportunity and that many of the risks could be mitigated by gradual and thoughtful implementation and by careful and continuing review of the program's results. In order to support these efforts, the Personnel Department must play a critical role by assisting in the development and implementation of a process for effective and ongoing audit of decentralized classification decisions.

Opportunities include:

1. Responsiveness to the desire of some operating units to move in the direction of a decentralized classification process.
2. A streamlined process that requires less time, fewer steps, and reduced paperwork.
3. Improvement in the quality of decisions; opportunity to develop better solutions to the unique problems of varied working environments.
4. Reduction in employee and supervisor stress associated with the existing process, and improvement in staff morale.
5. Reinforcement of the relationship between staff members and their own departments.
6. An increase in compensation's ability to serve as a resource to departments.

Risks include:

1. The inability or unwillingness of some supervisors to assume added responsibility and to utilize effectively available University resources.
2. Reduced consistency in the application of the University's classification system; possible exacerbation of the negative impact of subtle biases (male/female, minority/nonminority) or personality preferences or conflicts.
3. Migration of superior employees from poorer to

continued on next page

Task Force Report

continued from page 16

richer departments, if the latter inappropriately manipulate classifications in order to make them more attractive financially to employees from other departments.

4. Reduction in the central administration's understanding of local needs, which may impair its ability to design or revise the classification system and to formulate annual salary programs.

5. Decreased attention to legal obligations.

6. Increased budgetary pressure resulting from reduced central controls on individual reclassifications and possible patterns of 'grade creep' (e.g., most secretaries being promoted to administrators while still performing secretarial tasks). If this were to occur, there is a risk of unintended and possibly severe pressures on the University's financial resources.

Mitigation or elimination of these risks can occur if there is effective review by adequately trained administrators within each operating unit. Decentralization requires, therefore, an enhanced commitment to supervisory training and an institutional willingness to hold supervisors accountable for effective personnel management. In conjunction with this effort, there also needs to be a close working relationship between personnel and the operating units. The compensation section, for example, must provide adequate resources to supervisors; this will require an increase in time devoted to consultation, revisions in the classification system, communication and training, and market research. In addition, compensation should assist the process by conducting periodic studies of the consistency and accuracy of classification assignments in University departments. The purpose of such review would be to identify favorable or troublesome patterns and to propose the necessary corrective measures. Finally, units should be encouraged to develop formal mechanisms to support the decentralization process (e.g., classification committees) and to participate in interunit consultative and review bodies (e.g., a monthly or quarterly meeting of staff affairs officers or associate deans).

The task force believes that, in combination, the efforts described above can reduce substantially the principal risks: inconsistency in classifications across the University, increases in the University's legal liabilities, and unintended budgetary pressures. Accordingly the task force recommends that,

Recommendation #12:

The University should decentralize nonbargaining unit staff classification judgments and associated salary determinations into organizational units at a level where there is adequate administrative support for personnel activities.

Pay Administration: The Need For Increased Flexibility

Within the University there is a widespread concern that the current pay system may have the effect of compensating employees too uniformly and too automatically. The combination of the design of the present pay system and its application has resulted in pay increases for many nonexempt and exempt staff which are virtually across-the-board, and without regard to job performance. The task force believes that Stanford's approach to pay administration ought to be modified in order to provide the enhanced flexibility and incentives necessary to reward outstanding performance and to acknowledge the value of an employees' work to the University. We hope to see, as a consequence, an increased dispersion, based on performance, of both salaries and annual increases.

The desired flexibility is needed to support two objectives. First is the need to reward superior performance generally and, specifically, to provide particular recognition to long-term, high-performing staff whose salaries may be constrained unduly by range maxima. Second, poor performers ought not to be rewarded with increases which are greater than their performance warrants.

Our recommendations are premised on the belief that rewarding high performance acknowledges the kind of quality and productivity upon which the University depends. A companion premise is that denying substantial pay increases for poor performance would more clearly communicate the need for improvement.

While the existing exempt structure can provide adequate flexibility with only minor revision, significant modifications to the nonexempt step structure are required. The latter tends to reward all levels of performance equally, given the annual automatic range and step increases.

More than one member of the task force observed that the guaranteed nonexempt range adjustment may not only deny performance recognition for nonexempt staff, but also may establish an expectation on the part of exempt staff that their increases will be no less than the nonexempt range adjustment, regardless of performance. The step increases, moreover, are granted automatically by most supervisors, despite provision for their delay or acceleration, and we believe that the current system encourages that practice.

The following considerations should guide any modifications to the nonexempt pay structure:

1. Salary increases should be based on performance; automatic increases should be minimized.

2. Salary ranges need to provide adequate latitude to reward strong performers, especially those who have long tenure at the University.

3. A structure sufficient to guide the judgments of supervisors and to support the explanation of significant salary differences among employees is needed.

4. Nonexempt pay ranges, especially their minima, should be competitive with the market for hiring purposes; moreover, it would be useful to continue to specify a minimum and maximum salary for each pay range, as well as a normal hiring range for new hires to the University.

The Personnel Department should be charged with the responsibility of designing a system of nonexempt pay administration best suited to Stanford's needs. Alternatives may range from a significantly modified version of the current structure to an altogether new system, e.g., an open range structure with only a minimum and maximum specified. While final implementation may be phased in over time, the task force is recommending that two specific changes be initiated by next September.

First, the maxima of the ranges should be extended considerably. The current ranges have a span (percentage spread) of 37 percent (recently increased from 25 percent), as compared to the 50 percent span of the exempt curve ranges. The task force believes that strong performing nonexempt staff deserve treatment similar to that of exempt employees. An extension of the range maxima would remove the reality and appearance of disparate treatment and provide increased recognition for long-term nonexempt employees.

The increase in the pay range spans should be accomplished over time, in a manner that avoids undesirable outcomes. Our intention is to increase the rewards for the superior performance of long-term employees; but the cost of this proposal, however small, should not result in smaller increases to the minima of the pay ranges, as this would detract from the University's ability to hire qualified staff. Instead the cost should be recovered by reducing increases for less satisfactory continuing staff. In addition, while it is desirable for the nonexempt and exempt pay structures to be more similar, the increase in the nonexempt maxima should be coordinated with changes in the exempt ranges so that appropriate relationships are maintained.

The second change that the task force recommends for implementation by next September is a provision for exceptions to the constraint of range maxima, in order to recognize the extraordinary performance of a small number of long-term employees. Justification ought to be required, however, when proposing that an employee be paid more than the top of the range, and the action should be subject to approval by the dean or director within guidelines established by the vice-presidents.

Changes to the present exempt and nonexempt pay structures and policies are not without risk. The success of our recommendations rests heavily on the willingness of supervisors to accept additional responsibility and on the University's capacity to provide supervisory training and other needed resources. While most supervisors will welcome additional flexibility, some may find burdensome the requirements for judgment, decision, and communication.

One example of such a risk is that increased flexibility in nonexempt increases will place a strain on the existing salary program controls ("control percents.") With a more flexible structure these controls will represent the primary constraints on nonexempt salary increases, as opposed to other factors imbedded in the nonexempt pay structure (the programmed increases of the current system).

While significant flexibility has worked reasonably well for exempt staff, there are many more supervisors of nonexempt than exempt staff. This larger number of supervisors results in greater complexity in the administration, evaluation and communication of a salary program. The proposal for increased flexibility requires, therefore, that departmental administrators charged with personnel administration be given substantially increased responsibility and accountability for coordination and review of the nonexempt salary-setting process.

The employee response to greater flexibility in the nonexempt structure is uncertain but we believe that most employees, and certainly those whose performance is above the average, will respond favorably to a clearer linkage between performance and recognition through the compensation system. Some, however, may resent a loss of or reduction in increases that they have perceived as virtually guaranteed, and a few may feel that differences in salaries or annual increases are arbitrary or inequitable.

There may also be increased speculation by employees about the salaries or increases of others. Thoughtful communication of the proposed changes, the University's willingness to listen to feedback and to make sensible adjustments to the program, and more effective performance communication (discussed elsewhere in this report) can offset these risks. The task force recommends that,

Recommendation #13:

The nonexempt pay structure should be modified to provide greater flexibility to reward performance. The span of each nonexempt pay range should be as much as 50 percent to give supervisors greater flexibility to reward outstanding performance. There should be provision for limited exceptions to the policy of not allowing salaries to exceed the maxima of the pay ranges.

While the exempt range structure currently provides adequate flexibility to reward performance, a majority of the task force members believe that the annually published salary guidelines do not augment, and possibly impair, the ability of supervisors to differentiate among the performance levels of their employees through salary increases. The task force agreed that budgetary controls and the constraints of the curve structure provide sufficient guidance.

Specifically, there should be no centrally established guidelines linking performance categories and specific percentage increases. A description of the next year's curve ranges and the budget controls for exempt increases is sufficient. It may also be useful to communicate that salary increase control percents will vary somewhat among units, insofar as some areas will need to use part of their allocation to solve problems of salary equity and/or may choose to withhold a portion of the authorization for selected midyear increases; any resources withheld are intended to be used for future salary increases, not other departmental needs.

If more guidance is needed, individual operating units may exercise the option of formulating salary increase guidelines tailored to their own circumstances, provided that they are not inconsistent with the constraints of the salary control percentage and the curve range structure.

The risks and opportunities associated with this proposal are similar to those identified in the previous recommendation for nonexempt staff. The risks, however, are far more modest; namely, some employees and supervisors may regard the existing guidelines as helpful in determining and explaining annual merit increases. If this response is widespread and the expected benefits do not materialize, it would be relatively easy to modify the approach or return to our current method in future years. The task force recommends that,

Recommendation #14:

Centrally established guidelines on individual exempt annual salary increases should be discontinued; the University should rely on the curve range structure and the limits imposed by the budgetary process to provide adequate guidance to supervisors in setting individual salaries.

Changes to the Classification Structure

The task force reviewed at some length the efficacy of the existing classification system. Discussion centered around several troubling characteristics: rigidity, complexity, ambiguity, lack of responsiveness to local needs and, in some cases, obsolescence. The task force believes that our present system's attempt to categorize each of the University's thousands of employees into job classifications with bounded salary ranges may be unrealistic, unresponsive to the University's complexity, and perhaps unresponsive as well to the different job performances of different employees.

It appears that the commitment to maintain consistency has led the University to equate and compare jobs which often are not comparable or even of equal importance to the functioning of their respective departments. A substantial reduction in the number of classifications and an associated broadening of the assignment pay ranges should be considered, such as replacement of a series of classifications with a single title.

At the same time it is recognized that for some occupations progression through a hierarchy of titles (junior to senior, I through IV) provides a source of gratification and motivation to employees. Also in some circumstances highly specialized classifications will be required. Broad clerical classifications may, for example, be coupled with a set of highly specific titles for selected word processing positions.

Early and significant attention is required most in the

continued on next page

Task Force Report

continued from page 17

area of nonexempt classifications. Specifically, we propose that the major classifications for nonexempts be broadened and that there be clearer delineations between levels. Exempt classifications should be studied in order to improve their clarity and specificity. The goal of these efforts should be to make the system simpler to understand and easier to administer.

Our recommendation to decentralize the classification process presumes a system that is understood and accepted. The existing classification system is perceived by supervisors and employees to be cumbersome and restrictive. While our discussion reflected competing desires for simplicity versus specificity, and for ease of administration versus the provision of a source of motivation, the task force believes that a middle ground is achievable and that thoughtful modification to the classification structure will serve to support and accelerate the decentralization process. The task force recommends that,

Recommendation #15:

The Personnel Department should be charged with the responsibility for undertaking a review of the current classification structure for exempt and nonexempt staff. Wherever possible the structure should be streamlined and made simpler to administer. There should be fewer and more clearly defined classifications except for those occupations which are highly specialized and viewed as such in the local labor market.

E. Staff Development

The opportunity to grow in responsibility and skill is the essence of a developing career. We believe the University should provide avenues for and encourage such development through honest, timely and constructive performance communication, policies encouraging employee career growth and promotion, and educational programs supporting employee efforts to improve job performance and foster career development. Accordingly, we are making recommendations or comments in these three areas:

Performance communication

The task force has learned that, while significant performance communication is occurring presently, much is yet to be done. By performance communication, we mean the ways through which employees learn clearly what is expected of them and how well they are meeting those expectations. It is also the process by which employees can communicate with their supervisors.

The fact that 25 percent of the staff surveyed do not receive performance evaluations even once a year, and 13 percent have never received one, suggests that the University is missing an important opportunity to help staff develop while accomplishing the University's work.

Even more troubling is the finding that less than half of the staff surveyed understand the bases on which their performance is evaluated, and only half say they are satisfied with the performance feedback they receive. The possibility of miscommunication and discouragement in such a situation is evident.

We also learned by consulting with ethnic minority staff that supervisors are often reluctant to give constructive criticism to minority employees. This phenomenon only serves to frustrate affirmative action efforts and may be one contributing factor to our findings that minority staff are less satisfied with working at Stanford than are nonminorities. The task force recommends that,

Recommendation #16:

The University should expect and encourage effective performance communication for every staff member. All line officers should hold each succeeding lower-level officer accountable for insuring that performance communication is accomplished and that this communication includes, but is not limited to, a program for regular performance evaluation.

Career Growth and Promotion

Filling jobs from within Stanford is generally a preferred alternative to hiring from outside. Such an approach recognizes and encourages both productivity and loyalty. Institutional efforts are required to develop the internal talent pools from which to draw in the future to assure that well qualified internal candidates are available and to assure that affirmative action goals can be met.

It is especially important to understand that career development is a mutual responsibility of the employee and the University. Employees need to take the primary responsibility and initiative in charting their growth. The University can be instrumental in facilitating this growth by providing information about internal career directions, helping supervisors improve their skills in encouraging career development and developing employee potential, and providing financial assistance for educational activities. Accordingly the task force recommends that,

Recommendation #17:

The Affirmative Action Office and the Personnel Department should develop and publish periodically a report on career paths at Stanford. Such a report should focus on specific job titles and describe how current University staff reached those levels. In addition, information on relevant staff development offerings should be provided.

This is only one example of actions which can be taken to facilitate career growth. There are many others which require varying degrees of time and commitment. For instance, the University might consider an internal staff exchange program which would move middle level management staff from one vice-presidential area to another, thereby facilitating knowledge and understanding of University operations. Such a concept may also be workable within departments for both exempt and nonexempt staff.

Educational programs

While on-the-job learning is fundamental in the evolution of an individual's career, educational programs within Stanford and elsewhere can be significant in expanding the scope or extending the reach of career development.

A number of educational programs is offered presently by the Staff Development section of personnel. Supervisory and management development, skills training, and career counseling all exist currently. Yet, access to the programs is limited. Many of the offerings are filled very quickly, and staff are frustrated regularly when they are turned away from courses that would be immediately useful to them. Also, there are significant gaps in the categories of offerings; for example, while we have programs for people who are already supervisors, there are no programs to help prepare employees to become supervisors. Accordingly the task force recommends that,

Recommendation #18:

Existing staff development offerings should be augmented in those areas which have proven to he the most useful for staff, and new programs should be offered to fill existing gaps and build a more coherent set of programs for career growth, as well as for improved current performance.

In addition to courses offered within Stanford, a rich array of job-related educational programs is offered in the surrounding area. Many of our staff participate in these programs, and they serve as a useful adjunct to our own offerings. For years Stanford has provided tuition assistance for these programs at a rate of $75/quarter under STAP (Staff Training Assistance Program). That amount is inadequate today if we are to maintain sufficient incentive for staff to continue their learning and career development. Accordingly the task force recommends that,

Recommendation #19:

The University should adjust the staff training assistance program reimbursement rate to a more adequate level in order to make job-related educational growth more accessible to staff. This rate should be reviewed and adjusted periodically to maintain its adequacy.

F. Affirmative Action and Employment

A human resource development strategy without a vital affirmative action strategy is incomplete. Diversity is essential to the vitality of the University. It creates an environment of vigorous exchange and furthers the University's mission by incorporating a breadth of human experience.

This part of the task force's recommendations, while dealing broadly with affirmative action, also includes substantial reference to the University's employment policies and practices, which are so closely integrated with our affirmative action practices. This approach is based on our belief that affirmative action must be a principal consideration in the development and implementation of employment policy. Issues of the effects on minorities and women of our policies and practices in the areas of career development, pay and classification, grievance procedures and the like are considerably less meaningful if the basic employment policy and practice do not reflect an active commitment to affirmative action.

The diversification of the University's workforce began in earnest around 1970, chiefly as a result of the social and political issues raised by the civil rights movement. Minorities and women were hired into positions from which they traditionally had been absent.

By 1973 the University had established a formal affirmative action program aimed at increasing the overall numbers of minorities and women, as well as improving their distribution within the workforce. Systems were put in place that identified appropriate job-related criteria for positions, suggested means to improve recruitment, and addressed issues such as salary equity among groups. A major training effort designed for managers and supervisors was also implemented.

All of these approaches served to increase the diversity of the Stanford community until the mid-1970s. Since then, however, the University has experienced the development of a "plateau" whereby most programmatic efforts have not yielded a significantly higher level of diversity. Rather, most efforts have focused on maintaining the numerical ratios of minorities, and, to a major extent, women, already extant in the Stanford community. In fact, by the end of the decade, some erosion in both the numbers and percentages of minorities in the workforce had occurred, a trend that was not reversed until quite recently.

Thus, despite our successes, some significant problems remain. The challenge to the community becomes one of addressing and overcoming the present plateau, and of striving for increased diversity consistent with our general commitment to excellence.

No minorities or women currently hold positions as vice-presidents or deans of schools. Very few minorities or women currently occupy the top 100 policy-making positions in the University. On the most general scale, the University will have achieved diversity when a significantly larger number of women and minorities participate in the decision-making processes of the institution.

Another indication of success will be when affirmative action consideration becomes an integral part of the management process; that is to say when managers seek out diversity for its own value. Ultimate success will have occurred when formal mechanisms, such as an affirmative action office, are no longer needed because those functions operate regularly throughout the organization.

The University's official commitment to the principle of diversity has been reiterated at the highest levels. However, the need exists to translate that commitment into concrete action by having the senior administration actively and visibly committed to and practicing affirmative action. This commentary and the accompanying recommendations, then, are intended to propose full or partial solutions to some of the specific problems which lead to the conclusion that we have not yet fully integrated affirmative action into our human resources considerations.

Most of the input that we have received from minority staff members indicates a concern that greater decentralization may result in inattention to affirmative action. The task force shares those concerns and also believes that the University has a need for consistency from a legal perspective, for regular reporting to government agencies and, most importantly, for University-wide programs which are aimed at achieving greater diversity. Accordingly the task force recommends that,

Recommendation #20:

The Affirmative Action Office should retain its centralized programmatic responsibilities.

We mentioned earlier that few women and minorities are represented in senior and middle management positions. Approximately 100 positions throughout the University currently fall within those categories. They include such job classifications as University Officer IV, University Manager IV and V, Associate Provost, Development Officer V, Financial Manager II and III, and Associate Dean (Administration). All of these positions are of a key policy-making nature. Women occupy 14 of these positions, and minorities five.

In an effort to focus more attention on affirmative action at these levels, the task force concluded that the vice-presidents should be involved more directly when a vacancy at this level is filled. Because the total number of positions is relatively small and the turnover in these jobs is low, increased involvement by the vice-presidents should not prove unnecessarily burdensome.

This increased involvement of the vice-presidents in reviewing the hiring process should be augmented by a periodic review by the Administrative Council of progress made and problems to be resolved. Accordingly the task force recommends that,

Recommendation #21:

All searches, waivers and hires for senior and middle management should be reviewed and approved hy the cognizant vice-president for conformance with the University's affirmative action policies and that area's affirmative action hiring goals. Once a year the director of personnel and/or the employment manager and the affirmative action officer should meet with the administrative

continued on next page

Task Force Report

continued from page 18

council to discuss specifics of goal attainment at these key levels and jointly to develop specific strategies to address areas of concern.

In addition to the focused review of middle and senior management hires, the task force believes that each vice-president should review periodically the overall progress made in his area of responsibility, and that he should emphasize the role and the importance of his affirmative action coordinator(s) in supporting managers in their responsibilities for effective personnel administration. Accordingly the task force recommends that,

Recommendation #22:

Each vice-president should delineate clearly and communicate to the staff as a whole the duties and responsibilities of his area's affirmative action coordinator; and at least once a year each vice-president should meet jointly with his affirmative action coordinator, his senior staff and representatives from personnel and the Affirmative Action Office to discuss affirmative action progress.

In addition to the preceding recommendations there are many other ways to advance the state of Stanford's affirmative action efforts. One, for example, is the concept of providing positive recognition to faculty and staff who have made outstanding contributions to affirmative action in the University. While such recognition should be a part of performance communication between a supervisor and an employee, there can be substantial value in recognition which is more formal and public, such as a program whereby once a year a limited number of University employees (faculty and staff) would be formally recognized by the University for their outstanding contributions to affirmative action in the University.

Another example is based on the fact that a large percentage of our minority workforce was referred by other minority individuals already employed by the University. Consequently it has been suggested that the University consider methods of tapping the existing networks of minority and female staff to obtain referrals of existing applicants, perhaps through an employee referral program which, while not limited to minorities and/or women, would target those groups.

G. Problem-Solving Mechanisms

The proposed statement of human resource philosophy indicates that effective problem-solving mechanisms are an essential ingredient in an environment that values human resources. The statement also reinforces the belief that supervisors and managers have central responsibility for providing the means by which employee problems are addressed.

Stanford has several resources outside the supervisory line to assist in problem solving. Some of these resources are specialized offices such as the Help Center, affirmative action offices, the office of the Ombudsman, and the Employee Relations section of personnel on campus and at SLAC. Others take the form of policy mechanisms such as the grievance procedure.

While the task force was not able to spend significant time examining each of these resources in detail, it did gain some insight into the perceived usefulness through the staff survey.

The survey tested staff familiarity with and attitudes about the problem-solving resources mentioned above. We found that less than 50% of the staff are familiar with these resources. Of those having personal experience with the resources, the Help Center and the Employee Relations section of personnel were perceived as the most useful. Even so, 30% of the staff who had used these resources found them "not at all useful." Over 50% of the staff who had used the Affirmative Action Office, the Ombudsman's Office, and the grievance procedure found them "not at all useful."

The reasons for these perceptions are not clear. The general lack of familiarity with the resources available may mean that people do not focus on such resources until they are involved personally in a problem situation. The lack of perceived usefulness of the Ombudsman's Office and the Affirmative Action Office may reflect a misunderstanding by staff of the roles of those offices. The reason that the grievance procedure is perceived as not being useful could be that most grievances which would be decided in favor of the staff member are so resolved before they reach the formal process. The perceptions regarding the usefulness of each resource may also be due, in part, to expectations which the particular resources were not designed to meet.

While such interpretations may be plausible, they are not the results of focused study. The task force, therefore, recommends that,

Recommendation #23:

Additional efforts should be made to understand the staff's perceptions about existing problem-solving resources and to clarify their purposes.

H. Miscellaneous Issues and Acknowledgements

During the course of our consulting we learned of opinions which either do not fit the preceding categories or which are outside the charge of this task force.

Two of the latter categories warrant mention. The SRI survey indicated that staff are especially dissatisfied with the parking situation at Stanford. We have referred this finding to the Committee on Parking and Transportation for their consideration.

Similarly, the survey showed significant staff dissatisfaction with the availability of suitable, convenient child care facilities. This finding was reported to the Dean of Student Affairs.

The task force would like to express its appreciation to the many members of the Stanford community who have contributed to its work. Special appreciation is due to Dorothy Antwine, Paul Fearer, Caroline Gordon, Linda Haines, and Stephen Peeps.

IV. BUDGET IMPLICATIONS OF THE RECOMMENDATIONS

The task force did no analysis of the budget implications of these recommendations; indeed, we could not, given the combinations of plausible mixtures of recommendations and approaches to implementation. In talking about the subject, however, we found that two general points of view emerged about the likely budget effects.

One point of view is that, with the exception of a temporary investment of money, the net effect of these recommendations on the budget can be zero. The tendency toward incremental costs can be offset by simplification of administrative procedures, by leveraging staff efforts and by better aligning personnel policies and practices with local needs. The key to the success of a new matching of resources to needs will lie in how well we can increase efficiency—by improving the relationship of effort to results—and effectiveness—by increasing the impact of results on our human resources objectives.

The other point of view is that although simplification, leveraging, and aligning can mitigate cost increases, there will still be a residual and recurring net cost to implement these recommendations. More attention to human resource management throughout the University, coupled with significant decentralization of some activities, will require more time, effort, staff and other resources than can be offset by administrative redesign. How much more is not at all clear without analysis.

No doubt there are auspicious times for recommending increased attention to a major facet of organizational life, but the eve of an episode of retrenchment surely is not one of them. The budgetary climate into which our report is being introduced gives us considerable concern. Our principal worry is that consideration of our ideas and proposals will be attenuated if they appear, at first glance, to be too costly. We want to discourage that reaction and instead urge that careful thought be given to the recommendations in the context of the probable budget consequences.

APPENDIX

1. SRI Survey Findings by Staff Subgroups

In addition to the general findings, the survey report also provided an analysis of staff attitudes along dimensions of sex, minority/nonminority status, age, years of service, exempt/nonexempt status, supervisory/nonsupervisory status, salary and vice-presidential group.

Key findings from this analysis are:

Sex

- Of those surveyed, women tend to be younger than the men and to have worked at Stanford a shorter time than men.
- Men are more likely to be exempt employees and to be supervisors than are women. Women are just as likely as men to feel that they are paid about the same as others at Stanford who have similar responsibilities and experience and that their salary increases are determined fairly.
- Men earn significantly larger salaries than women (a larger percentage of higher-paying jobs are filled by men).
- Both men and women are more satisfied than dissatisfied with their jobs, with men being slightly more satisfied than women.
- Men and women do not differ importantly in their ratings of their supervisors; both perceive their supervisors more positively than negatively.
- Women are less satisfied than men with the classification system and its application.
- Women are more apt than men to feel that they understand how their performance is evaluated and that their last evaluation gave them an idea of their strengths and weaknesses.
- Both men and women rate the benefits quite highly.
- Women are less likely to be satisifed with the treatment of women at Stanford than are men.
- Ninety-four percent of men mostly or strongly disagree that they are discriminated against because of their sex, while 78% of the women mostly or strongly disagree that they are discriminated against.
- Men are more likely than women to be familiar with problem solving mechanisms, e.g., grievance procedures, Employee Relations section of personnel.

Minority/Nonminority

- Minorities are likely to be young and female and have worked at Stanford fewer years than nominorities.
- Nonminorities are more likely to be exempt and therefore to have higher salaries.
- Minorities are significantly less satisfied with their salaries than are nonminorities, less likely to think their increases are determined fairly, and less likely to think they are paid the same as others at Stanford with similar responsibilities and experience.
- Minorities are generally less satisfied with their jobs than are nonminorities.
- Minorities have consistently less positive views of various aspects of the supervisory relationship than do nonminorities.
- Nonminorities and minorities do not differ reliably in their attitudes toward staff development.
- Minorities are less satisfied with the job classification system than nonminorities.
- Minorities and nonminorities feel about the same regarding performance evaluations.
- Minorities consistently rate Stanford's benefits as less adequate than do nonminorities.
- A third (35%) of the minorities, as opposed to 15% of the nonminorities, are at least somewhat dissatisfied with the overall treatment of minorities at Stanford. Conversely, 38% of the minorities and 49% of the nonminorities ar mostly or very satisfied with the treatment of minorities.
- Twenty-five percent of the minorities believe that, to some degree, they are discriminated against in their jobs because of their race.
- Minorities are no more likely than nonminorities to be familiar with Stanford's problem solving or grievance mechanisms or to have found them useful.

Age

- Age is positively related to job satisfaction at Stanford, but job satisfaction does not increase continuously over the life cycle. Staff over 50 are significantly more satisfied with most dimensions of their jobs than are other age groups. Staff age 31 to 40 and 41 to 50 do not differ greatly in job satisfaction. Those under age 31 are significantly less satisfied with the type of work they do and with their independence and flexibility than are other age groups. This may be due to the fact that they are least likely to have exempt status or to be supervisors.
- Although staff under 31 earn significantly less than other age groups, they are just as satisfied with their salaries as are those age 31 to 40 or 41 to 50. Staff over 50 are more likely to be satisfied with their salaries than are their younger colleagues. Staff of all ages believe that staff who have similar responsibilities and experience should be paid similar salaries regardless of where in the University they work.
- Staff members over 50 are most apt to perceive their supervisors positively.
- Staff over 50 are most likely to say that they are very satisfied with the job classification system.

continued on next page

Task Force Report

continued from page 19

Staff over 50 are most likely to rate their last performance evaluation highly, to say that it helped them in their career development and planning, and that they understand how their performance is evaluated.

Staff members over 50 are most likely to perceive Stanford benefits as adequate.

Staff over 50 are significantly more likely to rate highly various personnel department services.

Staff members under 31 are more likely than their older colleagues to be female and minority; also they are less familiar with Affirmative Action offices, staff grievance procedures and the Ombudsman's Office than are other age groups.

Age groups do not differ significantly in their ratings of the helpfulness of various problem solving and grievance mechanisms.

Years of Service

Most staff have had relatively short tenure at Stanford. Fifty-seven percent have worked here less than six years, 15% for six to 10 years, 13% for 11 to 15 years, and only 15% for over 15 years.

Staff who have worked here for more than 10 years are more likely to be employed at SLAC than are staff with shorter service.

Employees with over 15 years of service are significantly more satisfied with their salaries than are employees with fewer years of service.

Length of employment at Stanford is positively associated with job satisfaction, though not as strongly as age is. For example, staff with fewer than six years of service are significantly less satisfied than are other employees. The lower satisfaction of this group may be due to the large percentage who are nonexempt. Nonexempts are significantly less satisfied with their jobs than are exempts.

Staff with fewer than six years of service are significantly less apt than employees with more years of service to say that their supervisors are not overly critical, are competent managers, are open and democratic, or give recognition for good performance. Conversely, staff with over 15 years of service are most likely to rate their supervisors highly.

Length of service does not appear to make a difference in satisfaction with the job classification system, in staff ratings of their most recent performance evaluations, or in ratings of personnel department services.

The longer staff have worked at Stanford, the more likely they are to say that Stanford benefits are adequate.

Exempt and Nonexempt Status

Almost all (93%) of the nonexempt staff surveyed are women, while women represent about half (46%) of the exempts.

Nonexempts tend to be less satisfied than exempts with their salaries and less likely to believe their increases are determined fairly.

Relative to nonexempts, exempt staff are generally more satisfied with their jobs.

Exempts and nonexempts differ very little on ratings of their supervisors.

Nonexempts are more likely than exempts to have participated in staff development activities at Stanford within the last 12 months, but the opposite is true for staff development activities away from Stanford.

Nonexempts are considerably less satisfied with the job classification system in general than are exempts and less likely to think the reclassification system is applied fairly.

Nonexempts tend to see performance evaluations as better vehicles for downward than for upward communication. Conversely exempts see performance evaluations as somewhat better for upward than for downward communication.

Exempts are generally more satisfied with Stanford's benefits than are nonexempts.

Nonexempts feel less familiar than exempts with Stanford's problem solving and grievance mechanisms. For those that have used these resources, nonexempts give lower usefulness ratings except for the Help Center and the Ombudsman's Office.

Supervisors and Nonsupervisors

Approximately one-third of the staff surveyed are supervisors.

Supervisors tend to be more satisfied with their salaries than are nonsupervisors.

Supervisors tend to be more satisfied with their jobs than nonsupervisors.

Supervisors of exempt staff feel they have more flexibility to reward superior performance through pay increases than do supervisors of nonexempt staff. For both types of staff, considerably more flexibility is desired than is currently perceived to exist.

Only about a third of the supervisors feel that current pay levels are mostly or very adequate for recruiting purposes.

Supervisors are more likely than nonsupervisors to have participated in staff development activities both at Stanford and away from Stanford.

Supervisors are somewhat less negative about the job classification system than are nonsupervisors.

Relative to supervisors, nonsupervisors tend to give more positive ratings to their last performance evaluation.

Supervisors are generally more positive about Stanford's benefits than are nonsupervisors.

Supervisors and nonsupervisors do not differ reliably in their ratings of most personnel department services.

Supervisors are substantially more familiar with Stanford's problem solving and grievance mechanisms than are nonsupervisors.

Salary Level

The distribution of the survey respondents by salary level was less than $16,000 (22%), $16,000 to $20,000 (26%), $20,000 to $28,000 (26%), and over $28,000 (26%).

Generally, the higher the income, the higher the job satisfaction is, although satisfaction with the size of the work load tends to decrease with increasing salary.

Salary level does not appear to make much difference in regard to staff perceptions of their supervisors.

Higher paid staff are more satisfied with their salaries than are lower paid staff and are more likely to believe their increases are determined fairly.

Staff with higher salaries tend to be more positive about the job classification system.

Higher paid staff are generally more satisfied with Stanford's benefits than are lower paid staff.

Staff with higher salaries are more likely to be familiar with Stanford's problem-solving and grievance mechanisms and to consider them useful.

Vice-Presidential Area

SLAC employees are significantly more apt to be satisfied with most aspects of their jobs than are employees in other parts of the University.

Business and Finance employees are significantly less apt to be satisfied with their intellectual stimulation, with their independence and flexibility and with the size of their work load than are employees in other vice-presidential areas.

Provost (non-SLAC) staff are significantly less likely to be satisfied with communication between management and staff and with faculty-staff relationships than staff in other vice-presidential areas.

Medical Affairs staff are less likely to be satisfied with their job security than are employees in other vice-presidential areas.

SLAC employees are more likely to say their supervisors give them recognition for good performance. Perceptions of supervisors on other characteristics do not differ reliably by vice-presidential area.

Provost (non-SLAC) employees and Business and Finance employees are more apt than are Medical Affairs or SLAC employees to have participated in staff development activities at Stanford in the past 12 months. Business and Finance staff are significantly more likely to have participated in staff development activities away from Stanford than are employees in other vice-presidential areas.

SLAC staff are more likely to be satisfied with their salaries and to feel their salaries are determined fairly.

SLAC employees are most apt to be satisfied with the job classification system whereas Medical Affairs employees are least apt to be satisfied.

Business and Finance employees are most likely to say that their most recent performance evaluations gave them an opportunity to communicate with their supervisors.

SLAC staff are most likely to consider Stanford benefits adequate.

SLAC employees and Business and Finance employees are more likely to be familiar with affirmative action offices, grievance procedures and the Employee Relations section of Personnel. Provost (non-SLAC) staff are most familiar with the Ombudsman's office. Familiarity with the Help Center does not vary importantly by vice-presidential area.

2. Task Force Findings from Other Staff Groups

In addition to the survey findings, two staff groups offered especially thoughtful input to the task force. They are La Raza Staff Association and the Staff Affairs Committee of the Stanford Black Community Caucus. A few of the principal recommendations from these groups are listed below. The complete texts of their reports are available on request.

La Raza Staff Association

La Raza Staff Association was supportive of the need for a sound personnel philosophy which recognizes that people are the most valuable resource the University has. Many of the principles suggested by the Association are reflected in our proposed statement of human resource philosophy.

The Association also expressed a concern for policies and practices which result in significant changes in the presence and status of chicanos and Hispanics at Stanford. Recommendations were made on the subjects of recruitment, retention, status, and compensation. Examples within recruitment, retention and status include proposals for:

An employee referral program which would provide incentives for employees to refer qualified minority applicants.

The establishment of statistical programs and analyses of chicano employment patterns.

A junior (C4-C6) management development program.

Career needs surveys.

Better tuition reimbursement programs.

In the area of compensation some examples of the Association's proposals or ideas include:

A reexamination of the assumption upon which Stanford's compensation program is based.

A set of values about pay including a belief that "pay for value to the University is the foundation of an equitable compensation policy."

The importance of a solidly based central classification and audit system, especially if compensation decisions are decentralized.

Analyses of salary relationships among exempt, nonexempt and bargaining unit employees.

Stanford Black Community Caucus

The Black Community Caucus expressed their view that the formation of the task force was a positive sign. In consulting with the task force they expressed an array of concerns and made several recommendations. Some of the concerns and recommendations from the Caucus are:

Managers and supervisors should be evaluated on their effectiveness in attaining affirmative action goals.

The University needs to articulate the career paths through which upward mobility can occur. There is an absence of black staff in middle and senior levels and it appears that more white women are being recruited and promoted to management positions than blacks and other minorities.

Much work needs to be done to improve the quality of existing supervisors and to provide training and support for new supervisors. "Many supervisors feel frustrated and burnt out. They feel expectations are high but support is low from top management."

Stanford's mid-market compensation philosophy precludes hiring highly qualified black applicants. Additionally in lower job classifications the pay is too low for the kind and quality of work expected.

There needs to be a stronger message from the University that career growth is important. Too many staff come in at one level and leave at the same level. The perception is that black staff are not really supported in their career growth.

There is a lack of opportunity for support staff to participate in decisions which affect their job. Additionally there is little minority representation on University committees.

The grievance procedure is not effective. It takes too long to process grievances and it appears biased in favor of management.

While it is difficult to be procentralization for personnel administration, there are very real concerns about our environment with weak central policies and guidelines. Minority staff are concerned that in a highly decentralized environment, policies will not be followed and there will be no central advocate to turn to for help. There appear to be inadequate incentives for supervisors to act responsibility.

Staff survey results: Stanford a nice place to work, but parking criticized

continued from page 1

solicited opinions from individuals and groups before writing its report.

(A composite summary of the survey appears under section II, Findings, on page 14 of *Campus Report*. An analysis by staff subgroups (i.e., by sex, minority/nonminority, exempt/nonexempt, vice-presidential group, etc.) is on page 19.

(Copies of the full text of the survey are available at the following libraries: Green, Meyer, Art, Music, Cubberley, Engineering, Earth Sciences, Math, Computer Science, Falconer Biology, Physics, Swain Chemistry, and Lane Medical.

(The survey also is available from Caroline Gordon at Personnel, ext. 7-9228, and at the SLAC Personnel Department.)

The survey revealed that exempt and nonexempt staff hold a slightly negative view of the job classification system, with one-third believing they are inappropriately classified. The task force proposes restructuring and streamlining the classification system by cutting down the number of classifications and making the system easier to administer.

Judgments about appropriate classification for nonbargaining unit staff should be decentralized to the organizational units at levels where there is adequate administrative support for personnel activities, the task force says.

According to the survey, most nonbargaining unit staff dislike the concept of giving all employees the same percentage salary increase. The task force suggests increased flexibility to reward performance of nonexempt staff by increasing the ceiling of the merit zone and allowing exceptions so salaries of selected strong performers could exceed the range maximum.

The survey showed strong support for salary equity across the institution. The task force says the University should continue its practice of not allowing the source of funds to be a factor in determining employees' salaries.

Feelings are slightly positive about advancement opportunities and salaries. Attitudes split evenly on satisfaction with management-staff communication and the grievance procedure. In addition to the job classification system, faculty-staff relations are viewed slightly negatively.

The staff survey showed Stanford employees have very positive feelings about their work environment, but feel very negative about parking and, for those to whom it applies, the availability of child care.

Minority staff, however, are less satisfied with working at Stanford and feel less positive about their supervisors than nonminorities. "Supervisors are often reluctant to give constructive criticism to minority employees," the task force was told. "This phenomenon only serves to frustrate affirmative action efforts and may be one contributing factor" to the findings about minority staff satisfaction.

Formed by President Donald Kennedy and Vice-President for Business and Finance William F. Massy, the task force was asked to develop a human resource philosophy and recommend changes in the personnel administration system to make it consistent with the philosophy.

Members of the task force were: cochairs Rob Parker, director of personnel, and John Schwartz, University council; Ray Bacchetti, vice-provost, management, and director of University budgets; Ken Creighton, assoc. vice-president, Business and Finance, and controller; David Korn, chairman and professor of pathology; Sally Mahoney, registrar and assoc. provost; David Mendelow, assoc. dean, School of Medicine; Rene McPherson, dean, Graduate School of Business; John Rees, assoc. director and adjunct professor, SLAC; Santiago Rodriguez, affirmative action officer; Elizabeth Salzer, head, Meyer Library; Norman Wessells, dean of Humanities and Sciences and professor of biological sciences; and Robert White, chairman and professor of electrical engineering.

"The task force had not been about its business long when it became aware of a general perception of over-regulation at Stanford," members say in their report.

"We did hear vigorously expressed concerns that certain processes took too long to accomplish, that some processes weren't accomplishing their intended ends, and that a large part of the administration of personnel policies was too remote from the front line supervisor and her or his immediate supervisors."

One of the principal dynamics in universities, they say, "is the tension between order and flexibility, between institutional policies and individual latitude, between central standards and local action.

"We shall be recommending change not because we espouse either polar position on the issue of institutional standards vs. local initiative, but because we believe that the optimum relationship between them requires periodic realignment with the evolution of the University.

"While recognizing the accomplishments and strengths of Stanford's present program," the task force nevertheless feels the University "needs to increase its capacity and effectiveness in managing its enormously valuable human resources."

Nearly two-thirds of Stanford's operating expenditures are for people.

"After years of adjusting policies and practices to meet current needs, there is a natural tendency for any program to lose coherence and focus," the report says. "We hope (our report) will be useful as a source for University initiative and direction for the coming years as Stanford enhances its capacity to manage its human resources."

Human resource philosophy

The task force drafted a statement of "Stanford's Purpose and Its Human Resources," emphasizing a "shared commitment" between the University and employees to fulfill Stanford's purposes and provide the context for the University's personnel policies and their administration.

"The University respects each person's worth, dignity, capacity to contribute and desire for personal growth and accomplishment. In return, Stanford depends on its staff to share a common understanding of and commitment to work for the achievement of the University's goals," the statement says in part (see full text, page 15).

"Each person is responsible for understanding the University's purpose, for understanding how his or her own work contributes to that purpose, and for performing at a level which serves both the University and other employees well."

Individuals with managerial or supervisory responsibilities "have special and additional responsibilities.

"Stanford recognizes its commitment to enable and encourage managers and supervisors to. . .treat each person with dignity and with respect for individuality; strive for mutual understanding of performance expectations, and reinforce that understanding through regular performance reviews and training; encourage and consider employee input in decisions that affect the work and careers of those employees; and encourage career development by helping individuals achieve their goals within the University, by encouraging self-development, by promoting from within, and when appropriate, by helping them move on to opportunities outside. . . ."

Central vs. local responsibility

In addition to shifting personnel responsibilities from central to local units "where appropriate," the task force recommends establishment of "explicit understanding" of the responsibilities of line officers for the "implementation of University-wide policies and principles and for the development of compatible local policies and practices."

In addition, the report says the role of the central Personnel Department and the roles of the vice-presidential staff involved in personnel administration should be clarified and communicated to appropriate faculty and staff.

The shift to greater local control should not be optional, according to the task force. If approved by the Administrative Council, it should be an "evolutionary process, not a cataclysmic event. The form and timing of the changes should depend to a large extent on local capacity and readiness.

Supervision

"A necessary companion to greater decentralization of personnel administration is the greater need for broadly competent supervision throughout the University," the task force says in recommending expanded supervisory training.

In addition, "the involvement and commitment of the University leadership will be crucial as local responsibility is enhanced. Despite the obvious nature of this observation, the task force has noted troubling examples of senior officers who are unaware of existing University personnel policies."

The task force proposes that senior officers or potential officers be made aware of the leadership roles expected of them in human resource management.

On the other hand, a "faculty as distinguished as ours should not be diverted into unchosen administrative pursuits except as absolutely necessary," so the task force recommends increasing the supervisory roles of appropriate administrative staff in support of faculty who also serve as supervisors.

Pay and classification

In recommending decentralization of classification decisions, the task force is "not recommending a return to the uncontrolled 'free market' " that existed prior to 1970, it says. Rather, it seeks to reinforce that "Stanford is a single institution and a single employer."

Therefore it proposes a "single, centrally maintained classification and pay system with an articulated set of supporting policies and guidelines" that allow "sufficient flexibility to recognize the differing needs of operating units."

On the positive side, decentralization could lead to, among other things:

* a streamlined process that requires less time, fewer steps, and reduced paperwork;
* reduction in employee and supervisor stress associated with the existing process, and improvement in staff morale; and
* reinforcement of the relationship between staff members and their own departments.

But the task force cautions, risks will include:

* reduced consistency in the application of the University's classification system, which could exacerbate subtle biases (male/female, minority/nonminority) or personality preferences;
* migration of superior employees from poorer to richer departments, if the latter inappropriately manipulate classifications;
* decreased attention to legal obligations; and
* increased budgetary pressure resulting from reduced central controls on individual reclassifications and possible patterns of 'grade creep.'

"Our recommendation to decentralize the classification process presumes a system that is understood and accepted. The existing classification system is perceived by supervisors and employees to be cumbersome and restrictive."

The task force suggests that Personnel streamline the current exempt and nonexempt classification structure, making it easier to administer. There should be "fewer and more clearly defined classifications."

Concern that the present pay system may appear to compensate employees "too uniformly and too automatically" led members to propose greater flexibility in rewarding superior performance and recognizing "long-term, high performing staff whose salaries may be constrained unduly by range maxima."

Nonexempt merit zone ceilings should be "extended considerably," and provisions for "exceptions to the constraint of range maxima" should be established the task force said.

Long-term, the task force proposes that the Personnel Department redesign the nonexempt pay system. "Alternatives may range from a significantly modified version of the current structure to an altogether new system, e.g., an open range structure with only a minimum and maximum specified."

Exempt pay curves currently have a span (percentage spread) of 50 percent, while the nonexempt step structure span is 37 percent, up recently from 25 percent. Extending the range maxima for nonexempts would "remove the reality and appearance of

Admissions Dean Hargadon reports to Academic Council

Tests point to sharp drop in supply of top academic talent

Following is the text of Admissions Dean Fred Hargadon's comments to the Academic Council Feb. 3, 1983.

When I was invited to speak at the Academic Council, it was suggested I might want to talk about "The State of Admissions." What I have to say to you this afternoon is neither as lofty nor as comprehensive as that title would imply.

Since a good deal of the nitty-gritty of the admissions process has been rather thoroughly covered in a number of campus publications during the past year and a half, I thought it might be useful were I to use this occasion to provide a broader perspective on admissions than that which normally characterizes discussions of the subject.

The points I intend to make (and in some cases to illustrate) can be summarized as follows:

a) It is not everyone's dream in life to attend Stanford.

b) The potential college applicant pool in a given year is far less manipulable than is generally assumed to be the case.

c) Significant changes in the makeup of a student body are possible over time, and if one looks at the last 10 or 15 years at Stanford, at least three trends have been established which I think are both positive and noteworthy: an increase in the number of minority students enrolled, an increase in the number of women enrolled, and an increase in the number of different secondary schools from which our applicants, admits, and enrolled students come.

d) Sheer geographical proximity to particular institutions of higher education exerts a strong influence on the college application and enrollment decisions of high school seniors.

e) For colleges like Stanford, the rather sharp decline in the absolute numbers of students scoring at the highest levels on one or another national standardized test is far more significant than the more highly publicized declines in the mean test scores.

This seems to be the year for college and university ratings of one sort or another. However well or poorly we fare in such ratings, I am not as enamored of such measures as some may be. But like almost everyone else, I am inclined to wonder how well, in my own area of admissions, we appear to be doing. And when I get to wondering about that, I am invariably reminded of the fellow who, when asked how his wife was, replied "compared to what?" The question is not an easy one to answer nor are the appropriate or relevant comparisons to be made ones which are easily determined.

For instance, which is more noteworthy: that we receive 14,000 applications for 1,500 available places in the freshman class, or, that of approximately three million high school graduates in a year, only 14,000 of them applied to Stanford? I think I know the answer to that question, but I'm not sure.

The factors which influence the college application and enrollment decisions of high school graduates each year are far more numerous and varied, frequently even trivial, and far less amenable to the efforts of college admissions offices than is generally imagined.

It is the lot of admissions officers to travel a good deal and we thereby gain a different perspective. For instance, one meets exceptionally talented young men and women who (a) have never heard of Stanford, and (b) have grown up all their lives wanting nothing so much as to attend a particular college which many of **us** have never heard of.

Nathan Glazer once wisely observed that "the taste for higher education does seem to have a limit. . . the combination of economic advantage, consumption opportunities, social pressures, and institutional encouragement finally faces the stubborn and unmoveable resistance of some young people to what the institution does, and what it expects those in it on occasion to do." To his observation we might well add that so, too, is there a limit to the attractiveness of a particular institution of higher education among those who **do** intend to enroll in college.

For about 10 years now, we have surveyed both the admitted students who have decided not to enroll at Stanford as well as those who did enroll. Among the things we have learned from that exercise is the fact that there is no reason anyone cites for deciding not to enroll which is not cited as the reason for deciding to enroll by someone else. We are either too close to home, or too far from home. We are thought to do either exceptionally well, or poorly, by our undergraduates. I could go on.

In any event, let me say simply that the potential applicant pool for colleges comes nowhere near close to operating like a "perfect market." To cut through all of that noise in order to enroll a first-rate freshman class each year is not without its problems.

While it is highly improbable that we could ever fine-tune a freshman class with respect to the frequently expressed, and particularly defined, wishes of the many members of this academic community, some changes in direction **are** possible over time. Let me mention several changes in the makeup of Stanford's undergraduate student body which have taken place over the past decade and a half.

Most significant of all, perhaps, is the increased enrollment of Black, Chicano and Native American students. Because students from these particular ethnic backgrounds were ones which previously had enrolled in schools like Stanford only in extremely small numbers, commitments for special recruitment efforts on their behalf were begun in the late 1960s and early 1970s. They are ongoing commitments, and as a result, the proportion of such students in each freshman class has steadily risen from an estimated three percent in 1966 to 18 percent in the current freshman class.

Similarly, a change has taken place in the percentage of women enrolled in each freshman class, from 32 percent in 1966 to the last four entering freshman classes in which, respectively, women have comprised 45 percent, 43 percent, 44 percent, and in this year's freshman class, 42 percent.

The opportunity for the Admissions Office to admit on a sex-blind basis was provided in the early 1970s, by which time coed dormitories have been launched and there was no longer any need to specify a particular number of men (900) and women (500) to be enrolled in a given freshman class.

A third change which has occurred over time has to do with the number of secondary schools from which we have received applicants, offered them admission, and enrolled a freshman class. The increases in each of these areas, as the tables show, have been rather steady ones.

The numbers on Tables 1, 2 and 3 (next page) may, and probably do, understate the actual number of **different** secondary schools with which we have dealt, since there are a number of schools each year from which we receive applicants (and perhaps admit and enroll them) for the first time.

Now would be an appropriate time to treat of the question of geographical distribution. I am not in a position to comment on changes in geographical distribution over the years (for applicants, admits, and enrollees), simply because the data, while there, would have required time I did not have to bring it together.

I am frequently asked about geographical distribution, the reasons for asking the question being no doubt quite varied. What most people want to know, of course, is whether any advantage or any disadvantage accrues to residing in a particular place at the time of making an application for admission.

We do not make our admissions decisions with regard to the particular state, or even country, in which an applicant resides. We don't know until the process is over, how many students have been admitted from any given geographical location.

Circumstance, i.e., growing up on a farm or growing up on Park Avenue, may, of course, play a role when it comes to admitting a diverse freshman class, but in the sense that most people mean by "geographical distribution," i.e., the state one lives in, it does not play a role. Perhaps it did before my time. No matter. Given the geographical mobility of this society in the past couple of decades, a large number of applicants live in a part of the country other than that in which they were born anyway (perhaps a few of them, I suspect, having moved precisely in an effort to enhance their chances for admission).

But what frustrates me most about the question of geographical distribution has to do with the surprise frequently expressed at the fact that a large fraction of our undergraduates come from the single state of California (for instance, 42 percent of the current freshman class).

In some cases (**many** cases), the query about the high percentage of Californians is simply a matter of geographical ignorance. Neither the size of the state nor its considerable diversity are quite as apparent to the inhabitants of the east as to the rest of us. They don't teach

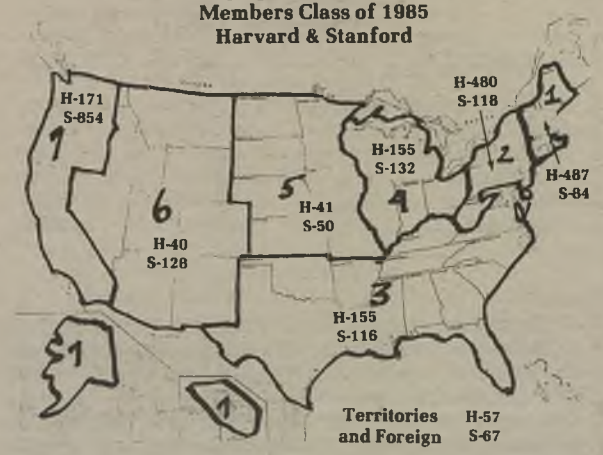
geography in the schools anymore. And, of course, there are those who believe that the sun and the intellect are mutually exclusive phenomena.

More importantly, I think many people labor under the impression of the "perfect market" of applicants to which I referred above, not realizing that the great majority of students in this country attend college within 400 miles of their homes.

The geographical pull, both in terms of where students apply to college and where they eventually enroll, is a **very** strong one. And this is particularly the case where the more distant and less distant colleges to which a student has been admitted are generally recognized as being of similarly high quality.



There is no undergraduate student body in the country which is "national" in its makeup in the way graduate and professional schools are. Some undergraduate institutions, Stanford included, **do** have more of a national representation among their undergraduates than do others.

To illustrate several of the points I have just made, I compared Harvard's Class of 1985 and Stanford's Class of 1985 in terms of where their respective members attended secondary school.

The divisions of the country by region are borrowed from Harvard, in part because their classification of the states of Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin as the "Old Northwest Territory" just seems to me to have a better ring to it than, say the "Midwest."

TABLE 4

Geographical Distribution Members Class of 1985 Harvard & Stanford

What do we find? That 31 percent of their Class of 1985 comes from New England (area 1 on the Table), and another 30 percent from the Middle Atlantic States (area 2). Now while those two areas include 12 states and the District of Columbia, I can't quite bring myself to believe that having 61 percent of a freshman class from New England and the Middle Atlantic States represents any more diversity than the 55 percent of Stanford's Class of 1985 which came from just the five states of California, Oregon, Washington, Hawaii and Alaska (area 7). Surely, diversity is not measured by the sheer number of states from which students come, but rather by a host of background characteristics of the individual students themselves.

While 10 percent of Harvard's Class of 1985 are from the five Pacific states, 13 percent of Stanford's Class of 1985 are from the New England and Middle Atlantic states. Students enrolled in our respective Classes of 1985 from the other geographical areas are as follows:

Southern (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia):
Harvard: 155
Stanford: 116

Old Northwest Territory (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin):
Harvard: 155
Stanford: 132

Central (Iowa, Kansas, Missouri, Nebraska, North Dakota, and South Dakota):
Harvard: 41
Stanford: 50

Mountain(Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming):
Harvard: 40
Stanford: 128

Territories and Foreign:
Harvard: 57
Stanford: 67

These two first-rate universities situated on the opposite coasts of the United States are among a number of universities and colleges which enroll some of the most talented students in the country. Each has a national representation of sorts among its students.

But it is also clear that the sheer geographical location of each has much to do with where the majority of their students come from. Having made that point, I should say that few colleges or universities have the national spread that both of these institutions obviously have.

Let me now turn to some contextual matters, and the question of "how well do we do?" I doubt that any among you are more concerned with the academic caliber of the students Stanford enrolls than am I.

Just as it is inevitable that there will be occasions on which you wonder whether the admissions standards are as high as they should be, so, too, there are occasions on which I have reason to question whether yours are as high as mine. You wonder on occasion how we could have let somebody in. And, on occasion, I wonder how you could have given a high grade on some of the papers I have read. There are surprises everywhere.

Most of you are somewhat familiar by now with the fact that on national standardized tests of one sort or another (indeed, on almost every state test), the scores have been declining for the past two decades. They reached their peak in about 1962 and apparently just bottomed out this year.

On the College Board SAT examinations, the mean Verbal score fell by 34 and the Math SAT by 35 during that period of time. Although we don't have records of the freshman **class** median SAT scores in our files (they were kept separately for men and women until 1971), I think it reasonable to estimate that over that 20 year span, the median class Verbal SAT declined in parallel fashion, if not as severely, while the Math SAT (for the class) has declined only slightly. The high school median grade point average of our entering freshmen (calculated by Stanford after we discount non-academic courses) remains as high as ever.

Less apparent than the declines in national median test scores are the declines on various tests of the absolute numbers of students scoring at the high end of these tests. And since schools like Stanford draw a significant number of their applicants from among such high scorers, it is **those** declines I want to call to your attention today.

TABLE 5

National Number H.S. Seniors Scoring 650 + on Verbal SAT
Stanford Applicants Scoring 650 + on Verbal SAT
Percentage National 650 + on Verbal SAT Applied to Stanford

Year	National	Stanford	Percentage
1972	53,794	2,641	5
1973	39,779	2,319	6
1974	43,393	2,506	6
1975	33,457	2,091	6
1976	35,500	2,186	6
1977	31,607	1,962	6
1978	32,019	2,230	7
1979	33,948	2,516	7
1980	29,019	2,390	8
1981	29,895	2,569	9
1982	29,236	2,430	8

For instance, in just the past 10 years (1972-1982), the number of students scoring 650 or better on the Verbal SAT has declined from 53,794 to 29,236. (The number of test takers dropped by three percent while the number scoring 650 + dropped by 45 percent.) Similarly, 21,952 **fewer** students scored 650 or better on the Math SAT in 1982 than scored that high in 1972.

TABLE 6

National Number H.S. Seniors Scoring 650 + on Math SAT
Stanford Applicants Scoring 650 + on Math SAT
Percentage National 650 + on Math SAT Applied to Stanford

Year	National	Stanford	Percentage
1972	93,868	3,872	4
1973	86,123	3,842	4
1974	90,271	4,186	5
1975	76,045	3,927	5
1976	84,896	4,242	5
1977	78,656	4,100	5
1978	75,552	4,365	6
1979	72,228	4,677	6
1980	73,386	5,290	7
1981	70,307	5,523	8
1982	71,916	5,260	7

There are similar drops at the high level no matter where we set it. In 1972, 17,560 scored 700 + on the Verbal SAT, and in 1982, that number had dropped to 8,240. **(see Table 7)** On the Math SAT at 700 +, the numbers scoring at that level went from 37,067 in 1972 to 29,528 in 1982. **(see**

continued on next page

Admissions Report

continued from page 23

Table 8) At the 750 + level, on the SAT Verbal, the total scoring at that level declined from 2,817 in 1972 to 1,479 in 1982. **(see Table 9)** And on the Math SAT at that level, from 9,966 in 1972 to 8,351 in 1982. **(see Table 10)**

That is the bad news. The good news (or **relatively** good news) is that we appear to have attracted a slightly larger percentage of those high scorers, at whatever levels, in our applicant pool, though certainly not sufficiently great to offset the rather large declines in the national pool scoring at those levels.

If one looks at the Achievement Tests, the news is no better.

American History	1,757	719
French	1,884	839
Biology	1,690	681
Chemistry	3,285	1,558

Here are a representative group of Achievement Tests at the level of 750 or better (the declines occur all the way down the line, regardless of the score level set). As with the SATs, the percentages of those scoring at this high level who apply for admission to Stanford have been steadily increasing (fortunately), but again not sufficient to offset the rather severe drops in the absolute numbers scoring at high levels on these various tests.

I don't intend to discuss the merits of the various tests on this occasion. Suffice it to say, they are the only national standardized tests we have, the only means, whatever qualifications we might attach to them, by which it is possible to approach a common standard in measuring student achievement which is otherwise represented only by the widely varying course content and grading practices of some 20,000 + secondary schools in this country.

I happen to think that the Stanford Admissions Office's practice of carefully scrutinizing transcripts and, in our decisions, obviously favoring those students whose academic programs appear to have been the most rigorous, goes some way toward offsetting whatever limitations the test scores might have. But the point here is simply that of catching you up on some of the changing characteristics of the potential applicant pool from which we draw our students.

That applicant pool is increasing in size, as you can see from the following tables (Table 12 and Table 13).

TABLE 12

Freshman Applications

Year	Number	% Admitted	Year	Number	% Admitted

1980	2,151	11
1981	2,420	11
1982	2,118	8

We have a relatively small staff for handling that number of applications in a given year, but I don't show these tables to evoke the sympathy of a faculty which itself is hardworking. Rather, you can see, among other things, why the alumni of Stanford whose children have applied in recent years are somewhat confounded by the fact that their children have a more difficult time in being offered admission than may have been the case when they, the parents, applied.

When the alumni parents of present applicants applied, perhaps 40 or 50 percent were offered admission. Now we offer admission to about 18 percent of the applicants.

You might also notice that whereas 10 years ago, 23 percent of the transfer applicants were offered admission, this past year only eight percent were offered admission.

My guess is that this rather steep decline in the percentage of transfer applicants admitted is the result of (a) the pressure the steadily increasing number of freshman applicants puts on those of us who have to make decisions, (b) a surprisingly stable yield (percentage of those offered admission who decide to enroll) in freshman admissions in the face of significant tuition increases each year, and (c) probably a decrease in the number of students "stopping out."

In terms of the context within which admissions must operate, one additional point is worth making. Few in the University are not aware of the changing aspirations of students over time. Ten years ago, the School of Engineering asked me why there weren't more engineering majors. Today, they ask me why there are so many. Since we admit students without regard to their perspective majors (a policy I happen to think we ought to hold onto), we are vulnerable to the changes with regard to career patterns which occur nationally.

For instance, here (in Table 14, next page) are the changing "intended field of study" choices of college-bound high school seniors over the past 10 years. However disappointing these changes may be to members of the various departments, quite frankly, there is relatively little the Admissions Office can do about them.

I must say that given the disproportionate amount of publicity accorded pre-meds and various pre-med syndromes in recent years, I chuckled when reading in Paul Starr's book on **The Social Transformation of American Medicine** that things were not always so. He notes the fact that among the most educationally talented in the late nineteenth century, there was a decided distaste for medicine.

continued on next page

Admissions Report

continued from page 24

A medical journal of that period remarked that "when a student of merit and ability chose to become a doctor 'the feeling among the majority of his cultivated friends is that he has thrown himself away.' " (It is also interesting to read that at the turn of the century, almost six percent of the doctors were women; there were some 7,000 women doctors at that time.) At any rate, times obviously change.

Three points in closing. The first has to do with the fact that admissions at a place like Stanford is a zero-sum game. While we do not try to be all things to all people, we **are** asked to be a lot of things to a considerable number of them.

It is simply impossible to maximize any single criterion, be it scores on a given test, or grade point average, or intended major (if known), or a particular talent, or a particular relationship to the University, without something else giving.

For instance, there are some 50+ majors in the University. I am not aware of any study which indicates that students scoring high on a particular national standardized test will distribute themselves equally over all possible major fields. It simply does not work out that way. I could give many other examples to illustrate my zero-sum point, but many of them should be obvious to you. Those of us in admissions try our best to achieve some balance overall.

The second point I would make has to do with the matter of tuition and its relationship to the applicant pool and enrollment. Frankly, I'm not sure what the relationship is. Applicants are distributing themselves to colleges these days for reasons not entirely clear to most of us.

I have two hunches. First, since costs at **all** colleges have risen, there may be a point at which parents decide that if what they're going to have to spend rises beyond "x" amount, then they will jump to "x + some amount." In other words, the difference between $1,000 and $5,000 may appear sufficiently severe so that, oddly, the increment to $10,000 from $5,000 appears less so. There is also a point at which some people equate price and quality.

My second hunch has to do with our policy of admitting without regard to the financial aid a student may need, and meeting whatever financial need that turns out to be with some combination of grant, job and loan. I don't think many colleges have that policy at present, and the fact that Stanford intends to keep that policy will undoubtedly attract applicants.

It seems to me clear that if the University kept its tuition at an artificially low level, the quality of the education offered here would suffer. And if that happened, the quality of the applicant pool would eventually suffer.

The dilemma, of course, is that part of any tuition increase results from the additional financial aid needed to enroll a student body of high quality which is also diverse in terms of the backgrounds of the students. So, the University must walk a tightrope here, and I believe that Stanford is doing that with both agility and sensitivity.

I should say that I am far from convinced that the present system for estimating financial need and awarding aid is without fault. Stanford's Financial Aids Office offers the most comprehensive and sensitively administered financial aids policy in the country.

But the basis for calculating need (using the College Scholarship Service) seems to me to too often reward spendthriftness and penalize frugality. The system takes a one-year snapshot of a family's financial situation. If that family has conscientiously saved for their children's college education, so be it. If, on the other hand, they have chosen to spend it on other luxuries rather than save it, they may well, under the present system, be eligible for financial aid. On occasion, the contrasts between families eligible for financial aid and those not eligible (or eligible for very little aid) can, on occasion, be quite startling.

I also think that there has been a rather drastic (and from my viewpoint unwarranted) shift in attitude toward the financial aid offered students in college, a shift from a time when such aid was gratefully received to a time when it is not only expected as some sort of right but, when granted, not fully appreciated even then.

My last shot has to do with the recently enacted NCAA legislation on athletic eligibility which is to go into effect in 1986. Lord knows, they needed to do something in this area. The requirement of a 2.0 grade point average in high school was a minimal step in the right direction.

The 700 total SAT requirement, while well intended (contrary to the assertions of those who took objection to it), seems to me to have been the wrong step taken for the right reason.

TABLE 14

Percentage College-bound H.S. Seniors Indicating Intended Field of Study (from SAT data)

Year	Math	Physical Sciences	Engineering	English/Lit
1972	4	4	6	4
1973	3	4	6	4
1974	3	4	5	3
1975	2.4	2.8	6.7	2.4
1976	1.9	2.4	8.4	1.9
1977	1.7	2.3	8.8	1.8
1978	1.4	2.3	9.4	1.6
1979	1.2	2.2	10.1	1.6
1980	1.1	2.1	11.1	1.5
1981	1.1	2.0	11.8	1.4
1982	1.1	1.9	12.6	1.4

Our concern should be that no college enrolls a student to play athletics unless that student's academic credentials (a) are reasonably within the range of the academic credentials of the college's student body as a whole, and which (b) are the kinds of credentials from which successful pursuit of that college's academic program can be reasonably predicted. This will vary from college to college, and it should not be hard to devise a formula by means of which it would be clear when a student was being enrolled largely for athletic reasons and with little hope of graduation.

Surely, that will mean some colleges can enroll students with lower academic credentials than can other colleges. That is now the case for all students, regardless of whether they participate in athletics.

Some sort of rule whereby colleges would be allowed to award athletic scholarships to new incoming students only in some proportion to **graduating** seniors who had been on athletic scholarships would help ensure the students' educational needs and interests were not overlooked.

Further, it might help if instead of those NCAA halftime pictures of college science labs, which perhaps too few college athletes have ever seen, were replaced by student-athlete graduation statistics for each of the schools, giving the viewers an idea of the role athletics plays within the context of the respective colleges being represented by that particular event.

In any event, I hope our president, our athletic director, and our faculty representative, in their various roles with the NCAA, while continuing to support efforts to raise the academic standards of intercollegiate athletics everywhere, will push to revise the recently enacted 700 score rule so that it more fairly and squarely meets the problem it was meant to address.

Staff survey results...

continued from page 21

disparate treatment," the task force says.

Centrally established guidelines on individual exempt annual increases should be discontinued and the University should rely instead on the "limits imposed by the budgetary process to provide adequate guidance to supervisors in setting individual salaries."

Staff development

Citing survey results showing 25 percent of staff do not receive performance evaluations at least once a year and 13 percent have never received one, the task force recommends that line officers assure that performance communication is done regularly.

A report on career paths that focuses on specific job titles and describes how current University staff reached those levels should be published periodically, the report recommends.

It also recommends an increase in the reimbursement for job-related classes to provide a greater incentive for "staff to continue their learning and career development."

Affirmative action and employment

Because of concerns that decentralization might reduce affirmative action commitments, the task force says the Affirmative Action Office should retain its centralized responsibilities.

The task force notes, however, that the ultimate success of affirmative action will occur when the office is "no longer needed because those functions operate regularly throughout the organization."

"The University will have achieved diversity when a significantly larger number of women and minorities participate in the decision-making processes of the institution."

Vice-presidents should be more involved in planning for recruitment and hiring of middle and senior management positions to "focus more attention on affirmative action at these levels." Of the approximately 100 such positions at Stanford, women currently occupy 14 slots and minorities 5, the task force says.

Vice-presidents also should review progress in affirmative action annually and clarify the roles of their affirmative action coordinators.

The University should consider publicly recognizing "faculty and staff who have made outstanding contributions to affirmative action," the task force suggests.

Problem-solving mechanisms

Survey results showed that less than half of the staff was familiar with the University's problem-solving resources, including the Help Center, Affirmative Action Office, Ombudsman, Employee Relations section of Personnel, and grievance procedure.

The Help Center and Employee Relations received the highest ratings, but 30 percent of the staff who had used these resources found them "not at all useful." More than 50 percent said the Affirmative Action office, Ombudsman's Office, and the grievance procedure were not useful in solving problems, the task force noted.

Although the "reasons for these perceptions are not clear," they could be "due, in part, to expectations which the particular resources were not designed to meet."

The task force recommends additional study of staff perceptions. Efforts to clarify the purposes of the various problem-solving resources also should be undertaken, it says.

—Karen Bartholomew

Board of Trustees report

Trustees approve $3 million for general plant improvements during 1983-84

The Board of Trustees took the following actions at its meeting on February 8, 1983:

1. Approved actions already taken by the Office of the Vice Provost and Dean of Graduate Studies and Research to enter into contracts and grants for research for the month of November, 1982, totalling $6,807,952 and for the month of December, 1982, totalling $8,367,227. The monthly average of such awards for the twelve-month period ending December 31, 1982, was $13,958,246 compared with $12,569,777 for the corresponding period the year before.

2. Accepted gifts received during the month of December, 1982, totalling $13,315,211 and during the month of January, 1983, totalling $10,357,984.

3. Amended signature resolutions to reflect inflation by delegating to the Vice President for Business and Finance decisions regarding projects costing less than $550,000 (raised from $500,000). Furthermore, actions taken under this delegation which cost more than $70,000 (up from $60,000) will be reported to the Board no less often than three times per year.

4. Authorized continuation of the Parent Loan Program for originating loans to eligible parents of Stanford students up to a maximal outstanding balance of $6.5 million.

5. Authorized an investment of up to $1,500,000 in the Aegis Fund.

6. Authorized an investment of up to $2,000,000 in Greylock Ventures, Ltd.

7. Authorized an investment of up to $500,000 in Nellcor, Inc.

8. Heard a report from Rosenberg Capital Management on the management of bonds in the University's endowment investment pools.

9. Discussed possible revisions in the Statement of Investment Goals and Objectives.

10. Approved the concept for restoration of the Inner Quad Courtyard.

11. Approved the concept for the reconstruction of the Red Barn and Stable.

12. Approved the project and approved the design to construct the Medical School's Research Animal Facility-I at a total budget of $12,000,000.

13. Approved projects included in the Program of General Plant Improvements (GPI) for 1983-84 for improvements to and extension of utility services, roads, paths, lighting, and other facilities at a total budget of $3,135,000.

14. Approved the concept for the extension of Building 120 of the Stanford Synchrotron Radiation Laboratory at the Stanford Linear Accelerator Center.

15. Approved the concept and site for the development of residential housing for faculty to be known as Rural Lane.

16. Heard a further report on the Electronic Communications Media Project.

17. Heard a report on action taken between meetings, pursuant to provisions in the By-Laws for conduct of business between meetings, to purchase the IBM 3081-D computer already installed for activities of the Research Libraries Information Network.

18. Received a report on the status of construction projects costing more than $60,000.

19. Established the Charles Lee Powell Professorship in the School of Engineering.

20. Established the Nora Eccles Harrison Professorship in Diabetes Research.

21. Heard a report from Professor Eleanor E. Maccoby, Barbara Kimball Browning Professor of Psychology, on "Child-Rearing Strategies."

22. Established tuition for 1983-84 of $9,027 for general tuition (up 9.8 percent), $9,178 in the School of Law (up 9.7 percent), $9,177 in the Graduate School of Business (up 11.7 percent), and $10,530 for M.D. students in the School of Medicine (up 9.8 percent).

23. Established rates for 1983-84 for room of $1,729 (up 14.5 percent) and for board of $2,083 (up 8.9 percent), making the aggregate increase 11.4 percent and the total standard amount $3,812. The Vice President for Business and Finance was authorized to approve specific rates for residences, food services, and apartments which may vary from the standard rate.

24. Elected W. James Ware a member of the Board of Trustees.

Board approves promotions, appointments

On February 8, 1983, the Board of Trustees approved the following actions, effective September 1, 1983, unless indicated otherwise:

PROMOTIONS:

Ben S. Bernanke, associate professor of economics, GSB; Jeremy I. Bulow, associate professor of economics, GSB; Gary J. Feldman, professor at the Stanford Linear Accelerator Center; D. Craig Miller, associate professor of cardiovascular surgery; Lynn W. Phillips, associate professor of marketing, GSB; Gordon M. Ringold, associate professor of pharmacology; William Watson, professor of dermatology; Steven C. Wheelwright, professor of management.

REAPPOINTMENTS:

Jonathan B. Bendor, assistant professor of public policy and public management, GSB; Douglas B. Lenat, assistant professor of computer science; Thomas E. Macurdy, assistant professor of economics; Hajime Miyazaki, assistant professor of economics; Daniel I. Okimoto, assistant professor of political science; Robert Schreiber, assistant professor of computer science.

APPOINTMENTS:

Alicia G. Herrmann, professor of mechanical engineering, effective 1/1/83; James M. Lattin, assistant professor of marketing and management science, GSB; Llewelyn R. O. Storey, professor of electrical engineering, effective 2/1/83; Carol H. Winograd, assistant professor of medicine; Bruce D. Winstein, professor of physics.

REPORT MATTERS:

Elie Abel, Harry and Norman Chandler Professor of Communication, appointed chairman of the Department of Communication, 9/1/83 to 8/31/86.

John P. Bunker, professor of anesthesia and family, community and preventive medicine, appointed acting chairman of the Department of Anesthesia, effective 1/10/83.

John J. Csongradi, assistant professor of surgery, appointed assistant professor, by courtesy, of mechanical engineering, 1/1/83 to 8/31/84.

Dorothy A. Huntington, associate professor of speech and hearing sciences, appointed associate professor, by courtesy, of linguistics, 9/1/82 to 8/31/87.

Perry L. McCarty, Silas H. Palmer Professor of Civil Engineering, reappointed chairman of the Department of Civil Engineering, 9/1/83 to 8/31/85.

Ronald I. McKinnon, professor of economics, appointed the Eberle Professor of Economics, effective immediately.

Anne K. Mellor, professor of English, appointed the Howard H. and Jessie T. Watkins University Professor in Feminist Studies, 9/1/83 to 8/31/88.

Julius Moravcsik, professor of philosophy, appointed chairman of the Department of Philosophy, 9/1/83 to 8/31/85.

David S. Nivison, professor of Asian languages, philosophy and religious studies, appointed the Walter Y. Evans-Wentz Professor of Oriental Philosophies, Religious and Ethics, effective immediately.

James B. Stockdale, reappointed senior research fellow at the Hoover Institution, 5/1/83 to 4/30/86.

Elizabeth C. Traugott, professor of linguistics and English, reappointed chairman of the Department of Linguistics, 9/1/83 to 8/31/86.

Thomas A. Wasow, associate professor of linguistics and philosophy, appointed acting chairman of the Department of Linguistics, 9/1/83 to 8/31/84.

Education School, Interactive Sciences plan summer institute on micros

Interactive Sciences, Incorporated and Stanford University's School of Education will jointly sponsor a unique, intensive five-week summer International Institute on Microcomputers in Education starting June 27. One hundred educators, administrators, and researchers from around the world will attend the Institute.

Participants will receive a broad exposure to computer technology and its potential in education, along with practical methods for integrating microcomputers into the school and community. Key computer-using skills will be taught using the innovative Computer Tutor peer tutoring method developed by Interactive Sciences. Institute graduates will acquire the background needed to establish successful computer programs in their home school systems and to serve as resource persons for others.

The Institute will feature a Distinguished Speaker series of talks and panel discussions given by leaders in the fields of computers and education. Social and economic implications of automation will be emphasized. Participants will tour major education/computer sites in the San Francisco Bay Area. In addition, a wide range of recreational and cultural activities on the Stanford campus will be available.

The Institute will serve as a showcase of advanced educational computer products. IBM, Apple, Radio Shack, Atari, and Hewlett-Packard are among the companies providing equipment for participants to use.

Educators will observe youngsters at a concurrently-offered computer camp, Computer Tutors at Stanford. Four two-week sessions will be offered for resident and day campers.

Further information on the Institute is available from the School of Education at Stanford University, Stanford, CA 94305, (415) 497-2102. Those with no prior computer or special math background are especially welcome. Enrollment is limited so early application is advised. For information about the camp, call (415) 461-7533 (in California) or (800) 227-2866.

Program planning session in residences

"Program Planning in the Residences" is the title of a workshop co-sponsored by the Offices of Residential Education and Student Activities, to be held on Thursday, Feb. 24, from 4 to 5 p.m. in the Elliot Center Common Room in the new Governor's Corner living complex.

The workshop will be tailored to address the specific aspects of planning an event to be held in a residence, as opposed to events in a large auditorium. It will be of special interest to groups trying to reach students on an informal basis within their home environments, emphasizing program theme development, planning and publicity. It also should be of particular interest to current and prospective R. A.s.

For more information, contact Nancy Torrey at OSA (497-3542) or the Office of Residential Education (497-3044).

Lagunita Players to present musical

The Lagunita Players, a residence-based theater company at Stanford, will present "How to Become a Legend in Your Own Mind"—an original musical production, written and produced by dormitory residents Feb. 24-27. The free show will run at 8 p.m. Thursday through Sunday in the Lagunita Dining Hall, Lagunita Court at Stanford.

The story revolves around two college seniors—a man and a woman—who, in trying to resolve questions regarding their own identities and independence, discover love and happiness together.

The script was written by senior Michael Weiss and edited by a committee of dormitory residents. The music was composed and arranged by sophomore John Sawoski. Sawoski and Weiss collaborated on the lyrics.

Drawings by Tia Rich will be shown in the Clubhouse Common Room, Old Union, through March 18. The exhibition, sponsored by the Ecumenical Ministries at Stanford, includes works in pastel, charcoal, pencil, gouache, and pen-and-ink. Rich is a Stanford senior majoring in drawing and human biology. She has taught art in her own studio in Maryland for five yeaars and is also engaged in portrait commission work. After graduation she plans to continue her work as a professional artist and as a teacher of preventive medicine.

Contracts and grants

Following is a selected list of government and nongovernment contracts and grants of $200,000 and over, received for the months of November and December:

FEDERAL

New Contracts

Ronald K. Hanson, Donald Baganoff, Craig Bowman, Robert L. Byer, Brian J. Cantwell, Lambertus Hesselink, and Sidney A. Self, mechanical engineering, "Advanced Instrumentation and Diagnostics for Chemically Reactive Flow Systems," $690,000 from the Department of the Air Force for 1 yr.

Albert E. Dien, international studies, "Joint East Asia Language and Area Center at the University of California Berkeley and Stanford University," $229,140 from the Department of Education for 1 yr.

Philip E. Oyer and Allen K. Ream, cardiovascular surgery, "Development of an Implantable Integrated Left Ventricular Assist System Utilizing a Balanced Solenoid Electrical Energy Converter and a Dual Pusher-Plate Blood Pump," $250,265 from NIH for 1 yr.

Theodore H. Geballe, W. W. Hansen Laboratories, "Superconducting Thin Films: Composites and Junctions," $877,513 from the Department of the Air Force for 2 yrs.

New Grants

Peter M. Banks, Stanford Electronics Laboratories, "Study of the Dynamics of Atmosphere-Ionosphere-Magnetosphere Interactions," $200,000 from NASA for 1 yr.

William M. Fairbank, W. W. Hansen Laboratories, "Program to Search for Gravitational Radiation Using Low Temperature Techniques," $455,000 from NSF for 1 yr.

John W. Farquhar, Department of Medicine, "Stanford Five City Multifactor Risk Reduction Study," $372,862 from NIH for 1 yr.

Oleg Jardetzky, Magnetic Resonance Laboratories, "High Frequency NMR Biotechnology Resources," $316,424 from NIH for 1 yr.

Edward Kavazanjian and Haresk C. Shah, civil engineering, "Risk and Damage Analysis Associated with Seismically Induced Pore Water Pressure Build Up," $230,900 from NSF for 2 yrs.

William Robinson, Department of Medicine, "The Viruses of Hepatitis B and Ground Squirrel Hepatitis," $257,171 from NIH for 1 yr.

Stanley G. Wojcicki, physics, "Program in High Energy Physics," $450,000 from NSF for 1 yr.

David S. Hogness, biochemistry, "The Molecular Basis for Genetic Control for Development," $326,353 from NIH for 5 yrs.

Philip A. Berger, psychiatry, "Biological Correlates of Psychopathology," $472,782 from NIH for 1 yr.

J. Martin Brown, radiology, "Experimental Radiotherapy/Basis and Modification," $220,603 from NIH for 1 yr.

Ronald W. Davis, biochemistry, "Cell Regulation: Biochemically Isolated DNA Segments," $301,564 from NIH for 1 yr.

Robert S. Feigelson, Center for Materials Research, "Materials for High-Temperature Thermoelectric Conversion," $250,000 from NASA for 1 yr.

Gerald M. Reaven, Department of Medicine, "General Clinical Research Center," $475,456 from NIH for 1 yr.

Robert T. Schimke, biological sciences, "Enzyme Synthesis and Degradation in Metabolic Control," $210,215 from NIH for 1 yr.

Irving Schulman, pediatrics, "General Clinical Research Center," $222,893 from NIH for 1 yr.

Eric M. Shooter, neurobiology, "Nerve Growth Factor in Neuronal Development," $252,358 from NIH for 1 yr.

NON-FEDERAL

New Contracts

John W. Lewis, political science, "Arms Control and Disarmament," $250,000 from the Weingart Foundation for 5 yrs.

William C. Fowkes, Department of Medicine, "Women's Health Care Training Project Primary Care Associate Program," $203,096 from the State of California for 1 yr.

Patrick Suppes, Institute for Mathematical Studies in the Social Sciences, "Research on Portability of LISP Systems and Applications," $211,800 from International Business Machines for 1 yr.

Edward A. Feigenbaum, computer science, "Use of Design Models in the Diagnosis of Computer Hardware," $660,000 from International Business Machines for 3 yrs.

Workers in older industries fund new ventures through their pension funds

Through their pension funds, workers in older industries are becoming big backers of new ventures, according to Pitch Johnson, veteran Peninsula venture capitalist.

By the turn of the century, pension funds may approach $1 trillion in value, he noted at an informal seminar Feb. 8 with associates of Stanford's Center for Economic Policy Research.

"The result may be a lot more, big scale entrepreneuring," Johnson suggested. Startups of new firms with as much as $20 to $50 million in capital may become common. Established firms may have trouble keeping their own people.

Johnson and Ralph Landau, award winning chemist, entrepreneur and academic, agreed that changes in the tax laws in the late 1970s triggered a major flow of venture capital in the U.S.

Contrary to the expectations of many economists, the returns on venture capital investments have averaged as high as 30 percent, compounded annually.

"The number of entrepreneurs has risen to meet the supply of dollars," Johnson observed. Classes at Stanford and Harvard on entrepreneuring are "jammed."

Pension funds and other big investors are able to limit their risks by participating in several different ventures.

Eventually, "so much (venture capital) will slosh in that the rates of return will drop. It won't be orderly; there will be some sharp readjustments," Johnson predicted.

Landau, cofounder of the Halcon SD Group, which pioneered advanced technology in petrochemicals, said that, besides capital formation, the biggest long-term constraint on the U.S. economy is human capital.

"We're way below where we ought to be" in supporting education and job retraining, he said.

A fundamental adjustment involves steelworkers and others accustomed to getting $25 per hour in wages and benefits, who may realize only $10 an hour after retraining. Social resistance to such downward mobility will be strong.

Worker attitudes

How workers might feel about having their pension funds used to support high technology, productivity enhancing firms could be another problem.

Johnson agreed that underinvestment in job retraining and education is a "severe, profound" threat to the economy. This could result in a sharply stratified society, with major gaps between younger people with access to advanced education and those lacking this opportunity.

Investment in education is "much too small," he said. "We're not investing in our young."

Stanford Prof. Kenneth Arrow, a Nobel Laureate in economics, said California's schools are "pinched and starved."

Landau observed that the last decade has seen great emphasis in the U.S. on income redistribution rather than capital or human investment.

This may change in the future. "That's what the social security dispute is all about," Landau added.

Frank Lodato, an early Peninsula venture capitalist, noted that "in the old days we couldn't get insurance companies to (participate in) joint ventures." Now venture capital "seem to be magic words. . . .

"If the government will stay out of our way, we'll solve many economic problems in relatively short time."

Johnson noted that in a recent study of business-government relations, the GAO estimated that 1,332 companies founded with venture capital in the 1970s now have $88 billion in sales, generate $1.7 billion in corporate taxes, employ 1.9 million workers, and yield an additional $5 billion annually in employee personal income taxes.

The U.S. may be moving into an era reminiscent of a century ago, when a series of major innovations triggered long-term economic growth, he suggested. A strong entrepreneurial environment is the most rapid, long-lived source of productivity improvement.

It includes seven key elements, Johnson said I) permitting individuals to make and keep money; 2) equity financing; 3) stock markets; 4) a basic pool of knowledge and human talent to develop innovations; 5) large markets to help recover the costs of research; 6) venture capital for startups; and 7) social respect for those who take risks and help create new jobs.

Johnson noted that England was once strongly supportive of entrepreneurs, then looked down on them, and now pays them more respect.

East versus west

In the U.S., many of the key players in the East come from investment banking backgrounds with a tough, competitive edge.

In Silicon Valley and the West, venture capitalists "grew up out of engineering" and have been known for a more collegial, live-and-let-live approach. But with the growth of venture capital, it's getting more competitive: "You don't talk loudly at Rickey's at breakfast any more," he observed, drawing lots of laughter.

Landau noted that a recent MIT study showed that of the 9.5 million new jobs created in 1970-79, 6.5 million came from small business firms, 3 million in government and none in large firms. Automation may have slowed job growth in big companies.

With a venture capital investment rate six to ten times that of the 1970s, "even with only a 10 percent success rate, we're talking about millions of new jobs" from small companies, he said.

Historically, smaller companies have been the source of "breakthrough technologies," especially in the chemical industry, he noted. But whether this will continue in the future is uncertain.

Landau noted that several large companies—Merck, IBM, and Bell Laboratories—have excellent records for research and innovation, plus the "deep pockets" of funds necessary to commercialize resulting products.

While there are many specific ways in which the tax laws might be improved, he said the best advice might be to leave the internal revenue act alone for the next 10 years. "You can't plan and take risks when the rules keep changing," he explained.

While many proposals for tax changes can be expected prior to the 1984 elections, the likelihood of passage does not appear great.

Many states now trying to solicit high technology industries, "simply don't have the infrastructure needed," including strong colleges and universities, he observed.—**Bob Beyers**

Staff employment opportunities

Nonexempt

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

HOUSING NEEDED

□ **Beg. April 1:** For 3-4 mo. Cambridge Univ. prof. & wife, seek quiet 2BR hse, apt. nr Stanf. campus. Call 497-2972 or 497-1978 (day), 327-3344.

□ **May 15 to Aug. 15, '83:** Visit. prof., wife, 2 children seek 3BR fully furn. & equipped hse or apt on or nr campus. Call COLLECT, Indiana, (317) 463-3912.

□ **NOW:** VA Resident seeks rm w/ba in Palo Alto during wk. nites in EXCHANGE for my S.F. r. w/ba & priv. entr. Call Margie, (415) 564-2622 (eve) or 493-5000, pager #229 (day).

□ **Mid-Mar. to June (flex):** Visit. prof, wife, 2 pre-sch. child. seek 4BR fully furn hse Palo Alto/Stanf. area. Call (415) 965-1109.

□ **Mid-June thru July '83:** TRADE HOUSES. 4-mbr prof. family seek Bay Area hse for Gattingen, W. Germany. Lovely new home in small vill. nr. Univ. twn. Accessible to fields & forest, 3BR/2BA & study. Car avail. Call (415) 859-4757, (415) 941-4319 (eve).

□ **July '83 to Aug. 31, '83:** Visit. U. of Chicago prof, wife, 2 teenage girls seek fully furn. 3-4BR campus hse. Stanf. refs. avail. on request. Call (415) 856-1145 or (312) 667-3611.

□ **June '83 to Aug. '84 (flex):** Visit prof, Elec. Engr seeks hsng for self, spouse, 12 yr. old daughter. Nonsmokers. Call COLLECT (505) 294-7758 after 5:30 p.m. or write Prof. Etter, EECE Dept., UNM, Albuquerque, NM 87131.

□ **NOW:** Prof. female seeks sublet, apt. or hse. Pay to $400/mo. or HOUSESIT. For 6 to 8 mo. Refs. avail. Call (415) 595-2950 (eve), (415) 965-0557 (day).

□ **NOW:** Reliable Stanf. staff seeks HOUSESIT in P.A. area. Pref. long term, 3 to 6 mo. but will consider shorter per. Will give excl. care to hse, pets, plants, yd. No charge. Loc. refs. Call Donna, 497-3967 (day).

□ **NOW:** Prof. here on leave seeks HOUSESIT, 1 to 8 mos. Very resp. nonsmoker, will give excl. care. Call Rosemary (415) 948-8694 (eve), 396-7173, Wed. & Thurs.

□ **NOW:** Prof. R&D Manager seeks rm w/BA in furn. condo. Pref. quiet, resp. male condo-mate. Mt.V., P.A., Sunnyvl area. Call Fred, (415) 494-1165, ext. 1407 (day).

□ **July 1 for 1 yr:** Campus hse for Stanf. family of 3. Excl. tenants. Call after 2 pm, 856-6417.

□ **NOW:** Concert pianist/teacher, long time P.A. resid., seeks to lease unfurn 1-3BR hse w/20 x 40 LR or studio suitable for 2 concert grand pianos. Call 323-6641.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Patricia Mikishka, mezzo-soprano, will solo with the Stanford Chamber Orchestra Friday, Feb. 18, in *Les Nuits d'Ete* by Berlioz. She is a D.M.A. candidate in early music.

Dallin to discuss Soviet outlook

"The Soviet Union After Brezhnev" is the subject of a talk by Alexander Dallin, Stanford professor of history and political science at noon, Tuesday, Feb. 22, at Bechtel International Center.

Dallin was director of the Russian Institute at Columbia University from 1962-67 and Adlai E. Stevenson Professor of International Relations there from 1966-71.

A specialist in Soviet affairs, he has also taught at Harvard and Berkeley and has served as a consultant to the U.S. government.

The lecture is one of a series held on Tuesdays at the International Center. Luncheon tickets are available at $2.50 one week before the event at the I-Center office or at the door as they last. Brown baggers are also welcome at no charge.

For more information about this or other programs call 497-1831 or stop by the I-Center for intercultural hospitality.

President's Day

Athletic facilities

CLOSED: Maples Pavilion, Roble Pool.

Tresidder services

The following Tresidder Union services will be open on President's Day, Feb. 21:

Coffee House, 10 a.m.-12 midnight
The Store, 7:45 a.m.-8 p.m.
Recreation Center, 10 a.m.-12 midnight
Wells Fargo Express Stop, 24 hours

All other offices and services will be closed in observance of this official Stanford University Holiday.

Panel, concerts highlight Dance Week Feb. 22-26

A free public panel discussion on the performing arts at 4:15 p.m. Wednesday, Feb. 23, in Tresidder Memorial Union and two dance and music concerts at 8 p.m. Friday and Saturday, Feb. 25-26, in the Roble Dance Studio will highlight Stanford's fourth annual Dance Week Feb. 22-26.

Six events are planned under the sponsorship of the Stanford Dance Division, coordinated by Jancy Limpert, and by the Stanford Dance Quorum.

Limpert and Gwendolyn Watson, resident dance musician, will lead an intermediate level modern dance class in improvisation at 4:15 p.m. Tuesday, Feb. 22, in the Roble Dance Studio. Open to qualified students, the free class will include guest musicians. Visitors are welcome to observe from the studio balcony.

Participants in the panel discussion on "Topics in Performance: Dance and the Other Arts" on Feb. 23 will include choreographer-dancer Lucas Hoving, Mellon Fellow Adrian Piper, Stanford academic news writer Millicent Dillon, and Profs. John Chowning, music, and Martin Esslin, drama. It will be held at 4:15 p.m. in the Tresidder Large Lounge.

A lecture-demonstration on "Mexican Regional Dance Forms" with Susan Cashion of the Stanford Dance Division and Ballet Folklorico of Stanford will be held at 8 p.m. Wednesday in the Burbank dining hall of Stern dormitory. Cosponsored by Burbank, it is free.

Three folkdance films from different cultures—"Step Style," "Buckdancer," and "Balkan Dancing"—and videofilms of East European folk ensembles will be shown at 6:30 p.m. Thursday, Feb. 24, in Room 17 at Roble Gym. A party will follow.

Diane Freccero, faculty coordinator for Dance Week, will join Cashion, Limpert and Watson in two separate programs of dance and music at 8 p.m. Friday and Saturday in the Roble Dance Studio.

Bay Area guest artists for these programs will include percussionist Rodman Marymor, harpsichordist John Toenjes, and choreographers Christopher Beck, John Goodwin, Leslee Lewis, and Julienne Weston.

There is an admission charge.

The Dance Division's production-management workshop taught by Limpert is providing support for the week's events.

Further information may be obtained by calling (415) 497-1234.

Noble to speak on Karakorum

British outdoorsman John Noble, long associated with the National Mountaineering Centre, North Wales, will give a free public illustrated lecture on the Karakorum mountain range of Central Asia Wednesday, Feb. 16, at Stanford.

The presentation, sponsored by the Stanford Alumni Association Travel/Study Program, will be held at 7:30 p.m. at the Elliott Program Center in Governor's Court.

The Karakorum range extends from the easternmost part of Afghanistan some 300 miles southeast and includes "K2," the second highest peak in the world.

Stanford Jazz Band performs at 8 p.m. Saturday, Feb. 19, in Dinkelspiel Auditorium. They preview their concert today (Feb. 16) outside Tresidder. Special guests: Bay Bop.

Barnes to direct Symphonic Band concert Feb. 27 in Dinkelspiel

The Stanford Symphonic Band, formerly the Stanford Wind Ensemble, will present an exciting program at 8 p.m. Sunday, Feb. 27, in Dinkelspiel Auditorium under the direction of Prof. Arthur Barnes.

Featured work on the program will be *Grand Pianola Music* by John Adams—San Francisco Symphony's adviser on new music and a composer of formidable talent.

After the work's premiere in San Francisco last February, Richard Pontzious of the *San Francisco Examiner* wrote: "If the warm response it was accorded by the virtually sold-out house is any indication, it will be played repeatedly.

Grand Pianola Music is scored for winds, percussion, two pianos, and three voices. Pianists will be Stanford faculty members Naomi Sparrow and Jodi Gandolfi; singers will be Nancy Wait, Nancy Kass, and Jan Wilcox.

Prof. Barnes describes *Grand Pianola Music* as "stream of consciousness music. . . a visual, aural, sensual experience. . . a spoof on music, past and present."

Also on the program will be Will Gay Bottje's *Concerto for Trumpet, Trombone, and Winds*, with James Duncan and Anne Witherell. Trumpeter Duncan is an M.D. at Stanford Hospital; Witherell is a Department of Music Ph.D. and freelance trombonist. Bottje is resident composer at Southern Illinois University.

Rounding out the program will be *Suite No. 1* and *Mars* and *Jupiter* from *The Planets* by Gustav Holst. "*Mars* and *Jupiter* are bombasitc," says Barnes, while the *Suite* is diametrically opposed—singable, conservative, based on English folk tunes."

Nelhybel's *Symphonic Movement* will also be performed.

Tickets are $4 general, $2 students and senior citizens, available from Tresidder Ticket Office (497-4317) and the door.

Panel set on U.S. political prisoners

Amnesty International has recently added the United States to the list of countries holding political prisoners.

Nationally known criminal defense lawyers William Kunstler, Chokwe Lumumba, Francisco "Kiko" Martinez, Bruce Ellison, Susan Tippograph, and Stewart Hanlon will speak at a free public forum about political prisoners in the U.S. at 7:30 p.m. Thursday, Feb. 24, in Kresge Auditorium at the Stanford Law School. The program is sponsored by the National Lawyers Guild, the Black American Law Students Association, and LaRaza Law Students Association.

The participating attorneys have represented leaders in many movements protesting U.S. government policies. Kunstler currently represents Dennis Banks and Leonard Peltier, leaders of the American Indian Movement. Kunstler is best known for his defense of anti-Vietnam War protestors in the Chicago Seven conspiracy trial.

Lumumba is Minister of Justice for the Republic of New Africa. He has represented members of the Black Liberation Army and is currently defending Sekov Odinga in the Brinks robbery trial.

Martinez has been repeatedly harassed for his representation of Chicano activists in Texas.

Ellison is also representing Peltier and has successfully obtained documents under the Freedom of Information Act exposing government attempts to harass the American Indian Movement.

Tippograph is representing two members of the Weather Underground arrested in connection with the Brinks robbery. In the past her clients have included Puerto Rican nationalists.

Hanlon is a Bay Area attorney who represents Geronimo Pratt, a former Black Panther, and Bill and Emily Harris, former members of the Symbionese Liberation Army.

Immediately following the forum a reception will be held in the Law School Lounge.

Young flutist, Marga Martin to play Feb. 20

The Lively Arts at Stanford will present flutist Marya Martin at 2:30 p.m. Sunday, Feb. 20, in Dinkelspiel Auditorium.

Martin's program will include "Sonata in B flat Major" by Telemann, "Sonatina" by Berkeley, and "Duo for Flute and Piano" by Copland.

It also includes Schubert's "introduction and Variations on a Theme, 'Ihr Blumlein alle,', Opus 160" and Chopin's "Variations on a Theme by Rossini".

New Zealand-born Martin made her debut in the 1979-80 Young Concert Artists Series in New York at the 92 Street Y and in Washington D.C. at the Kennedy Center. She won the 1979 Young Concert Artists international auditions and received the Young Concert Artists' Mortimer Levitt career development award for women artists.

Martin has performed with Jean-Pierre Rampal in the "Mostly Mozart" Festival at Lincoln Center, and with Alexander Schneider at the Metropolitan Museum. In addition, she has performed with the Brandenburg Ensemble and has appeared in Lincoln Center's "Great Performers Series."

Martin has studied with Jean-Pierre Rampal and James Galway in Europe and at Yale University with Thomas Nyfenger.

Martin's solo debut recording was released in 1982 by the Musical Heritage Society.

For more information call Tresidder Ticket Office, (415) 497-4317.

Zapf to discuss new type design

Internationally recognized type designer Hermann Zapf will discuss "The Designer in the Age of Metafont," the design of types in the computer age, at a free public meeting of the associates of the Stanford University Libraries Sunday, Feb. 20.

Zapf is visiting from Germany. His talk is scheduled for 3 p.m. in Bishop Auditorium of the Graduate School of Business. A reception in the Lurie Rotunda of Cecil H. Green Library will follow.

Zapf has designed more than 130 type faces for hand and mechanical composition and for computer use. These include Palatino, Optima and Marconi.

Working with Stanford Prof. Donald E. Knuth and the American Mathematics Society, he developed a typeface which has been named Euler in honor of the Swiss mathematician. In 1974 the city of Mainz in Germany awarded him the Gutenberg Prize and in 1977 and '78 he was Melbert B. Carey professor of typography at the Rochester Institute of Technology.

'Station' cuts hours

Encina Station will close its Monday through Friday evening service beginning Feb. 14.

The Station will continue to be open from 7:30 a.m. to 2:30 p.m. Monday through Friday serving full breakfasts, lunch, snacks and beverages.

Tashi:(left to right) Richard Stoltzman, Fred Sherry, Ida Kavafian, Toby Appel, Theodore Arm.

Tashi, Tibetan for 'good fortune,' plans chamber music concert here Feb. 23

Tashi, one of the most versatile chamber music ensembles will perform at 8 p.m. Wednesday, Feb. 23 in Dinkelspiel Auditorium at Stanford.

The program will include Beethoven's "String Trio in G Major, Op. 9, No. 1," Takemitsu's "A Way a Lone (String Quartet)," Douglas' "Dances" and Von Weber's "Quintet for Clarinet and Strings in B flat Major, Op. 34."

Tashi, whose name is Tibetan for "good fortune," combines traditional repertoire with new music. Initially formed to perform Messiaen's "Quartet for the End of Time," they have since inspired the compositions of Bill Douglas, Peter Lieberson, Tori Takemitsu and Charles Wuorinen.

Members of the ensemble are clarinetist Richard Stoltzman, violinists Ida Kavafian and Theodore Arm, violist Toby Appel, and cellist Fred Sherry.

Since making their New York debut in 1973, Tashi has toured North and South America, Europe and the Far East. During the 1982-83 season Tashi will have presented their own series with guest artists at the 92nd Street Y featuring a variety of repertoire from the Mozart and Brahms quintets to Schoenberg, Stravinsky, the American premiere of Charles Wuorinen's "Fortune," and some jazz improvisations.

In addition to their performance, Tashi will give an open rehearsal from 3 to 4 p.m. Wednesday, Feb. 23, in Dinkelspiel Auditorium. There will also be a record signing from 4:30 to 5 p.m. at Classical Wax, 1190 Chestnut Street, Menlo Park.

For ticket information call Tresidder Ticket Office, (415) 497-4317. Tashi is presented by the Lively Arts at Stanford.

Toth to direct Symphony Orchestra concert featuring Bartok, Vivaldi

Stanford's Symphony Orchestra, under the direction of Andor Toth, will perform music by Vivaldi, Bartok, and Beethoven at 8 p.m. Saturday, Feb. 26, in Dinkelspiel Auditorium.

Featured work on the program will be the Bartok *Violin Concerto No. 2*, performed by violinist Toth and directed by assistant conductor Eric Kujawsky. This will mark Kujawsky's conducting debut at Stanford, where he is a doctoral candidate in instrumental conducting.

A native of Los Angeles and a UCLA graduate, Kujawsky conducted the Los Angeles premiere of *The Berlin Requiem* by Kurt Weill and the 1982 UCLA Dance Company's concerts.

Following the Bartok, Toth will conduct Beethoven's magnificent Symphony No. 3, the "Eroica." Flutist Diana Peterson will open the program, performing Vivaldi's *Piccolo Concerto in C Major*.

Toth has a special affinity for Bartok's works. His quartet, the New Hungarian Quartet, received great acclaim for their recordings of Bartok's *Complete String Quartets*. The Bartok Violin Concerto is recognized as perhaps the most intricate and violinistically difficult in the repertoire.

In April, Toth will give recitals in London, The Hague, Rome, and other European cities.

Tickets are $4 general, $2 students and senior citizens.

Early Music Singers concert

Four Centuries of Music in Italy will be featured in a free concert by the Early Music Singers, under the direction of Prof. William Mahrt, at 8 p.m. Tuesday, Feb. 22, in Dinkelspiel Auditorium at Stanford.

The concert will trace the development of Italian music from the 14th through the beginning of the 17th centuries—a time when vocal music flourished in Italy.

Both sacred and secular works will be performed: songs by Landini (14th century); sacred pieces by Dufay and Matteo de Perugia (15th century); songs in Italian by 16th-century French composer Jacob Arcadelt; madrigals and motets of the later 16th century; and works by Cipriano de Rore, Luca Marenzio, Gesualdo, and, finally, Monteverdi in the early 17th century.

Mazon to review Zoot Suit Riot of June, 1943

Mauricio Mazon, associate professor of history at USC, will speak on "The Psychology of Symbolic Annihilation: The Los Angeles Zoot Suit Riot, June 1943" at 7 p.m. Thursday, Feb. 17, in History Corner, Room 34, at Stanford.

The free public lecture is sponsored by the Chicano Fellows Program.

Mazon will present a psychoanalytic interpretation of the Zoot Suit Riot, an infamous confrontation between servicemen and Mexican-American youths.

For nearly a week in early June, 1943, army and navy personnel stormed through the Mexican communities of Los Angeles, determined to stamp out a crime wave among gangs of Mexican teenagers. The crime wave did not exist, but the zoot suit, a sytle favored by jitterbug fans, denoted a hoodlum in public opinion.

Most studies of the riot center on juvenile deliquency as the cause of the troubles; others emphasize the role of yellow journalism. In contrast, Mazon's psychoanalytic interpretation focuses on the ritualized and symbolic behavior of servicemen.

Mazon, who earned his doctorate in history at UCLA, also received training at the Southern California Psychoanalytic Institute in Beverly Hills, where he is a research clinical associate. Besides teaching at USC, Mazon is a consultant at the Wright Institute in Los Angeles, where he offers courses in psychoanalytic theory and is a supervisor of psychologists in training.

Mazon will publish a book on the subject of this lecture with the University of Texas Press.

I-Center to show 3 Indian films

The Other Cultures Film Series goes to India this week via three films, *Juggernaut*, *Rhythm of Kerala*, and *Glory of Pratishtan*. The films will be shown at 7:30 p.m. Thursday, Feb. 17, at the International Center.

In India's annual festival of the cult of Juggernaut, the image of the god Vishnu is dragged through the streets. In the film *Juggernaut*, a modern day "juggernaut"—the 70-ton heart of a nuclear reactor—moves on a 600-mile journey across India. And as it passes, a people whose lives are rooted in poverty and the past watch.

Rhythm of Kerala unfolds the rhythm of life in this state by using vibrant sound from a large number of drums. *Glory of Pratishtan* shows the rich cultural heritage of the people who once lived on the banks of River Godavari in South India.

A donation of 75 cents will be requested at the door. For further information, phone 497-1831.

Psychohistory of '70s discussion set

"Psychohistory of the 1970s" is the topic of a Psychiatry Department talk, to be given next week by Dr. Peter Carroll, historian and author of *It Seemed like Nothing Happened*.

Open to anyone interested, the grand rounds lecture will be held 11:30 a.m. till 1 p.m., Tuesday, Feb. 22, in room M104 of the Medical School.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Feb. 16, to cover the week of Mon., Feb. 28, through Sun., Mar. 6.

MONDAY, FEBRUARY 21

Baseball: vs. Santa Clara. 1:00 p.m. Sunken Diamond. $2 general, Stanford students free.

Biological Science Seminar: Dr. Frank Stockdale, Division of Oncology, Dept. of Medicine, Stanford Medical Center. 4:15 pm. Room T-175, Herrin Hall, Dept. of Biological Sci.

Film Society: "Smiles of a Summer Night" (1955). 7:30 p.m. Bishop Aud. $2.

Men's Volleyball: vs. Hawaii. 7:30 p.m. Maples Pavilion.

TUESDAY, FEBRUARY 22

Bechtel International Center Luncheon Series: "The Soviet Union after Brezhnev," by Alexander Dallin. Prof. of History, Stanford. Noon. I-Center. $2.50 for lunch, brown baggers free.

Men's Tennis: vs. Canada College. 1:30 p.m. Varsity Courts.

Stanford Museum of Art Lunch Hour Tours: "The Harmony of Japan". 12:15 p.m. Stanford Museum of Art.

Music Dept. Concert: Early Music Singers, William Mahrt, director. 8 p.m. Dinkelspiel Aud. Free.

WEDNESDAY, FEBRUARY 23

Center for Latin American Studies Lecture: "The Metamorphosis of the State under Authoritarian Regimes: Argentina, 1976-82," with Prof. Oscar Oszlak, Director of the Centro de Estudios de Estado y Sociedad (Buenos Aires). Noon. 582 Alvarado Row, Bolivar House.

Men's Tennis: vs. University of San Diego. 1:30 p.m. Varsity Courts.

Stanford Museum of Art Lunch Hour Tours: "The Harmony of Japan". 12:15 p.m. Stanford Museum of Art.

Women's Softball: vs. Mission. 2 p.m. Roble Field.

Lively Arts at Stanford: Tashi, free open rehearsal. 3-4 p.m. Dinkelspiel Aud.

Men's Rugby: vs. University of Victoria. 3:30 p.m. Maloney Field.

Electronics in Medicine Lecture: "Digital Radiographic Methods for Blood Vessel Imaging," by Dwight Nishimura, Dept. of Elect. Eng'g & Adv. Imaging Techniques Lab at Stanford. 4:15 p.m. McCullough-134.

Chemical Engineering Lecture: "Slender Bodies, Thin Films and the Micromechanics of Dennse Suspensions," by Prof. Joe Goddard, Univ. of Southern California. 4:15 p.m. Chemical Engineering Conference Room.

Basic Science Research Colloquium: "Molecular Analysis of Genes Controlling Development of Drosophila," by Dr. David S. Hogness, Dept. of Biochemistry. 5:00 p.m. Fairchild Aud.

Squash: vs. Berkeley #1. 6 p.m. DeGuerre Courts.

Women's Basketball: vs. Fresno State. 7:30 p.m. Maples Pavilion. $2 adults, $1 children.

La Casa Italiana Lecture: "Speaking of a President: Italian and American Coverage of Reagan's Trip to Europe," by Paolo Mancini, University of Perugia. 7:30 p.m. La Casa Italiana, 562 Mayfield.

Lively Arts at Stanford: Tashi, playing Beethoven:String Trio in G Major,Op. 9, No. 1; Takemitsu: String Quartet; Douglas: Dances (2); Weber: Clarinet Quintet. 8 p.m. Dinkelspiel Aud. $9.50, Students:$6.50.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

Art Dept. Lecture Series: "Frederic Edwin Church and the Art of Manifest Destiny," by Prof. David Huntington. 8:15 p.m. Annenberg Aud.

THURSDAY, FEBRUARY 24

Materials Science and Engineering Symposium: "Application of Contemporary Electron Microscopy". 1-5 p.m. and 8-9:30 p.m. Peterson Lab, Room 550-A.

Stanford Geothermal Program: "Application of Geochemistry to Understanding Geothermal Systems," by Robert W. Potter II, Occidental Research Corp. 1:15 p.m. Mitchell Bldg., Room B67.

Office of Student Activities/ Residential Education: Program Planning in the Residences. 4 p.m. Elliot Common Room/ Governor's Corner Program Center.

Medieval Italian History, Univ. of Chicago: "Ubi est ille?" Franco Sacchetti in the Monte Comune of Florence, by Professor Julius Kirshner, Renaissance and. 4:15 p.m. Bldg. 200, Room 205. Free.

Solid Mechanics Seminar: "Stability of Nonlinearly Elastic Rods," with Prof. John Maddocks, Dept. of Math, Stanford. 4:15 p.m. Skilling Aud.

EE-370 Informations Systems Laboratory Seminar: "Computer Communications," by Prof. Fouad Tobagi,Stanford. 4:15 p.m. Skilling Rm. 191.

Industrial Engineering Symposium: "Facts and Values in Risk Analysis for Environmental Toxicants," with Prof. Alice Whittemore, Stanford Univ. 4:15 p.m. to 5:30 p.m. Terman Aud.

Latin American Film Series: "On Company Business," a film about the CIA's role in the third world. 7 p.m. Zapata Lounge, Stern Hall. Free.

Bechtel International Center Film Series: "Innocent Door" and "Jerusalem" (Jerusalem). 7:30 p.m. I-Center. .75 donation.

Men's Basketball: vs. Washington State. 8 p.m. Maples Pavilion. $7, $6, $5, $4, students $2.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

Spirit of Japan Lecture Series: "The Emperor's Villa and Other Gardens," by Ron Herman of U.C. Berkeley. 8:15 p.m. Annenberg Aud. Non members $5, Comm. for Art members & students $4.

FRIDAY, FEBRUARY 25

Women's Tennis: vs. University of San Diego. 1:30 p.m. Varsity Courts.

Men's Tennis: vs. West Valley College. 1:30 p.m. Varsity Courts.

Women's Softball: vs. USC. 3 p.m. Roble Field.

Mathematics Dept. Lecture: "Steady Currents in Materials with Thin Inclusions," by Dr. P. Hagan, Exxon Corp., New Jersey. 3:15 p.m. Building 380, Room 380-C.

Materials Science and Engineering Colloquium: "Recent Results in Tetrahedral Amorphous Semiconductors," by Prof. Josef Stuke, Univ. of Marburg, FRG. 3:30 p.m. Peterson Lab., Building 550, Rm. 550A.

African & Afro-American Studies: "The Harlem Renaissance," a film on this historic era of Afro-American intelligentsia. 4 p.m. Bldg. 200, Rm. 30.

Mexican Students Association and Bechtel International Center: "Reed: Insurgent Mexico". 1971 Film about radical journalist John Reed, of "Reds" fame, who before writing *Ten Days That Shook the World* joined Pancho Villa's army. 7 & 9 p.m. I-Center. Tickets on sale in advance at I-Center for $1.50.

Men's Gymnastics: vs. UC-Davis. 7:30 p.m. Maples Pavilion. $2 Adults, $1 Children.

Democratic Socialists of America West Coast Student Conference: "Plenary: Students in a Changing World," by Michael Harrington, DSA National Chairperson, and Dorothy Healey, KPFA Radio, Los Angeles. 7:30 p.m. Jordan-040. Free to Stanford affiliates.

Women's Gymnastics: vs. Arizona State/ San Jose State. 7:30 p.m. Maples Pavilion. $2 Adults, $1 Children.

STARTS Great Directors Film Series: "Diary of a Shinjuku Thief," by Japanese director, Nagisa Oshima. 8 p.m. Geology Corner, Room 320. $2.50.

Stanford Law School Film Society: "Roman Holiday". 8 p.m. Kresge Aud. $1.50.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

SATURDAY, FEBRUARY 26

Democratic Socialists of America West Coast Student Conference: Program will include Harry Britt, San Francisco Board of Supervisors; Elinor Glenn, President Emeritus, California SEIU-Los Angeles DSA. All Day, Registration at 8:30 a.m. History Corner, Room 2.

Men's Rugby: vs. Univ. of British Columbia. 1 p.m. Maloney Field.

Lively Arts at Stanford: Guitar Master Class Audition by Michael Lorimer. 1- 5 p.m. Dinkelspiel Rehearsal Hall. Open to residents of Greater Bay Area.

Women's Softball: vs. Santa Clara. 11 a.m. Roble Field.

Men's Lacrosse: vs. San Francisco Lacrosse Club. 2 p.m. Lacrosse Fields.

Men's Basketball: vs. Washington (on TV). 3:30 p.m. Maples Pavilion. $7, $6, $5, $4, $2 students.

Stanford Hillel: "Purim Madness!". Megillah reading, followed by the band "Eshkoliot" at 9:00 p.m. 7:30 p.m. Tresidder Union, Large Lounge. Reading is free, party: $2.

Music Department Concert: Stanford Symphony Orchestra. Bartok- Violin Concerto No. 2, Andor Toth, violin, Beethoven-Symphony No. 3, "Eroica". 8 p.m. Dinkelspiel Aud. $4/$2.

Drama Department: "Cyclops/Nobody's Musical", book and lyrics by Rush Rehm. 8:00 p.m. Little Theater. $4 general, $2 students & senior citizens.

Coffee House Evening Entertainment: Music featuring many of the area's favorite new & up-and-coming performers. 9-12 p.m. Coffee House. Free.

SUNDAY, FEBRUARY 27

Democratic Socialists of America West Coast Student Conference: Program includes Gus Newport, Mayor of Berkeley; and Peter Cervantes-Gautschi, Business Manager, Santa Clara County Central Labor Council. Program commences at 9:30 a.m. and continues all day. History Corner, Room 2.

Lively Arts of Stanford: Chamber Music Society of Lincoln Center. Open rehearsal. 11 a.m. to 12:30 p.m. Dinkelspiel Aud. Free.

The Lively Arts at Stanford: Chamber Music Society of Lincoln Center. Brahms: Trio for Clarinet, Cello, and Piano in A minor, Op. 114; Beethoven: Serenade No. 6 for Flute, Violin, and Viola in D Major, Op. 35; Dvorak: Quartet for Piano and Strings in E-flat Major, Op. 87. 2:30 p.m. Dinkelspiel Aud. $11.50, $10.50; students $8.50, $7.50.

ASSU Sunday Flicks: "Author,Author". 7 & 9:30 p.m. Memorial Aud. $1.50.

Music Department Concert: Stanford Wind Ensemble. John Adams: Grand Pianola Music, Will Bottje: Concerto for Trumpet, Trombone, & Winds, Holts- Mars,from the Planets, Nelhybel-Symphonic Movement. 8 p.m. Dinkelspiel Aud. $4/$2.

Young Stanford Artists Classical Series: Marianne Cleary, cello and Artis Wodehouse, piano. 8 p.m. Tresidder Union, Rm. 280. $3 general, $2 students.

Armchair Traveller Series: Showing two films, "South America" and "Colombia". 8:30 p.m. I-Center. Free.

Flutist Yvonne Kendall performs 20th-century sonatas with pianist Gloria Cheng Sunday, Feb. 20, at 8 p.m. in Dinkelspiel Auditorium. The concert is free.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

Photographs by Olivia Peterson. Coffee House/ Tresidder Union. Feb. 1 - Feb. 28.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Recent Expressionist Drawing Experiences by Barbara Scoledes. Tresidder Union, upper lobby. Feb. 1 - Feb. 28.

"Images in Bloom", by Sally Spence, watercolor paintings. I-Center. Feb. 3 - Feb. 28.

Photographs of Old Russia. The rich artistic and architectural heritage of traditional Russia, photographed by Jack Kollmann. Faculty Club. Through March.

CAMPUS REPORT

Volume XV, Number 21 | A publication for Stanford University faculty & staff | February 23, 1983

STANFORD'S WORKERS: Employees of the Palo Alto Stock Farm, predecessor to Stanford University, pose for a group portrait. An account of the farm's achievements appears on pages 11-14.

Homosexual gift offer refusal seen

Stanford probably will reject a $500 gift offer for scholarships to males who publicly identify themselves as homosexuals, President Donald Kennedy said February 17. *(Related story, page 6.)*

The University has returned a check in this amount from an anonymous donor, who is not a Stanford alumnus. The prospective donor returned it with a more extensive explanation, which is still being reviewed. This does not appear to change the basic terms of the initial offer.

Kennedy said the initial offer "has two strikes against it."

"First, it asks for a declaration of belief which is impossible to verify without an impermissable invasion of privacy.

"Second, it violates policy dating from the mid-1970s at Stanford."

In October 1976, Dean of Student Affairs James Lyons informed the Gay People's Union it would not be possible for the University to receive or administer loan or scholarship funds with a designated preference based on sexual orientation.

"Sexual orientation is a private matter and should not be used by the University as the basis for either extending or denying to students the services and benefits of the University," Lyons declared.

Kennedy noted that the recent gift offer "is not merely a proposal to give some (financial aid) to students on the basis of sexual orientation, but a proposal to restrict those funds to a student who announces a sexual orientation publicly."

In general, the University seeks the fewest possible restrictions on gift offers, so they may be used to meet the highest priority needs. It will accept student aid gifts with stated preferences for minorities, sex, or geographic origin.

It does not accept gifts with specific restrictions by race, national origin or religion.

"I'm very worried about any proposal that requires a declaration of faith on the part of an individual as a requirement—and I don't care what that declaration of faith is," Kennedy said in an interview with campus radio station KZSU tape recorded Feb. 15 for broadcast Monday, Feb. 21.

Anthropologists consider report on Mosher

The Stanford Anthropology Department faculty wil meet privately at 8:30 a.m. Thursday, Feb. 24 to consider a committee report on the professional conduct of Steven W. Mosher, doctoral candidate in the department.

The committee, headed by Prof. Jane Collier, anthropology, and ineluding Profs. Joseph Greenberg, anthropology, and Thomas Grey, law, has not disclosed its recommendations.

Four news media—*Time* magazine, the *San Francisco Examiner*, the *San Jose Mercury*, and the *Peninsula Times-Tribune*—independently informed Stanford University News Service this week that they had been told the recommendation was to "expel" Mosher. One was directly informed by Mosher, who was given a copy of the committee report with a request to maintain its privacy.

Mosher has been flown to San Francisco at the University's expense and given an opportunity to respond both in writing and in person to the committee report before the department faculty.

In October, 1981, the faculty committee opened an investigation of Mosher's conduct while doing field research in the People's Republic of China in 1979-80 and publications stemming from this work.

Specifically, the committee was asked to determine the following:

* Did Steven Mosher properly protect the privacy of the community and the individuals he studied?

* Did he violate any obligation, as an anthropologist and graduate student in the department, to properly protect the standing of the discipline and its practitioners?

* Did he abuse his status as an anthropologist and a graduate student to engage in illegal activities?

In response to repeated questions from reporters, Prof. Clifford Barnett, department chairman, Tuesday, Feb. 22, released a synopsis of procedures followed in the case to date and the professional concerns involved. *(See text, page 16.)*

Mosher was paid round trip air fare from Taiwan to meet with the committee in November 1981. The great bulk of evidence was sent to him April 27, 1982.

The committee report was sent to Mosher Oct. 27, 1982. A written reply was received Feb. 16 and distributed to the department faculty.

Trustees approve concept of housing on Rural Lane

Stanford trustees have approved the concept of a 15-unit clustered residential development for senior faculty and staff overlooking the 13th hole of the University's golf course.

The four-acre site, known as Rural Lane, is southwest of the intersection of Alpine Rd. and Junipero Serra.

About half the site now lies within the City of Menlo Park. Annexation to Menlo Park will be sought for the remaining half, which is now unincorporated area within San Mateo County.

Sales prices for two and three-bedroom clustered homes are expected to range from $275,000 to $325,000, averaging about $300,000.

Two floor plans are contemplated: a one-story unit of 1,800 square feet with two bedrooms, two baths, and study; and a two-story, 2,200 square-foot unit with three bedrooms, two and a half baths, and a study.

A report to the trustees notes that "Rural Lane is intended as attractive, alternate housing for senior faculty and staff, who may presently own single-family homes on campus.

"The opportunity for golf course views and low-maintenance homes on campus lands should appeal to families whose homes now exceed their space requirements.

"The inherent premium for golf course frontage does not make this a suitable project for first-time home buyers, nor does the location lend itself. . .for families with young children."

Menlo Park is "receptive" to annexation, the report notes. If this is obtained and the project given final approval by the trustees, construction could start in mid-to-late 1983, with completion 14 to 18 months after ground breaking.

People

David Nivison

The Stanford University Board of Trustees has confirmed the appointment of David S. Nivison—professor of Chinese, of philosophy and, by courtesy, of religious studies—as first holder of the endowed Walter Y. Evans-Wentz professorship of Oriental philosophies, religions and ethics.

Nivison was born in Maine and educated at Harvard. He has taught Chinese at Stanford since 1948 and philosophy since 1953, was curator of Far Eastern Collections in the University Libraries from 1950 to 1952, and has served twice as chairman of the Philosophy Department.

He is the author of *The Life and Thought of Chang Hsueh-ch'eng (1738-1801)* and editor of the four-volume *The Stanford Chinese Concordance Series*.

Nivison teaches a wide range of topics and periods in Chinese intellectual and religious history at both introductory and advanced levels, as well as introductory and advanced language courses in classical Chinese.

His research interests include Chinese intellectual history, especially Confucianism in the pre-Han period and the Ming and Ch'ing dynasties, and the character of the Chinese language as it affects religious and intellectual life.

Arthur Bienenstock

Prof. Arthur Bienenstock, materials science and engineering, applied physics, and SSRL, has been appointed a member of the U.S. National Committee for Crystallography (USNCCr) for a three-year term ending Dec. 31, 1985.

The Committee, part of the National Research Council, maintains liaison between the International Union of Crystallography (IUCr) and U.S. crystallographers. Its purpose is to promote the advancement of the science of crystallography in the U.S. and throughout the world.

The Committee also advises the president of the National Academy of Sciences on matters pertaining to U.S. participation in the IUCr.

Robert Freelen

Robert E. Freelen, 48, Stanford associate vice-president for public affairs, has been appointed acting vice-president, effective immediately, President Donald Kennedy announced Thursday, Feb. 17.

He will fill the vacancy created by Robert M. Rosenzweig, newly appointed president of the Association of American Universities in Washington, D.C.

Kennedy noted that Freelen "served with distinction" as acting vice-president while Rosenzweig was on leave of absence during 1980-81.

"I know Bob will continue the tradition of strong leadership of Stanford's critical efforts in government relations, public events, community affairs, and news and publications," Kennedy said. A consultative group headed by Vice Provost Gerald Lieberman, dean of research and graduate studies, is working on recommendations regarding this vice presidential search.

A former Stanford student body president, Freelen received his bachelor's degree in political science in 1957 and his MBA from Stanford in 1959. He returned to the University in 1961 as associate general secretary and director of the Stanford Annual Fund.

He was named associate dean of students in 1969, director of student services in 1970, and associate director of university relations and director of government relations in 1972. He was promoted to associate vice-president for public affairs in 1978.

He lives in Watsonville with his wife and their two children.

Robert Freelen

Anne Mellor

W. Glenn Campbell

John Schwartz

Rene Girard

A week-long conference on the work of Prof. Rene Girard of the Department of French and Italian will be held from June 11 to June 18 by the Centre Culturel International de Cerisy-la-Salle.

A group of eminent European scholars will focus on Girard's writings, including *Violence and the Sacred* and on the relationship of his work to that of Lukacs, Durkheim, Nietzsche and others. Girard will address the closing session of the conference.

W. Glenn Campbell

W. Glenn Campbell, director of the Hoover Institution at Stanford, has been appointed a member and chairman of the American Panel of the Joint Committee on Japan-U.S. Cultural and Educational Cooperation. The committee is responsible for promoting mutual understanding between the two countries.

In the appointment letter, Director of the U.S. International Communication Agency Charles Z. Wick noted that Campbell also becomes a member of the Japan-U.S. Friendship Committee which administers a $30 million trust fund for cultural activities between the two countries. The three-year appointment begins July 1, 1983.

Campbell, director of the Hoover Institution since 1960, currently serves as chairman of the Board of Regents of the University of California.

Noey Lozano

Noey Lozano has been appointed assistant dean in graduate studies and research at Stanford, with primary responsibility for recruitment of Chicano graduate students, providing academic support services, and other administrative duties.

Lozano received his bachelor's degree in psychology at UC-Santa Cruz and an M.A. in curriculum development, administration, and policy analysis at Stanford's School of Education. He is currently enrolled in the doctoral program in applied social sciences at UC-Berkeley.

For the past four years Lozano has been assistant to the dean of the graduate division at UC-Santa Cruz. His responsibilities there included management of graduate recruitment and admissions, and advising graduate students on financial aid, career planning, and study progress.

Anne Mellor

The Stanford University Board of Trustees has confirmed the appointment of Anne K. Mellor, professor of English, as first holder of the endowed Howard H. and Jessie T. Watkins University professorship in feminist studies. The term of her appointment is from Sept. 1, 1983, to Aug. 31, 1988.

A native of Albany, N.Y., Mellor was educated at Brown and Columbia. She has been a member of the Stanford faculty since 1966. Her courses—ranging from English romantic literature and art to Shakespeare, Yeats, literary theory, women writers, and feminist literary criticism—recently won her the School of Humanities and Sciences dean's award for outstanding teaching.

As chair of the new Feminist Studies Program, she developed the introductory course, "Women's Situation," and has given numerous guest lectures on feminist issues in the Western Culture, Human Biology, Structured Liberal Education, and Residential Education programs.

Her publications include *Blake's Human Form Divine*—in which she initiated a critical strategy for study of the relationship between William Blake's poetry and illustrations that has become standard in analyses of his work—and *English Romantic Irony*, widely praised for its methodological innovations and enlightening readings of major poems.

John Schwartz

University Counsel John Schwartz, 48, has been named a vice-president at Stanford, President Donald Kennedy said Thursday, Feb. 17.

The Board of Trustees approved the additional title at their February meeting.

"For the past several years of his excellent service at Stanford, John has functioned as a vice-president in all ways except in name," Kennedy said.

"The new title will permit the role of the University's Legal Office and its senior officer to be understood more precisely both inside and outside the institution.

"It will also conform Stanford's title for this position to common practice in other institutions with which we deal—including, increasingly, other universities.

"No changes in the function of the office are contemplated."

Kennedy said the proposed change was discussed with Stanford's five other vice-presidents last fall and with the faculty Advisory Board before going to the trustees.

Schwartz was named University counsel by President Richard W. Lyman in September, 1977. A graduate of Cornell (B.S., physics, 1955), Harvard (Bachelor of Laws, 1958), and Rochester (Ph.D., physics, 1965), Schwartz came to Stanford as assistant professor of physics in 1968. He served as special assistant to the President from 1970 to 1973, when he was named counsel for medical affairs. He was promoted to associate vice-president for medical affairs in 1977.

He practiced law in Phoenix, Ariz. from 1958 to 1961 and taught at the University of Rochester for three years before coming to Stanford. He was admitted to the California Bar in December, 1974.

Born June 3, 1934, in Brooklyn, N.Y., he is married and has four children.

McBride: Public morality lowered by bad examples up top

BY DONALD STOKES

The time of reckoning has come in the handing out of taxpayers' money in the scores of programs that disburse megamillions, sometimes with very little checking, says Tom McBride.

Until November, 1982, McBride was for several years a watchdog of many of those programs, and saved huge sums of public money as inspector-general of two major government departments—Labor and Agriculture.

Now he is beginning a new career as associate dean of Stanford Law School.

In a campus interview McBride discussed the scale of corruption and fraud in the U.S., the need for those in the public eye to set a better example, and the unsung heroes of the government's investigatory agencies. Some questions and answers:

Is there a growing momentum of fraud and cheating by the American people?

"Even if the Reagan administration had not come to power, I think the legislators in Congress had begun to realize that the time of reckoning has come," said McBride.

"They had been on a spending jag for social programs in the late 1960s and '70s. Now they realize that many of the programs are not achieving all they had hoped, that some were fraught with serious mismanagement and administration problems, and that they were wrecking the national budget.

"There came a strong Congressional sentiment for tightening up. The passage of the Inspector General Act of 1978, which appointed watchdogs over major government departments, symbolized the new Congressional attitude.

"I think it transcends party lines. I have worked closely with Democrats and Republicans."

What party does McBride belong to?

"I have been a registered independent for years. I have found that on the issue of proper management of government programs, support crosses party lines."

He had sometimes been portrayed as a right-winger who was keen on "cracking down?"

"Occasionally, yes. It is easy to translate a record of securing proper management into 'cracking down,' and from there to project that I am an 'enemy' of a particular program. And of course, there are politicians who have used fraud and waste as a rallying cry to try to gut programs they don't like.

"That is what I had to guard against—to make sure that our findings about laxness in some programs were not misused in order to make political hay."

Does fraud and corruption exist at every level of American government, including local?

"I like to think it is not all that common. There are places, such as New Jersey, New York, and Reading, Penn., where I prosecuted the mayor and police chief, and other pockets round the country such as Chicago, where historically there has reputed to have been corruption. I think there is some truth in that.

"I don't think that there is necessarily less corruption in local government than in federal government. In New York City you will find more corruption at all levels than you will find in, say, Kansas City or Phoenix."

Is that due to bad government in New York City?

"I don't pretend to be a social scientist. But I cannot deny my observations and experience as a public prosecutor in the matter of corruption. It seems to me that cities which have been dominated for years by political machines, where corruption has been a way of life, and favored contractors kicked in to the party kitty in exchange for street paving contracts—such a climate endures. It's part of the culture.

"We have recently read of more scandals in Boston, for example. There is nothing new in that—there have been scandals about political corruption in Boston for decades, going back long before Mayor Curley.

"Nor is government corruption a phenomenon of the east and mid-west. Corruption of municipal officials in California, or sheriffs in Georgia, is often reported.

But I am not a pessimist about morality in our various governments. Over the years I have worked with thousands of local and federal officials, and by and large the great majority of them are honest.

"Where you find payoffs as a way of life it is not restricted to government. For a time I worked on investigations into payoffs in the garment district in New York City, and it became clear to me that in that instance there were probably more payoffs in industry than there were in government.

"It is part of the human condition that a small percentage of people will try to make a fast buck in an illegal way when the opportunity presents itself. One task of management should be to reduce those opportunities as much as possible.

"Corruption is found wherever you go. I worked overseas in India for some time, and found corruption to be rampant there. I remember that on one occasion a person had to pay off in order to be admitted to a hospital emergency room.

"In some parts of the world, including pockets in America, the perception is that with the job come the payoffs and kickbacks."

Is dishonesty and fraud by members of the public influenced by the frequent publicity about dishonesty and corruption in high places? Is the public attitude "I might as well get mine—the people up top are busy feathering their nests"?

"Yes, I think Watergate and Abscam, and publicity for expensive Congressional junketing on trips abroad, do influence the public's standards of morality. Perhaps we need to proselytize that those in public office should have a higher standard of morality.

"There are these impersonal corporate conglomerates, there are those stories about officers absconding with huge sums, reports of conflicts of interest. The motivation of the offenders may be 'They have so much—they won't miss it.' But the effect spreads to the general public.

"I have always lived a fairly simple life, and I have watched public figures who have done the same. I think it is proper that people who are in the public eye should live by ethics that can withstand public scrutiny.

"I think the examples set by Presidents Truman and Carter—irrespective of the latter's effectiveness in performance—were good from the point of view of encouraging higher standards of public morality. I am sure that Carter did not leave office a great deal richer than when he arrived, which cannot be said of many other presidents.

"I read recently that Lyndon Johnson left office richer than any president before him. He certainly did not enter office that rich.

"You cannot sustain public faith in government programs and elected officials when cases of corruption are frequent.

"I think that since Watergate and Abscam there has grown up a great deal more public skepticism. People don't believe their elected officials as much as they used to. From one point of view that is terrific—a healthy level of skepticism and disbelief is one of the best parts of a democracy."

Surely if public skepticism grows very large it encourages public dishonesty?

"Exactly. It becomes corrosive."

Was this one reason why there seems to be so little ideal of public service in America, as compared to some other countries where it is considered a prestigious calling to be a public servant, and such service is often given for lower salaries, or even for nothing? Most magistrates in Britain, for example, are unpaid, and are given great prestige and respect.

"I don't think that as strong a tradition of selfless public service has grown up in the U.S., as exists in a few countries. I know that in some countries the finest universities have historically trained the best people for the public service.

"On the other hand there are a large number of American public officials—I might even include myself—who regard public service as a high calling to which they have given their best."

Including some very great ones such as the late Robert Moses of New York City?

"And a great number of less publicized ones. There are many bureaucrats right here in California who are handling great responsibilities and achieving

continued on next page

Tom McBride saved millions for taxpayers when he was federal 'watchdog'

McBride/ continued from page 3

important results for the public, often under very frustrating conditions. The public knows too little of their efforts.

"I think one of the most unfortunate things since the Reagan administration reached power is a tendency for it to dump on the public service bureaucracy."

When public officials became corrupt, did it have anything to do with the fact that they were resentful because their salaries were lower than they would get in the open market place?

"I don't know that to be true. I take a rather simplistic view of corruption. I don't think you need to look too deeply into psychological reasons. The plain fact is that they decide they want more money, and they proceed to get it."

When McBride went after those suspected of fraud had he relied solely on computer matching or had he used detectives and other methods of detection?

"We used all the usual methods of detection, including investigators, surveillance, legal wiretapping, and—probably far more than the public realizes—a heavy reliance on expert examination of financial records of all types.

"The investigator who tends to be most successful is a sort of hybrid between the traditional detective and a fairly sophisticated tracer of complicated financial transactions.

"When I was inspector general I had two large units, one composed of investigators and the other of auditors, and I tried to cross-train as many of them as possible in both disciplines. This produced a few highly specialized detectives, but more usually it was necessary to send one from each discipline on a case.

"The work of such people is not particularly well paid, and it is not glamorous, but it can be very satisfying when it results in exposure of largescale fraud. They have the joy of the chase, and every day there is something new.

"It can also be very frustrating. After two years of hard work we prosecuted the mayor and police chief of Reading, Penn., and the judge did his best to influence the jury into voting an acquittal, but fortunately the jurors had more sense and found them guilty on all counts. Then the judge had the last laugh—he sentenced the mayor to only 30 days!"

Are there any unsung heroes who have saved the public millions of dollars?

"Oh yes, probably there should be a medal for such people. I recall one investigator who had a consummate combination of all the skills I have mentioned. He was a highly skilled detective, with a keen knowledge of human nature, and a fine accounting mind.

"He was Carmine Bellino, who was chief investigator for the Senate Permanent Investigations Committee.

"He was a key figure in the cases against Dave Beck of the Teamsters Union and against James Hoffa, and in many other big cases when I was an inspector general. I used him as an instructor, and he was something of a guru and role model for the younger investigators.

"Carmine was exceptional, but not that much more so than scores of other dedicated investigators who keep on the trail, with very little public realization of their skills."

Did fraud and excesses tend to be concentrated in poorly-run departments?

"Yes, whenever there is a combination of poor administration and the opportunity to make some fraudulent money you will find people taking advantage of it. That is why I shaped my career as I did. I started off as a prosecutor, but I tended to become more of an administrator and manager, for that is the best way to cut down mismanagement and fraud."

How can junketing by elected officials be cut down? You mentioned their bad effect on public morality.

"The best place to start is in securing proper oversight. When I was inspector general I would hear, let us say, that some department was planning to sponsor a conference in a pleasure resort. I would make it known that this was a dumb idea, and that a better place would be somewhere like Kansas City.

"I think that because there are now inspectors general supervising major departments there are more controls over flagrant abuses of public trust and money."

Who supervises Congressmen and their junkets?

"There is no inspector general for Congress, which is a self-policing body. I have seen no change in the scale of congressional junketing. At the end of every session you see the phenomena of the world trip for lame duck members of Congress."

Is there anyone who orchestrates the work of the various inspectors general, so that the efforts against fraud can be nationally organized?

"President Reagan set up a White House Council on Integrity and Efficiency which coordinates this effort against fraud and waste."

...whenever there is a combination of poor administration and the opportunity to make some fraudulent money, you will find people taking advantage of it.

—Tom McBride

It all began for McBride when he was a deck yeoman on the newly launched superliner *United States*, a job he had taken to finance his further education, after his B.A. at N.Y.U.

"The year I spent at sea coincided with the Senator Joe McCarthy era, and reading about the goings-on at the famous hearing I grew increasingly interested in public policy, government and politics," said McBride. "I also realized that my earlier plans for an academic career were not so attractive to me.

"I decided to go to Law School, as that would be the key to a wide variety of career opportunities where the buttons and levers of power could be used. I was accepted at Columbia Law School.

"I was a sort of phantom student at law school. I worked at nights on the west side piers in Manhattan as a cargo checker, and studied by day, slept when I could, and kept my fingers crossed that I would make it.

"It was a struggle to keep body and mind together, but, Saints be praised, I made it."

McBride's first job was with the District Attorney's Office for New York State. He conducted major investigations and trial work. He moved on to become, in turn, assistant counsel to the Commission on Government Operations of New York City, then a supervisory investigator in the Department of Labor, and Organized Crime trial attorney in the U.S. Department of Justice.

He first went to Washington to join an investigative group at the Department of Labor dealing with labor union racketeering. Within a matter of months Robert Kennedy became U.S. Attorney General, and a massive move against organized crime and labor racketeering began.

"In spite of his youth, Bob Kennedy became an extraordinarily effective Attorney General," said McBride. "He inspired the career attorneys in the department to do better than they had ever done before. The bottom fell out of our world with the assassination of John Kennedy, and the departure of Robert Kennedy to run for the Senate seat in New York."

McBride joined the Peace Corps, had some stirring adventures in the field, and rose to be named deputy director of the Latin America region, where he supervised the work of 5,000 volunteers in 19 countries.

He left to join the presidential campaign of Robert Kennedy, on whose assassination he found himself jobless, with a wife and three children to support. He went to work for the newly-formed Urban Coalition, while the riots were occurring in cities across America. He helped to organize local urban coalitions of social action groups consisting of business, minorities, governmental and other leaders.

In 1969 he became deputy chief counsel of the Select Committee on Crime, for the House of Representatives. His next post was with the Police Foundation, a Ford Foundation-funded group that supported innovative social and criminal justice programs.

I used to be embarrassed by the frequency with which I changed jobs. I was afraid of being considered a job-hopper, but now that I am older, I am sure glad I got all that experience."

Then came Watergate. Archibald Cox was appointed Special Prosecutor and McBride directed the largest of Cox's task forces, dealing with campaign contributions.

After the famous "Saturday night massacre," when Cox was fired by President Nixon, McBride continued to serve under Leon Jaworski. He prosecuted over 30 individuals and 20 major corporations. Among the felonies investigated were the purchase of ambassadorial appointments and illegal contributions to politicians.

This was draining work. In October 1975 he was glad to become director of the Bureau of Enforcement of the Civil Aeronautics Board. Here he managed a staff of 100 lawyers, auditors and investigators. He redirected the enforcement program toward greater emphasis on big cases, antitrust actions and consumer protection work.

He took an even bigger job in 1977 when he became inspector general of the Department of Agriculture. His oversight responsibilities covered about $40 billion of expenditures a year, and included over 300 programs, ranging from Food Stamps to the land grant university research and support programs.

On the Inauguration Day of President Reagan he was fired, along with all the other inspectors general. There was a backlash from Congress and within a few days the administration said that it intended to reappoint the better inspectors general. McBride was shifted to the Department of Labor.

As inspector general at Labor he led the President's Computer Matching Project, a key element in the administration's anti-fraud/waste program.

"By the fall of 1982 I was feeling jaded with Washington. I had put in 20 years on major jobs, and I felt the need for new horizons. So I accepted with pleasure the offer of the associate deanship of Stanford Law School."

McBride's wife, Catherine Milton, has successfully pursued her own career. She became closely involved with criminal justice work. She worked for the Commission on Campus Unrest, and has written several books, including *Women in Policing*, *Police Use of Fatal Force*, and coauthorship of *History of the American Negro*.

Her book, *Little Sisters and the Law* revealed the plight of children detained in custody, often for reasons which have nothing to do with their own actions. She drew attention to the fact that many such children were institutionalized in circumstances where, if they had been adults, nothing would be done to them.

Most recently, she was the key Senate staff person in the drafting and passage of the "Victims Assistance Act, 1982," the first major piece of federal legislation aimed at helping victims of crime.

Todd sees more interest in Russian studies among students

BY MILLICENT DILLON

After a decade and more of progressive decline in Russian studies, registration now seems to be on the upturn, says Prof. William M. Todd III of the Stanford Department of Slavic Languages and Literatures.

"Enrollment in the survey course on 19th century Russian literature has doubled this quarter from 12 to 26. The figures are admittedly small, but they are significant.

"Enrollment in the first year Russian has also gone up dramatically, from 30 last year to 50 this year.

"This increase seems to be happening around the country. We're hearing about it from people at Berkeley and Columbia as well."

The graduate program in Slavic at Stanford is thriving. Todd notes that Stanford for several years has led the country in the number of graduate students going to the Soviet Union.

"We now have six students there, one in comparative literature with a Russian specialty, two from Slavic, and three from history.

"I believe we have made such an excellent showing because of our strong research orientation."

An exciting time

Todd's own interest in Russian studies began in the late '50s when he was a junior high school student and Sputnik was launched. In high school he elected to take a unit on Russian literature. He read the works of Dostoevsky, Chekhov, Gogol, and Tolstoy, and he was "hooked."

"It was a very exciting time for Russian studies, both because of scientific advances in the Soviet Union and because of the Western discovery of such writers as Pasternak and Solzhenitsyn.

"Reading the paper as a young student growing up in New Jersey, I had the sense that Russia was everywhere and that we were entering a period of great change with respect to the Soviet Union. There seemed to be a thaw in the making.

"I was aware then, in an intuitive way, that the world of the 1950s was dominated by two great powers, America and the USSR, and the future of the world would be decided by what took place between these two powers.

"The study of Russian history and literature and politics thus seemed to me to be a very urgent thing. I remember being worried that the moment might pass and leave me without an understanding of what was going on," he says.

Demanding study

Todd received his B.A. in Russian at Dartmouth, then went on to Oxford for his second B.A. He considers the course at Dartmouth as an excellent one, but he still was not prepared when he came to Oxford for the difficulty of the work.

"The standards were very high," he recalls, "almost overwhelming. I felt for the first month that I was hanging on by my fingernails."

From Oxford Todd went on to Columbia, where he received the Ph.D. He came to Stanford directly from Columbia.

Todd took his first trip to the Soviet Union in the summer of '65 when he was 20. "I went on a summer program funded by the government. It was tremendously exciting for many reasons, for the direct contact with a culture I'd been studying so intensively, for the chance to speak the language outside of the classroom, for the chance to explore out-of-the-way parts of the country."

He has returned to Russia twice since then, for 10 months in '70 and for three months in '76.

"The last was a very dreary time.

"I had been very excited about going, but then when I was there I was uneasy with the situation, in part because contacts were more limited than they had been in 1970."

Defined by roles

The period of the 1970s was a time of increasing repression in the Soviet Union, even though it appeared to be on a "smallish" scale, with the Soviet government anxious to avoid making martyrs out of prominent dissidents, says Todd.

"It was also a time of what might be called the sociologization of Soviet culture.

"By this I mean that the Russian writers no longer perceived themselves as living in a heroic age of mass transformation, as they did in the earlier periods of Soviet history.

"To themselves they have become sociological beings. I use that term to suggest an individual who is defined by the various roles and relationships he has in subsystems in a society."

A specialist in the Russian literature of the 19th century, Todd emphasized the difference between the view of a human being in Soviet literature of the last decade and in the great works of the 19th century.

"Authors such as Gogol and Dostoevsky dealt with human beings in terms of their social relationships, too, of course. But they also confronted directly the major problems of human existence. Is there a God? Is there justice? Does life make sense?

"In those 19th century works nearly every character had to find his own individual response to these questions.

"And it was precisely these very large questions and the way the characters grappled with them that made it possible for that literature to amaze the rest of the world.

"To be sure I am not an expert on modern Soviet literature. Yet as I read it, I can see that these questions have not been addressed with equal grandeur and directness."

The sociologization of the literature reflected the stagnation and disenchantment in the society, says Todd, and may in part have accounted for the decline of interest of students in the last decade. "It has just not seemed a very interesting culture to study."

"To some of us, for a time, it seemed as though studying Russian literature was like studying the classics—great in the past, but nonexistent in the present.

"However, I no longer feel quite so pessimistic."

Looking toward the future in curricular terms, Todd would like to see a cooperative effort between his department and history and other interested departments to produce a sequence of courses on Russian culture, to include intellectual history, social history, and linguistic and literary history.

Russian literature of the 19th century amazed the world, but William Todd III isn't so sure about modern writing.

New book explores U.S.—Soviet relations in crisis era

The steady deterioration in U.S.-Soviet relations has created "dangerous instability and uncertainty," warns Prof. Alexander George of Stanford.

Winner of the 1975 Bancroft prize for his book on *Deterrence in Foreign Policy*, George is the author of a new book on *Managing U.S.-Soviet Rivalry-Problems of Crisis Prevention* (Westview Special Studies in International Relations, 415 pp., paper $11.75, cloth $30, Westview Press, Boulder, Colorado)

While both sides may be drifting toward Cold War II, "they continue to have a common interest in managing their rivalry in order to avoid war threatening crises," he declares.

Strengthening U.S. defense is "essential, given the failure of detente and the continued buildup of Soviet forces," he adds. But "strengthening military capabilities cannot substitute for a well conceived, realistically grounded foreign policy.

"The end itself—the kind of relationship with the Soviet Union that the strengthening of U.S. military posture is designed to help achieve—must be clarified."

Strengthening U.S. defense alone is "not sufficient. . .for achieving the limited objective of 'containment without confrontation' in U.S. relations with the Soviets."

During the Cold War, deterrence alone was of only limited use in preventing encroachments on U.S. interests in third areas outside the two superpowers immediate spheres of interest.

"This gap in deterrence is even greater in today's world. . .particularly in situations characterized by low-level conflict, internal instability, national liberation struggles, indirect and limited involvement by outside powers, use of proxies, etc," George notes.

Even when successful, deterrence can at best be regarded as "no more than a time buying strategy. . .it cannot compensate for a foreign policy that is confused or mistaken, or one that enjoys inadequate or unstable support from Congress and the public," he declares.

"It may well be that the Reagan Administration has not evolved any clear or fixed view. . .that its day-to-day actions are not guided by any well-defined or predetermined concept of what kind of U.S.-Soviet relationship it should strive for."

While it is "very unlikely" the two superpowers would agree to general purpose rules of engagement across the board, "specific rules contrived to limit or regulate competition in a particular area are much more feasible," he believes.

Repeated outbreaks of war between the Arab states and Israel have shown that the superpowers "must cooperate, if necessary, to bring about a timely ceasefire before (either side) is threatened with a devastating defeat."

But both superpowers have stepped up noncrisis deployments and military exercises in the Middle East, he adds.

"Specifically, the deployment of U.S. ground forces to the Sinai in 1982 as part of the multinational force lowers a longstanding norm against stationing superpower ground forces in the area during more or less normal periods. The possibility arises that the Soviets will not be far behind in seeking a way to position a limited contingent of Soviet troops in the area, possibly in Syria.

"Erosion of the firmer norm concerning Cuba is also a possibility, as the Soviets continue their arms buildup there and the Reagan Administration speaks of 'going to the source' to oppose Cuban interventionism in the Caribbean and in Latin America. . . .

"Because the present crisis presents no sense of urgency and poses no deadlines for remedial measures, each side has shifted to the other side the burden of responsibility for taking corrective action.

"Since the Soviet invasion of Afghanistan doomed whatever possibility had remained for Senate ratification of SALT II, each side has succumbed to the temptation of developing its own self-serving account—all the more dangerous because sincerely believed—of why detente eroded. . . .

"Instruments of self-justification and assertions of blame are steadily hardening, fueled by new developments, such as those in Poland.

"This inflexibility is leading inexorably to a new group of rigid mind-sets and mutually hostile images that will severely constrain efforts to halt the drift into a new version of the Cold War."

George is the Graham H. Stuart professor of international relations at Stanford. His previous works include *The Limits of Coercive Diplomacy* and *Presidential Decision-Making in Foreign Policy*.

Letters to the editor

Affirmative action assessment of progress 'misleading,' La Raza staff say

Editor, *Campus Report*:

The University Administration has in recent months created an impression within the campus community that Stanford has distinguished itself as an affirmative action employer. This has been done primarily by publication of various newspaper articles.

For example, on Oct. 7, 1982, an article entitled "Minority hiring here betters national rate" appeared in the **Stanford Daily**. The article stated that it was unrealistic to expect significant gains in affirmative action because "Now the original available group of minorities has been drained and monumental gains, as then occurred, are **impossible** (emphasis added) to achieve right now."[1] Moreover, the article pointed out that ". . . other member schools have not done as well as Stanford in affirmative action."

Recently an article appeared in the Jan. 12, 1983, issue of the **Campus Report** entitled "Substantive progress in affirmative action." As evidence of **substantive** progress it was pointed out that "There has been 'very slow but consistent growth' in the proportion of minority employees in exempt job categories (ranges C-4 through C-10). . . . "

The thrust of these articles is that, given the lack of qualified minorities available, Stanford has achieved favorable results from its affirmative action efforts. The impression, we believe, is erroneous.

Worse yet, the University's misleading assessment of its progress abets continued inaction by the administration. For, in fact, affirmative action at Stanford has suffered a further setback because it has created a false sense of achievement, thus sending the wrong signal to those who make hiring and other personnel decisions at Stanford. The reality of affirmative action at Stanford is quite different from the impression created by these articles.

First, there is no truth to the statement that there are no longer qualified minorities available to be able to achieve affirmative action gains. Since the 1960s a great number of Hispanics and other minorities have gained valuable experience qualifying them for even greater responsibilities. A critical problem is, however, that we still are not represented in higher levels of the organization.

Second, while both articles acknowledge "underutilization"[2] of minorities in management, the jargonese of affirmative action tends to blur the reality of how miserably small minority representation really is.

This viewpoint is written from an Hispanic perspective. However, it is enlightening to view the actual status of minority and women staff at Stanford by examining the following data for the period beginning January 1981 through January 1983.

Senior Management[3]

	1981		1982		1983	
	N	%	N	%	N	%
Total	21	100	21	100	23	100
Non-Min Females	1	4.7	0	0	0	0
Asians	0	0	0	0	0	0
Hispanics	0	0	0	0	0	0
Blacks	0	0	0	0	0	0

Middle Management[4]

	1981		1982		1983	
	N	%	N	%	N	%
Total	96	100	96	100	84	100
Non-Min Females	22	23	24	25	15	17.9
Asians	1	1	0	0	0	0
Hispanics	2	2	1	1	2	2.4
Blacks	4	4	5	5	3	3.6

Lower Management[5]

	1981		1982		1983	
	N	%	N	%	N	%
Total	231	100	228	100	243	100
Non-Min Females	99	42.8	97	42.5	115	47
Asians	8	3.4	8	3.5	10	4.1
Hispanics	13	5.6	14	6.1	11	4.1
Blacks	7	3	12	5.3	13	5.3

The University Affirmative Action Plan published in the Jan. 12 **Campus Report** fails to provide the perspective offered by the above data (these data were obtained from the University Affirmative Action Office).

The front-page cover article in the **Campus Report** cited the increase in exempt minorities from 13.6 percent to 16.4 percent since 1978 as the basis for claiming **substantive progress**.

Yet, while Hispanics are the fastest growing minority population in the state, the above data show that there isn't even one Hispanic in senior management, only two in middle management (no better than in 1981), and our numbers have decreased in lower management from 13 (5.6 percent) to 11 (4.1 percent).

The fact that there may be more minority exempt employees than in 1978 is largely irrelevant when you consider that they are heavily concentrated in the lower ranks and are all but absent in higher positions.

These data illustrate that for Hispanics, Blacks, Asians, and to some extent even white females there has been **regression** and not progress, substantive or otherwise. Moreover, even if "full utilization" is achieved, according to the University's "availability" statistics these figures would remain largely unchanged.

For example, the availability figure set for Hispanics in middle management is four percent, according to the University's January 1983 affirmative action availability data. This means that the hiring of only two more Hispanics would result in "full utilization." Thus, not only has the University failed to achieve "full utilization" but the availability and goal figures are established so low that its achievement would be all but meaningless.

In view of the above data La Raza Staff Association urges the University to depart from its established hiring and career mobility patterns. A good starting point would be to stop patting itself on the back, admit to the serious nature of this situation for Hispanics, other minorities and women and adopt strategies which produce meaningful affirmative action results.

La Raza Staff Association

Edward Escobedo
Olivia Peterson
Hector Cuevas
Yvette Sanchez-Klemm
Personnel Policy Committee:
Conrado Hinojosa

[1]The Affirmative Action Office has stated that the article misquoted. The impression created remains, however, and a correction has not been issued.

[2]This term means that representation of a particular group is lower than their "availability." "Availability" data are a theoretical demographic estimation of the presence of a particular group in the relevant labor market.

[3]Typical classifications: President, V. P., University Officer IV.

[4]Typical classifications: Admin. Deans, Assoc. Deans-Admin., University Manager IV, Financial Manager II. (Note: These are not working titles. Typical ranges: C-9, C-10, NA-11.)

[5]Typical classifications: Asst. Dean-Admin., Asst. Provost, Univ. Manager II & III, Admin. Services Manager II & III, Administrative Asst. III. (Note: Some working titles are similar, e.g., "Asst. Dean," but are covered by different classifications not included in this category. Typical ranges included: C-6/C-9.)

Gay and Lesbian Alliance responds: there is no need to 'check' gay ID

The steering committee of the Gay and Lesbian Alliance at Stanford has responded to recent comments by Stanford President Donald Kennedy indicating that the University may turn down an offer by an anonymous donor to establish a scholarship for an openly gay student.

The group stated that its primary concern is one of equity compared to other minority groups. In a letter to Kennedy, the group suggested that the University should apply the same standards to the acceptance of scholarship funds for gay and lesbian students which it would apply to scholarship funds for other minorities.

The group expressed its concern that the University may be about to create the same type of discrepancy in its policies on gift acceptance as that which presently exists in its policies on admissions. The University states that it prohibits discrimination in admissions based on sex, race, color, national and ethnic origin, but not sexual orientation.

In an article in Thursday's *San Jose Mercury*, Kennedy is quoted as saying the proposed scholarship "requires an assertion that we couldn't possibly check without interfering in a person's privacy." The group responded that the Stanford community contains a large and ever-growing number of people who openly refer to themselves as gay or lesbian.

"They are no more difficult to identify than members of any minority group, who generally are also required to identify themselves to the University prior to being recognized as a member of the group," the letter stated.

The group asserted that there is no need for the University to "check" this self-identification. They state that discrimination *against* gay men and lesbians is usually based on knowledge of their public, and not private, behavior; scholarships can certainly be distributed on a similar basis. "If our society ever reaches the point that the stigma of being a homosexual has diminished enough that people are willing to falsely state that they are gay just to get a scholarship, such scholarship restrictions will no longer be needed."

The group expressed an interest in working with the Stanford administration to help bring in gifts which would benefit both the University and the gay community. The group stressed the importance of a clear statement of policy from the University regarding the acceptance of gifts targeted toward the gay community.

The group asserted that gays and lesbians make up a significant and increasingly well-organized portion of the University's students and alumni. The group told Kennedy it hopes that "with some encouragement from you, we can put this organizing effort to work to serve our mutual interests."

Gift rejection seen as likely

continued from page 1

The University received $77 million in gifts last year.

In 1973, the Gay People's Union at Stanford received a federal grant to fight alcoholism in the gay community. In 1974, the GPU was instrumental in obtaining a $30,000 grant to the Whitman-Radclyffe Foundation in San Francisco from the State of California for professional mental health services and research involving the bisexual and homosexual community in the Mid-peninsula.

While neither of these grants went through the University, there is no barrier to such organizational funding, according to University Counsel John Schwartz.

Eight to receive Dean's Student Service awards Wednesday

Eight students, including a trio who work together on a project, have been named recipients of six 1982-83 Dean's Student Service Awards at Stanford.

Each recipient will be presented with a bronze medallion and a personalized certificate at a dinner honoring them Wednesday, Feb. 23.

The three sharing an award are Mary Crouter, Dubois, Wyo.; Bernie Mehl, Cali, Colombia, South America; and Erin Moore, Hayama, Japan.

Other honorees are Meg Donovan, Glastonbury, Conn.; Ana Marcovich, Mexico City; Jonathan W. Siegel, New York; Thomas Wu, San Jose, Calif., and Nick Zirpolo, Palo Alto.

Erin Moore
Bernie Mehl
Mary Crouter

Meg Donovan

Thomas Wu

Nick Zirpolo

Ana Marcovich

Jonathan Siegel

Crouter, Mehl, and Moore, all senior history majors, were honored for creating a peer advising program in the History Department. As members of the History Undergraduate Student Association (HUGSA), they began the program with help from career counselor Audrey Bernfield to answer undergraduates' questions about courses, professors, the honors program, career possibilities, and how to structure a major in history.

Each works about two hours a week to "get people excited about history and the History Department."

Along with others active in HUGSA, "our motivation is to make majoring in history an integral part of students' lives so they enjoy it and get a lot out of it," the trio said.

Donovan was selected for her involvement in numerous activities including: helping organize a six-mile race that raised $600 for the Peninsula Children's Center; serving as a Big Sister in Volunteers for Youth; serving in Amnesty International; co-directing the Student Center for Innovation in Research and Education (SCIRE), which helps establish student internships; serving as a dorm resident assistant; organizing intramural sports in the dorm; and working as a student editor for *Approaching Stanford* and assisting with the sports section of the *Quad*.

She also has worked in community affairs and other capacities for the athletics department. A fifth year senior in English, Donovan has "astonishing time management skills and selfless motivation," her award notes. She's considering law school for the future, but says right now she'd "love to work for the Olympic Committee."

Marcovich Mexican by birth but of Polish and Russian descent, is studying for a master's degree in education. Interested in health and fitness education, she leads aerobic dance classes for graduate students as part of the Health Promotion Program at Cowell Student Health Center. She also choreographs routines and teaches others to lead classes.

Marcovich was cited for "making aerobic dancing as fun as it is healthful." She's interested in holistic medicine and nutrition, and may pursue study in public health at UC-Berkeley.

A graduate of Universidad Iberoamericana in Mexico City, she taught high school history for four years in Mexico before coming to Stanford with her husband, who is studying for his Ph.D.

Siegel, a sixth-year graduate student in political science, was honored for "effectively presenting graduate student concerns in so many committees, councils, and associations."

Long active in housing issues, Siegel was described as a "hard worker with a knack for asking apt questions and spotting injustice at 50 yards." He was president of the Escondido Village Council in 1978-79 and earlier served on a task force studying the Village.

He has served on the Committee on Services to Students and as student representative on several administrative search committees. Siegel earned his bachelor's degree in political science in 1977 from University of Pennsylvania. Siegel is writing his dissertation on member participation in Common Cause with assistance from a National Science Foundation grant.

Wu, a third-year senior in electrical engineering and biology, is a candidate in the honors programs in biology and the honors program in Values, Technology, and Society.

One of two tutors for undergraduates in a dorm of 250, Wu was cited for "responding to a competitive environment by sharing his knowledge and skills in many settings." He spent a year coaching students in statistical analysis for their study of diffusion of home computers recently released from the Institute for Communication Research at Stanford. He also has served as a volunteer consultant to students taking introductory computer science classes.

As survey coordinator for the Stanford chapter of Tau Beta Pi, national engineering honor society, Wu analyzed results of a survey taken to determine what constitutes good teaching in the School of Engineering. He's never taken a statistics course, but read some books on the subject.

An active swimmer, he also plays violin and piano. Wu hopes to earn a Ph.D. in engineering and an M.D., working eventually in clinical medicine and doing research in biomedical engineering.

Zirpolo was honored for his "successful service as advisor, advocate, and analyst, helping to make the campus both physically and psychologically accessible to those with disabilities."

In 1978 Zirpolo began working with architects, project managers, and others at Stanford to determine what "constitutes accessibility—not just mechanical, but also psychological and social accessibility," he said.

Currently teaching "The Disabling Society" in the Human Biology Program, he also has taught a course on "Severe Disabilities" for the Department of Family, Community, and Preventive Medicine.

A board member of the Center for the Independence of the Disabled in Belmont, he instigated a national computerized bulletin board on rehabilitation engineering design.

A native of New York, Zirpolo has resided in Palo Alto for 17 years. He expects to complete his Ph.D. in June 1984 on psycho-social aspects of physical adaptation. —**Karen Bartholomew**

Medical Center MEMO

Life and death decisions getting tougher, says Raffin

One night a depressed college sophomore raised a shotgun to her own neck and pulled the trigger. Instead of killing her, the blast destroyed her spinal column and crushed the bony vertebrae of her neck.

The extent of brain damage was unclear, but physicians were certain that her limbs were completely paralyzed and that she would never speak again. Artificial breathing machines, drugs to boost the pumping of her heart, and an artificial kidney machine were necessary to keep the young woman alive. Family members were adamant that the machines be turned off. The physicians were faced with a decision.

"The family said, 'Take my daughter off life support.' What would you do?" Dr. Tom Raffin asked the 300 laypersons gathered at Stanford University last Wednesday to hear him discuss the practical and moral issues faced each day in a hospital's intensive care unit.

"Turn the machines off," said several members of the audience, but Raffin, assistant professor and assistant chief of medicine and associate director of Stanford's 60 intensive care beds, cautioned them not to be hasty.

"She tried to commit suicide, that's true, but that's no reason to let her die," Raffin said. "If you are a physician, who are you responsible to, the family or the patient? Several hundred thousand patients a year try to commit suicide. The great majority of these take drug overdoses and must be placed on respirators. Many of these recover and then go on to live productive lives.

"You might say, 'but what about the idea that she faces such a miserable life?' Well, what about the soldiers in Vietnam who were shot in the neck and were forced to go on breathing machines? You can visit them at VA hospitals around the country. . .You can see how complicated this is," Raffin said. "These are not easy situations to deal with, but decisions have to be made."

The decisions may become tougher, Raffin said, as medical costs skyrocket. Currently, there are more than enough ICU beds in the 6,000 U.S. hospitals to care for all critically ill patients, at an average cost of $2,000 each day. But the number of beds available may soon drop.

Intensive care nurses B.J. Beames (left) and Marilyn Brett adjust the intravenous lines and monitors on a patient just back from open heart surgery.

"With the recent changes in health care legislation and the coming changes in benefits from private insurance, there will be a limit to the number of intensive care unit beds in the future," Raffin said.

"The old days of triage decisions are going to come back," he predicted. ("Triage" refers to a method of prioritizing patients for treatment in a way that maximizes the number of survivors.)

"When you have a 70-year-old and a 30-year-old who are equally critically ill and you have one bed, the 30-year-old gets the bed," Raffin said. "The 70-year-old who might be salvageable doesn't get the bed and has a greater chance of dying. Those days will be coming back, and I believe the people who will first experience the brunt of those tough decisions are the underprivileged."

Eventually though, nearly everyone will be touched by the painful choices of the intensive care unit, either personally or through a family member or friend, said the physician. With even the best health insurance paying only 80 percent of an ICU bill, several weeks or months in an intensive care unit can render even financially stable families monetarily, as well as emotionally, bankrupt.

The high costs stem from expensive life support and monitoring equipment such as respirators, artificial kidney machines, and heart and lung monitors that the critically ill patient needs to stay alive, as well as from the host of physicians, nurses and specialists who render round-the-clock health care.

If the patient can be healed and returned to a reasonable quality of life, the cost is well worth it, Raffin said. The tragedy comes for the significant percentage of all ICU patients who have essentially no quality of life and are suffering for weeks in ICUs on extraordinary life support systems.

"Cost is not the most important issue," Raffin said, "though it is important." More important is the reality that many ICU patients languish for weeks or months in a critically ill state with almost no chance to recover, while anguished families and health care teams try to guess what choices the patient would make if he could talk.

A "living will," which frees the family and physician to withdraw extraordinary means of life support once it has been determined that the patient has almost no chance of regaining "an acceptable quality of life," is an important document that everyone should sign, Raffin said.

Though "acceptable quality of life" could be different for each individual, the working definition in Stanford's four ICUs is the ability to leave the hospital, he said.

While such a will would not prevent, for example, an elderly patient from being put on a breathing machine in the emergency room, it could be used to help the family and health care team decide whether or not to withdraw artificial life support when a comatose patient is deteriorating after several weeks on a breathing machine.

Such wills can be obtained in the

Regional NLRB overrules union's objections and certifies fall election

The regional director of the National Labor Relations Board in Oakland, Calif., has certified as final the Nov. 5-6, 1982 election in which service and maintenance employees at Stanford University Hospital rejected representation by a union.

In a Feb. 7, 1983 communication to Stanford, James Scott, the NLRB regional director, upheld the results of the election and overruled seven objections filed Nov. 10, 1982 by Local 715, Service Employees International Union, AFL-CIO (United Stanford Workers). The group sought to represent 1,150 workers at the hospital.

Approximately 90 percent of the eligible employees cast ballots, resulting in a vote of 778 against representation by Local 715, 253 in favor, with 22 ballots void or challenged.

Michael Baratz, executive secretary of Local 715, said last week the union has appealed the certification order to NLRB headquarters in Washington. The regional director's decision is final unless it is overruled by NLRB headquarters.

The regional director overruled without comment four of the objections because the union "presented no evidence in support of the allegations," he wrote.

The other three objections drew comments from Scott but were overruled in their entirety:

Concerning one objection, the regional director discussed a union charge that some employees scheduled to work on neither election day were told they could receive two hours' pay for coming in to vote. SUH did not dispute that it made such an offer and that some employees did receive that benefit.

In his comments, the regional director found "that the Employer's conduct at issue herein was in furtherance of the election process," especially since there was no evidence that the benefit was conditioned on whether the employees voted against the union.

In a second objection, the union had alleged that one of its organizers was escorted from the hospital cafeteria by hospital security guards in September 1982, when Local 715 employees at the university—not at the hospital—were on strike.

The guards allegedly observed the union organizer blocking the access of supply trucks to the Medical Center.

The regional director ruled that even if this charge could be proven, the union during a one-year campaign "enjoyed unlimited access to the employees."

He wrote that the incident would not have created an atmosphere which would alter the outcome of the election.

A third objection by the union alleged that one day, a supervisor took down some union literature from a bulletin board in the hospital. Again the regional director ruled that even if this charge could be proven, it would not have significantly interfered with the union's right to disseminate information, including posting of notices on a wide variety of other bulletin boards throughout the hospital.

He said that such a charge did not constitute "conduct which substantially interferes with the election."

No employees are represented by Local 715 at the hospital, a wholly-owned nonprofit subsidiary corporation of Stanford University.

A nonaffiliated organization, the Committee for the Recognition of Nursing Achievements (CRONA) represents about 1,250 registered nurses and is the only labor organization currently representing employees at the hospital.

At the university, a Local 715 contract covers a bargaining unit of 1,350 workers.

The chief of staff believes only physicians are qualified to make diagnostic decisions and treat patients.

M.D.s vs. 'healers': Silverman takes stand

A proposed change in California's Medical Practice Act would ultimately decrease the quality of health care if passed, said Dr. James Silverman, chief of staff at Stanford University Hospital.

Silverman reviewed the reasons for and the effects of the suggested revision that would allow a group of nonphysician practitioners to register with the state as health care providers, in the recent issue of *Stanford M.D.* The magazine is published by the Stanford Medical Alumni Association.

"The proposal would accept unorthodox and unproven therapies as having real value and classify them as health care services," said Silverman. "It would legalize quackery, and mock the present stringent controls of new drugs and new therapies."

Sponsored by the Board of Medical Quality Assurance (BMQA), the proposal calls for rewriting Section 2052 of the Medical Practice Act to allow alternative practitioners such as homeopaths, lay midwives, naturopaths, Indian shamans, and body workers to register with the state in order to treat patients. "They would be required to simply inform their clients of their training and background," Silverman explained.

The BMQA is California's regulatory agency charged with overseeing medical quality assurance, licensing, and allied health professions. It is made up of 12 physicians and seven nonphysicians.

The Medical Practice Act now states only physicians may diagnose and treat any mental or physical disorder. The change would register nonphysician practitioners, which would allow them to treat patients. "Even if they are only registering with the state, it still implies their acceptance as health care providers," Silverman commented.

"Nonphysician practitioners do fulfill a perceived need of society. The question is whether their services fall under health care, are good for sick people, and whether they should be available to replace scientifically proven treatments," Silverman said. By condoning registration of this group of practitioners, he added, "the public may be misled into thinking they are qualified to substitute for trained people (physicians) in caring for the sick."

The proposal has been a controversial issue since its inception, and legislative action on it has been delayed a number of times. Public hearings were held in January 1983 in San Francisco, and Feb. 19 in Los Angeles.

The controversy over the proposal has been presented as a battle between organized medicine and the "healers," Silverman said. Proponents feel some illnesses need not be treated by physicians, but rather nonphysicians can provide cheaper, faster care. They also feel alternative providers are necessary to make health care affordable by all segments of society.

Opponents feel physicians, because of their vast amounts of training and experience, are the only ones with the skills and confidence necessary to make diagnostic decisions.

"The belief that it is possible to have effective, less expensive, and successful health care services rendered by nonphysician practitioners seems to be based on the assumption that cheaper—albeit inferior—care is better than no care at all," Silverman said. "This assumes that nonphysicians know enough about medicine to do at least some good.

"Unfortunately," he concluded, "much alternative providers' knowledge is based on folklore, stylish fads, and other nonscientific sources. They have little, if any, knowledge of the human body or medicine."

—Shirley Kraus

Dr. Ronald Levy (left) and David Maloney are Friday's speakers.

Lecture series ends with a SMASH

"Custom-tailored antibodies for tumor diagnosis and therapy" is the topic of this week's S*M*A*S*H lecture, the last of the winter 1983 series, to be held 4:30 p.m. Friday, Feb. 25, in Fairchild Auditorium.

Speakers are Dr. Ronald Levy, associate professor of medicine, and David Maloney, fifth-year M.D./Ph.D. student. The presentation is open to all interested members of the Medical Center community, and will be followed by a TGIF gathering in the lobby.

Eat right, enjoy nutrition month

"Say Yes to Less. . .Les Fat, Less Salt, Less Sugar. . .A Health Plus" and "Juggle the Foods You Eat. . .Be Bright, Eat Right" are the themes of the 11th annual National Nutrition Time to be promoted by the American Dietetic Association (ADA) during the entire month of March.

The clinical dietetic staff of the Department of Dietetics at SUH have planned a wide range of educational activities to promote this year's theme of nutrition and fitness with patients, staff, and community.

The events will include:

- Announcements through posters, bulletin boards, National Nutrition Month (NNM) buttons, table tents in the cafeteria dining rooms, and distribution of nutrition education materials to patients and staff;
- Free Jazzercise demonstration to be held from 3:45-4:30 p.m., March 3. Patty Jones, R.D., part-time clinical dietitian and certified Jazzercise instructor will lead the physical exercise in the north cafeteria dining room (P1060). Space is limited and admission will be on a first-come, first-served basis. Participants should be dressed to get the full benefit out of the demonstration. Bring a towel.
- On Saturday, March 5, the department of dietetics will sponsor the San Jose Peninsula Dietetic Association's Trends in Nutrition 1983 symposium for health care professionals at Fairchild Auditorium. The program this year is "Marketing Your Profession in the 1980s." Fees will be charged, and early registration is recommended. For further information about the symposium, call 497-6904.
- A patient and cafeteria lunch meal special offered sometime during the month of March will promote the principles of sports nutrition.
- Clinical dietitians will present nursing grand rounds March 9, on "The Confusing World of Food and Nutrition Fads." A 56-page booklet, *Popular Diets—How they Rate*, will be available for purchase through the dietetics department. The booklet, written by dietitians of the Los Angeles District Dietetic Association, reviews and critiques 14 currently popular diets. Nursing grand rounds will be presented by Beth Douglas, R.D., Diane Madgic, R.D., Diane West, R.D., and Janet Cecchino, R.D.
- Dietitians from SUH and Children's Hospital at Stanford will participate in the Pediatric Health Fair at the Stanford Shopping Center on Saturday, March 19. Patsy Obayashi, R.D., and Lynn Adams, R.D., are coordinating the nutrition booth.

National Nutrition Month is a united effort by members of ADA to focus national attention on nutritional needs of this country. The event was proposed by the California Dietetic Association and passed by the ADA, and the initial effort began in March, 1973.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

FEBRUARY 21 through 25

Office of Postgraduate Medical Education: "Basic Science for Clinicians." To register, call 497-5594.

WEDNESDAY, FEBRUARY 23

Div. of Hematology Conference: "Bone Changes in Hematologic Disease"—Dr. Henry Jones. Noon, M208.

Depts. of Biochemistry and Chemistry Seminar: "Site-Directed Mutagenesis as a Probe of Enzyme Structure and Catalysis"—Dr. Alan Fersht (Imperial College, London). 4 p.m., Karl F. Braun Lecture Hall, S. Mudd Bldg.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Digital Radiographic Methods for Blood Vessel Imaging"—Dwight Nishimura. 4:15 p.m., McCullough 134.

Basic Science Research Colloquium: "Molecular Analysis of Genes Controlling Development of *Drosophila*"—Dr. David Hogness. 5 p.m., Fairchild Auditorium.

Progress in Medicine Lecture Series: "Who is Saved?"—second of a six-part series on Progress and Ethical Dilemmas of Intensive Care. Speaker is Dr. Myer Rosenthal. 7:30 p.m., Fairchild Auditorium. For further information, call the office of public events at 497-6389.

THURSDAY, FEBRUARY 24

Dept. of Medicine Grand Rounds: "Chronic Ambulatory Peritoneal Dialysis"—Dr. Charles Feldman. 8:30 a.m., Fairchild Auditorium.

Nursing Educational Services: Deadline for March 7 and 8 course "Interventions in Neonatal Nursing: Beyond Medical Care." The course is recommended for those caring for the long-term neonate (hospitalized for longer than one week), and focuses on the nurse's role in achieving and maintaining an optimal level of health in the newborn through interventions in nursing, physical therapy, nutritional support and social services. 8:30 a.m. till 4 p.m. each day, Tresidder Union. To register, call Carole Kidder at 497-6366.

Dept. of Biochemistry Seminar: "The dnaK Gene, Macromolecular Biosyntheses and Heat-Shock Control in *E. coli*"—Dr. Costus Georgopoulos (Univ. of Utah). Noon, M316.

FRIDAY, FEBRUARY 25

Dept. of Pediatrics Grand Rounds: "Computers in Medical Decision Making"—Dr. David Bergman (UCSF). 8 a.m., M106.

SMASH Lecture: "Custom-Tailored Antibodies for Tumor Diagnosis and Therapy"—Dr. Ronald Levy and David Maloney, fifth-year student. 4:30 p.m., Fairchild Auditorium.

FEBRUARY 26 and 27

Office of Postgraduate Medical Education: "Life in the Universe." 8 a.m. till 5 p.m. Saturday; 8 a.m. till noon Sunday, Fairchild Auditorium. To register, call 497-5594.

MONDAY, FEBRUARY 28

Dept. of Gynecology and Obstetrics REI Conference: "Spontaneous Miscarriage"—Dr. Jean Curran. 8 a.m., A336.

Nursing Educational Services: "Pediatric Critical Care, Level II." First session, 7:30 a.m. till 4:15 p.m., Faber Auditorium, Children's Hospital. Second session on Tuesday, March 1. For further information, call Carole Kidder at 497-6366.

Dept. of Pharmacology Seminar: "Solubilization and Characterization of MU and Kappa Opiate Receptors"—Dr. Suzanne Zukin (Albert Einstein College of Medicine). 4:15 p.m., R358.

SATURDAY, MARCH 5

Dept. of Dietetics: "Trends in Nutrition 1983—A Symposium on Marketing Your Profession in the '80s." This program addresses the reasons marketing is essential to the survival of health professional careers. Fees required; early registration recommended. Presented by the San Jose Peninsula Dietetic Association. 7:45 a.m. till 3:15 p.m., Fairchild Auditorium. (*See related article on National Nutrition Month activities.*)

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Hecht and Yonchenko leave Stanford to begin their own new business

Bob Hecht, coordinator of Instructional Media (IM) and the Fleischmann Learning Resource Center, and Michael Yonchenko, audio visual/television manager at IM, have resigned effective Feb. 15.

Elwood Pierce, operations manger for the School of Medicine, said a personnel search is under way for replacements for the two men but that virtually all services, including medical illustration, photography, film processing, and pamphlet production, will continue normally under appropriate unit managers.

Complete video productions, including production planning, scripting, recording and editing, will be halted or delayed until restaffing occurs, Pierce said, however video taping service will be available.

The two men left Stanford to form their own business.

Hecht began work at Stanford as a media specialist in 1970 and was promoted to his most recent post in 1976.

Yonchenko joined the deppartment as a media specialist in 1977 and remained for three years. After a one-year absence he rejoined the department as AV/TV manager.

IM's services were set up to provide comprehensive media support for the Medical Center, but its services are available to the entire university community, Pierce said.

Med faculty openings

Stanford University is an affirmative action employer and welcomes nominations of women and minority group members and applications from them.

Applications are invited from surgical pathologists with strong academic orientation for the position of assistant professor in the department of pathology at Stanford University School of Medicine.

Respondents must either be eligible for or possess California licensure and must be certified in anatomic pathology by the American Board of Pathology. Applicants must have a comprehensive knowledge of and a strong background in general surgical pathology, prior experience in research and teaching, and diagnostic expertise in renal pathology, cytopathology, and gynecologic pathology.

Duties will include teaching medical students and housestaff, diagnostic and supervisory responsibility in general surgical pathology, and participation in the diagnostic, teaching and research programs in renal pathology and gynecologic pathology. A record of prior publications is essential.

Applications should be dated no later than April 1 for an appointment to commence Sept. 1, 1983. Send curriculum vitae and the names of at least three referees to: David Korn, M.D., chairman, Department of Pathology, Stanford University Medical School, Stanford, CA 94305.

News Notes

The new post office hours are 9 a.m. to noon and 1 to 3 p.m., Monday through Friday. Located in the basement of the Hospital, the post office will now be closed during the noon hour.

* * * *

The telephone number listed on page 20 of the new Medical Center directory for the neurosurgery clinic in room R103 is incorrect, a mistake which has resulted in many misdirected calls. The correct number for the neurosurgery clinic is 497-5798. The correct number for the orthopedic clinic is still 497-5643.

* * * *

Telecommunications and the Community Relations Department have developed a new telephone sticker for all inpatient Hospital rooms. The stickers, which explain clearly the procedures for dialing in-Hospital, within the University, locally, and long-distance, are now being distributed to all nursing units.

Favorite recipes shared in book

Have you tasted Kay Zehr's persimmon pudding? Jeanne Kennedy's semi-truffled pate? Or Caroline Zlotnick's Mexican fiesta salad?

If these recipes sound especially tempting, you can find them in the newly-published *Favorite Recipes of the Friends of Nursing*. The cookbook is now for sale, for $10, in the Nursing Administration Office (C020), the Hospital gift shop, and at both Stanford bookstores (downtown and on campus).

Favorite Recipes was compiled by Jane Binger, R.N., Ed.D., and Patricia Allen Sparacino, R.N., M.S., and features family-tested recipes from around the world. Contributors include more than 300 nurses in clinical, educational, and management roles at Stanford University Hospital, Clinics, and Cowell Student Health Center, and nurse alumnae of Stanford University.

Recipes range from simple, easy-to-prepare delights like mud pie and chicken-on-Sunday, to more sophisticated specialties such as almond pear supreme and eggplant parmigiana. (*Check display soon at the Community Relations bulletin board.*)

Binger is a relief staff nurse on Orthopedics (W2A) and a lecturer in the master's program in community health administration, department of nursing, San Jose State University. Sparacino is a clinical nursing specialist in cardiovascular surgery, University of California, San Francisco. Both are charter members of Friends of Nursing and alumnae of Stanford University.

All proceeds from the sale of the cookbook will go to Friends of Nursing, a newly-founded philanthropic organization dedicated to fostering excellence in nursing at Stanford. For information about joining the group, call 497-5311.

Raffin/ continued from page 8

chaplain's office of most hospitals, said Raffin.

"I believe it's very important for people, young or old, to discuss with their family, friends, and physicians their ideas and viewpoints about being on life support equipment in an intensive care unit," Raffin said. "If there is 'almost no chance' for survival, do you want your family and friends to work with physicians in withdrawing you from external support?"

Raffin's was the first in a series of six weekly lectures at Stanford on the progress and ethical dilemmas of intensive care. Admission is free for all the "Progress in Medicine" public lectures, which begin at 7:30 p.m. on successive Wednesdays in the medical school's Sherman Fairchild Auditorium.

This evening's lecture, entitled "Who is Saved?" will be presented by Dr. Myer Rosenthal, associate professor of anesthesia, medicine and surgery, and director of the intensive care units at SUH.

For further information on the series, call the medical center's office of public events at 497-6389. —**Deborah Franklin**

The Stanford campus today is a center for technological innovation. Prior to the founding of the University, Leland Stanford, who saw the potential of the horse to boost American productivity, used his land for biological innovation. His horse experiments yielded numerous trotting champions and a new approach to breeding on. . .

The Farm a century ago

BY KAREN BARTHOLOMEW

The roof is patched, but rain still leaks in. Windows are broken. The Victorian wood siding and the hayloft floor are rotting.

The once-grand training stable of Senator Leland Stanford's Palo Alto Stock Farm still stands, one of the few remaining remnants of a grandiose experiment in scientific breeding and training of horses that took place on what is now the campus between 1876 and 1903.

The Stanford Board of Trustees recently approved renovation of the historically significant Red Barn. Reconstruction could start as early as June, if sufficient funds become available. The Development Office is assessing fundraising possibilities.

The Palo Alto Stock Farm operated for 27 years and was at its peak between 1880 and 1891. The farm was best known for its trotting department, located on land now used for the golf course, driving range, and Governor's Corner dormitory complex. The recent extension of Campus Drive West bisects the trotting department site.

The stock farm's founder, Governor and later Senator Leland Stanford, has been viewed by some as simply a wealthy man indulging his hobby. But the stock farm was, in fact, a giant biological laboratory where he tested his progressive and controversial ideas on horse breeding and training.

It also was the site of photographic experiments he commissioned to prove his theories that a horse in motion has all four feet off the ground at one point in its gait. The experiments, conducted by Eadweard Muybridge, gave rise to the idea of moving pictures.

The stock farm never earned a profit. The Senator never expected it to. His immediate goal was to develop speed in trotters, horses that pulled sulkies—latter day chariots—in the then-popular harness races.

In the years preceding development of the automobile, Senator Stanford thought careful breeding of horses could increase their productivity, thereby boosting the U.S. economy. There were approximately 13 million horses in the country in the late 1800s.

Stanford told the New York *Spirit of the Times* that "there is a great difference in the capacity of horses to perform labor. . .some horses lasting three or four times as long in laborious service as the average. It seems to me that the majority might be bred up to the standard of the best, thus increasing the average value $100 per horse. The increased value would represent a gain of 13 hundred millions of dollars to the United States."

In 1876, Leland Stanford began acquiring the 8,800 acres first used for the stock farm and later the University.

His initial purchases were the Gordon estate and the Hoag ranch, together covering land roughly from El Camino Real to Junipero Serra Blvd. between San Francisquito Creek and the area near Galvez St. The Stanfords enlarged the house on the Gordon property, near the current Children's Hospital, for use on trips from their San Francisco home.

Several buildings on the Hoag property formed the nucleus of the trotting department, but most of the structures, including the Red Barn, were added by Stanford, probably in 1878 and 1879.

Stock farm records in the University Archives do not include dates various structures were built, nor are architects or contractors recorded.

Charles Marvin, who eventually became superintendent of the trotter farm, said in his 1890 text, *Training the Trotting Horse*, that "the track was just being built, new buildings were hardly yet planned, and there (were) only about a dozen men employed on the farm" when he began work in April 1878.

Yet only two years later the Palo Alto farm would win the first in its string of 19 world record.

While the trotting department's 37-stall training stable remains, more than 100 years after it was built, few other farm buildings were saved. A similarly styled but slightly smaller barn that housed colts was moved to the vicinity of the present-day Press Building in 1914 to house the University's team of work horses.

Near the stock farm's two large barns was a two-story carriage house with sleeping quarters upstairs and space for carriages and wagons downstairs. Numerous shed barns, several of them L-shaped, dotted the landscape.

The trotting farm had a blacksmith shop, a

wheelwright shop, its own feed mill, approximately 50 paddocks, eight tracks, an office building with sleeping facilities for 40 men upstairs, a dining hall, a harness shop, a superintendent's house, and a school.

At its height, the farm employed 150 workers and boarded 600 horses.

A 115-million gallon reservoir built by Stanford around 1878 or 1879, now known as Lagunita ("little lake"), supplied water to grow crops. The reservoir was then, and still is, filled by a network of flumes that divert water from nearby San Francisquito Creek. Large tanks near the dam held water for the farm.

A eucalyptus-lined road connected the trotting farm to the Stanford home near the present shopping center. Although planted by the previous owners workers dubbed it "the Governor's avenue" because Leland Stanford used it regularly. The name still holds and some of the trees still stand, although in recent years many have died of old age and stress caused by the drought of the mid-1970s.

Riding along the Governor's avenue 100 years ago, visitors could see acres of carrots, corn, barley, alfalfa, orchard, and vineyards. Another Stanford barn, converted in recent years for commercial use at the Stanford Shopping Center, was the center of a small wine production facility. Nearby, Stanford was planting an arboretum of trees which he hoped eventually would contain all species that were adapted to the area's Mediterranean climate.

In 1882 Stanford expanded his stock farm with land purchased from Peter Coutts. In the vicinity of what is now Escondido Village he built a thoroughbred department for breeding English race horses. The "running" farm was much smaller and less significant than Stanford's trotting department.

A contemporary writer who had seen the major stock farms of America reported: "It is easy to say that no two or three of them rolled into one would duplicate Palo Alto. . .Governor Stanford is easily the first (place) trotting-horse breeder in the world."

The stock farm's most famous horse, Electioneer, poses for one photographer while another captures the scene.

Three factors accounted for the trotting farm's success: Stanford's theories of breeding and training along with his financial resources, the competence of superintendent Marvin, and the consistent quality of colts sired by the prolific stallion Electioneer, mainstay of the breeding program.

At a time when many thought speed in a horse was the result of chance rather than hereditary qualities that could be cultivated, Leland Stanford advocated crossbreeding trotters with the best of English thoroughbred stock. His goal was to "engraft by degrees" the "superior qualities of the thoroughbred" without disturbing the resulting colt's trotting inclination.

Stanford also had innovative ideas for training trotters. His "Palo Alto system" included training colts as soon as they were weaned, and driving horses at full speed for short runs instead of the standard practice of longer distances at slower speeds.

The system eventually was widely accepted, but even Marvin had serious doubts about it at first: "While I was determined to do the best I could to carry out my employer's instructions, I had very little faith in the ultimate success of the experiment.

"None of the old trainers would entertain the idea," Marvin added.

Stanford also believed in "calling forth the best natural qualities of an animal by kindness and encouragement." A horse was "never touched with a whip, although it is accustomed to the crack of the lash in the air, to the shouting of the trainers and to other signals of encouragement or disapprobation," Marvin said.

The hardworking superintendent was perfectly suited to carry out Stanford's wishes. Marvin was said to be a man of quiet demeanor and few words, a thoughtful man with an educated wife and several children.

The third component of the stock farm's success, Electioneer, often was called the "world champion sire of world champions." He fathered nine of the 13 world record champions bred at Palo Alto.

Stanford purchased Electioneer for $12,000 in 1876, against the advice of friends. "They could not see what I wanted of that horse, with his heavy shoulders like a cart horse and with high hindquarters like a steer. It did look a little risky," Stanford later admitted.

In nine years at Stony Ford in New York, Electioneer had not produced any progeny of significance, so he had been largely ignored. But in 14 years at Palo Alto he sired 166 colts that could trot the mile in less than 2:30.

Stanford called Electioneer "the most prepotent sire the world has ever known," and Marvin simply said he was "the greatest of all trotting sires."

Electioneer died in August 1890 of the disease sciatica. In a series written for the *Daily Palo Alto Times* in 1925, stock farm trainer C.C. Crippen estimated that the disease cut short Electioneer's life by five years.

Electioneer's three most famous colts were Sunol, Arion, and Palo Alto.

Sunol set the world record for 2-year-olds in 1888

Palo Alto Stock Farm's trotting department. Numbers on the accompanying photos were shot.

at 2:18. The following year she won for 3-year-olds, then again at 4 and at 5, when she also won the "all ages" category with a time of 2:08¼, making her the world's champion trotter and the first to hold all age records. She was sold for $41,000.

Arion sliced Sunol's record for 2-year-olds in 1891 with a new mark of 2:10¾, a remarkable record that stood for 18 years and, in fact, was surpassed only when a new, faster sulky was introduced. But the extraordinary Arion almost lost his chance to perform for the Palo Alto farm. The year before, Stanford had agreed to sell the yearling for $5,000, but the purchaser later changed his mind and the deal was called off.

According to C.C. Crippen, stock farm business manager Ariel Lathrop, Stanford's brother-in-law, tried to prevent Marvin from entering Arion in the fateful 1891 race. Returning from several months in the East the day before the race, he read in the newspapers that Arion would run at Stockton against his previous time of 2:14½. Arriving in Stockton by train just before the scheduled race, Lathrop challenged Marvin, declaring Arion's earlier time couldn't be beat and that Marvin and the colt would look like fools for trying.

The long-standing antagonism between the two men may have spurred Marvin and contributed to the outstanding victory.

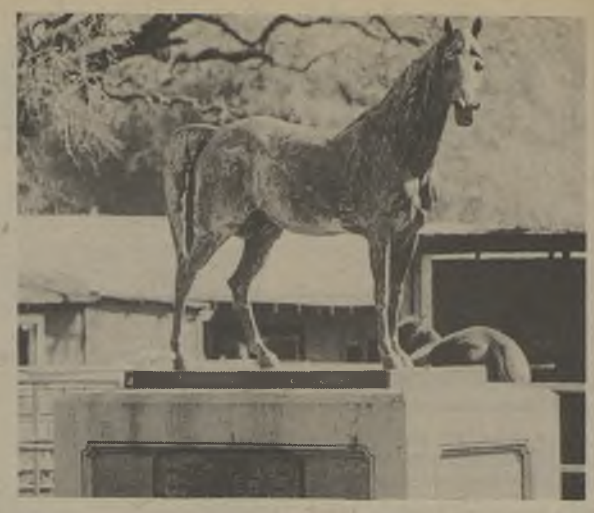
Arion's fame spread quickly and many purchase offers were received. The Senator sold him for the incredible sum of $125,000. Of the earlier sale, Crippen observed: "If the man who had purchased Arion a little more than a year before for the paltry sum of $5,000, but failed to come through with the price, died of heart failure when he read of the colt's sale for 25 times the amount he was to have paid, I never heard of it. But he must have experienced a queer sensation."

A document in the University Archives indicates Arion was fitted with a special shoe to correct a foot problem. Alumnus Archie Rice, '96, in 1938 said Arion, when young, stepped "violently" on his right front foot with his left, and thereafter walked with the foot toeing out.

Extra weight was added to the inside of the shoe, Rice said. He traced in blue on one page of his letter the outline of the modified shoe Arion was said to have worn during the Stockton race.

Electioneer's third great colt was of such outstanding breeding and showed so much promise that the Senator honored him with the name Palo Alto. But tragedy was to plague the horse and cut short his life.

Palo Alto was injured in an 1888 fire that destroyed the stable in which Marvin's most prized horses were boarded. The horse might have died along with several others, but, according to Crippen, trainer Jack Phippen struck Palo Alto a hard blow with the handle of a stable fork, dazing the animal so he could lead it to safety.



Palo Alto recovered from his burns, won all his races on the California circuit in 1889, and was defeated only once in the East during 1890.

Palo Alto's moment of glory came in November

1891 when he set the world record for stallions with a time of 2:08¾.

Palo Alto's decline began in spring of 1892 when he was boarded in a new "fire-proof" brick stable under construction. The stable's heavy brick walls and earthen floor were damp from spring rains and many of the horses, including Palo Alto, became ill.

Palo Alto succumbed to complications from pneumonia in July despite the "heroic efforts" of San Francisco's most skilled veterinarian, "who never left his patient day or night while there was life and hope," Crippen recalled. When Palo Alto died, the veterinarian "broke under the strain and wept."

According to Crippen, Palo Alto's death "cast a shadow of gloom and sadness over the entire establishment and other eyes than those of the famous doctor's were moist with sorrow.

"No worse place could have been found in which to place a horse in training than that new brick stable," he added. "That Palo Alto's life was so jeopardized was not his trainer's fault but that of those in higher authority."

Remembering the earlier fire, Senator Stanford ordered the brick structure built to protect the horses. Painted white, it still stands near the Red Barn, and is now used by the athletic department to store golf course maintenance equipment.

The fire that almost cost Palo Alto his life killed seven horses and injured others. Newspaper clippings in the Stanford family scrapbooks dramatically describe the valiant rescue efforts of farm employees led by Marvin.

In the confusion, two horses broke loose and rushed into the flames. Moments later a section of roof fell, trapping several horses. The farm's most valuable yearling, Norlaine, survived but was badly burned, according to newspaper accounts. Later articles indicate she was a victim of the fire, so it appears she died of injuries shortly after the blaze.

The loss of Marvin's 12-stall stable was estimated at $2,000, but the value of the dead horses pushed the damage estimate to $100,000. The 10 p.m. fire was believed to be of "incendiary origin."

Norlaine's death was a great loss, for "she would doubtless have won other championship honors and developed with age into one of the fastest trotters ever bred at Palo Alto," Crippen said.

Norlaine was buried beneath an oak grove in the middle of the "cool down" walking ring near the burned stable.

The site evolved into a "royal cemetery," ultimately containing the remains of 15 of the farm's most famous horses, according to Crippen. For years a white shaft marked the burial place, which became a "shrine" visited by "hundreds of trotting horse lovers every year," Crippen said.

But in February 1925 the shaft was replaced by a statue cast in France of a horse named Sherwood. Writing in the *Stanford Illustrated Review* that April, Basil L. McGann, '27, said the statue for "many years" was located at the Menlo Park estate of Timothy Hopkins. Hopkins had strong personal ties with the Stanfords and served as president of the Board of Trustees during the early years of the University. Sherwood was the name of the Hopkins estate, now the site of Menlo Park's civic center.

The original shaft was "already timeworn and was certain to be obliterated eventually," McGann wrote. Inscriptions from the shaft were engraved on the base of the Sherwood statue, which still marks the "royal cemetery" across the road from the brick barn.

The skeletons of Palo Alto, Electioneer, and Occident, the star of the horse-in-motion photo experiment, were preserved in the Stanford Museum until the 1906 earthquake. Their remains were buried in the equine cemetery.

The year the University opened—1891—was the premier year for the farm, with the Senator's trotters garnering world's records for all ages: 1-, 2-, 3-, 4-, and 5-year-olds, plus aged performers and the stallion record.

But the glory soon would fade. At the end of 1891, a month after he defied Lathrop and set the extraordinary record with Arion, Marvin resigned his position to take a similar post in Pennsylvania. Only one more record was set after his departure.

The death of Electioneer the year before had been a severe blow to the trotting farm's breeding program.

Senator Stanford, who had hoped that "long after I shall have crumbled into dust the breeding establishment founded by me at Palo Alto shall endure," died in 1893.

With its three driving forces gone, the stock farm's demise came quickly.

To help the financially ailing University, horses were sold off for a fraction of their earlier value. Electricity, for whom the Senator had refused $25,000, was sold for $2,800, as was Advertiser, for whom $150,000 had been turned down. Electioneer's colts, which previously brought thousands, sold for as little as $60.

The stock farm officially closed in 1903, but the old brood mares were allowed to live out their lives in the pastures. In 1909 the last important horses were added to the "royal cemetery," bringing the total to 15. The rest of the horses through the years were buried near San Francisquito Creek, covered now by the golf course.

On Founder's Day in 1918 students honored the horses by planting redwood trees and two rose bushes at the "royal cemetery." A message by Chancellor David Starr Jordan was read in which he asked participants to keep in mind "the horses that saved the University even as the Romans keep in mind the geese that saved their city."

Jordan overstated somewhat the financial impact of the horse sales, but he expressed accurately the students' warm feelings about the farm.

In 1885 a writer from the *Spirit of the Times* concluded that "whatever the future uses of Palo Alto, as demanded by the exigencies of the grand institution which Senator Stanford is about to found, the history of the training park cannot soon be forgotten, and there is nothing to lead to the supposition that the business of stock raising may not be continued as a superior source of income."

But neither the eloquent writer nor the Senator had forseen that a technological innovation of great impact—the automobile—would appear. The economic importance of horses quickly waned.

As the University evolved into a world-famous 20th century center for technological innovation, the Senator's world-renowned 19th century experiment in biological innovation has, but for the large Red Barn, mostly faded into the background.

The author wishes to express her appreciation to University Archivist Roxanne Nilan for her help and encouragement in the preparation of this article.

Horse exhibit set for summer

An exhibit of art work and documents from Senator Leland Stanford's various horse-related projects will be on display this summer at the Stanford Art Gallery.

"The Stanford Horse Show" will include displays about the Palo Alto Stock Farm. Featured will be the zooepraxiscope, showing horses in motion.

The zooepraxiscope projects images from rotating glass disks in rapid succession, giving the impression of motion pictures. Developed in 1879 by Eadweard Muybridge at the suggestion of Leland Stanford, it remained the only commercially demonstrated motion-picture projector in the U.S. until Thomas Edison exhibited his vitascope in 1895.

The first showing of "motion pictures" took place in autumn 1879 in Leland and Jane Stanford's Palo Alto home.

The exhibit will open June 28 and remain through mid-August, according to curator Carol Osborne.

Alphabet designer foresees type as 'dynamic composition'

Printed materials may become "dynamic compositions," where the shape of letters and words visually reinforces the content of written messages, internationally famed alphabet designer Hermann Zapf suggested at Stanford University Sunday, Feb. 20.

Creator of several of the most widely used typefaces in the world, Zapf for the first time publicly described how typographers could use computer assisted design systems to basically alter the way books look.

He has been working with Stanford computer science Prof. Donald Knuth, creator of Metafont, a schematic description of how to draw a family of type fonts—not simply the drawings of individual letters.

"We are used to hundreds of pages looking all the same in a book," Zapf said. "With Metafont we are able to get an expressive and an additional visual explanation of the words of the author.

"Such a Metafont book design looks completely different. The type area is not done as now—repeated page by page, looking monotonous and dull.

"Here we may change the line length, several times jumping from justified to unjustified lines, having different interline spacing within the running text or ending up it describes only a situation.

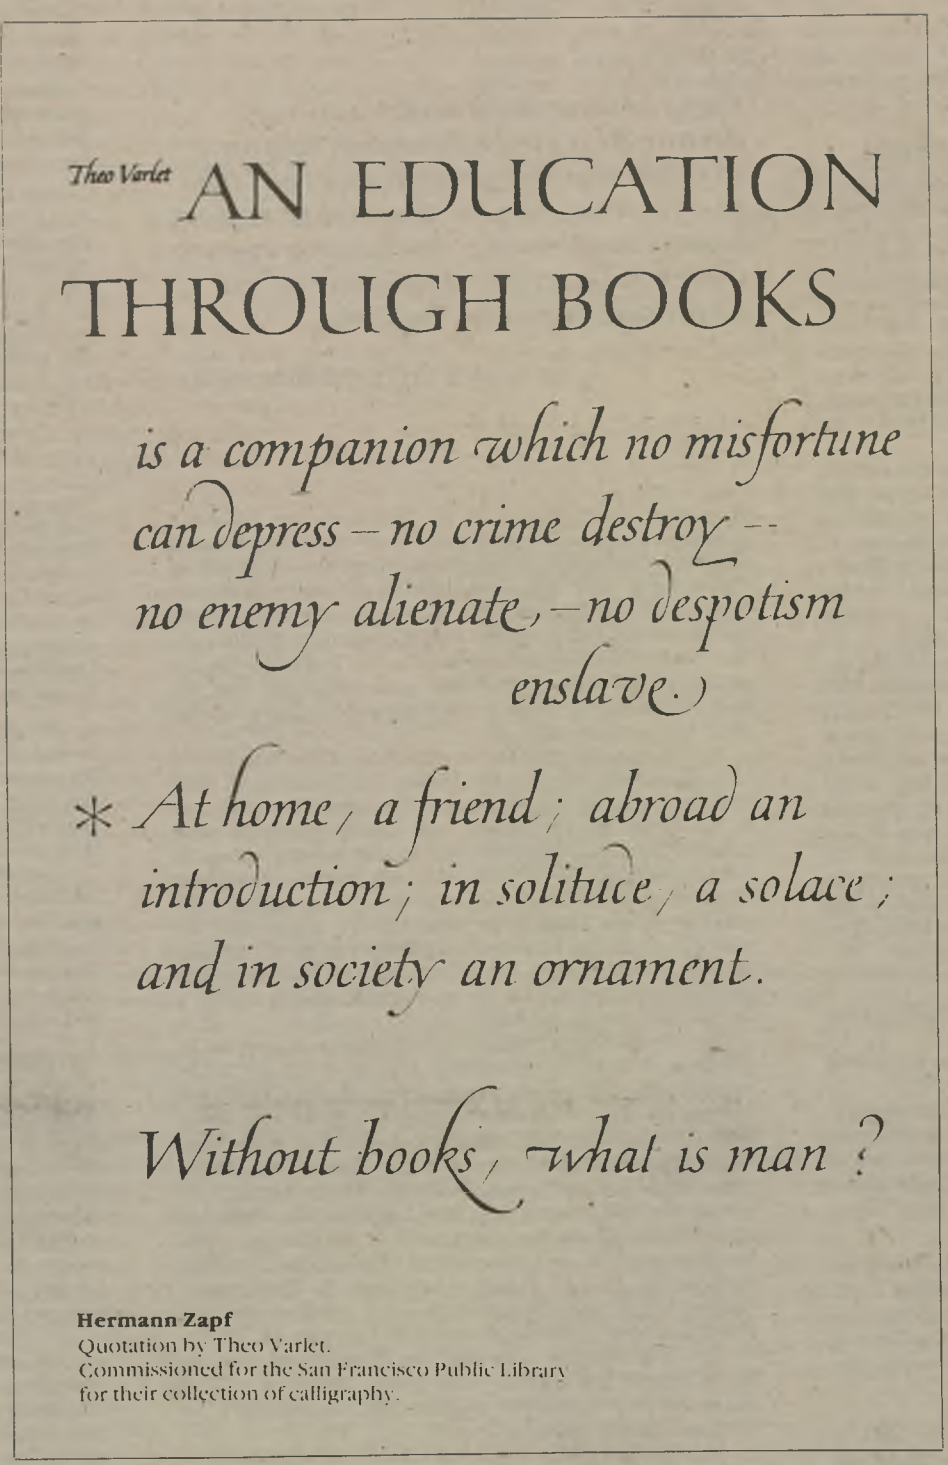
"We are running for our life to catch a train. The type gets slanted, even more slanted, for we are in a real hurry.

"To go further in our imagination of 'dynamic composition': the vibration on a steamboat may be demonstrated, even the break of a glass, etc."

Expressionistic approach

In the "expressionistic approach" to book design made possible by Metafont, he added, "The type size can change within the lines. Important or loud spoken words or paragraphs can be larger or heavier.

"For example, the answer of the beauty to her boyfriend whispering, will be in a relatively small and very light version of the text face, looking sweet on the printed page, like the touch of a teenager's kiss on the paper.



"Yes, you can visually demonstrate kissing and touching in such a kind of typography in the future: the letters are connected by minus spacing, which means contact each other really.

"Some parts of the story can be shown in a free arrangement of lines, which means that life and action run through the pages.

"Browsing through a book like this, your eye will be caught by the dynamic appearance of every page. If two or more people are involved in our story, different type faces can be used to express the different characters: bold, masculine, sweet and gentle, etc.

"The reader of such a novel would be stimulated, invited to look at the book. In our age of visual mass communication, perhaps this is the way to bring some people back to reading. . . .

"In our daily work, by doing our business correctly, we may enable intelligent people, including scientists or teachers, to continue to see in the future the difference of quality, of legibility, of adequate presentation of a properly designed text compared to poorly printed photocopies, of which millions are produced every day, which have ruined so many eyes and have undermined the interest of the reader in quality printing."

Hermann Zapf
Quotation by Theo Varlet.
Commissioned for the San Francisco Public Library for their collection of calligraphy.

Instead of fearing the future, "we will use the new possibilities," he said.

Zapf is working with Knuth and his Metafont computer-assisted design system to prepare mathematical fonts for the American Mathematical Society—a Roman, Greek and Fraktur, together with a Bold and a Script.

"Designers have fewer limitations in designing alphabets for the new systems of today," Zapf said. "Digital composition and the use of the laser beam need designs tailored especially to these electronic devices. . . .

"More and more mathematics and technical knowledge are involved in our work. . . I would not call us artists any more, creating new alphabets. I think alphabet designer is a correct term and his comrade is no longer the punch-cutter but the electronic engineer.

"If the technician finds out that he doesn't have to work along with a crazy artists, and if the designer learns a little about electronics, about the abstract world of an engineer, then this is the ideal team."

The designer today "may find poor copying of his drawings everywhere, which may make him sad for the rest of his life. He sees his children, his alphabets, manipulated in wild modifications. . . .

"Specially prepared lenses stretch, hit, bend and distort our letters in every direction. . . ."

Photocomposing machines can change the spacing between individual characters. "The letters are not separated any more," Zapf said. "They are not individual characters as they have been for 500 years. The characters now touch each other, kiss each other, and—oh my dear—sometimes they go into each other.

Sexy spacing

"One name for this funny game is 'sexy spacing.' But as always, as in sex, it is mostly overdone.

"Logical principles based on common sense and developed over centuries are ignored these days, for some people think it is old fashioned. To be modern—to be 'in,' as we say—they think every foolish idea cooked up on Madison Avenue must be followed, for the crowd is following them.

"No, please, too narrow intercharacter spacing reduces readability. . . .

"Many people are fascinated by the speed of machines (with sophisticated typographic programs). I think we should find an economic compromise whereby part of the time that is saved by the extreme speed of our composing machines is reinvested in the typographic layout—given back to the typographer."

Zapf's talk on "The Designer in the Age of Metafont: Design of the Family of Types in the Computer Age" was sponsored by the Associates of the Stanford University Libraries.

Among other typefaces, Zapf designed Optima, now used by *The Stanford Daily*, and Melior, now used by *Campus Report*, the University's weekly newspaper for faculty and staff.

Edgardo Garlit pleads innocent to grand theft charges

Edgardo Garlit, 37, financial analyst accused of embezzling $17,518 from Stanford's Center for Information Technology, pleaded innocent to four charges of grand theft in Palo Alto Municipal Court Friday, Feb. 18.

A resident of Mt. View, he remains free on $3,000 bail. A preliminary hearing is scheduled March 8.

Garlit has been placed on investigatory leave, with pay, by the University.

He was arrested by Stanford detectives Feb. 9. He allegedly submitted phony invoices for work done by a non-existent company.

According to Stanford Police Capt. Raoul Niemeyer, Garlit had "an intimate and complete knowledge" of the payment process and was able to circumvent normal checks in the system.

An accounting manager became suspicious in late December when Garlit inquired about a check to the phony firm that was held up for lack of information, according to an affadavit filed with the court. Garlit told the manager that the firm was his brother-in-law's.

Other Stanford employees later said they had seen Garlit pick up a check for the firm and submit work authorizations for the firm, according to the affidavits. The accounting manager checked the firm's name and could find no telephone listing for it. Internal auditors charged that neither the work contracts nor the firm existed.

Auditors told police that in many cases the phony work requests were issued under a blanket order set up for emergency work. Garlit is suspected of forging the signatures of Herb Fong, manager of operatons and maintenance, and Bruce Wiggins, assistant director of operations and maintenance, on some of the work orders.

According to Niemeyer, the case is still under investigation. Police are still looking for additional evidence. Until it is obtained, "we won't know if there were any accomplices or whether additional charges should be filed," he said.

Procedures, professional concerns in Mosher case given

Following is a statement by Prof. Clifford Barnett, head of the Stanford Anthropology Department concerning procedures and professional concerns in the Steven Mosher case:

I. PROCEDURES WHICH WERE FOLLOWED

1. In August 1981, allegations about mr. Mosher's professional conduct in the field were brought officially to the attention to the Chair of the Anthropology Department by two members of Mr. Mosher's Dissertation Committee.

2. Following University rules with regard to allegations of student misconduct, the Office of the President was contacted. After several meetings in September 1981 it was decided by the appropriate officials that the allegations involved professional conduct and therefore lay within the purview of the Department, rather than with the University-wide procedures to be invoked for alleged violations of the Fundamental Standard.

3. The fall session of the University had not started, but a meeting of the Anthropology Department faculty was held at the earliest possible date, September 29, 1981, to discuss the matter. The faculty voted unanimously to establish an Ad Hoc Committee of Investigation to inquire into the allegations which related to professional conduct. The Committee was charged to contact all appropriate parties, including mr. Mosher, and make a report to the faculty on their findings and any recommendations for action. The Chair of the Department was charged with appointing the memers of the Committee. The faculty agreed, however, that in order to avoid any possibility of conflict of interest, no member of the Committee should be a China specialist. Further, the faculty agreed that in the interest of further assuring objectivity, at least one member of the committee should be chosen from outside of the Department. In order to protect Mr. Mosher's interests, the faculty agreed that he should receive a full copy of the report and be given appropriate time to respond to the report in writing, before the faculty would meet to consider the findings and recommendations of the Committee.

4. The charge to the Committee read in part as follows:

"Specifically, the Committee is asked to determine the following:

1. Did Steven Mosher properly protect the privacy of the community and the individuals he studied?

2. Did he violate any obligation, as an anthropologist and graduate student in this department, to properly protect the standing of the discipline and its practitioners?

3. Did he abuse his status as an anthropologist and a graduate student in this department to engage in illegal activities?

The faculty members appointed to serve on the Committee were: Professor Jane F. Collier (anthropology), Chair of the Committee; Professor Joseph Greenberg (anthropology); and Professor Thomas Grey (law). The Chair of the Department sent Mr. Mosher a copy of the charge to the Committee and notified him of the membership of the Committee.

5. The Committee first met on October 12, 1981 to discuss procedures and the relevant people to be contacted. The Committee decided that no material or statement would be considered as evidence unless it could be shown to Mr. Mosher and he could be made aware of its source.

6. In correspondence with the Committee, Mr. Mosher indicated his willingness to meet with the Committee and the Department paid Mr. Mosher's round trip air fare from Taiwan for him to meet with the Committee in November 1981. During his meetings with the Committee, it was agreed with Mr. Mosher that the Committee would send him all of their accumulated evidence so that he could respond to it before the Committee wrote their final report.

7. The great bulk of the evidence assembled by the Committee and considered pertinent to the allegations in the charge to the Committee were sent to Mr. Mosher on April 27, 1982 along with questions the Committee requested he respond to. Three supplementary items were sent to him after that date. Mr. Mosher was given a deadline by which to respond to the evidence and questions that were sent to him. Several extensions of the deadline were made in the hope that Mr. Mosher would respond. The last deadline given was October 1, 1982. When advised of the last deadline, mr. Mosher responded that the deadline was "absurd" because the Committee had already "reached its conclusions and begun drafting its final report." He demanded that the report be sent and he would respond to it when it arrived. The Committee then proceeded to draft its report.

The report was submitted to the Chair of the Department on October 27, 1982 and on the same date it was sent to Mr. Mosher. The letter of transmittal requested that Mr. Mosher respond by December 8, 1982, at which time his response would be distributed to the faculty along with the report of the Ad Hoc Committee. Mr. Mosher also was advised that he had the right to appear personally before the faculty and that his round-trip coach fare (Taiwan-San Francisco) would be paid by the University. Mr. Mosher's response was sent by him to the Vice-Provost and Dean of Graduate Studies and Research and was received by him on December 2, 1982. In his response, Mr. Mosher stated that: he would not be prepared for such a meeting until at least the end of February; and he would present his response to the faculty when he arrived back in the United States. He requested 30 days of per diem and demanded that the faculty meeting be "open to the press and to whomever else that I choose to invite."

Field research in anthropology. . . demands a clear demonstration to others in the profession that (the researcher) can be trusted to report events accurately, including events which involve the behavior of the anthropologist in the field.

—Clifford Barnett

8. In response to his letter, the Chair of the Department of Anthropology advised Mr. Mosher on december 7, 1982 that given the fact the evidence in the report had been sent to him seven months earlier, and that he had been most insistent on avoiding further delays, the meeting would be held on January 13, 1983. He also was told that three days of per diem would be provided for him. With regard to the meeting of the faculty, he was advised again that the meeting would be closed, since as he had noted himself, some of the materials in the Report of the Ad Hoc Committee involved innocent parties. He was urged again to submit a written response to the Report.

9. Mr. Mosher's response to this letter was received by the Dean of Graduate Studies on December 23, 1982. Mr. Mosher reduced his per diem request to 15 days, continued to demand that the meeting be open to all, but also stated explicitly that he would come to a meeting if it was held during the last half of February. Mr. Mosher was sent a cable by the Dean of Graduate Studies for the Department stating that the meeting date had been reset for February 24, 1983. Mr. Mosher was advised that the meeting would be closed and that no additional per diem support would be forthcoming. He was asked to telephone the Department, "collect" to arrange transportation. Mr. Mosher also was urged to submit a written statement by February 15, 1983.

10. Mr. Mosher informed the Department that he would attend the meeting and would submit a written statement. The statement was received on February 16, 1983 and distributed to the faculty.

11. Finally, we report on the status of Mr. Mosher, as a student, during the course of the investigation. At the time the Ad Hoc Committee was established by vote of the Department Faculty on September 28, 1981, Mr. Mosher was a student in good standing, registered as a terminal graduate student in absentia. He was writing his dissertation on research he did on Taiwan, and was residing on Taiwan. He was receiving a stipend from the University and he continued to receive a stipend during the academic year, September 1, 1981-June 30, 1982.

Immediately after the Department voted to establish the Ad Hoc Committee, two of the three faculty members of Mr. Mosher's Dissertation Committee resigned. He was assisted by the Chair of the Department in obtaining two new members of the Committee, all suggested by Mr. Mosher. One new member was from the Department and the other was from outside of the Department. Mr. Mosher indicated his satisfaction with the Committee and stated he would proceed to complete a draft of his dissertation and submit it to his Committee.

In April 1982, without forewarning his Dissertation Committee, Mr. Mosher submitted a dissertation draft dealing not with Taiwan, but with the research he had carried out in the People's Republic of China. Nevertheless, Mr. Mosher received comments on the dissertation from the members of the Committee. One of the Departmental members of the Committee also notified Mr. Mosher that since he had changed not only the area but the topic of his dissertation to one for which the faculty member was not a specialist, he was resigning from the Committee. Mr. Mosher withdrew the dissertation draft on the People's Republic of China, but also dismissed the second Departmental faculty member from the Committee.

In the course of these events the Department learned that Mr. Mosher was eligible for dissertation write-up support from the Social Science Research Council, (which had sponsored his reseach on Taiwan), if the Chair of his Dissertation Committee would support a request for funds for him to complete writing his dissertation while on Taiwan. Eligibility for these outside funds automatically made Mr. Mosher ineligible for the University funds he had been receiving. His funding was temporarily stopped and then resumed (retroactively) to complete the academic year.

Mr. Mosher was advised by the Chair of the Department that it would be in his best interests to rapidly reconstitute a Dissertation Committee so that he could obtain funds and complete work on his Dissertation. Mr. Mosher responded by stating that he would not accept any Committee which had a member of the Department as a member, since all departmental faculty were biased against him and would not give his dissertation a fair reading. The Chair of the Department responded that since the degree would be awarded through the Department, at least one member of the Committee must be a member of the Department. In order to assist Mr. Mosher in constituting a Committee, since he was on Taiwan, the Chair found an appropriate Departmental faculty member to serve and also learned that the faculty member who had been dismissed from the Committee by Mr. Mosher was still willing to serve and provide an objective reading of the dissertation when it was submitted. These members were suggested to Mr. Mosher at the same time he was advised that he was free to add or substitute other suitable members (from outside the Department or University) so long as one Departmental faculty person was included on the Committee.

Mr. Mosher restated his position that he would not accept any Departmental faculty person on his Committee. He requested the Dean of the Graduate Division to overrule the Chair. The Dean of the Graduate Division advised Mr. Mosher that he would not accept a Dissertation Committee that varied from the University rules without the support of the Department. Lacking the support of the Department, he would be willing to formally consider Mr. Mosher's request and any evidence he had that he could not get a fair reading, if Mr. Mosher filed a formal grievance with the Dean of the School of Humanities and Sciences. Mr. Mosher chose not to file a grievance and he thus has remained without a Dissertation Committee.

II. CONSIDERATIONS SPECIFIC TO ANTHROPOLOGY

Field research in anthropology heavily involves the anthropologist in responsibility for the welfare of those he is studying and demands a clear demonstration to others in the profession that he or she can be trusted to report events accurately, including events which involve the behavior of the anthropologist in the field.

The reasons for this professional imperative for sensitivity to others, prudent judgment and unquestioned honesty are inherent in the nature of the anthropological research process.

1. Anthropological research most often involves a solitary researcher rather than a research team. In anthropology it is difficult for other researchers to go to the "laboratory" and replicate the findings of another researcher. Since replication of results is so difficult, special demands are placed upon the professional anthropologist to be open and honest in accounting to others in the profession about his behavior in the field.

2. Anthropologists often study populations which have relatively little power in their national units and often are at the mercy of officials and others who have power over them. The study populations often have little realization of the uses that can be made of information collected by anthropologists. Some of those uses, unfortunately, can work against the interests of those who have supplied information to the anthropologists. Therefore, anthropologists have a special responsibility not only to protect the confidentiality of those who provide information to them, but to consider and attempt to anticipate the repercussions for their study populations of the content and form of their disseminated research findings.

3. Anthropologists are responsible for protecting the good name and standing of the discipline. This is a functional necessity, since the standing of the discipline determines the ability of anthropologists to get access to the populations they wish to study. One of the ways anthropologists can protect the name of the discipline is to abstain from engaging in activities while in the field that are judged to be "illegal" in the areas in which they work.

4. Points 2 and 3 are more than simple admonitions. They involve the making of very complex decisions demanding considerable judgment. In some situations, actions judged "illegal" by a national government may not be perceived as "illegal" by the study population and may even be necessary to protect the interests of the study population. Similarly, unconsidered action taken by the anthropologist after leaving the field to further the welfare of the study population may foreclose the opportunity of other researchers to carry out research in the same area, and might harm the populations the anthropologist would like to assist. Sound judgment and fully considered action are thus, requisite for the professional.

Hall, Rabushka say flat tax would boost personal income 9% in 7 years

Prompt adoption of a 19 percent flat rate tax would boost real incomes of Americans by an average of nine percent in the next seven years, two Stanford economists estimate.

Robert E. Hall and Alvin Rabushka, senior fellows at the Hoover Institution, put the flat tax on the national political agenda with a column published in the *Wall Street Journal* Dec. 10, 1981.

They flesh out their basic idea and respond to its critics in a new McGraw-Hill book, *Low Tax, Simple Tax, Flat Tax* (137 pp, $9.95 paper, $18.95 cloth).

Urging that the reform be adopted "cold turkey," they concede that it may raise taxes by three to five percent of income among those with taxable incomes up to $21,000. But faster economic growth triggered by the flat tax will quickly make up this loss.

Tax income once

All income should be taxed only once, at the same low rate, on a form simple enough to fit on a post card, they declare. The poorest families should pay no tax, and lower income families should pay a smaller fraction of their income in tax than those who earn more.

To achieve this result, only those earning above a personal allowance would be taxed. They recommend an allowance of $7,700 for a family of four in 1982, increasing with the cost of living in subsequent years.

Four-fifths of the population could then simply fill out a post card for their federal taxes. At present, taxpayers spend $9 to $10 billion preparing and verifying their taxes. In 1977, the Treasury Department estimated the time spent on tax forms at about three hours for every man, woman and child in the country.

Besides cutting paperwork, Hall and Rabushka note, the flat tax "increases incentives to work, save and invest. . . . It lowers interest rates immediately. It balances the federal budget in a few short years. It creates new jobs and raises living standards. It supports the values of honesty and integrity of the American people."

The Internal Revenue Service currently estimates tax evasion at more than $87 billion annually and projects the loss at $120 billion by 1985. These figures do not include unreported income from drugs, prostitution, and gambling, which represent an annual tax loss of an additional $10 billion.

Eliminate deductions

Their proposed flat tax would eliminate all deductions, exclusions, credits and other "loopholes," insuring that all millionaires paid a fixed percentage of their income in taxes.

"A flat tax would discourage underground economic activity, cheating and shelters. It could provide more—not less—revenue to sustain government spending on social programs," they declare. A 19 percent flat rate could balance the federal budget by 1985.

In 1979, half of all gross income was taxed at marginal rates of 28 percent or higher. A uniform flat rate of 19 percent would dramatically improve incentives for almost everyone who is economically active, they argue.

MIT economist Jerry Hausman has projected an increase of 8 percent in total hours of work in the U.S. economy for a flat rate tax plan similar to the Hall-Rabushka proposal. This would be equivalent to about three hours a week, with some people taking second jobs, while others worked longer per week.

Such a change would boost U.S. production of goods and services about 6 percent, or almost $200 billion—nearly $1,000 per person.

"Dramatically improved" entrepreneurial incentives could add at least 3 percent more to this gain over the next seven years, Hall and Rabushka believe. "By 1990, it means each American will have an income about $1,400 higher in 1982 dollars as a consequence of tax reform. This economic dividend is more than enough to offset most of the adverse immediate effects of tax reform."

The simple tax would pull down interest rates immediately, they note. "There are good reasons to think interest rates would fall by about 4 percentage points—say from 16 to 12 percent for mortgages.

But the tax deductibility of mortgage interest payments would be eliminated. This would especially hurt those who took large, fixed-interest mortgages in the late 1970s at rates around 12 percent.

While tax reform would not stimulate the housing market, its total impact on housing prices probably would be small. The stimulus from lower interest rates would be offset by the loss of deductions for interest payments on mortgages.

Decline in giving

The tax deductibility of charitable contributions also would be eliminated. The immediate effect of a flat tax probably would be a small decline in giving, followed by a recovery as the economy improves. They estimate the decline at 10 percent, at most.

In 1979, Hall and Rabushka note, total contributions from individuals and corporations to charitable causes in cash and voluntary work was about $94 billion, of which only $24 billion was deducted on tax returns.

"We can confidently expect the continuation of $70 billion in contributions being made today without any special tax benefits," they add.

"Further, the bulk of contributions is made today by people in modest tax brackets—less than $7 billion in contributions was deducted in 1979 by families with taxable incomes over $35,000.

"Churches have nothing to fear from tax reform and, like most people and institutions, would have much to gain from better economic conditions brought about by reform.

"Institutions serving the absolute economic and social elite—universities, symphonies, opera companies, ballets, museums—are protesting the loudest.

"No compelling case has ever been made that these worthy undertakings should be financed by anybody but their customers. A glance at the crowd in any of them will tell you it is perverse to tax the typical American in order to subsidize the elite institutions. But granting tax deductions for gifts is precisely such a subsidy.

"Tax reform will be a tremendous boon to the economic elite from the start. Removal of tax deductions from their favorite cultural activities is a reasonable price to pay. With substantially higher after-tax incomes among their customers as well as donors, the universities and other institutions will make up part or perhaps all of the ground they will lose when tax deductions disappear."

Under the Hall-Rabushka flat tax of 19 percent, families with incomes around $130,000 would receive tax breaks of about 7 percent of income. Those with incomes around $700,000 would get 10 percent and the handful with incomes approaching $2 million would get 13 percent.

The flat tax also would eliminate personal and corporate deductions for depreciation. But it would allow a 100 percent first-year writeoff for new investment. The burden of this change would fall mainly on business firms now in the doldrums, with low current investment and large backlogs of capital depreciation.

Lower business tax

Taxes on business income would be lowered from the current 46 percent rate for corporations and up to 50 percent for unincorporated businesses to a low, standard charge of 19 percent. It would permit unlimited carryforward of tax losses, effectively reducing the tax burden on young, innovative, rapidly growing firms, like Apple Computer, and raising taxes on established, high-ranking firms, like Exxon.

"Our plan is a tax on consumption," they explain. "Money invested in the economy is not taxed; thus investment is encouraged. Money withdrawn and consumed is taxed. . . .

"We think our package of low tax rates and improved incentives for businesses more than offsets the loss of deductibility of excise and property taxes, preferential treatment for corporate pensions, taxation of fringes, and the loss of interest deductions."

Hall and Rabushka note that "our colleague and friend, Milton Friedman (senior fellow at Hoover and Nobel laureate in economics) started the flat tax movement more than 30 years ago. . . .

"Now public support for a flat-tax reform collectively exceeds all of the individual sentiments to preserve one or more tax breaks added together. 1982 marked the first year in modern history that members of the Democratic Party opened and led the drive for tax reform to improve incentives. . . .

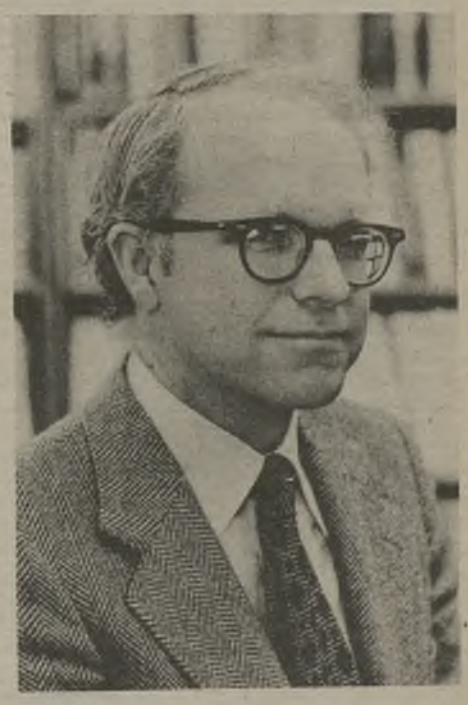
"Intellectuals and liberal politicians have always said that high marginal tax rates were inherent in any progressive (tax) system. But the dismal performance of the economy since 1975 has jolted their thinking—even Joe Pechman of the Brookings Institution favors lowering all marginal rates.

"There is even a growing consensus that graduated rates are not essential to progressivity. It would have been nearly impossible just two or three years ago to gain endorsement of the flat tax from such people as Ralph Nader. With the turning of the intellectual tide, we expect the political tide to turn as well."

Biographical background

Hall is a professor of economics at Stanford and director of the National Bureau of Economic Research's program on economic fluctuations. He is the head of the NBER Committee on Business Cycle Dating, which maintains the semi-official chronology of the U.S. business cycle. He recently edited an NBER volume on "Inflation: Causes and Effects." A Palo Alto native, he was educated and taught at both Berkeley and MIT before joining the Stanford faculty in 1978.

Rabushka holds three degrees from Washington University, St. Louis, and taught at the Universities of Rochester and Hong Kong before joining the Hoover Institution in 1976.



Coeditor of "The United States in the 1980s," the Hoover Institution's most extensive project, his most recent work is "The Tax Revolt," a study of Prop. 13 and the national tax limitation movement, published last year.

By 1990, each American will have an income about $1400 higher in 1982 dollars as a consequence of tax reform.

Kennedy responds to Menlo Park concerns on Stanford West: housing 'critical'

Following is a Feb. 8 letter from President Donald Kennedy to Menlo Park's Mayor Pro Tem Peg Gunn, on the Stanford West housing project:

Thank you for coming to us last week to present so clearly and forcefully Menlo Park's position on the proposed Stanford West housing project—and for your warm letter of Feb. 1. We have always known (and have tried to consider) the concerns about the project on the part of our neighbors across San Francisquito Creek. You, Mr. Bedwell, and Mr. Pirofalo set out those concerns exceedingly well.

You left with me a letter detailing the points you made. I want to assure you that we will give them careful consideration as we work toward a final plan. All of the impacts that you noted, the total costs of the various mitigations that have been suggested, and the basic economics of the project itself, are causing us to look carefully before we leap.

I hope you will share several of our responses with your colleagues on the City Council, and with other Menlo Park residents. The first is that had Stanford agreed years ago to limit the size of a project on the 46 acres to 800 units, we would abide by that agreement.

It is probable that the figure was mentioned by Menlo Park representatives during the Sand Hill Road Improvement Project discussions, but the memories of those who were there from Stanford—and the written record—show that the only agreements were that Stanford would consult with Menlo Park when housing was to be built, and that a 90-foot set-back from the Creek would be established. We **have** consulted with you, and the 90-foot set-back has been accepted.

The consultation consisted of four, voluntary, open planning process meetings preceding the design of the project, joint meetings with the Menlo Park and Palo Alto staffs, and meetings of the EIR consultants and our staff with our Council, Planning Commission, and Transportation Committee. As a result, the housing proposed for the 46 acres is 20 percent less dense than the zoning allows; smaller units have been placed near the creek; noise and light-generating activities are located toward the center of the project; and additional landscaping has been proposed along the green buffer zone. Those measures may not go as far as Menlo Park would like, but they surely supply evidence that we were listening.

Your letter also suggested that Stanford and Palo Alto are doing something to Menlo Park that they would not do themselves. That's not quite right. The Lytton Gardens housing in Palo Alto consists of 100 units on one acre near residential areas. The Peter Coutts Hill housing project on our campus consists of buildings larger than those at Stanford West nearest Menlo Park, and closer to our faculty homes than Stanford West would be to houses in your city.

Our new student housing project across from the Searsville Road faculty subdivision will house some 800 students. Some 3,500 Stanford students live in Escondido Village, across a street from a Palo Alto residential area. The Pearce Mitchell condominiums were built on a former school site near single-family homes.

Most of those developments are not as large as Stanford West, to be sure, but they do suggest that we have been willing (as have many other places) to build multifamily units near areas in which single family residences predominate.

As we discussed at our meeting, Stanford does not have a standard density of 11 units per acre for housing elsewhere on its lands. We have exceeded that density in the past, and probably will do so again, given the severe shortage of housing in this area.

The question often asked is: Why not elsewhere? Why this site, so close to Menlo Park? The answer is that the 46 acres are ideally suited for general housing. The land is flat, it has utility lines in place, it is within a city, it is close to the main campus, it is zoned for housing—and we have been strongly encouraged over the years to build there.

In fact, Santa Clara County policy calls for the development of general housing within cities, and **not** in unincorporated areas. Finally, from a planning point of view, we believe that it makes much more sense to hold our central campus lands for educational facilities and faculty and student housing, and to use peripheral areas for staff and public units.

I think a word also is in order regarding the strong pressures—internal and external—that have come to bear on Stanford in recent years. The need for housing has become critical in our efforts to recruit and retain a front-rank faculty.

At the same time, study after study by off-campus groups have urged the University to build more housing, and to develop it at higher densities on in-fill sites near existing services, so as to reduce commute traffic and the jobs/housing imbalance. In fact, we have been told that we are socially irresponsible for **not** building such housing.

It is my hope that the impacts from Stanford West may not be as great as you fear, any more than the Oak Creek Apartments adversely affect Menlo Park as a whole. The project EIR shows that the main traffic flow will be toward the campus, and that it can be alleviated or facilitated by various measures.

The purpose of this long recital is to let you and your colleagues know that Stanford has not acted hastily, nor insensitively, nor without strong reasons and encouragement, in proposing Stanford West. I also want you to know that we will be giving even further attention to what you have reported to us. We value our long and friendly history with Menlo Park, and would like to retain that friendship in the future.

Sincerely yours,
Donald Kennedy
President

Hastorf, Hinchliffe outline practices on access to prospective donors

Following is a memorandum to vice-presidents, deans of schools, department chairs, and directors from Provost Albert H. Hastorf and Acting Vice-President Bruce Hinchliffe concerning access to prospective donors.

Hastorf notes that it is the first of a series of papers on principles of fundraising at Stanford—principles which need to be reviewed and reaffirmed from time to time in order to insure that we conduct our business with donors in such a way as to maximize gift utility and hence, benefit to the University.

The memoranda to be issued soon will deal with the establishment of fundraising support groups and with a system of assigning priorities to fundraising objectives.

Organized fundraising at Stanford has been guided by a set of tacit understandings with respect to the relationships between the schools, departments, institutes, and other entities on the one hand, and the Offices of the President, the Provost, and the Vice-President for Development on the other.

These principles have served the University well. The effectiveness of its fundraising program in terms of dollars raised, purposes served, and the careful manner in which gift solicitations are planned and carried out, speaks for itself. We have benefited from the experience of other institutions by incorporating their best features into our program and avoiding pitfalls that have for some, at least, proved troublesome.

It is a good system, but it is fragile, and its integrity must be guarded. Thus, while we want to keep rule-writing to a minimum, we think the time has arrived at Stanford when tacit principles must be translated into written guidelines. The reasons have to do with the growing complexity of the University, and the fact that many of us, including several development officers, are relatively new in our jobs.

The basic principle we wish to affirm is that gift procurement at Stanford is centrally guided. While the schools, departments, institutes, and other entities have needs for gift support, their fundraising activities are conducted in a spirit of collaboration with the other parts of the University, and are consistent with the objectives and priorities of the University. Those activities are therefore guided by an office with University-wide responsibilities, that of the Vice-President for Development.

In operational terms, this means that all prospective donors rated as having the capacity to make gift commitments of $25,000 or more are reviewed periodically by the Office of Development, at its initiative, to determine whether they are appropriately matched with respect to field or fields of interest, and—equally important, with respect to the University's priority needs. In this way, access will be determined. While some donors are now considered to be prospects for only one school, and are likely to remain so, scheduled review has the salutary effect of ensuring that gift income is maximized in line with University priorities. Schools and other entities may also request an **ad hoc** review of the current assignment of an individual donor or a group of donors. All solicitations are to be cleared by appropriate development staff.

Prospects rated as having the capacity to make gift commitments of $1 million and over are a special group. Although the principles enunciated above also apply to them, there is a variation in how they are treated. These prospects are of such transcendent importance to Stanford that they are regarded as University prospects.

All approaches to them are approved by, and planned in close consultation with, the central Office of Development. Where there is disagreement between the Office of Development and a school, institute or other entity as to the appropriate course to be followed with respect to a prospective donor rated at $1 million capacity or greater, the Development Office shall refer the matter to the Provost for adjudication.

In setting forth these guidelines, we would like to underscore their relationship to the University's priority objectives for fundraising, the establishment of which are the responsibility of the Provost and his staff. These represent a continuing, and at times changing, statement of the University's most important objectives, and it is implicit that those judged to be our highest priorities deserve the greatest attention from the Development staff—both centrally and the schools.

It follows that all strategies for obtaining gifts from such significant prospects be formulated with special attention to University priority needs. In the near future, a new set of guidelines will be issued on the system of setting priorities and the allocation of fundraising effort to them.

What is said above, we emphasize, is neither basically new nor different. It is a restatement—and to an extent a refinement—of what has been generally accepted policy and practice.

What makes this memorandum necessary is that there have been recent instances which made it clear that the policy is not universally understood. Stanford's success in fundraising, just as in its academic program, has been built on commonly shared ambitions for the entire University; we believe the observance of these policies is consistent with that spirit.

I-Center program on Swedish outlook

"Where is Sweden Heading? A Post Election Discussion of the Political/Economic Situation in Sweden Under the Newly Elected Government" is the title of the Tuesday Luncheon/Lecture at Bechtel International Center at noon March 1.

The two speakers will be Gunnar Heckscher, former ambassador and former leader of the conservative party in Sweden; and Berndt Ahlqvist, chief editor of a provincial newspaper in Sweden specializing in economics. The program is cosponsored by the New York and San Francisco offices of the Swedish Information Service.

This is the last Tuesday Luncheon/Lecture for winter quarter. The programs will resume on April 5. Luncheon tickets are available at a cost of $2.50 one week before the event at the I-Center office or at the door as they last. Brown baggers are also welcome at no charge.

For more information about this or other programs call 497-1831 or stop by the I-Center to see what's happening.

University to honor general academic advisers Wednesday

Faculty and staff members who have served five years or more as general academic advisers will be honored at a reception hosted by the School of Humanities and Sciences at 5 p.m. Wednesday, Feb. 23, at the Stanford Museum.

President Donald Kennedy will present 17 advisers who have served 11 years or more with certificates naming them "master adviser" and copies of the book, *Stanford: From the Foothills to the Bay*. Copies of the same book will be given to 78 advisers with five to 10 years service.

This event is the first broad public recognition of academic advisers at Stanford.

Every year, about 375 faculty and staff members serve as general academic advisers to freshmen and sophomores who have not declared a major.

Those advising freshmen, about 275 in all, are assigned six to 10 students from the same residence and become part of its advising team.

Responsibility for coordinating the general advising program has been shifted to the School of Humanities and Sciences this year as part of an administrative reorganization of undergraduate education at the University.

Associate Dean Carolyn Lougee oversees academic advising with support from the Academic Information Center. She and Provost Al Hastorf are scheduled to speak at the reception.

Those honored and their departments are:

Five to Ten Years

David Abernethy, political science; Mary Lou Allen, engineering; David Barnett, materials science; Dan Bershader, aero and astro; Mason Blacher, development; Richard Britt, surgery; Richard Brody, political science; George Brown, English; Phyllis Brown, freshman seminar program; Kevin Callaghan; Sally Cole, dean of student's office; Christos Constantinou, surgery; Anne Coxon, academic information center; Kenneth Creighton, controller; Doug Davis, freshman seminar program; Carroll G. Diaz, APER;

Albert Dien, Asian languages; George Duca, Hoover Institution; Franklin Ebaugh, medicine; Arlee Ellis, political science; C.W. Francis Everitt, Hansen Labs; Joel Ferziger, mechanical engineering; Jean Fetter, graduate division; Michael Fogel, medicine; James Gibbs, anthropology; Donald Goffinet, radiology; Thomas Gragg, psychiatry; Tatiana M. Granoff, academic information center; Alan Grundmann, Jasper Ridge Biological Preserve; Robert Hamerton-Kelly, Memorial Church; Glen Haydon, pathology and materials science; Jean Helliwell, APER; Robert Houghton, registrar's office; E. Barrie Hughes, Hansen Labs; Madelyn Hunt, engineering; Paul Johnson, Graduate School of Business; Robert Kessler, surgery;

Carolyn Lougee, history; Elizabeth Lucchesi, Law School; Linda J. Marks, development; William H. Marshall, Jr., radiology; David M. Mason, chemical engineering; David Maurice, surgery; Marsh McCall, classics; James McClenahan, Cowell Student Health Center; I. Ross McDougall, radiology; Robert McGinn, industrial engineering; Dwight Miller, art; Monica Moore, humanities special programs; Thomas Moser, English; Mary Munter, Graduate School of Business; Richard Muth, economics; Herbert Nanney, music; Anne Peck, Food Research Institute; Richard Placone, radiology; John Planting, music; Robert Polhemus, English; Helen Quinn, SLAC; Theresa Marie Rhyne, CIT; David Riggs, English;

Channing Robertson, chemical engineering; Norm Robinson, residential education; Paul Robinson, history; Richard Schupbach, Slavic languages; Carlton E. Schwerdt, medical microbiology; Alan Schwettman, physics; Laura Selznick, undergraduate specials; Richard Shevell, aero and astro; Wendy Smith, Memorial Church; Pamela L. Strathairn, APER and education; Mary Sunseri, mathematics; John Thomas, biology; Robert Wagoner, physics; Ward Watt, biological sciences; David Wellbery, German studies; Douglass J. Wilde, mechanical engineering; Don Woodward, biological sciences; Karl Pribram, psychiatry.

Eleven Years or More

Troy Barbee, materials science; John Bunnell, undergraduate admissions; Bernard Cohen, sociology; John Goheen, Ombudsman; G. Robert Hamrdla, president's office; David Haskin, chemistry; Robert Helliwell, electrical engineering; Marvin A. Karasek, dermatology; Jon Kosek, pathology; Sally Mahoney, registrar; Leonard Ortolano, civil engineering; Henry "Hank" Parker, civil engineering; Antony Raubitschek, classics; Ruth Schneider, career planning and placement center; Peter Sylvester, development; Evelyn Thomas, freshman seminar program; Larry Thomas, education.

Sloss to participate in seminar on security in an insecure world

Leon Sloss, former assistant director of the U.S. Arms Control and Disarmament Agency, has been added to the program of the Great Powers Seminar on "Security in an Insecure World" to be held at Stanford February 26 and 27.

Currently president of the Stanford Alumni Association and head of his own consulting firm in Washington, D.C., Sloss will speak on "The Role of Nuclear Weapons in International Politics."

Sloss, who has a number of years of service with the Department of State, largely with the Bureau of Political-Military Affairs, has also been a vice-president of the Stanford Research Institute stationed in Washington. A specialist on strategic arms, he served as acting chief of the Arms Control and Disarmament Agency and directed a 1977 National Targeting Policy Review on nuclear warfare.

The faculty for the seminar, sponsored jointly by the Stanford Alumni Association and the Stanford Arms Control and Disarmament Program, includes a number of Stanford professors and Stanford Linear Accelerator Center officials affiliated with the Stanford program. Also scheduled to lecture is William G. Hyland, senior associate at the Carnegie Endowment for International Peace. Prof. John Lewis, political science, is seminar chairman.

The seminar, which will be held in the Terman Engineering Center Auditorium, will run from 8:30 a.m. to 4:30 p.m. on both days.

Saturday evening there will be a showing of the film *The Day After Trinity*, the story of the Alamagordo project to build the atom bomb.

The program is open to the public. For further information, contact the Continuing Education staff of the Stanford Alumni Association, 497-2021.

THIS IS DANCE WEEK AT STANFORD, with events every day through Saturday. A panel will discuss "Topics in Performance: Dance and the Other Arts" at 4:15 p.m. today (Wednesday) in the Tresidder large lounge. Performances will be given tonight at Burbank, Thursday, Friday, and Saturday in the Roble Dance Studio. Above are Jancy Limpert and Jean Massicotte.

Henry Kaiser to play guitar

Undergraduate Special No. 31 is pleased to present experimental guitarist Henry Kaiser in an evening of solo improvisations at 8 p.m. Saturday, March 5, in Stanford's Skilling Auditorium.

The Oakland-based Kaiser has appeared on over 30 records and has performed with notable avant-gardists such as Fred Frith, the Rova Saxophone Quartet, Greg Goodman, Evan Parker, and is currently working with vocalist Diamanda Galas.

He was recently proclaimed "the most innovative and important guitarist in the country" in the Los Angeles *Herald Examiner*. Although his music is highly creative and challenging, Kaiser remains one of the most eloquent and accessible experimental musicians working today.

The concert is sponsored by Stanford's Undergraduate Special Course No. 31, entitled "Experimental and Avante-Garde Rock, 1965-Present."

Tickets at $4 each are available at Chimaera Records, 405 Kipling (at Lytton) in downtown Palo Alto.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

36484-JB (JCC:2128) Accountant II: Applying standard acctg concepts, practices, & techniques in analyzing, modifying, monitoring, & maintaining the Accts payable sys as we continue the conversion fr a manual to a computerized sys; working closely w/ all accts payable staff on campus to establish & document Accts Payable policy & procedure; write operational & training manuals; work closely w/ Procurement & Genl Acctg to contribute Accts payable knowl to future major sys development such as PRESS & the Core Acctg sys; respon for update of Univ Guide w/ current payment policy, etc; Bachelor's degree in Acctg or a related field; 3 yrs of professional acctg exp; EDP exp in Acctg or Finance area; prev Accts Payable exp or on-line & batch sys processing exp; ability to write policy & document procedure; excel oral & written commu skills.; C06; $1854-2312.

42477-VW (JCC:2048) ADMIN SERVICES MGR IV: Associate Dir is expected to represent the Executive Dir on committees w/ members of FPP Executive Committee, the FPP/Clinics Executive Board, & in negotiations w/ Hospital & Univ offcs as well as reps in external community; acts for the Executive Dir in his absence; full respon in the long range planning for FPP & clinics, legislative analysis, develop't & implementation of market strategies, establishing & monitoring work standards & procedures for all FPP & clinic operations; QUALIFICATIONS: strong analytical & statistical skills;.ability to interpret health care trends, gov't regulations, & demographic informa; demonstrated skill & prior exp in formulating operating plans, writing reports & making verbal presentations of complex mat'ls; prev exp and/or training in all aspects of mgmt at a senior level; ability to negotiate w/ a variety of constituencies, etc.; C09; $2972-3642.

33719-LL (JCC:2160) ACCOUNTANT II: Direction & mgmt of activities of Payment ID & application staff; coord activities of payment application unit w/ those of other depts w/in FPP & Med Ctr; coord w/ Hosp. counterpart on payment ID & transfer problems relating to accts common to both FPP & Hosp.; coord payment application activities w/ FPP genl acctg to ensure that payments received & processed are in balance w/ genl acctg records; recommends & implements cash ID policies & procedures w/in FPP; develops & maintains a control of credit balances & refunds generated by FPP; QUALIFICATIONS: bachelor's degree preferred but not nec; 3-5 yrs supvry exp nec; good knowl of acct principles & practice is required; good knowl of cash acctg controls & procedures as they relate to Univ acct practices; ability to function in a highly complex & dynamic environ; prior exp in either a hosp or physician group practice setting is desirable.; C06; $1854-2312.

33720-LL (JCC:2168) ACCOUNTANT III: Assure timely response to all patient's inquiries; consults w/ physicians & clinic staff to resolve patient issues; maintain accurate & timely patient acctg informa using detailed data sys; respon for develop't of written procedures for Patient Relations in coord w/ other units & divisions; interpretations & application of admin policies; attend mtgs; makes independent mgmt decisions & participates in mgmt decisions affecting FPP, etc; QUALIFICATIONS: broad working knowl of physician billing & must have a basic understanding of mgmt & supvn as they relate to a prof'l practice offc setting; analytical & problem solving skills; ability to work & commu w/ people both w/in & outside the areas of respon; knowl of basic business functions incl acctg, data processing sys & med terminology; must have maturity in dealing w/ public, sr. executives & med staff.; C07; $2113-2724.

26093-VW (JCC:3062/3062) Assoc Staff Counsel: Staff Attorney will prov legal support principally in the health care area; advising SU Hospital, SU Sch'l of Medicine, & SU Clinics; areas of emphasis will be in practicing before those State & Federal regulatory agencies respon for health care, working w/ issues arising fr third party reimbursement (such as Medicare & Medicaid), med staff issues, contracts, & patient care issues such as informed consent; exp in one or more of these areas is desirable; expected to work w/ increasing independence as fast as indiv develop't will permit; QUALIFICATIONS: demonstrated interest in health law; ability to draft complex legal documents; commu effectively, orally & in writing; ability to analyze complex legal problems & to engage in legal research; LL.B. or J.D. degree; membership in Calif Bar or willingness & ability to become a member at first opportunity.; C09/C10; EN/OPEN.

16282-LL (JCC:5588) LIFE SCI RES ASST I: 9-6; Research Assistant to do bacterial transformation, agarose gel electrophores, rapid & large-scale plasmid preps, Southern blots, microbial tech for purifying, characterizing, & maintaining bacterial strains, microbial genetics, DNA cloning, performance of mutagenesis, & radioisotope handling; respon for modifications of protocols if nec; analyze & interpret results of experiments & make independent decisions; QUALIFICATIONS: BS in Biochemistry or equiv exp; extensive exp (at least several yrs) w/ above tech.; C05; $1670-2086.

33354-TC (JCC:5588) LIFE SCI RES ASST I: Respon for developing HRP staining tech for studies in animal central nervous sys; respon for setting up lab for EM perfusion tech & sectioning nervous tissue using a Vibratome; performing histological stains on a variety of brain tissues & must have a thorough knowl of spec neurohistological stains; respon for screening mat'l & giving an Initial interpretation of the histological mat'l; QUALIFICATIONS: BS/BA degree in biological sciences or equiv exp; min 2 yrs of exp in histological work, preferably neurohistology; thorough knowl of all aspects of histology (incl a theoretical understanding of stains & how they work): embedding (paraffin), frozen section tech, a knowl of routine & spec neurohistological stains (Retic, HVG, Trichrome, Creysl Violet-IfB); knowl of HRP tech & EM perfusion tech would be an advantage.; C05; $1670-2086.

30044-AW (JCC:7578) PROJECT MANAGER III: Respon for completing assigned facilities projs w/in budget, on schedule & mtg the program requirements, given the financial constraints established by Univ; program requirements incl not only needs defined by using dept but sys requirements to meet those needs such as HVAC, mechanical, electrical, energy, maintenance, aesthetic, etc; respon for reporting progress on all aspects of the proj; liaison between dept & all others involved in the proj; has sufficient authority for making proj mgmt decisions, etc; QUALIFICATIONS: BA/BS or equiv of edu & exp required; MBA or executive course in business mgmt desirable; skills in planning, scheduling, cost control, contract admin, organizational behavior helpful; strong leadership w/ the capability of exercising authority to get job done; excel interpersonal skills w/ proven success in proj mgmt.; C08; $2464-3139.

Nonexempt

27092-PM (JCC:1755) LIBRARY SPEC II: 50%; lib support in East European Collection of Hoover Institution; pre-selection of new Soviet publications for Deputy Curator's approval; bibliographic searching in acquisitions files & card catalog for items to be purchased; maintenance of corresp & records for exchanges of mat'ls w/ numerous libs in Eastern Europe & Soviet Union; organization & listing of duplicate & out-of-scope mat'ls prior to exchange or sale; filing & updating current orders; QUALIFICATIONS: typ 40+; good reading knowl of Russian lang; working knowl of one or more other East European langs; familiarity w/ an academic lib; ability to do some light typing; send appl/resume to Joseph D. Dwyer, Hoover Institution Stanford, CA 94305, 497-2066.; B12; $655-687.

32577-BP (JCC:2210) ACCOUNTING ASST III: Review documents (salary reqs, check requests, expense reports, etc) for allowability & applicability according to Univ, Gov't & non-Gov't policy; prep contracts & billing as required; answer dept inquiries concerning expenditures; correct expenditure statements to various cost centers; prov guidance & assistance to offc asstants when unusual acctg matters occur; various acct reconciliations; QUALIFICATIONS: 2-3 yrs exp, training or equiv education; requires a thorough knowl of basic acctg procidures as well as ability to use calculator; maturity & judgmental ability required in applying policies; send appl/resume to Kenneth Cummins, 30 Encina Hall.; B14; $1440-1514.

11057-PM (JCC:2554) SECRETARY II: Academic Affairs Sec; set up & maintain all undergrad & grad student academic files, grad admission files, & alumni files; handling corresp, transcripts, study lists, gradeslips, supplimentary grad report cards, & all petitions & applications required by Registrar & Dean of Grad Studies; produce copy for COURSES & DEGRESS, & typ qrterly Time Schedules; originate and/or typ routine memos & letters; serv as receptionist in Dept'l Offc & share respon for answering Dept telephones, as well as sorting mail; QUALIFICATIONS: typ 50; substantial exp in genl offc work; some exp w/ computer text-editing essential; ability to set constantly changing work priorities using high level judgment & discretion; ability to interact effectively w/ diverse group of faculty, students, staff & the public; send appl/resume to Betty Kaplan, Dept. of Communication, Bldg. 120.; B11; $1246-1310.

29539-BP (JCC:2554) SECRETARY II: Prov sec'l serv for 2 staff members of Med Develop't Offcs respon for fundraising, donor relations, & research; typ corresp w/ high level of accuracy & appearance; draft routine corresp; arrange appts & group mtgs; maintain calendar & tickler file; prep various Univ forms; prep letters on word processing eqpt; hand address envelopes, name tags, etc; code & retrieve computer informa; check monthly budget statements; read & sort mail; QUALIFICATIONS: typ 60; detail oriented; excel spelling, grammar, & punctuation skills; good typist, neat & legible handwriting; willingness to Interchange job assignments; commu effectively by telephone; self-motivated; send appl/resume to Liz Trujillo, Office of Development, 301 Encina Hall.; B11; $1246-1310.

33721-PM (JCC:2672) MED SERV ASST III: 7:45-4:30; respon for identification of remittances to patient's accts; involves batching remittance, balancing batches, entering batches on acct & correcting errors; accuracy is a must; other related duties & spec projs as assigned; QUALIFICATIONS: typ 35-40; high sch'l degree; clerical & terminal work exp nec; dependable, reliable; have analytical & problem solving skills; work well under pressure & time-limits; contact: Patti Barber, 328-5461.; B11; $1246-1310.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, March 1, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Bargaining Unit

17850-TC (JCC:5638) LIFE SCI TECH I: TMS Unit; 50%; anesthetizing dogs & mice for irradiation procedures; giving total lymphoid irradiation to mice w/ 250 KV X-ray machine; prep of solutions & supplies for multiple automated sample harvester; sterile reagent & equipment preparation; mouse & rat spleen cell prepartion; plaque-forming cell assays; QUALIFICATIONS: licensed Animal Health Tech w/ min of 6 mos lab exp; able to work some wkends; willing to work in early evening (5-7pm) 2-4 times wkly.; A18; $ 7.50.

22523-TC (JCC:7082) STOREKEEPER II: TMS Unit; maintain Biochemistry storeroom; order & inventory all stock items; fill in for purchasing assistant when absent; receive, process & distribute all goods received; handle & store stock items requiring special treatment; maintain eqpt records; perform dept'l duties as assigned; QUALIFICATIONS: bkground in biology desirable; good organizational skills; typ 40-60; good physical condition to lift & store large, heavy items; non-smoker preferred.; A22; $ 8.25.

Ph.D. oral exams

MONDAY, FEBRUARY 28

Ellen K. Eliason, food research, "A Stock Adjustment Model of Contraceptive Use in the Philippines," 11 a.m., Food Research 214. **Lauro T. G. Fortes,** engineering-economic systems, "Quality-Differentiated Products, Consumer's Uncertainty and Incentives to Innovation," 2:15 p.m., 332 Terman. **Alan Irwin Murray,** business, "Determinants and Consequences of Differences in the Composition of Top Management Groups," 1:45 p.m., GSB 272.

TUESDAY, MARCH 1

Laszlo T. Juhos, physiology, "Activation and Regulation of Collagen Metabolism of Fibroblasts," 2:15 p.m., Physiology Library.

WEDNESDAY, MARCH 2

John J. Monaco, Jr., medical microbiology, "Major Histocompatibility Complex Linked and Unlinked Antigens of Murine Macrophages," 1:15 p.m., M114 Medical Center. **Ralph Dale Samuelson,** engineering-economic systems and economics, "Regulation and Efficiency in a Public Utility; the Economics of the Natural Gas Pipeline and Distribution Industry," 2:30 p.m., Terman 332.

THURSDAY, MARCH 3

Agatha Dillard Haun, Japanese and Slavic languages & literatures, "Ooka Shohei's *Furyoki* (*Prisoner of War Memoirs*): Translation and Commentary," 2:15 p.m., Bldg. 250, Room 252A. **Terry Dean Jones,** geophysics, "Wave Propagation in Porous Rock and Models for Crustal Structure," 2:15 p.m., Mitchell 350.

FRIDAY, MARCH 4

David Gutierrez, history, "Immigration Policy and the Chicano Community, 1930-1970," Room 230, History Corner. **Steven J. McNall,** pharmacology, "Characterization of a Serotonin Receptor Coupled to Adenylate Cyclase in the Liver Fluke, *Fasciola hepatica*," 10 a.m., Pharmacology Library, R-358. **Paul Veitch Preckel,** operations research, "Intertemporal Equilibrium Models: Development and Results," 2:15 p.m., Terman 202. **Eunice Mary Schroeder,** music, "The Term *Mensura* as Used in Theoretical Treatises from 1400-1540," 2:15 p.m., Knoll 300.

Dinkelspiel wheelchair lift sought

Stanford is applying to the Occupational Safety and Health Standards Board for a variance to install a Garaventa incline wheelchair lift on one of the two stairs that serve the Dinkelspiel Auditorium stage.

This lift will be for handicapped use. The mechanism is installed to one side of the stairway. The chair is partially encumbered when the lift platform is down and in use.

Any party wanting information regarding the hearing or wishing to speak at the hearing can request permission to do so by writing to the:

Occupational Safety and Health Standards Board
1006 Fourth Street, Third Floor
Sacramento, California 95814

Democratic Socialists consider "Reviving the Left" Feb 25-27 at Stanford

"Reviving the Left" will be the theme of the first Democratic Socialists of America Western youth conference at Stanford Feb. 25-27.

Featured speakers will include DSA Chairperson Michael Harrington, author of *The Other America*, Congressman Ron Dellums, San Francisco Supervisor Harry Britt, vice chair of DSA, and Berkeley Mayor Gus Newport.

Several hundred students from Western states are expected. DSA currently has about 2,000 student members on 40 campuses, plus another 5,500 older adults.

DSA members have a political orientation similar to that of European Socialist and Social Democratic parties, according to Michael Lighty, head of the Stanford group.

"Unlike the 1960s student radicals, who often rejected the reforms of standard liberalism, DSA joins with other liberals in the labor, minority and women's movements to win reforms such as the ERA and the nuclear freeze," he explains.

"But at the same time, DSA works to convince its coalition partners that resolving the nation's current economic problems will ultimately require much more far-reaching changes in the distribution of wealth and power in America."

Harrington will discuss "Students in a Changing World" at the opening plenary session, scheduled for 7:30 p.m. Friday, Feb. 25, in Jordan Hall Room 40. Dorothy Healy of KPFA, Los Angeles, also will speak.

"American Democracy in Crisis" will be discussed by Supervisor Britt and Elinor Glenn, president emerita of the Service Employees International Union, at 9:30 a.m. Saturday, Feb. 26, in History Corner, Room 2. Workshops on the corporate nature of the university will follow.

Congressman Dellums will speak in Room 2 at 1:30 p.m. on "Guns versus Butter: Militarism and Social Spending Cuts." Workshops on the peace movement, domestic and foreign policy will follow.

Mayor Newport will discuss "Building Coalitions" at 9:30 a.m. Sunday, Feb. 27, in Room 2. Peter Cervantes-Gautschi, business manager of the Santa Clara County Labor Council, also will speak. Workshops on feminism, religion, and Third World issues will follow.

Preregistration fee for the conference is $10. Further information may be obtained from DSA at 29 29th St., San Francisco 94110, phone (415) 550-1849 or from Lighty (415) 323-7693.

Trombonist to give master class

The Department of Music presents a Master Class by trombonist Ralph Sauer at 7 p.m. Tuesday, March 1, in Dinkelspiel Auditorium at Stanford.

All trombonists are invited to attend. Admission is $3 for participants, free to observers.

Sauer is principal trombonist with the Los Angeles Philharmonic. He received his early training in trombone from Robert Harper of the Philadelphia Orchestra, then studied with Emory Remington while obtaining a B.M. degree and performer's certificate from the Eastman School of Music.

At age 23, Sauer joined the Toronto Symphony Orchestra as principal trombonist at the invitation of Seiji Ozawa. His summer engagements have included the Marlboro Festival in Vermont.

Sauer has given many master classes and recitals, most recently in Tokyo and Mexico City.

Rental housing

HOUSING AVAILABLE

□ **March 27 to Sept. 15, '83:** Fully furn 3BR/3BA, FR, So. Palo ALto hse. Nghbrhd pool assoc, gardener, 15 min. to Stanf. Walk to shops. Ideal for children. $1100/mo. Call Cornish & Carey, 325-6161 (day), Rita Benedict, 327-7190 (eve).

Pianists Jodi Gandolfi and Naomi Sparrow (above l. to r.) will join singers Nancy Wait, Nancy Kass, and Jan Wilcox in a performance of John Adams' Grand Pianola Music in a concert at 8 p.m. Sunday, Feb. 27, in Dinkelspiel Auditorium. Prof. Arthur Barnes will conduct the Symphonic Band concert, which also includes works by Will Gay Bottje, Gustav Holst, and Nelhybel.

Award-winning pianist Murray Perahia to perform at Mem. Aud.

Pianist Murray Perahia, the first American to win the Leeds International Piano Competition will perform at 8 p.m. Friday, March 4, in Memorial Auditorium at Stanford.

Presented by the Lively Arts at Stanford, the program will include: Beethoven's "Sonata in D Major, Op. 10, No. 3," Schubert's "Four Impromptus, Op. 142," and Liszt's "Sonata in B Minor."

Perahia made his Carnegie Hall debut in 1968 with Alexander Schneider conducting and has appeared in the Casals and Edinburgh Festivals, at Spoleto and in the Lincoln Center Mostly Mozart Festival. He has also performed with members of the Budapest, Guarneri, and Galimir Quartets, and has toured with "Music From Marlboro."

In January 1975 Perahia was selected as the first recipient of the Avery Fisher prize. He was also winner of the Kosciusko Chopin prize.

In 1972, Perahia became the first pianist signed by CBS Masterworks to an exclusive contract in almost 10 years and his first recording, released in 1973 was selected as best solo piano record of the year by *Time* magazine. In 1978, 1981, and 1982, Perahia received the Edison prize, Europe's most prestigious recording award.

Perahia was born in the Bronx, New York in 1947 and now lives in London with his wife. His family descends from the branch of Sephardic Jews that lived in Spain until 1492 when they were exiled.

Though the Sephardics then migrated to other countries, they kept up with their Jewish and the Spanish traditions, and the language that Perahia first spoke was not English but the language of 15th century Spain called Ladino.

Perahia is a graduate of Mannes College of Music in Manhattan where he studied conducting. He studied piano with Jeannett Haien and Mieczyslaw Horszowski and chamber music coaching with Artur Balsam.

For ticket information call Tresidder ticket office, 497-4317.

'Study in Britain' session at I-Center

Stanford's second annual "Study in Britain Celebration" will be held at 4:30 p.m. Wednesday, March 2, at Bechtel International Center. The program, sponsored jointly by the Overseas Resource Center, Stanford Overseas Studies, and the Stanford Rhodes-Marshall Panel, will highlight diverse opportunities for study in Britain as well as scholarships to fund graduate study.

Specific opportunities to be covered in the program include summer study; academic year study either through programs sponsored by U.S. universities other than Stanford or directly through Britian institutions; graduate degree study; and Rhodes, Marshall, Churchill and Fulbright awards for graduate study.

Students interested in study abroad are often not aware that there are alternatives to the Stanford programs, according to Catherine Gamon, assistant director for overseas resources at the International Center.

"This year, it is particularly important that we help students learn about the many exciting possibilities open to them, since the Cliveden campus will be closed in 1983-84 and the Oxford program will not yet be in place," she says. "Although deadlines for some programs have passed, it is still possible to apply to a wide range of summer or academic-year programs."

At the same time, the sponsors of the Study in Britain Celebration want to encourage more students to consider applying for scholarships for study in Britian.

"We are very pleased with the results so far of this year's Rhodes and Marshall Scholarship competition," says Prof. Stephen Ferruolo, Stanford Rhodes-Marshall panel chairman. "We hope to do even better next year by encouraging a greater number of qualified candidates to apply."

During the week when interest in Britian is high, the Study in Britain Celebration will provide an opportunity for students, faculty, and staff to hear speakers, peruse information tables, and meet informally with colleagues who have interest and experience in Britain. British refreshments will be served.

For more information, please contact the Overseas Resource Center, 7-0856.

Susan Owicki to lecture

Prof. Susan Owicki, electrical engineering, will speak on "Generals and Traitors: Building Reliable Systems from Unreliable Components" at 4:15 p.m. Thursday, March 3, in room 420-041 (entrance in basement of Math Department).

Her talk is part of the 1982-83 lecture series of Stanford Women in Science and Engineering (WISE). The series is designed to promote interdisciplinary discussion among women by providing a regular forum where nontechnical lectures on research topics are followed by informal discussion over refreshments.

The sponsors are WISE and the Office of the Dean of Graduate Studies. Questions may be directed to ext. 7-2496.

Baroque harpsichordist

Harpsichordist Vera Kochanowsky will present her Doctor of Music Arts recital at 8 p.m. Saturday, March 5, in Annenberg Auditorium.

Presented by the Department of Music, Kochanowsky will perform music of the German and French Baroque—four Bach sinfonias and suites by Froberger, Boismortier, and Rameau. Also on her program is Bach's *Capriccio on the Departure of His Most Beloved Brother*.

Kochanowsky received her master's degree in performance of early music from the New England Conservatory, where she studied with John Gibbons. She received her bachelor's degree in piano from Oberlin Conservatory, then spent a year studying the harpsichord at Penn State, where she was raised.

Draft Awareness Week Feb. 26-Mar. 4

Stanford Against Conscription will sponsor Draft Awareness Week on campus between Saturday, Feb. 26 and Friday, March 4.

Events include:

1. Workshop on the linking of draft registration and financial aid, led by SAC members. 11 a.m., Saturday, Feb. 26, in History Corner Room 34.

2. Showing of slide show "Choice or Chance" on military recruitment, economic conscription, and draft registration, led by SAC members. 4 p.m., Saturday, Feb. 26, in History Corner Room 34.

3. Panel on the history of the draft and draft resistance. Speakers include Stanford History Profs. Paul Seaver and Clay Carson. 7:30 p.m., Tuesdday, March 1, in Cubberley Room 133.

4. Panel on third world people, economic conscription, and the draft. Presented by members of the Draft Information Alliance. 3:30 p.m., Wednesday, March 2, in Ujamaa Lounge.

5. Workshop on women and resistance, led by SAC members and other local women resistance organizers. 4:30 p.m., Thursday, March 3, in Zapata Lounge.

6. Panel on draft resistance today. Speakers will include indicted non-registrant David Waite and other resistance organizers. 7:30 p.m., Thursday, March 3, in Terman Auditorium.

7. Anti-draft/Anti-war coffee house. Singing and poetry on anti-militarist themes. 9 p.m., Friday, March 4, in Columbae House.

This series of events is part of a coordinated week of activities on a number of campuses around the state, including Berkeley, Chico, Humboldt, Santa Cruz, UCLA, San Diego State and others.

Purim Holiday to begin on Feb. 26

Celebration of the Jewish holiday of Purim begins at 7:30 p.m. Saturday, Feb. 26, with the traditional reading of the Megillah.

In "Megillah Madness" the story of Purim will be acted out as well as read. At 9 p.m. the celebration continues with "Munchie and Music Madness," featuring food, drink, and dancing to the band "Eshkoliot."

Both parts of the celebration take place in Tresidder Union large lounge at Stanford and are open to the public. The Megillah reading is free; there is a $2 admission charge for "Munchie and Music Madness."

The event is sponsored by the Shabbat and Festivals and the Graduate Students Activities Committees of Stanford Hillel.

For more information, contact Stanford Hillel at 497-1602.

'Hazing' foe to speak

Eileen Stevens, founder of the Committee to Halt Useless College Killings (CHUCK), will speak on fraternities in the modern university at 7 p.m. Tuesday, March 1, in Kresge Auditorium.

A question-and-answer session will follow her talk.

Stevens founded CHUCK after her son was killed in a hazing incident at Alfred University in New York. Though she is in favor of the fraternity system, she has dedicated herself to stopping the kinds of fraternity pranks that sometimes result in death.

She has spoken on many college and university campuses and has appeared on the Phil Donahue Show and the Tom Snyder show, in addition to being featured in *People* magazine.

Her lecture at Stanford is sponsored by Delta Tau Delta.

Robert Luc to speak

Ambassador Robert Luc of France will present a free public lecture on "France and the Future under the Mitterand Administration" at 4:15 p.m. Tuesday, Mar. 1, on the Stanford campus in History Corner, Building 200, Room 205.

Luc is teaching at the Fromm Institute of Life Long Learning, and the University of San Francisco. His field is contemporary French history, especially foreign policy.

Andor Toth (above) will be soloist in the Bartok Violin Concerto No. 2 when the Stanford Symphony performs at 8 p.m. Saturday, Feb. 26, in Dinkelspiel Auditorium. Assistant conductor Eric Kujawsky will take over the baton from Toth for the Bartok; also on the program are Beethoven's Eroica and Vivaldi's Piccolo Concerto in C major.

Opera Workshop presents two one-acts

Stanford Music Department's Opera Workshop, under the direction of Andor Toth, will present two one-act *opera bouffas* at 2:30 p.m. Saturday and Sunday, March 5 and 6, in Dinkelspiel Auditorium.

The two operas are *The Necklace* by Music Department Prof. Leonard Ratner—a bittersweet comedy based on Maupassant's famous short story, and *Mavra* by Stravinsky—a charming, hilarious farce written for the Paris Opera in 1922 and rarely performed today.

Production of these two operas represents a combined effort by students of the Music and Drama Departments at Stanford, as well as guest artists from the community.

Stage direction is by Tom Lindblade, graduate student in Drama. Lindblade wrote the score for Brecht's *The Good Soul of Setzuan* and directed Brecht's *The Human Voice*, both produced by the Drama Department last fall. His score for Brecht's *Don Juan* will be heard in March. Assistant stage director is Stephen Weeks, with lighting by Nan Buck.

The cast includes Stanford voice students Cheryl Karinen and Nancy Kass, sopranos, and Patricia Mikishka, mezzo-soprano. All three study with Lila Stuart. Mikishka, a doctoral candidate in Early Music, recently soloed with the Stanford Chamber Orchestra.

Guest artists will be soprano Kay DeVries, who recently appeared in the San Jose Opera production of *Rigoletto*; mezzo-soprano Wendy Green, a graduate student at Notre Dame college; baritone Michael Morris, who has sung with West Bay Opera and Stanford Savoyards; and tenor Mark Daniels, soloist with the Carmel Bach Festival and Bay Area orchestras.

Pianists for the performances will be Camilla Passarelli and Kay Bedenbaugh.

Tickets are $4 general, $2 students and senior citizens,

Alea II concert includes Carillon piece

A la Mode is the title of Alea II's free concert at 8 p.m. Wednesday, March 2, in Dinkelspiel Auditorium.

Stanford Music Department's ensemble for contemporary music will present medieval and Renaissance music along with new works that quote, parody, or employ early music techniques.

Under the direction of Jonathan Berger, the program will feature *Missa Supra Le Homme Arme* by Peter Maxwell Davies—a theatre piece for actress, two keyboard players (organ, harpsichord, and honky tonk piano), flute, clarinet, violin, and cello. Jeannine Wagar will conduct.

Also on the program will be the premiere of Paul Wieneke's *Poured Brilliant* for solo contrabass and chamber orchestra. Shinji Eshima, principal bass with the Marin Symphony, will solo; Wagar will conduct.

A la Mode will commence, weather permitting, outside on the steps of Dinkelspiel Auditorium for the premiere of *Piece for Carillon* by Paul Nahay. Electrical Engineering Prof. James Angell will perform.

The audience will then move inside for the remainder of the program: *We Made the Dogs for Your Delight* for magnetic tape by Doug Fulton; *Music for a Bird* for recorder by Hans Martin-Linde; the premiere of *Piano Piece No. 2* by William Sussman, who will also perform it; and the premiere of David Jaffe's *String Quartet for Two Players*, with Christina Ruotolo, violin, and John Lin, viola.

Interspersed between these works will be medieval and Renaissance pieces, performed by members of the Early Music Singers and the Baroque Orchestra, that are sources of direct quotes, or written with the same compositional techniques, as the contemporary works they preface.

"Watch Your Step"

"Watch Your Step," a program of dance and film, will be presented at 8 p.m. Wednesday, March 2, in Tresidder Lounge. Sponsors are Stanford Dance Quorum and STARTS.

Swedish folk dance, student choreography, and Alvin Ailey's film, "Images and Visions," will be featured.

Admission is $2. For further information call Lisa Christensen, 497-4254.

Stegner reading slated Monday

Wallace Stegner, novelist, biographer, historian, critic, dedicated environmentalist, will read from his works at 8 p.m. Monday, Feb. 28, in Annenberg Auditorium at Stanford for the 1982-83 Jean and Bill Lane Lecture Series.

Stegner is profoundly concerned with the plight of man in his environment and with the durability of essential human values. His numerous works include *Big Rock Candy Mountain*, *Mormon Country*, *The Women on the Wall*, *A Shooting Star*, *Wolf Willow*, *All the Little Live Things*, *Angle of Repose* (which won the Pulitzer Prize in 1972), *The Spectator Bird* (which won the National Book Award in 1977), and *One Way to Spell Man*, his most recent book.

Stegner taught at Stanford from 1945 until 1971. He founded the Creative Writing Program in 1946.

He is a member of both the National Institute and Academy of Arts and Letters and the American Academy of Arts and Sciences. He has repeatedly won the gold and silver medals of the Commonwealth Club of California, and his works have frequently been Literary Guild selections.

The Lane lecture series, sponsored by the Creative Writing Program, will host one other lecture in April, in which E. L. Doctorow will speak.

For further information, call the Stanford Writing Program at 497-2637.

William Ramsey

St. John Passion heard next week

Bach's monumental *St. John Passion* will be performed by Stanford's Chorus, under the direction of William Ramsey, at 8 p.m. Friday and Sunday, March 4 and 6, in Memorial Church.

The Chorus will be joined by a chamber orchestra and distinguished guest artists: Sara Ganz, soprano; Miriam Abramowitsch, contralto; Gregory Wait and David Howell, tenors; and Leroy Kromm and Thomas Hart, baritones.

Prof. Ramsey will give a free lecture on the *Passion*, sponsored by the Music Guild, at 8 p.m. Tuesday, March 1, in Annenberg Auditorium. The public is invited to attend.

Tickets for the March 4 and 6 performances are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and the door.

Cellist Leslie Parnas

Lincoln Center chamber group coming Sunday

From New York's Alice Tully Hall, where it has played to sell-out audiences since 1969, the Chamber Music Society of Lincoln Center will perform at 2:30 p.m., Sunday, Feb. 27, at Dinkelspiel Auditorium.

Presented by the Lively Arts at Stanford, the group's program includes the "Trio for Clarinet, Cello, and Piano in A Minor, Op. 114" by Brahms, and "Serenade No. 6 for Flute, Violin, and Viola in D Major, Op. 25" by Beethoven. The final work on the program will be the "Quartet for Piano and Strings in E-flat Major, Op. 87" by Dvorak.

The Chamber Music Society of Lincoln Center, the resident performing organization at Alice Tully Hall, is the outgrowth of an intensive survey of the chamber music field and its audience. Artistic director Charles Wadsworth has brought together strong musical personalities from all parts of the world, whose combination and interaction generate true excitement for the music they play.

The Society's commitment to program not only master works, but also infrequently heard works from the past and challenging contemporary compositions for a wide variety of instrumental and vocal combinations, has lured a brand-new audience to chamber music.

Performing regularly for sold-out audiences both in New York and at Kennedy Center, the Chamber Music Society of Lincoln Center has toured the U.S. annually since 1975. The group has twice been the subject of a "Live from Lincoln Center" international telecast, and it records for the Book-of-the-Month Club and the Musical Heritage Society.

Under a program to encourage outstanding contemporary composers to broaden the repertoire, the Chamber Music Society has commissioned more than 30 works to date, and has given world premieres of 32 compositions.

The Society has a permanent membership of 14 virtuosi, each with special skill in the chamber repertoire, who perform together in constantly varying combinations. The Stanford concert will feature: Paula Robison, flute; Gervase de Peyer, clarinet; James Buswell, violin; Scott Nickrenz, viola; Leslie Parnas, cello; and Lee Luvisi, piano.

For more information call Tresidder Ticket Office at (415) 497-4317.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., Feb. 23, to cover the week of Mon., Mar. 7, through Sun., Mar. 13.

Calendar correction: "The Harlem Renaissance," a film on the historic era of Afro-American intelligentsia, will be shown at 4 p.m. Wednesday, Feb. 23, in Bldg. 200, Rm. 30 (**not** on Friday, Feb. 25, as printed in last week's calendar).

Calendar correction: The open rehearsal of the Chamber Music Society of Lincoln Center, originally scheduled for 11 a.m.-12:30 p.m., Sunday, Feb. 27, in Dinkelspiel Auditorium, has been cancelled.

MONDAY, FEBRUARY 28

Energy Policy Seminar: "Risk and Decision Processes in the Public Sector," with Elisabeth Pate-Cornell, Industrial Eng. & Eng. Management Dept., Stanford Univ. 4:15 p.m. Skilling Aud.

Center for East Asian Studies Colloquium: "Zen Community". Dennis Merzel, Zen Buddist priest from the Zen Center in Los Angeles will speak. 4:15 p.m. Rm. 238, Lou Henry Hoover Bldg.

Numerical Analysis Seminar: "Parameter Estimation in Ordinary Differential Equations," by James Varah, Univ. of Waterloo. 4:15 p.m. Room 380c, Math Corner.

EE350 Radioscience Seminar: "Radio Occultation Studies of the Solar Corona," by Jan Martin ,Stanford. 4:15 p.m. McCullough Bldg., Room 134.

Biological Sciences Seminar: "The Neurobiology of Bird Song," by Dr. Mark Konishi, Prof. of Biology, California Institute of Technology. 4:15 p.m. Room T-175, Herrin Hall.

Film Society: "Saturday Night & Sunday Morning" plus "Loves of a Blond". 7:30 p.m. Kresge Aud. $2.

Jean & Bill Lane Lecture Series: Wallace Stegner reading from his works. 8:00 p.m. Annenberg Aud. Free.

TUESDAY, MARCH 1

Bechtel International Center Luncheon Series: Swedish Politics: Analysis. Allan Larsson, former Undersecretary of State for Labor; Gunnar Heckscher, former ambassador and leader of the conservative party in Sweden. Noon. I-Center. $2.50 for lunch, brown baggers free.

Stanford Museum of Art Lunch Hour Tours: "The Chinese Tradition." 12:15 p.m. Stanford Museum of Art.

Center for Russian & East European Studies: "The Refractory Art of Soviet History," by Dr. Robert Conquest, Senior Fellow & Scholar-Curator of the Soviet & East European Collection, Hoover Institution. 2:15 p.m. Room 102, Lou Henry Hoover Building.

History Dept. Lecture: "France and the Future under the Mitterand Administration," with Ambassador Robert Luc. 4:15 p.m. History Corner Room 205. Free.

Music Department Auditions: Trombone Master Class by Ralph Sauer. All trombonists invited to attend. 7 p.m. Dinkelspiel Aud. $4 participants; Free to observers.

WEDNESDAY, MARCH 2

Gifts and Exchange Division, Stanford Univ. Libraries: Book Sale. Books and periodicals in many fields. Hardbounds $1.50 and up, paperbacks 25 cents and up, periodicals 10 cents. 11:00 a.m. to 1:30 p.m. Green Library, West Wing, First Floor, Rm. 101. n.

Stanford Museum of Art Lunch Hour Tours: "The Chinese Tradition." 12:15 p.m. Stanford Museum of Art.

Materials Science & Engineering Colloquium: "A Variety of Non-Crystalline Solids: Their Preparation and Structures," by Prof. Rustum Roy, Director of Materials Research Lab., Penn. State Univ. 3:30 p.m. Peterson Lab., Rm. 550A.

Structural Biology Seminar: "Dissection of Antigenic Determinants on Human Histocompatibility Antigens," by Dr. Victor Engelhard, Univ. of Virgina. 4 p.m. Fairchild Bldg., Rm. D-102.

Joint Applied Physics-Physics Colloquium: "Josephson Computer Technology," by Dr. Hans Zappe, IBM Yorktown Heights. 4:15 p.m. Physics 100.

Electronics in Medicine Lecture Series: "Status of a Clinical Left Ventricular Assist System," by Dr. Peer Portner, Novacor, Inc. 4:15 p.m. McCullough 134.

Chemical Engineering Colloquium: "Catalytic Reactions over Modified Surfaces," by Dr. Wayne Goodman, Sandia Laboratories. 4:15 p.m. Chemical Engineering Conference Room.

Drama Dept: "Don Juan," by Moliere. Directed by Lawrence Maslon. 8 p.m. The Nitery. Free.

Music Department Concert: "Alea II—Contemporary Music Ensemble," with members of the Baroque Ensemble & Early Music Singers. Medieval and Renaissance music interspersed with recent works using Medieval and Renaissance techniques and tunes. 8 p.m. Dinkelspiel Aud. Free.

Art Dept. Lecture Series: "The Amazing Career of Mme. Vigee Lebrun (1755-1842)," by Prof. Lorenz Eitner. 8:15 p.m. Annenberg Aud.

THURSDAY, MARCH 3

Stanford Geothermal Program: "High Temperature Geothermal Developments in the Basin and Range Province," by W. Richard Benoit, Phillips Petroleum Company. 1:15 p.m. Mitchell Bldg., Room B67.

Solid Mechanics Seminar: "Fracture Response of Materials under Short Pulse Loads," with Dr. Donald Shockley, Director, Metallurgy and Fracture Mechanics, SRI International. 4:15 p.m. Skilling Aud.

Center for East Asian Studies Colloquium: "Backyard Furnaces in 1958". Dr. Donald Wagner, visiting scholar, will speak. He is a research fellow at the Danish Research Council for the Humanities. 4:15 p.m. Rm. 238, Lou Henry Hoover Bldg.

EE-370 Information Systems Laboratory Seminar: "Robust Adaptive Control," by Robert Kosut. 4:15 p.m. Skilling 191.

Stanford Women in Science and Engineering Lecture: "Generals and Traitors: Building Reliable Systems from Unreliable Components," by Prof. Susan Owicki, Assoc. Prof. of Electrical Engineering. 4:15 p.m. Building 420, Room 041.

Latin American Revolution Film Series: "The Cost of Cotton". Filmmaker Jim Watson will discuss his film about Guatemala. 7 p.m. Casa Zapata, Stern Hall. Free.

The Winter Nuclear Weapons Film Series: "The Nuclear Battlefield". 7:30 p.m. Meyer Forum Room.

Weil to give first de Leeuw lecture

Prof. Andre Weil of the Institute of Advanced Study in Princeton will give the first Karel deLeeuw memorial lecture at 3:15 p.m. Wednesday, March 2, in Physics Auditorium at Stanford.

Weil, one of the great modern universalists in mathematics, has made basic contributions covering virtually the entire spectrum of mathematics of this century. His lecture will be on "Euler and Number Theory." Euler is considered one of the greatest mathematical universalists of all time.

According to mathematics Prof. Robert Osserman, the deLeeuw lectures are not intended to be of a specialized or technical nature, but rather to illuminate the many facets of mathematics.

The lecture series is being sponsored by the deLeeuw Memorial Fund, set up by the Mathematics Department after his murder in 1978. ESL, Inc. of Sunnyvale supported the series.

"Karel deLeeuw was unique in his involvement and success with students on all levels," notes Osserman.

"He had a large number of Ph.D. students, many of whom became close personal friends. At the other end of the spectrum, he spent many years developing a course for freshmen with weak mathematical backgrounds.

"He taught a variety of undergraduate and graduate courses, and was renowned for his lucidity, his humor, and his innovative approach.

"At the center of all his activity was his focus on the human aspect of his work.

"Partly out of concern for graduate students during a period when jobs in pure mathematics were becoming scarce, he made considerable efforts to establish communication with other disciplines and to become involved with applications of mathematics."

Bechtel International Center Film Series: Animation—titles include "Hunger," "No Apple for Johnny," "Citizen Harold," "A Token Gesture," "Metamorphosis of Mr. Samsa," "My Financial Career," "The Street," "Bead Game," "A Chairy Tale," and "Boomsville" (Canada). 7:30 p.m. I-Center. .75 donation.

Drama Dept: "Don Juan," by Moliere. Directed by Lawrence Maslon. 8 p.m. The Nitery. Free.

FRIDAY, MARCH 4

Music Dept. Concert: Stanford Chorus. Bach–St. John Passion, with chamber orchestra and soloists Wendy Hillhouse, mezzo; Gregory Wait and David Howell, tenors; Leroy Kromm and Thomas Hart, baritones. $4/$2. Memorial Church. $4/ $2.

Applied Mathematics Lecture: "A New Model for Generating Biological Patterns: Applications to Cartilage Formation and Skin Organ Primordia," by Prof. J. Murray, University of Oxford & CalTech. 3:15 p.m. Room 380-C, Math Corner.

Materials Science and Engineering Colloquium: "A Variety of Non-crystalline Solids: Their Preparation and Structures," by Prof. Rustum Roy, Director of the Materials Research Laboratory, Pennsylvania State Univ. 3:30 p.m. Peterson Lab., Rm. 550A.

Drama Dept: "Don Juan," by Moliere. Directed by Lawrence Maslon. 8 p.m. The Nitery. Free.

The Lively Arts at Stanford: Murray Perahia, piano. Beethoven: Sonata in D Major, Op. 10, No. 3; Schubert: Four Impromptus, Op. 142; Liszt: Sonata in B minor. 8 p.m. Memorial Aud. $11.50, $10.50, $9.50, $8,50. Students $3 off regular price.

Lively Arts at Stanford: Murray Perahia, piano. 8 p.m. Memorial Aud. $11.50, $10.50, $9.50, $8.50.

STARTS Great Directors Film Series: "The Man Who Left His Will on Film," by Japanese director Nagisha Oshima. 8 p.m. Geology Corner, Room 320. $2.50.

Stanford Law School Film Society: "Psycho". 8 p.m. Kresge Aud. $1.50.

Coffee House Evening Entertainment: Music featuring many of the area's favorite new & up-and- coming performers. 9-12 p.m. Coffee House. Free.

SATURDAY, MARCH 5

Women's Swimming: Cardinal Invitational. All Day. DeGuerre Pool.

Music Dept. Concert: Opera Matinee. Featuring Andor Toth, director and Kay Bedenbaugh, pianist. Program includes Ratner "The Necklace"; and Stravinsky - "Mavra". 2:30 p.m. Dinkelspiel Aud. $4 & $2.

Music Dept. Concert: Vera Kochanowsky, harpsichord. Music of the German and French Baroque: works by J.S. Bach, Froberger, Rameau. 8 p.m. Annenberg Aud. Free.

Dance Quorum Slide and Music Show: "The Way of the White Clouds"-Dymaxion Dance; "On Wings of Breath"-Continuum; and "Lightstream"-Jeanett Stoble. 8 p.m. Dinkelspiel Aud. General $8, seniors, students, & children under 12: $6.

Drama Dept: "Don Juan," by Moliere. Directed by Lawrence Maslon. 8 p.m. The Nitery. Free.

Undergraduate Special #31 Concert: Henry Kaiser, experimental guitar. An evening of solo improvisations with electrical guitar and a digital sound processing system. 8:00 p.m. Skilling Aud. $4.

SUNDAY, MARCH 6

Music Dept. Concert: Stanford Chorus. Bach - St. John Passion, with chamber orchestra and soloists Wendy Hillhouse, mezzo; Gregory Wait and David Howell, tenors; Leroy Kromm and Thomas Hart, baritones. $4/$2. Memorial Church. $4/ $2.

Music Dept. Concert: Opera Matinee. Featuring Andor Toth, director and Kay Bedenbaugh, pianist. Program includes Ratner "The Necklace"; and Stravinsky - "Mavra". 2:30 p.m. Dinkelspiel Aud. $4 & $2.

ASSU Sunday Flicks: "Diamonds are Forever." 7 & 9:30 p.m. Memorial aud. $1.50.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

"Photographs of Old Russia," by Jack Kollman. Faculty Club. Jan. 17 - March 26.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 30.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Paintings by Marina Goodier. Tresidder Union, Upper Lobby. March 1 - March 31.

CAMPUS REPORT

Volume XV, Number 22 | A publication for Stanford University faculty & staff | March 2, 1983

President Donald Kennedy, behind railing at lower right, thanks dozens of faculty and staff members who have served as general advisors to Stanford undergraduates for five years or more. The ceremony last Wednesday was the first such public recognition for general advisors.

Anthropology faculty ousts Mosher, 11-0

The Stanford Anthropology Department faculty unanimously voted to terminate Steven Mosher as a Ph.D. candidate Thursday, Feb. 24.

A focal point of international controversy, Mosher was one of the first U.S. anthropologists to conduct field research on a Chinese commune in 1979-80.

The faculty decision followed the findings, conclusions and recommendations of a three-member investigating committee, which was not made public on grounds that "it contains information that may be injurious to third parties."

Mosher, who was sent a copy of the report in October, refused to make it public, saying that doing so could "undermine" future legal action against the University.

After dramatically opening a letter from Prof. Clifford Barnett, department chairman, informing him of the decision—and thus making it public—Mosher said he was terminated "basically because the faculty chose to believe charges brought against me by the Chinese."

The confidential report "goes on to accuse me of 'poor judgment' " for publishing an article on China's birth control program and a photo of a woman about to be aborted in a popular Taiwanese magazine, Mosher said. The report also alleges his actions "gravely endangered innocent villagers," he added.

Mosher said a letter in the report from his former wife "makes a number of slanderous allegations against me concerning my research behavior in China."

She is Maggie So, a Hong Kong Chinese, whom Mosher described as "the scorned woman." Mosher said she threatened to "ruin me" (her words) when he made clear he wanted a divorce in March 1980, while she was visiting him

Kennedy sharply criticizes proposed financial aid regs

Stanford President Donald Kennedy Monday, Feb. 28, sharply criticized proposed new federal regulations on student aid, saying they "will almost surely penalize students" who already have registered for the draft.

The proposed rules issued by the U.S. Department of Education are "directly contrary" to Congressional intent and "impose a very heavy and wholly unjustifiable administrative burden on colleges," the former federal food and drug commissioner charged.

"The proposed regulations go out of their way to place colleges and universities in an adversarial relationship with their students," Kennedy said. The law simply requires students to file statements certifying they have complied with Selective Service registration requirements.

"The regulations' grasp far exceeds the statute's reach," he added. Every student applying for federal aid would have to file statements which the institutions would have to verify prior to any awards.

"The proposed regulations conscript Stanford into the enforcement process," Kennedy said.

"The regulations assume an unreasonable level of efficiency from Selective Service. The system proposed

Which way will Queen come here?

The Stanford community will not be able to see Queen Elizabeth II when she comes to lunch on Thursday, March 3, except for. . .

* the guests at the lunch, which is being given at Hoover House, Mirada Avenue, the residence of President Donald Kennedy and Mrs. Jeanne Kennedy, or

* those who guess correctly the route the royal cavalcade will take to Hoover House.

The Secret Service and the other security forces which have responsibility for protecting Great Britain's head of state do not wish the possible routes to be publicized.

This is far from the hopes which President and Mrs. Kennedy had when they first began their planning for the visit by the Queen and her husband, the Duke of Edinburgh.

Stanford's intention at that time was to bring the royal party through the heart of the campus, giving the Queen the fullest opportunity to see and be seen.

Security people rejected this idea, for their own good reasons, and also subsequent modified suggestions for the route.

The decision to keep the route secret has led to great disappointment on campus and in the surrounding areas, including many local schools which had hoped to bring entire classes to see the Queen.

The roads around Hoover House will be cordoned off on Thursday by police and other security forces. Special arrangements will be in force for residents in the closed areas.

The guests at the Hoover House lunch have been asked to arrive well before the Queen, and they will be waiting to greet her in the various street-level rooms of the residence.

Accredited journalists, photographers and TV people will be able to go to a designated area to record the royal arrival and departure. Those without the required accreditation will be barred from the area.

People

Former Stanford administrator to help in survey of black alumni

When James Simmons worked as a Stanford University administrator from 1968-72, much of his time was spent seeking out minority students to attend Stanford. Today he's searching for them again.

Simmons says he hopes his "seek and find mission" will be able to locate approximately 1,200 former black students as part of a joint, six-month project of the Stanford Alumni Association and the Dean of Student Affairs Office.

The purpose of the effort is to survey the black alumni on how they feel their Stanford experience influenced their professional and personal growth, what their attitudes are toward the university, and what kinds of association they have had with other Stanford graduates and alumni clubs.

"We are interested in what these former students can bring back to the current and future student populations," Simmons explained. "One of the other spin-offs of the survey will be the development of programs and activities that students can do while here to make them more readily aware of and keen to alumni activities.

"We ought not have students come in here and feel they are not part of this university. The university's good health depends on the good will of its graduates."

Simmons is finding that it is no easy task tracking down former students. He's had to dig out his old files from the University Archives as well as research financial aid and registrar records. However, most addresses on record are usually outdated.

Simmons also plans on contacting parents of former students, since he believes that they are not as likely to have moved. In addition, he plans on enlisting the aid of the alumni he finds to help him spread the word and locate more people.

The largest concentration of alumni is believed to be in California, mostly the Bay Area and Los Angeles. Large groups of alumni are also thought to be in New York, Washington, D.C., and Texas.

Simons asks that any former black students contact him at P.O. Box 7275, Stanford, California, 94305 or at (415) 497-4568.

GLAS plans new scholarship offer

The Gay and Lesbian Alliance at Stanford (GLAS) plans to offer the University scholarship funds for a medical student who has shown a commitment to serving the gay community.

The funds would not be limited by sex or by the sexual orientation of the recipient.

The GLAS Steering Committee already has raised $550 toward such a scholarship and will seek additional funds for this purpose before April 15.

Meeting with University attorneys Russ Meyer and Iris Brest, GLAS representatives expressed hope the new scholarship would meet objections raised by the University to an anonymous gift offer of $500 toward a scholarship restricted to males who publicly identified themselves as gay.

Douglas Bernard of GLAS said the group would contact the anonymous donor, who had asked the University to inform the Gay People's Union at Stanford, the predecessor of GLAS, about the initial offer. GLAS hopes to enlist the prospective donor's support for their new proposal.

"Should the University refuse this (new) scholarship offer, the GLAS Steering Committee will attempt to negotiate modifications to the gift restrictions which are acceptable to the University and consistent with the spirit of the offer," according to a GLAS news release.

"GLAS believes it is important that the gay community demonstrate its willingness to work with the University administration, and that the University demonstrate its willingness to work with the gay community. . . .

"We hope the proposed scholarship will not only assist a medical student with a commitment to gay health care, but that the very existence of the scholarship, and its administration by a major university, will help make gay health care a more accepted and legitimate field of practice within the medical profession. . . .

"Besides the shortage of health care professionals with skills and commitment to serve the gay community. . .there has been little research directed at the health care needs of gay people."

Among the ways a commitment to serving the gay community might be shown, GLAS said, are 1) active involvement in an organization oriented toward serving the gay community, 2) pursuing a course of studies directed service to the gay community, or 3) doing research specifically directed toward developing health care techniques for gay men and lesbians.

Meyer noted that fairly wide consultation within the University would be needed before a decision would be reached on the prospective offer.

GLAS said that if an agreement could not be reached which was satisfactory to the Steering Committee, all funds collected would be returned to the original donors.

Gutenberg Express riders have choice

Users of the Stanford-Berkeley Gutenberg Express shuttle will be asked this month if they prefer paying for the ride or having the service cut down, according to Libraries director of administrative service Joe Jezukewicz.

The Gutenberg Express originating from Stanford has a general fund subsidy to cover the cost of this service. To assist the University in closing its budget gap, it has been suggested that the level of general fund support for the Gutenberg Express be reduced with revenue generated from a $2.50 one-way fare, or by eliminating the mid-day shuttle service, leaving only one round trip in the early morning and one in the late afternoon or early evening.

During the month of March, the Gutenberg registration service located at the Privileges Desk in Green Library will survey riders as to their preference between the current level of service with a fee or a reduced level of service with no fee.

Based on the results of this survey and input from the campus-at-large, a recommendation will be made to the provost this spring regarding the future service level of the Gutenberg Express.

Additional comments on this subject can be addressed to Jezukewicz, 245 Green Library.

Charles Horngren

Charles Horngren

Stanford Business School Professor Charles T. Horngren, 56, has been named recipient of the 1982 Distinguished Professor Award of the California Society of Certified Public Accountants.

The CPA Society cites Horngren for his "outstanding long-term contributions to accounting education and the CPA profession." He was presented with the award last month at the 1983 Accounting Educators and Practitioners Conference.

Horngren is the first person to have won both of the California CPA Society's special awards for accounting educators. The organization presented its Faculty Excellence Award to Horngreen in 1975.

Bernanke, Kreps, Macurdy

Stanford University professors have won three of six research fellowships awarded to young economics scholars from throughout the nation by the Alfred P. Sloan Foundation.

Selected as Sloan Research Fellows are Ben S. Bernanke, 29, David M. Kreps, 32, of the Graduate School of Business, and Thomas E. Macurdy, 31, of the Economics Department. Each will receive a two-year grant of $25,000 for basic research.

Bernanke, assistant professor of economics, will use the grant to continue his research in empirical macroanalysis. Kreps, professor of decision sciences, will use the funds to continue his game theory analysis of industrial competition. Macurdy, assistant professor of economics, will use his grant to continue empirical analysis of consumption and labor supply in a life cycle framework.

. . .and my father can beat yours up

Stanford ranks fifth nationally among research universities in its holdings, according to an index developed by the Association of Research Libraries and published in the *Chronicle of Higher Education*.

Harvard ranked first, followed by Berkeley, UCLA, and Yale. Toronto, Texas, Michigan, Illinois, and Columbia completed the top 10, in that order.

The index takes into account volumes held; gross number of volumes added; mircoforms held; current serials received; expenditures for library materials, binding, salaries and wages, and other operating costs; and number of professional and nonprofessional staff members.

In total volumes held, Harvard was first with 10.4 million, followed by Yale, 7.7 million; Illinois, 6.2 million; Berkeley, 6.1 million; Michigan, 5.5 million; Columbia, 5.2 million; and Stanford, 4.9 million, in round figures. UCLA, Texas, and Toronto were closely clustered behind Stanford.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medicals news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

'Burned' bankers may weaken U.S. world trade

The international banking system will survive the potential landslide of debt, hundreds of billions of dollars worth, which the Third World is unable to repay.

However, the bankers will say "No" more often to developing countries that ask for more loans.

This will constrict the one-third of U.S. trade that depends on the Third World.

Prof. Stephen Krasner, who makes these forecasts, is a Stanford political scientist who studies the world situation from a political rather than an economic point of view. Krasner's research focuses on the politics of international economic relations, particularly U.S. foreign economic policy.

He is now writing a book on the confrontation between the industrialized nations and the developing countries.

"I study how the actions and attitudes of nations affect international trade," he said in a campus interview. "The openness and liberalization that occurred in the international economic system after World War II very much depended on the power of the U. S. That is changing very rapidly now.

"The critical question is how far and how fast it will change in the future. For the first time in its history the U.S. is intimately involved and dependent on international trade. That was never true in our history up till about the 1960s.

"The share of American foreign trade as a proportion of our gross national product went up from about six percent in the 1940s to about 17 percent now. We are importing more than we export, so we have a negative trade balance. Our biggest bilateral deficit is with the Japanese.

"It is not clear whether the whole system of international trade is going to unravel because of the growing moves towards protectionism.

"Partly it will depend on the attitude of the U.S., partly on the staying power of various international institutions. I think it is quite striking that so many countries have turned to the International Monetary Fund to deal with the vast problem of world debts.

One unconventional view I hold is that the world system is not so interrelated that protectionism in one area necessarily leads to protectionism in others. For example, most nations have intervened in the market, in one way or another, in order to protect their domestic agriculture, but this hasn't necessarily meant that the rest of the system became more protectionist.

"I am not sold, for example, on the idea that U.S. restrictions on Japanese auto imports would automatically spill over into other areas.

"Twenty years ago the U.S. was in a position where it was able strongly to influence general political and economic developments in the rest of the world, but that is no longer the case either in American capability or in terms of American preferences.

"The world economic system is certainly more fragile but the fragility doesn't necessarily indicate that the system will shatter. But it might."

Was Krasner worried that the international bankers are owed hundreds of billions of dollars by such countries as Brazil, Mexico and Argentina?

"I don't believe that the principal of those loans will ever be repaid, in most cases. But that is by no means unprecedented historically.

"I don't think there will be a banking collapse or a liquidity failure of the sort we had in the 1930s. Why? Because the international banking system has far more official support than it had in those days. The system is certainly not going to fall apart.

"The problem is that bankers are likely to become excessively pessimistic in a way similar to their excessive optimism in the 1970s.

"The result will be that bankers will be much more reluctant to hand out loans. This will mean a lower level of world demand and downward pressure on the level of world trade, and on the level of economic activity as a whole."

Will the banks ask for guarantees from their domestic governments for loans to other countries?

"That they won't get. In most cases the loans that are now in peril were made to governments. I am sure that our banks won't get U.S. Government guarantees for foreign loans.

"This means that loans to developing countries will become less, perhaps much less, in the years to come. This will be compounded by the fact that if oil prices break sharply, which is quite possible, then the amount of money that banks have to lend will go down. This is because the banks will not have an avalanche of petrodollars to push out to anxious borrowers in the Third World."

Did this foreshadow a sharper confrontation between North and South?

"I don't think so, in fact it may have the opposite effect. Some countries, such as Brazil, will have more interest in striking deals that would be beneficial for the U.S. as well. For instance, both American bankers and Brazilian exporters have an interest in preventing U.S. trade restrictions."

Krasner was asked the reason for the high level of conflict between North and South during the 1970s.

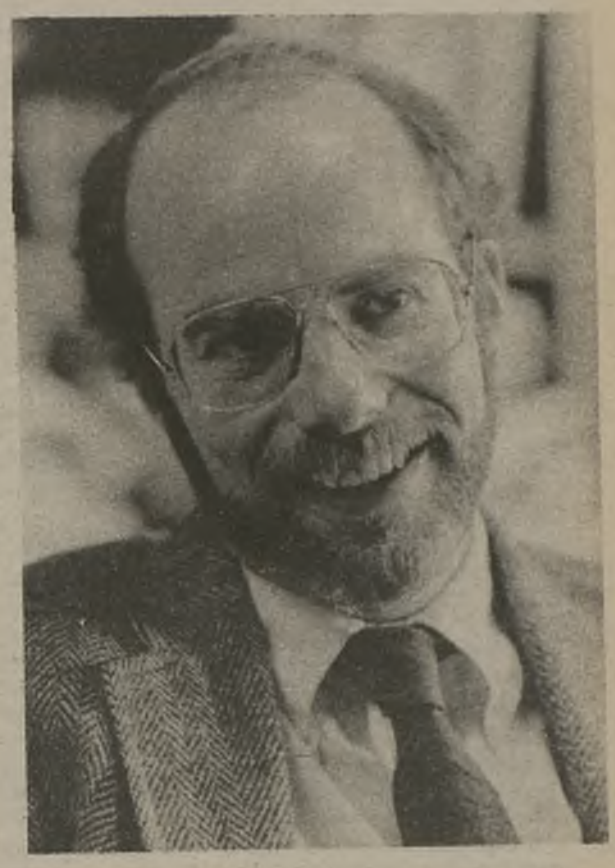
"I think the efforts by the Third World in the 1970s to get a new sort of economic order were very heavily motivated by political and not just economic concerns. These countries have problems of vulnerability, both domestically and internationally.

"Those weaknesses led them to try to change the rules of the game in the international system. The basic rules have been market-oriented, in other words the market determines the allocation of resources. This is great if you are strong and powerful, able to insulate yourself from or adjust to undesirable market pressures.

"The Third World countries, nearly all of which are weak internationally—with a few exceptions such as Brazil and Nigeria—also tend to be weak domestically. They will be in severe difficulties if world trade collapses. It would not only be a blow to their export-import trade, but also to government revenue.

"What the Third World wants to do is to change from basically liberally-oriented regimes to ones based on authoritative state allocation. Such efforts have had some successes but they create enormous tensions, because there is a real conflict of interest between industrialized states and Third World countries."

Why did the international bankers overlend in such an apparently irresponsible manner?



"Much of the attitude of the bankers is psychologically determined. In the 1970s they had a lot of oil money which they needed to put to work. They made a number of optimistic but not unreasonable assumptions about the future level of macroeconomic performance in the industrialized world, which would determine how much money the Third World countries could ask for.

"The bankers were optimistic about what U.S. interest rates would be— and these determine world rates. They made guesses about what oil prices would be. They were wrong. American interest rates skyrocketted, oil prices went up, and there was a recession in the North. Those wrong guesses led to the general recession.

"I think that most but not all of the bankers were excessively optimistic. The likelihood now is that they will be excessively pessimistic. They have been burned and made to look foolish.

"The basic problem is not that the banks will collapse, nor that there will be a world liquidity crisis, but that the overall level of lending will be lower than is warranted.

"This will be serious for the Third World and also present difficulties for the U.S. One-third of our exports go to Third World countries. So if Mexico, Brazil, Taiwan and Korea, for example, find themselves unable to finance imports from the U.S., it will have a dampening effect on American trade as well."

For the first time in its history the U.S. is intimately involved and dependent on international trade.

—Stephen Krasner

Won't this have the effect of making those countries which import substantial amounts of goods from the U.S. ask for loans from the U.S. government, in order to continue to do so?

"They will go through the I.M. F. rather than the U.S. The fund is now rapidly increasing its resources, in anticipation of this."

But the U.S. is the principal contributor to the fund?

"Yes, it puts in about 20 percent of its budget. The quotas were originally set just after World War II."

Surely the contributions should reflect countries' relative shares of world trade, in which case Japan and Germany should bear far larger burdens?

"There have been incremental changes, but the proportions have not fully reflected changes in world trade shares. U.S. contributions still reflect the sort of power that the U.S. had back in the 1950s.

"It would be more fair in some ways if America's falling share of world trade were reflected in our contribution to such institutions as the I.M.F. and World Bank. But equally, it is clearly in the American interest to make sure that we don't have short-term contractions in world trade, and that U.S. influence in the I.M.F. remains strong.

"I think we can see an American foreign policy emerging that is more oriented toward American interests in a narrow sense."

That is why U.S. aid to the Third World is going down?

"The U.S. is near the bottom of the list in aid given by major industrialized countries as a percentage of G.N.P. Some European countries have increased their aid substantially."

But from a low base, and in the cases of such countries as France, aid to countries which can be regarded as their satellites?

"Yes, and the Japanese are giving their money to

'New federalism' battles the tides of history, David Kennedy declares

President Reagan's "new federalism" battles the tide of history, says Prof. David Kennedy of the Stanford History Department.

While the federal government apparatus remains relatively small for a country as large as the U.S., its growth stems in part from the past shortcomings of state government, he maintains.

"Too often, as in the case of regulating interstate economic enterprises, the states have proven incapable of coping with problems whose real dimensions far exceed their geographic boundaries or political powers.

"Too often, as in the case of Depression welfare programs, they have been unwilling or unable to cope with problems even well within their strictly political jurisdiction.

"Too often, as in the case of gross rural over-representation in their legislatures, the states have perpetrated patent political absurdities.

"And far too often, the states have indeed been instruments of oppression.

"When asked to respect our 'traditions' of local government, one is tempted to recollect Winston Churchill's description of the 'traditions' of the British Navy—'grog, sodomy, and the lash."

David Kennedy

The benevolent myth

Alexis deTocqueville, whose writings contributed powerfully to the "largely mythical image of the benevolence of local American governments" conveniently overlooked the presence of two million slaves in America, Kennedy notes.

"It is only the central government, by virtue of its aloofness from local passions, that has proven capable—even if only occasionally—of lifting us above petty parochialisms and sometimes vicious prejudices, and holding us up to our own highest ideals, especially the ideal of equality. . . .

"Federal power has not expanded, as the British Empire was alleged to have done, in a prolonged fit of absent-mindedness, nor has it increased by some perverse process of national usurpation.

"It is even arguable that federal power has grown exceptionally modestly in this country. . . .

"To the extent that the U.S. has managed to preserve a less centralized governmental system than other modern nations, the explanation is perhaps to be found in the fact that we as a people have been singularly spared the scourges of modern warfare that have been visited upon almost every other society.

"It has not been our collective national virtue or political wisdom, but our fortunate—and entirely accidental—geographic location that has allowed us for so long to maintain our distinctive political system of *imperium in imperio*. . . .

"Decentralization is a luxury. . .affordable only in circumstances of guaranteed national security, abundant economic resources, and assured social peace.

"When all, or any, of these conditions are absent, a pressure arises—almost with the regularity of a law of nature—for unitary leadership from the center. . . .

"Contrary to popular legend, the First World War did not constitute a notably permanent advance toward federal intervention in the economy. Not a single one of the major wartime mobilization agencies survived; most, in fact, were disbanded within days of the armistice.

"The Civil War had left a much more long-lived legacy of centralized government agencies."

Kennedy is the author of a recent book on the impact of the First World War on American society, titled *Over Here*.

"Again, contrary to popular legend, Franklin Roosevelt's New Deal did not move aggressively in 1933 to snatch relief and welfare programs away from the states," he adds.

"By that date, after four grinding years of depression, the states were broke, many of them even on the brink of defaulting on their debt obligations.

"Virtually no states had unemployment compensation plans, and only 17 had old-age pension plans, most of those dismally underfunded.

"The states, in short, came begging for federal assistance; they did not have it roughly shoved down their throats. . . .

"There were then, as there remain today, compelling reasons for national uniformity of welfare programs, necessarily entailing federal administration. Without it, the most generous states justifiably fear becoming saddled with an unfair share of welfare costs, as they become magnets drawing the nation's needy.

"Poorer states are painfully tempted to deprive their citizens of social services, including adequate education, in order to attract industry by keeping their tax bases low. These fears and temptations thrive in an environment that lacks strong central government direction.

"The absence of that direction may not lead again, as it did in 1861, to a shooting Civil War, but it encourages a kind of federalist economic fratricide that is analogously harmful to the national interest."

His views were developed in a recent paper for the American Enterprise Institute.

Krasner/cont. from page 3

South East Asia where they have a lot of trade, and so on."

Such facts, Krasner says, reinforce his belief that economists are blinkered in their tendency to regard economic relations as autonomous, flowing along on their own, whereas economic behavior is more or less conditioned by political interests and power.

He believes that a statist interpretation which focuses on high-level policy-makers and their conceptions of national interest is superior to either pluralistic or Marxist methods.

Asked to develop this idea he said: "Most Americans, and many scholars, look on public policy as the result of conflict and compromise among opposing groups. Most people believe that public policy emerges from this pluralistic conflict, and that the great danger is that private groups will 'capture' the U.S. government.

"My view is that state institutions, especially the White House, the State Department and the Treasury, have a great deal of autonomy, in terms of the preferences they have, and a fair amount of autonomy in carrying out those preferences. Certainly not all the time, for there are many constraints, but a great deal of autonomy in implementing policy.

"In the research for my book, I studied about 15 cases of raw materials investments, in many of which there were conflicts between American public officials and American multinational corporations.

"What I found in almost all those cases was that the government prevailed. The final outcome reflects in a powerful way that the final decisions are made by the governmental institutions and not by the multinational corporations.

"The belief that American foreign policy is run by multinational corporations is just bunk."

But wasn't the American decision not to sign the draft Law of the Sea influenced by the multinational corporations?

"Industry was divided on this issue. However, the Reagan administration was concerned about restrictions on deep seabed mining and resentful of Third World influence on the Treaty's final provisions. The treaty illustrates the pitfalls of trying to negotiate with over 120 nations."

Krasner believes that the present period is a very challenging one for the U.S., both domestically and internationally.

"It is difficult domestically because we have a governmental structure that fragments and decentralizes power. At the same time we have social and economic problems that demand a coherent governmental response.

"Internationally, this is the first time in American history that the U.S. has been what I call a normal power, that is involved in the world but not able to control events. Up till 20 years ago we had an enormous amount of influence over the non-communist world. We were more powerful and influential than any other state has been in the last 500 years.

"Today much of that has changed. We are deeply involved with the rest of the world, and in many ways—oil for example—dependent on others. We do not have institutions or political traditions which allow us to function well in this sort of situation.

"On the domestic side decisions have to be filtered through so many layers of control and bureaucratic agencies. Another factor is that in the U.S. we have deeply-rooted ideological beliefs about the illegitimacy of too much power being given to central government.

"Yet we may now be entering a political and social environment where central decision-making is imperative."

Krasner believes that the Cancun world conference in 1981, which attempted to deal with North-South problems, was the last gasp of the universal negotiating process. He says there is not underlying consensus, only underlying disagreement.

"I think we are much more likely to have a stable international situation if only those countries negotiate which have a specific interest in a particular issue. This will be better than trying to secure general agreement on all issues. The failure of the attempt to get a Law of the Sea is an example.

"It will always be feasible to have negotiations between nations on issues of specific interest to particular parties, such as the question of emigration from Mexico, for example. But it is chimerical to expect general agreement in principles and norms between industrialized and developing countries. That simply won't be productive.

"The U.S. will continue to support liberal principles. Developing countries will favor more direct state control.

"Looking ahead, I think there are a relatively small number of Third World countries which are very important to the U.S. and the rest of the industrialized world. We shall have a lot of interaction with newly emerging industrialized countries such as Taiwan, Brazil, South Korea, Singapore, and a few big countries such as India.

"I think we shall ignore, or tend to pay much less attention to the rest of the Third World. The major industrialized countries will act in a similar manner. As a result there will be a number of Third World countries which will be ignored."

Three hundred students crowd Krasner's Political Science 35 "How Nations Deal with Each Other," which serves as the introductory course for the international relations major. He also teaches graduate seminars and undergraduate courses on American foreign policy, and the politics of international economic relations.

There are advantages at women's colleges —Nan Keohane

Women's colleges as separatist institutions continue to provide advantages for women that are not available to them in coeducational colleges, Wellesley College President Nannerl Keohane said Feb. 20 at a conference on communities of women held at Stanford.

Keohane was formerly a professor of political science at Stanford and head of the Faculty Senate.

Women's colleges, according to Keohane, provide the opportunity for women to obtain leadership training and for them to define themselves through forms of association such as clubs and sports and governance on their own terms.

They also make it possible for women to be treated seriously as scholars, for them to function in an environment without "hassle," no matter how subtle, and to form close friendships with other women.

"Of course there are still problems," said Keohane, "problems having to do with social life, with making male friends, with depression and eating disorders and with some pressures of ambivalence about sexuality.

"But the continuing advantages of separatism are clear. Until true and full coeducation is achieved, there must be room for a separate path, at least for some women."

The question whether, in the long run "in a better world" there will still be a need for single sex colleges for women is not resolved, she said.

"The reasons why a women's community such as a women's college and also communities of women within coeducational universities and wherever they may be found are important now for our lives are well expressed in an editorial in the most recent issue of the *Wellesley News* written by Wellesley undergraduates," said Keohane.

The editorial said in part:

"Our generation has been accused of being grim preprofessionals lacking social concerns, and expressing political apathy.

"We would like to contest that image. First, unlike the sixties, the eighties is a time of economic recession. The job market is tight. In order to compete in it with men, we must work as hard as men. That doesn't leave much time for volunteerism.

"For awhile it seemed that we might be the new superwomen, juggling family, career, and personal satisfaction while still leaving time for good works and political involvement. No one believes that anymore.

"Instead, we are at the beginning of a series of tough choices. Should we marry now, or later in our career? Should we have children early, later, or not at all? Do we want a job, a profession, or a career? Should we major in Anthropology or Computer Science? Rather than exhilarating, these choices are exhausting. Most of them lead us in the direction not of satisfaction or complacency, but of guilt. Will we neglect our children for our careers or vice-versa? Rather than supporting us, we find that society is adding more guilt. Who will read to the blind and put up campaign posters while we are in the board room?

"Further, we know that the fight is not over. Women do not have equal rights in this country, nor are they paid equally, but we cannot afford to solve this problem by withdrawing from the work force nor by becoming, at the expense of ourselves, superwomen. We must all accept equal responsibilities for the future as well as equal rights, as we share equally the pressure of finding employment as men.

"The fact that another more vocal generation chooses to condemn our lifestyles does not make them invalid. If our 'sisters' will not support us then we, at least, can start this year by supporting each other in what is going to be for many of us much tougher lives than Gloria Steinem ever led us to believe."

. . .we are at the beginning of a series of tough choices.
—Nannerl Keohane

The conference on communities of women was sponsored by SIGNS: Journal of Women in Culture and Society, The Center of Research on Women, and the Humanities Center. It was funded by a grant from the Rockefeller Foundation.

Attention must be paid to younger people in the country —Donald Kennedy

"The best single social test of a nation's regard for the future is the way it treats its children," according to Stanford University President Donald Kennedy.

As the huge post-war "baby boom" generation moves toward retirement over the next 30 years, "there is a real danger that we will increase our absorption with the end of the life-cycle, instead of attending to its beginning, where the future lives," he observes.

"The elderly deserve and need our help; I doubt they would ask for our preoccupation."

Former commissioner of the Food and Drug Administration, Kennedy says, "Our resources for health care and health research are selectively consumed by the diseases of age, while those of infancy are, by comparison, given less attention.

"As the head of a federal agency concerned with public health, I was constantly struck by the emphasis given to carcinogenic risks, which have their primary effects on older Americans, as compared with equally prevalent teratogenic risks, which affect the very young.

"Within the past few years, we have watched our welfare system stagger as benefits to the retired under Social Security rise twice as fast as the wages paid in by younger workers.

"And a sluggish job market, clogged by the overabundance of young people, has made youth unemployment a chronic national disease—and we have meanwhile decreased entry-level opportunity by delaying or abolishing mandatory retirement."

Public education

Public schools deserve increased support, he adds. "In 1969, national expenditures for education and health were about equal. Now we spend only two-thirds as much on education as on health."

Stanford, Yale, Harvard and Berkeley are among the major research universities now focusing attention on public primary and secondary education.

"The business community has also been more active at the local level in school improvement," he notes. Both need "to build a national faith that the schools can be improved and that success in that venture will guarantee our future."

Years ago, he noted, "the argument for public responsibility was that it spared matters important to the society's future—like investment in the education of the young, the management of non-renewable resources, and the conduct of innovation—from market forces we feared were heedlessly concentrated on the present.

"But these public responsibilities have become more and more vulnerable to the short-term payoff incentives of the electoral system."

Since 1968, he notes, federal support for non-defense research and development has declined 38 percent, with half of the decrease taking place in the first two years of this decade.

One third of the pupils enrolled in New York public schools now are defined as chronic truants—"that is, they are absent essentially all of the time," he adds.

"Society is not managing its capital in a future-oriented way," either in human talent or in "hard" capital assets that improve productivity.

Many highly publicized visions of the future "turn out to be higher in entertainment value than in utility," he observes. "For example, the latest entrant in the Grand Scenario parade is a float called the High Technology Society. It depicts an industrial culture in the U.S. based entirely on smokeless information—an appealing vision indeed.

"But there are a number of things wrong with it.

"First, both the number of jobs it will create and their average skill level have been overstated.

"Second, computers and similar products move a lot of wealth but create relatively less than the classical extractive and productive sectors.

"Finally, we just can't get along without what we now please to call low-tech; we can't afford the balance-of-payments losses, and we can't get along without the stuff it makes.

"It is all very well to be entranced by our future. But we should avoid the fate of Holden Caulfield, the hero of *Catcher in the Rye*, who was 'not merely entranced by beauty, but impaled upon it.'"

Kennedy's views were developed in a Feb. 18 talk to the Young President's Organization in Phoenix, Arizona.

Mosher 'took full advantage of the situation' when China first opened its doors

continued from page 1

briefly at the commune in Guangdong province.

Soon afterwords, Mosher said, "she went to Peking. . . (and) began to cooperate in a Chinese campaign to slander me." He has not seen her in two years and the University refused to disclose her whereabouts to him, at her request.

Mosher said Prof. Jane Collier, head of the three-member faculty investigation group, had written a statement in the final report on the basis of "a half-dozen phone calls" with So.

Talking later with reporters, Barnett emphasized that the committee had relied only on materials from sources willing to be identified both to Mosher and the full anthropology faculty.

Mosher was given an opportunity to reply to the report both in writing and in person. Flown from Taiwan to Stanford at the University's expense, he spoke for 45 minutes at a closed session of the department faculty Thursday morning, then answered questions.

The faculty then deliberated its decision while Mosher met reporters. After learning of the decision from Barnett at 4 p.m., Mosher said his former wife was "obviously lying" and "reluctant to put things in writing."

In effect, he added, "the reason Stanford is not making the report public is that they offered my ex-wife confidentiality in return for this statement."

Reasons not given

All 11 professors who participated in the decision signed a statement that "the faculty does not intend to publicly discuss or release the substance of the report and we have urged Mr. Mosher to exercise the same discretion."

Stamped "confidential," the cover of the report—shown to reporters by Mosher— said it "contains information that may be injurious to innocent parties."

Mosher said "the only innocent person harmed was myself."

Earlier, looking tired and drawn, he calmly described how hundreds of peasant women were coerced into abortions when the Chinese government drastically tightened its family planning program months after they had become pregnant.

In a commune of 80,000 there were as many as 400 abortions a month early in 1980, he said.

"Perhaps I should have seen" that publishing an article on this in the popular press of Taiwan a year later "would upset many" and "perhaps I should not have permitted the photo to be printed," he conceded.

Published in the *Sunday Times China Weekly* his photo showed a woman in advanced pregnancy being prepared for abortion. She was naked around the waist and her face was fully visible.

The concept of privacy "does not exist in the current Chinese state," Mosher said. With Chinese censorship, the peasant "will never see that" photograph.

Under questioning, he added, "I should have published the article under my name" instead of using only his first two names, Steven Westley.

Faculty greatly upset

Mosher said publication of the article and picture in what he described as a Taiwanese "clone" of *Time* magazine "upset the Stanford faculty greatly."

He had presented the same material to an academic audience in Taiwan without controversy. Mosher said that Prof. William Skinner of Stanford, a member of his doctoral dissertation committee, had described his article as "good" before it appeared in the popular press.

Mosher submitted a similar piece to *Asian Survey* which published it around April, 1982. This was delayed several months because of what Mosher called the reaction of "angry academics" after the Taiwan publication.

He felt it was "necessary" and "appropriate" to make the birth control information public "sooner than the body of work" stemming from his field research. He expects MacMillan will publish his book, *Broken Earth: The Rural Chinese* later this year.

Lots of pressure

The popular article generated "a great deal of pressure" and hate mail from other Sinologists, who said there was "no possibility" of changing Chinese practices by such means, Mosher noted.

The faculty "never questioned the truth of (my) charges" about birth control. "What they have questioned is my right to say the truth at a time and place of my choosing."

During the course of the faculty meeting Thursday, Mosher told reporters, Prof. Arthur Wolf admitted he had heard charges in Peking about Mosher's work that led to the faculty investigation. It was "irresponsible behavior" for Wolf to raise these issues "without contacting me," Mosher said.

Wolf was in China doing research on several different communes from September 1980 until August 1981. Contacted by Stanford News Service, he said he had first learned of the Chinese charges against Mosher through correspondence from faculty colleagues on campus, who provided him with a copy of Mosher's response. He found this "quite convincing."

Only 48 hours prior to his planned departure from China, he was personally briefed by his Chinese hosts and decided to discuss their concerns further with the U.S. Embassy. On his return to campus, he told his faculty colleagues there might be a serious problem but "they already knew more about it than I did," Wolf said.

Wolf responds

He noted that Mosher "never informed me" of the Chinese accusations, even though he was head of Mosher's dissertation committee. Wolf resigned this position.

Both Skinner and Wolf heard Mosher's presentation to the faculty Thursday, but left the room and did not participate in either the deliberation or the vote to avoid any possible conflict of interest.

Mosher told reporters that the faculty was "well aware" the Chinese "threatened harm" against exchange programs unless he was disciplined. "The extent to which they succumbed (to this threat) only the Stanford faculty knows," he added. Mosher's research in China was done as an independent scholar, arranged through the Committee on Scholarly Communication with the PRC.

Mosher told reporters he had "no strong political feelings" when he first went to China. "My disillusionment was very gradual," shaped by what he learned from "peasants, workers and officials."

Women now literally "take to the hills"

'Perhaps I should have seen' that publishing an article (on Chinese abortions) in the popular press 'would upset many' and 'perhaps I should not have permitted the photo to be printed.'

—Steven W. Mosher

when the government intensifies its birth control program with personal checkups every six months. Infanticide by parents is increasing, especially for female babies, who normally leave home after marriage. Sons remain responsible for older parents.

While he did "nothing unethical or unprofessional" in China, Mosher said, "I took full advantage of the situation." Official rules were few as "the world's largest bureaucracy"—the Chinese government—proved slow to respond to changes stemming from normalization of relations with the U.S. The current restraints on scholarly research there "certainly derived in part from some of their concerns with me," he added.

Anthropology is "a very loose discipline" with "no elaborate codes of conduct," he declared. "Every researcher who works alone in the field has to decide how to protect his informants. . . how to protect privacy. . . in what manner to publish his work.

"I could only use my best judgment. If others think that judgment was somehow lacking—and they certainly do—then that's their opinion. . . .

"Regardless of the faculty decision, I will continue to write up my research in China."

Termination from the Ph.D. program may "hang like a cloud over me for the rest of my life, but it should not undermine my credibility as a reporter of events." He suggested his style might resemble that of Margaret Mead's accounts of Samoa.

Talking with reporters before the decision, he said that without a Ph.D. "I would not be able to go on to an academic position. I would essentially have to support myself doing creative writing. I would be a pariah. I would be outside academia.

"It would essentially put my academic career on academic hold for the rest of my life."

In his letter to Mosher, Barnett said the faculty "wishes to emphasize that the decision to terminate you from the program was made with great regret."

Professorial votes

"You have had an excellent academic record, and as with all advanced students, the faculty feels that they have invested very heavily of their time and effort in your training. The decision was made after careful and full consideration of the facts of the case and extenuating circumstances."

Active, tenure-line faculty joining in the vote included Profs. William Durham, James Fox, Charles Frake, James Lowell Gibbs Jr., Joseph Greenberg, Gilbert Herdt, Renato Rosaldo, Bernard Siegel, Robert Textor, and Sylvia Yanagisako. Harumi Befu had to leave before the four-hour session ended.

Collier and several other faculty currently are in the field.

An additional four hours elapsed before Mosher received Barnett's letter and made it public.

Mosher said the 47-page committee report covered three basic points: his Taiwan article, statements by the investigating committee for his ex-wife, and statements by the Chinese communist government.

"I will use every resource at my disposal" to contest the outcome, he said. Existing student grievance procedures provide for written appeal to the dean of the School of Humanities and Sciences, the vice provost and dean of graduate studies and research, and finally to the president.

Mosher said he has consulted an attorney, but noted that the case was "very complex" and could cost $3,000 to $5,000—"not an easy sum" for a graduate student to obtain.

Background on Mosher

Now 34, he lives in Taiwan with his new wife, a teacher. His parents live in Fresno. A graduate of Hoover High School in Fresno, Mosher received bachelor's and master's degrees from the University of Washington and came to Stanford in 1976.

He expects to stay in California about three weeks and visit his publisher in New York before returning home. His father sat quietly in the background through most of the discussion with reporters. A departmental flyer posted in the halls noted that graduate students would hold a discussion on ethical questions in field work that night. Mosher was not included on the program.

—Bob Beyers

Mosher accuses Peking of 'campaign of slander,' makes no apologies to anyone

Following is a statement by Steven Mosher, Stanford graduate student in anthropology, dated Feb. 9, 1983.

In 1979-80 I carried out a community study of a production brigade—what formerly would have been called a village—in the People's Republic of China as an exchange scholar under the newly signed U.S.—P.R.C. cultural exchange agreement. My research was the first and, as it turned out, the last full-length rural field study ever permitted by the Communist Chinese, who quickly realized that it was not in their interest for the impoverished and oppressed conditions under which rural Chinese live to become generally known.

Although these conditions were in many respects depressingly dismal, in my experience nothing topped the population control program for sheer barbarity. I found that abortions—were regularly carried out on women seven, eight, and even nine months pregnant, often against their will, and that there were even occasional cases of officially instigated infanticide. PRC statutes which prohibit these and other inhumane practices were simply ignored by Communist cadres in their drive to meet the stringent birth quotas they were given.

Primarily because of my efforts to bring these atrocities—and here I choose my words as carefully as I can—to the attention of China and the West, Peking officials have embarked upon a campaign of slander intended to destroy my academic reputation and undermine the credibility of my charges. Since fall 1980 each American academic exchange delegation to visit Peking has had to sit through a lengthy recounting of the research improprieties I am alleged to have committed.

There is another reason I have been singled out. Out of the more than one hundred research scholars who have thus far participated in the U.S.—P.R.C. exchange program, I am the only one who has yet to receive the Ph.D. degree, who does not hold an academic position, and who does not enjoy the support of an academic institution. Peking correctly calculated that I could be slandered without fear of American reaction. American scholars, including those at Stanford, instead of coming to my defense, have abandoned me. Stanford University, rather than aiding my cause, has subjected me to an investigation.

The final report produced by the Stanford investigation, which has run on an incredible 17 months and has caused me much mental and emotional suffering, follows the PRC line in falsely accusing me of "grave misconduct." It recommends "the termination of Steven Mosher's doctoral candidacy in Anthropology."

* * *

Everything was in flux when I first arrived in China, and I was allowed to carry out my study of a village without official supervision or even surveillance. *Newsweek*'s characterization of me as adopting "a freewheeling style that smacked more of Indiana Jones than Margaret Mead"is exaggerated, but it is true that I took full advantage of the unprecedented latitude I was given by Peking to gather a wealth of information on all aspects of life in the Chinese countryside.

Not that all was smooth going. In the opening stages of my research several misunderstandings occurred. In February 1980 I received a note from John Jamieson, the U.S. Academic Adviser in Peking, informing me that Peking had expressed concern that I had (1) imported a van, (2) engaged a research assistant from Hong Kong, (3) obtained sensitive documents, and (4) hired local villagers to help with my research. Peking's charges were false and fatuous, since I had received permission from provincial authorities for the van and assistants, and the rural reports and notices I was gathering could scarcely be considered "sensitive," but I nevertheless bent over backwards to alleviate Chinese concern.

Immediately and on my own initiative, I (1) requested and received permission to donate my van to the local village, (2) sent my assistant back to Hong Kong, (3) became more circumspect in collecting written materials, and (4) requested that Jamieson convey to the Chinese that I was not hiring locals to help with my research, although under arrangements made by provincial officials villagers were helping me with domestic tasks. I even wrote a letter to Peking expressing my regret over any misunderstandings that had arisen.

These steps had the desired effect. On May 2, 1980, I was notified by the Committee on Scholarly Communication with the People's Republic of China, the semiofficial body charged with overseeing the American end of the exchange program, that "there has been a resolution of questions and concerns raised in Peking."

During these same months, though, I had grown increasingly concerned about China's birth control movement. I witnessed first-hand the spring 1980 campaign in my commune, and saw hundreds of often very pregnant women forced to undergo abortions. Initially I felt that these excesses were caused by overzealous local cadres, of whom there are many in China. After some deliberation, I decided to contact Vice-Premier Chen Muhua, who heads the national birth control program, about the problem. The short, carefully worded report I sent her pointed out that in Guangdong Province, where I was doing my commune study, the PRC's own birth control regulations, which forbid abortions after the sixth month of pregnancy and the use of coercion, was being regularly and systematically violated. By bringing these violations discreetly to the attention of the high official directly responsible for overseeing the program, I was hoping that there was a hard core of integrity and decency in the upper reaches of the Deng-led Communist Party capable of mitigating its own evils.

I was naive. During the year after I sent this report the campaign continued, indeed, intensified. I began to receive reports that to escape abortion women were taking to the hills at the onset of each semiannual birth control campaign, there to give birth under the most primitive of conditions, without medical facilities or trained midwives. More tragically still, infanticide began to reappear as families sought to reserve their quota of one child for the birth of a boy.

The only achievement of my report was to anger the Peking authorities. Not only did they now resurrect their old complaints about the van, the assistant, and "sensitive" material, they embellished them beyond belief. As relayed to me by former Carter Administration China adviser Micheal Oksenberg, the van was now alleged to have been used to bribe village officials, and the originally "sensitive" material was upgraded to "highly classified materials. . . .state secrets, particularly about the work of the public security forces and the Communist Party, which caused Chinese officials in Peking to believe that (Mosher) was an intelligence agent." Nor was this all. I was also accused of having travelled in the van through South China without proper authorization (even though I had been issued a valid travel permit for the trip), and of trying to exit the country with "undeclared gold coins."(In fact the coins were not gold but copper, had been approved for export, and were declared by me to customs—which confiscated them anyway.) In short, by questioning the implementation of the birth control program I had drawn the wrath of the Chinese powers-that-be, whose instinctive response to criticism is to crush it.

Another reason why Peking chose to renew their allegations against me at this time was their desire to restrict research on contemporary social problems. The Chinese cannot live with American social scientists getting on the inside of their society. At the same time, they were anxious to ensure that this move would not adversely affect their ease of access to American academic and research institutions and the transfer of American technology. What better way to accomplish this than to select from among past American researchers someone to blame this shift in policy on, and further forestall reprisals by enlisting American academics and scholarly organizations in the effort to scapegoat him.

So it was that the Chinese began threatening American scholars with "negative consequences" for the exchange program if I were not punished. To give just one example, in a conversation with Kenneth Prewitt, President of the Social Sciences Research Council, held in Peking on Nov. 14, 1981, PRC official Zhao Fusan stated that "the exchange program could be harmed if the American scholarly community took no action on what the Chinese regarded as improper behavior by Mosher." (Letter from Kenneth Prewitt to Stanford University.) Even though the Communist Chinese have since banned social science research altogether, they continue to demand that I be punished.

In the meantime I decided that the time had come to begin making public the excesses of the Chinese birth control program. In an article first published in Taiwan, and then later in the United States, I detailed the progress of birth control in the Chinese countryside. This article was factual, Peking was imposing its will on a powerless populace. Pictures that accompanied the article showed young village women seven and eight months pregnant being prepared for abortions. One of these was picked up and carried in the Nov. 2, 1981 issue of *Newsweek* (without permission).

It was this graphic evidence of human rights violations that led Peking to go public with its charges against me. In a formal statement sent to Stanford University, the Communist Chinese claimed that "the photographs taken by Mr. Mosher during his stay in (China) exceeded the scope of his research topic (and) had nothing to do with any conceivable social science research topic." After repeating a number of earlier allegations, the statement concludes that "We hope that Stanford University will deal with this matter severely and that (we) be informed as to its disposition." (Copy of statement enclosed.) In effect, they asked for my head.

It is a measure of the success of my research that the Chinese Communists are so anxious to discredit it. They are apparently acting under the belief, shared by some American academics, that if I am expelled by Stanford University my work in China will go unpublished. They could not be more wrong. Although I face certain financial hardship in continuing to write without the support of an academic institution, I have an obligation to the rural Chinese whose lives I shared to document the reality of village life under Communism. My first book, entitled *Broken Earth: The Rural Chinese*, will be published by MacMillan later this year. Others will follow.

I have long since given up the naive notion that the Communist Chinese will correct their own abuses in the area of birth control. Neither do I expect that these abuses will be curbed by embarrassing the PRC before Western public opinion. But I have at least borne witness to them in articles and photographs. And I apologize to no one for having done so.

Steven Westley Mosher

Letter from Barnett disclosed by Mosher

Following is a letter from Anthropology Dept. Chair Clifford Barnett informing graduate student Steven W. Mosher that he has been terminated from the Ph.D. program. It was released by Mosher shortly after Barnett gave it to him.

I am writing to inform you of the decision taken by the faculty of the Department this morning to terminate you from the Ph. D. Program in Anthropology.

The faculty of the Department unanimously endorsed the findings, conclusions, and recommendations contained in the Report of the Ad Hoc Investigating Committee. You have a copy of that report as well as all of the documents which are utilized in drawing up the report.

As you know, the cover of the report states that: "It contains information that may be injurious to innocent parties." You have remarked on the truth of this statement in a letter you wrote when you received a copy of the testimony contained in the Report. For that reason the faculty does not intend to discuss publicly or release the substance of the Report and we urge you to exercise the same discretion.

The faculty wishes to emphasize that the decision to terminate you from the program was made with great regret. You have had an excellent academic record, and as with all advanced students, the faculty feel that they have invested very heavily of their time and effort in your training. The decision was made after careful and full consideration of the facts of the case and extenuating circumstances.

If you have reason to believe that the decision was unjust, either substantively or procedurally, you may file a grievance. To do so, as you know from the material I sent you earlier, you can address an appeal to Dr. Norman Wessells, Dean of the School of Humanities and Sciences.

Sincerely,
Clifford R. Barnett, Ph.D.
Professor & Chair, Anthropology

Faculty statement

Following is a statement released by the Anthropology Dept. faculty members who voted to terminate Steven W. Mosher from the Ph.D. program.

The Faculty and the Department of Anthropology who participated in the discussion and vote taken on the case of Mr. Steven Mosher have subscribed to the following statement.

The full substance of this case is contained in the Report of the Ad Hoc Investigating Committee and in the documents which are attachments to the Report. Mr. Mosher has a copy of the Report and of all of the documents that were utilized in drawing up the Report.

The cover of the Report states that: "It contains information that may be injurious to innocent parties." Mr. Mosher has remarked on the truth of this statement in a letter he wrote when he received a copy of the testimony contained in the Report. For this reason, the faculty does not intend to publicly discuss or release the substance of the Report and we have urged Mr. Mosher to exercise the same discretion.

Contaminated 'heroin' provides clues to Parkinson's

The freak accident in a drug dealer's laboratory that sent several young Bay Area heroin users to the hospital with symptoms of Parkinson's disease last summer may have opened a new door to understanding and treatment of the disease, according to research by Stanford University scientists.

A poison, probably made as an accidental byproduct when a kitchen chemist used too much heat or acid in preparing a homemade batch of a narcotic, has been found to selectively kill cells in the part of the brain most severely affected by Parkinson's. If the drug induces the same symptoms in laboratory animals—and preliminary research indicates that it does—the physicians may have uncovered an animal model for the disease.

"The six young people we have studied have symptoms that are virtually indistinguishable from Parkinson's," said Dr. J. William Langston, an assistant professor of neurology at Stanford who conducts clinical research at Santa Clara Valley Medical Center in San Jose.

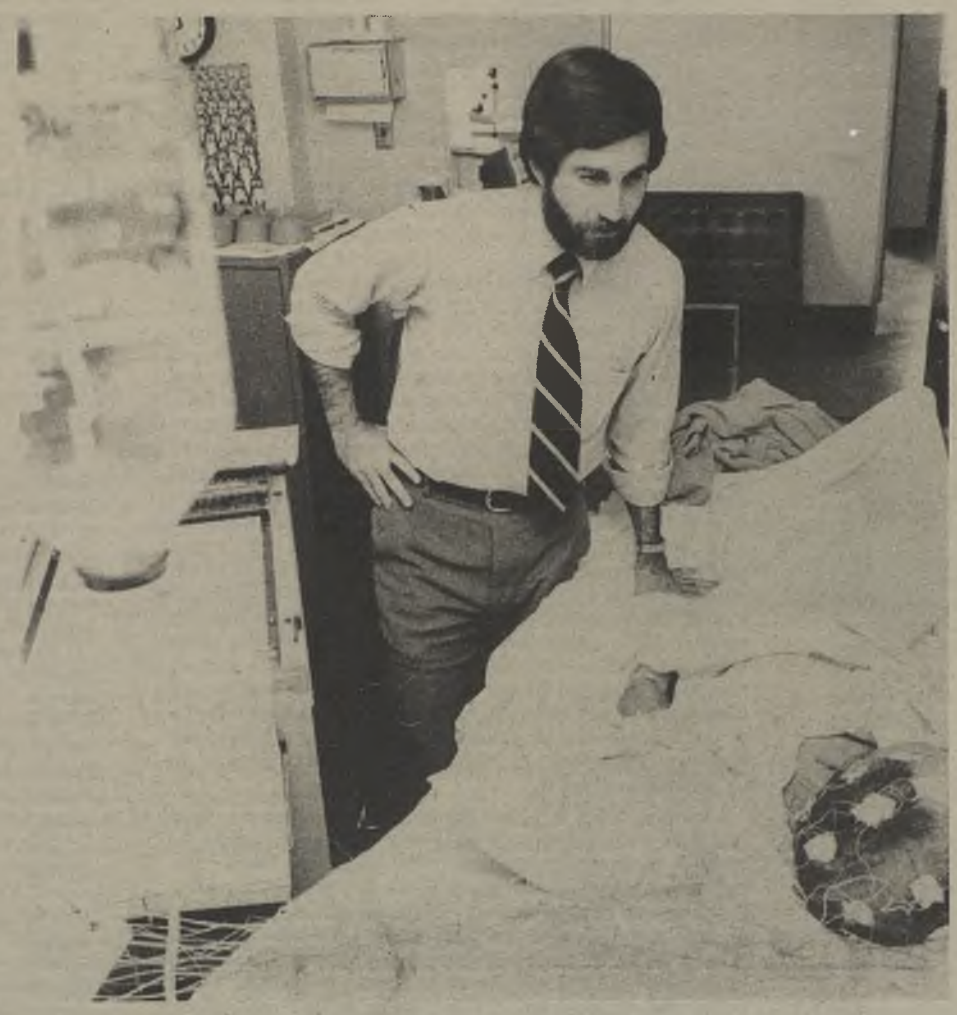
"The rigidness of posture, slow movement, and tremors are classical Parkinson's symptoms. But Parkinson's is a disease of the elderly, and these are young people. We were stunned when they came in."

Langston and colleagues Philip Ballard, James Tetrud and Ian Irwin reported their findings in the Feb. 25 issue of *Science* magazine.

The findings are significant for two reasons, Langston said. "First, if the drug has the same action in animals—and early indications from the National Institute of Mental Health indicate that it does—we'll have a new way of studying potential treatments for Parkinson's disease."

Until now, creating an animal model of the disease has been difficult because no other substance tested is specific enough to selectively affect only those cells responsible for Parkinson's.

"The second implication is more theoretical, but potentially just as important," he said.



Understanding the disease

"No one knows why, but in some diseases, such as Parkinson's, only certain specific brain cells die. One theory says that as some people get older, waste products accumulate in these nerve cells—the cells can't take out the garbage.

"Now we have a drug that we're pretty sure is toxic to only these cells," he said. "As we learn more about the chemistry and function of this drug, we may get a clue to understanding what's happening in the natural disease."

The chemical culprit responsible for the artificial Parkinson's seems to be 1-methyl-4-phenyl-1,2,5,6-tetrahydropyridine, called MPTP for short. Used as a tool in synthesizing other chemicals, MPTP has had no known biological properties, and has been readily available from the Aldrich Chemical Company for years, Langston said. However, he added, the recent findings have prompted the Bureau of Narcotics to begin reclassifying the chemical as a "controlled substance."

Langston theorizes that, while attempting to make a drug similar to the analgesic Demerol with "a little more kick," a drug dealing chemist mistakenly produced MPTP instead, and sold it on the street as heroin. Drug users from Salinas to Santa Clara county bought the contaminated drug and injected it. At least six developed full blown, advanced stage Parkinson's symptoms.

Langston monitors a neurology patient. In a detective story that stretched from coast to coast last summer, Langston and colleagues traced six cases of apparent Parkinson's disease to a contaminated batch of a drug dealer's narcotic. Their findings, published in last week's *Science*, may help scientists simulate Parkinson's in animals, Langston said, as an aid to understanding and treating the disease.

While researching the bizarre occurrence of the disease in young people, Langston and his colleagues found a case reported in 1979 of a graduate student who developed the same symptoms after injecting homemade drugs.

"For four to six months he had been synthesizing MPPP (using a reaction which produces MPTP as a by-product) and injecting it intravenously without problems," the researchers wrote. (MPPP stands for 1-methyl-4-phenyl-4-propionoxy-piperidine, a chemical closely related to MPTP in structure.) "Apparently, after taking several 'shortcuts' in synthesis and injecting the resulting product, he developed marked parkinsonism."

When the student died of a drug overdose two years later, an autopsy of his brain showed substantial, selective damage to his substantia nigra, an area half the width of a pencil and two inches long at the base of the brain, that is involved in coordinating movement. Damaged cells from that region looked "indistinguishable" from analagous cells in elderly patients with advanced Parkinson's disease, Langston said.

"This situation is both tragic and ironic," Langston said. "Usually scientists try a lot of substances in animals first, in their attempts to understand mechanisms and treatments of disease, long before they're tested in humans. It's very ironic to develop the animal model in humans first."

Where to call

All six of the patients Langston has thus far studied injected multiple doses of the drug, ranging from five grams over four days to 20 grams over five to eight days.

"But we have some evidence that even one dose of this chemical may have permanent effects," said Langston, who urged anyone who thinks they may have used some of the contaminated drug to contact the department of neurology at the Santa Clara Valley Medical Center, (408) 279-5246, for confidential testing.

"Heroin" contaminated with MPTP triggers a burning sensation during injection, and frequently causes hallucinations, said Langston. Precise laboratory tests can confirm or debunk a suspected case of MPTP poisoning.

"Though the people who have had only one or two doses may have no Parkinson's symptoms now, they may be at greater risk for developing symptoms at some point in the future," Langston said.

Though the exact mechanism of Parkinson's disease is unclear, one result of destruction of the brain cells is a reduction in the vital neurotransmitter dopamine. In current treatment for the disease, Parkinson's patients take daily oral doses of "L-dopa," a substance the brain can use to make more dopamine. Patients with the disease get progressively worse over a number of years, though the L-dopa treatments can permit them to return to normal lifestyles.

The patients Langston has studied who injected MPTP have responded just as well to L-dopa treatments, he said. However, side effects from L-dopa, such as movement disorders, which usually occur in Parkinson's patients only after years of treatment, already are appearing in some of the young patients.

—Deborah Franklin

Guest lecturer to discuss multiple sclerosis

Dr. Byron Waksman, a noted investigator in neuroimmunology, will deliver the seventh annual George A. Zimmermann Lecture at Stanford University Medical School Friday, March 4.

His talk, "Is Research on Mutliple Sclerosis Getting Anywhere?" will begin at 4 p.m. in the Fairchild Auditorium. It is open to the public.

Waksman, an internationally recognized authority on immunology, has been director of research programs, National Multiple Sclerosis Society, since 1979. He has made numerous contributions to the understanding of immune disorders of the nervous system.

Waksman was appointed professor of microbiology at the Yale University School of Medicine in 1963, and in 1964 he became chairman of the department. Since 1979 Waksman has been an adjunct professor of pathology and biology at Yale University and adjunct professor of pathology at New York University. He served as president of the American Association of Immunologists in 1970-71.

Waksman has published more than 250 papers in the field of immunopathology, especially dealing with autoimmune reactions, reactions of "cellular" hypersensitivity, the role of the thymus, specific acquired tolerance, suppressor cells and their mediators, cyclic nucleotides in the regulation of immune responses, and cell cycle phenomena in lymphocyte function.

The Zimmermann Lectureship was established by the Department of Neurology in 1977, as part of a gift by the late George A. Zimmermann, a long-time San Francisco businessman, for multiple sclerosis research and treatment at Stanford.

Changes with new Medi-Cal contract to be minimal

A contract with the state to continue to provide care for Medi-Cal patients has been signed by Stanford University Hospital officials.

Stanford was among six hospitals on the Peninsula notified by telephone Feb. 4 by the Medi-Cal special negotiator that a contract would be sent for hospital review and signature. The contract, effective March 1, was negotiated under a law passed last year by the state Legislature in an effort to reduce Medi-Cal costs.

The effect on most hospital operations at Stanford will be minimal. In fact, "physicians, patients, and most of our staff will not notice any difference when the contract takes effect," said Sheldon King, executive vice president and director. "The same authorizations for treatment will be required, and there will be no change in the care patients receive."

Medi-Cal contracts do not cover care for Medically Indigent Adults (MIAs). Since Jan. 1, county facilities have responsibility for care of MIAs.

The main change under the new Medi-Cal contract at SUH will be in the billing department, King said. The hospital will be reimbursed at a single daily rate for each patient, regardless of the severity of the illness or the extent of the treatment.

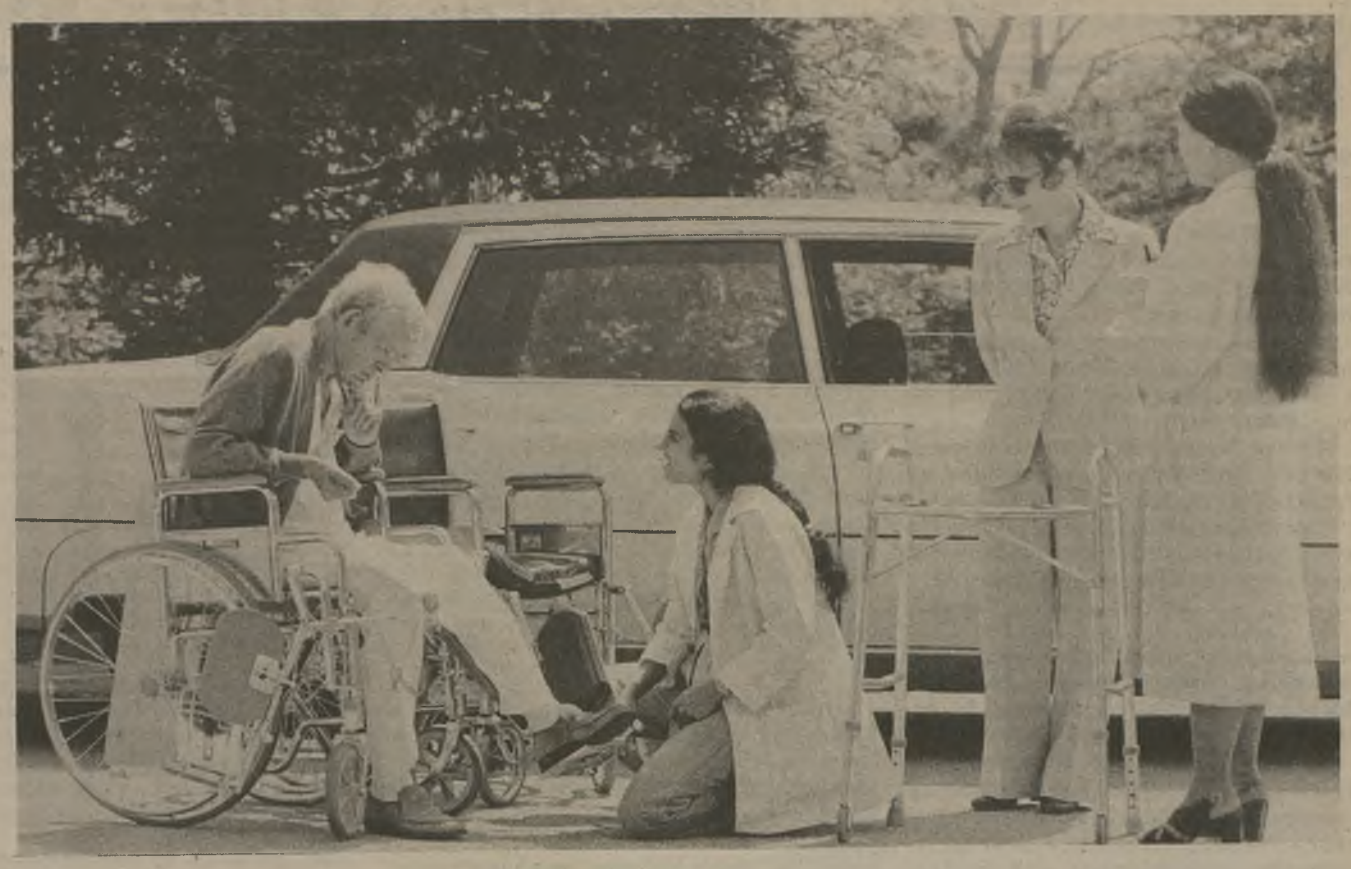
In the past, the state reimbursed hospitals for "reasonable" costs incurred for treatment of Medi-Cal patients. These costs differed according to the intensity of care and amount of services required by the individual's illness.

King said that if the current level of Medi-Cal patients at Stanford is sustained, the hospital will be able to manage with the current single reimbursement rate. If, however, it receives a heavy load of very ill patients requiring intensive and expensive care, the new rate might be difficult to accept for a prolonged period.

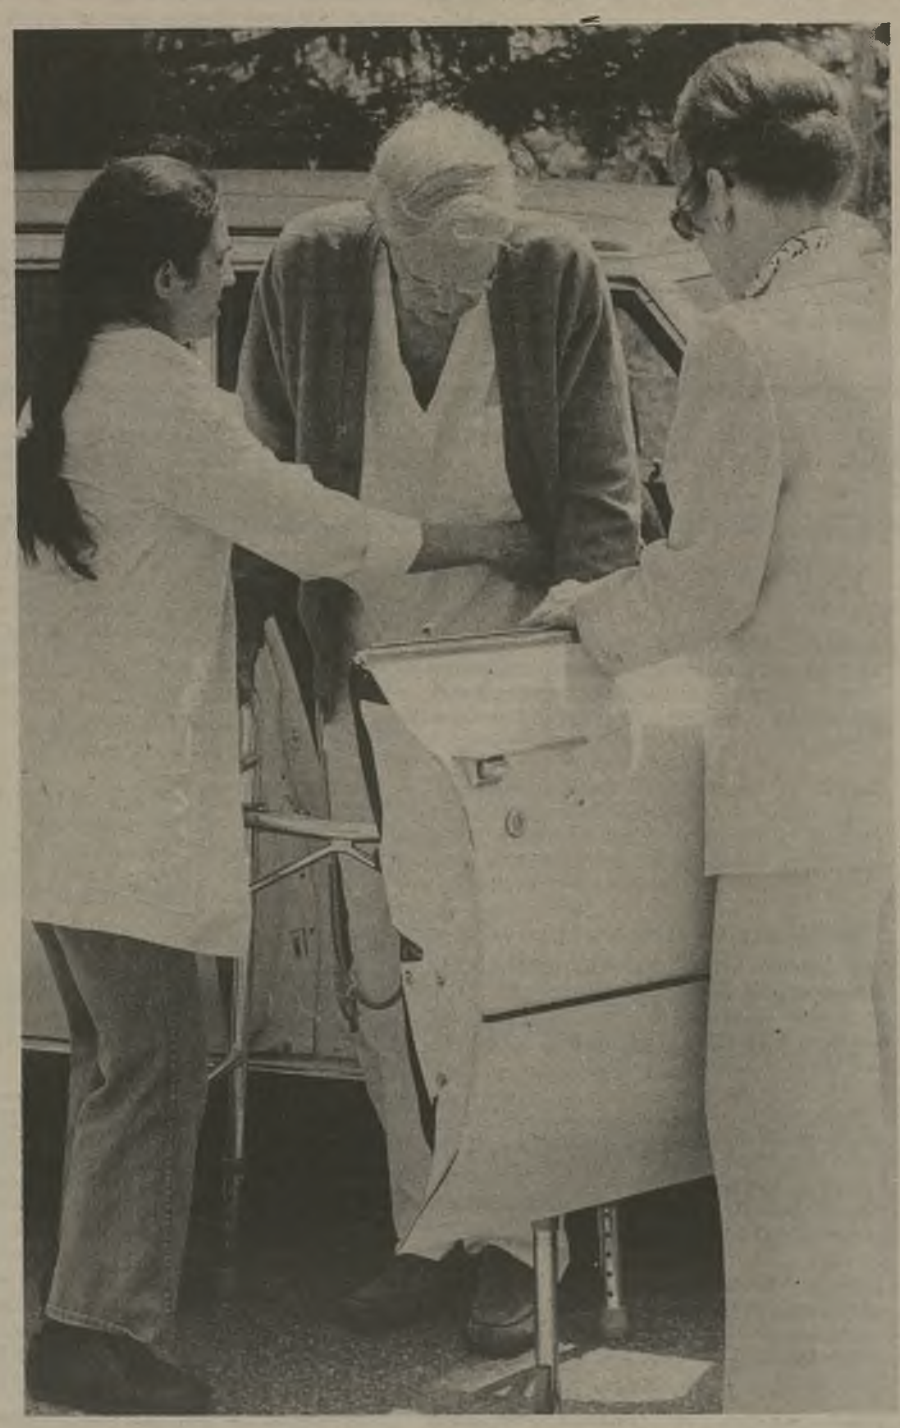
"I expect that the mix of cases of patients requiring major and minor levels of care will enable us to sustain the one-rate arrangement for the immediate future," he said.

The reimbursement rate will be renegotiated annually, and both the state and the hospital have the right to cancel the contract with 120 days' notice.

Rates not public



Specific conditions of the Medi-Cal contracts are not made public. Hospitals negotiated for contracts without knowledge of other hospitals' rate proposals.



The Medi-Cal changes are derived from the first of two new laws passed by the Legislature last year bringing fundamental changes in the way health care is paid for in the state. The second law allows private insurance companies to negotiate prices in advance for their subscribers with specific hospitals and doctors.

Insurance companies can write reduced rate packages for groups of patients receiving care from these providers, although patients might be required to pay more for coverage of high-priced services.

According to King, Stanford Hospital officials are in preliminary discussions with several insurance companies.

Coordinated community care: giving patients a headstart home

In earlier days when patients had complex or chronic illnesses, they would spend considerable time recuperating in a hospital. Now, because of changing times and high costs, many patients get long-term care at home.

But easing the transition from hospital to home requires preparation for patients and their families. At Stanford, home care is organized by a team of professionals who begin planning for it almost as soon as the patient is admitted.

Discharge planning may involve teaching patients to take their own medications, advising on insurance coverage, or lining up community services.

Above, 80-year-old Earle Smith listens intently as occupational therapist Matra Majmundar teaches him to transfer from wheelchair to car with the aid of a walker. After spending five weeks in the Hospital last spring, suffering from a neurological disorder that left him without sensation from mid-chest down, Smith was eager to return home with his wife Dorothy (second from right).

In order to discharge Smith, many arrangements for equipment and home care had to be planned by discharge coordinator Jeanette Muzac (above, far right). "I was as helpless as any patient they get," remarked Smith, who with humor and pluck, succeeded in mastering the wheelchair-to-car maneuver in record time (photo at left).

...News Notes...News Notes...News Notes...

Ronald Just, director of Operations and Maintenance, has announced that a major utility shut-down will take place from 8 a.m. to 6 p.m. Sunday, March 6. There will be a tie-in of the power factor capacitors affecting: Core, East, West, Boswell, Grant, Lane, Medical and Edwards Buildings.

A similar shutdown was scheduled for Feb. 27. It will be in full effect March 6, weather permitting. There will be momentary interruptions to the normal electrical service during the course of the day. Emergency power will be affected as during Monday weekly tests.

For further information regarding the interruption call 497-5555. In case of emergency during interruption, dial 86.

Daniel Robinson has accepted the position of acting director of Personnel Management effective March 1, announced Sheldon King, director of SUH.

Robinson began at Stanford four years ago, and has served as assistant director of Personnel for the last two years. He brings to his new position an extensive background in the field of personnel management and labor relations.

Robinson replaces Donald Thomas, who is resigning from his current position to pursue other career opportunities. Thomas has been director of the department since 1979.

King remarked, "Don Thomas' philosophy and practices regarding people, their importance as individuals, and their significance in the overall efforts of SUH to become an even better place to work, are a major contribution he has made to us all. His active efforts to improve communications between people are also well recognized."

Thomas has agreed, at King's request, to continue as an internal consultant for SUH for several months beyond his resignation.

The Garden Patio is closed through March 9 for spring cleaning and reparation activities, announced the Department of Dietetics. During this period, the Deli Bar and Soup Station have been moved up to the cafeteria north seating area, with hours of operation from 11:30 a.m. to 1:30 p.m. weekdays.

Normal Garden Patio operations will resume Thursday, March 10.

* * * *

Arthritis self-management classes will again be offered by the Stanford Arthritis Center in conjunction with Midpeninsula Health Service starting in April. These courses are open to anyone with arthritis and will provide information about arthritis, how best to use arthritis medication, how to design an appropriate exercise program; dealing with emotional and physical problems caused by arthritis, and working more closely with your physician.

There will be morning, afternoon and evening sessions held at 11 locations in the Bay Area, including Palo Alto, Redwood City, Cupertino, Santa Clara, San Jose and San Francisco. Classes meet for two hours weekly and run for six weeks.

Pre-registration is necessary and enrollment is limited. A small fee will be charged, and scholarships are available. For information and applications for the course, call 497-7935.

For my Mom and Dad is the title of a new handbook being given to all parents in the Hospital's intensive care nursery. The book, a collaborative effort by many nurses in the unit, is meant to serve as a resource of information for parents.

"They get a lot of information from the staff when they're here," explained Janet DeLong Pettit, one of the nurse editors, "but there is so much to remember. The book, coordinated with the staff's efforts, should fill in the gap for parents when they're at home."

Topics covered include "Transport of your Baby," "Special Features of the Premature," "Ultrasound in the Nursery," "Discharge from the Hospital," and many more. There is a glossary of terms for easy reference at the end of the book.

The SUMC Auxiliary held its annual general meeting and luncheon, Saturday, Feb. 26, at the Sharon Heights Country Club. Ernle Young, chaplain of the Medical Center and associate dean of Memorial Church, spoke on the subject of medical ethics—a topic he teaches to medical students.

Elected as executive officers on the Auxiliary Board of Directors for 1983-84 were Donnie Ellington (president); Phyllis Alper (first vice president); Virginia Thoits (second vice president); Gerald White (treasurer); Margaret Mahoney (assistant treasurer); Pat Parker (corresponding secretary); and Laura Warner (recording secretary and three-year term).

Reelected for three-year terms were Donnie Ellington, Phyllis Alper and Virginia Thoits. The nominating committee for 1983-84 will include Joyce Vincenti, Robbie Sharp, Judy Dayle and Betty Keil.

Four annual Auxiliary-funded scholarships were awarded to Gary Roper, Janet Smick, Dawn Hocevar and Christine McElroy. Roper and Smick are students in Stanford's physical therapy division, and will receive $2,500 each.

Hocevar, a student at San Jose State University, works in the clinical lab at SUH as a lab assistant, and plans to train at Peninsula Hospital for a license as a medical technologist. She was awarded $1,500. McElroy, a nursing assistant in the Emergency Department, plans to become a registered nurse. She also was awarded $1,500.

The scholarships are intended to help SUH-affiliated persons fund their education in a medically related field.

Medical Center Calendar

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MARCH 2

Basic Science Research Colloquium: "Brain Distribution Opioid Peptides and Their Precursors"—Dr. Eckard Weber. 5 p.m., Fairchild Auditorium.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Status of a Clinical Left Ventricular Assist System"—Dr. Peer Portner (president, Novacor, Inc.). 4:15 p.m., McCullough 134.

Progress in Medicine Lectures: "Impact of the Intentive Care Unit on the Critically Ill Patient with Chronic Lung Disease"—Dr. Andrew Newman; and "Impact of the Intensive Care Unit on the Critically Ill Patient with Heart Disease"—Dr. Robert Sladen. Third program of a six-part series on Progress and Ethical Dilemmas of Intensive Care. 7:30 p.m., Fairchild Auditorium. For further information, call the Office of Public Events at 497-6389.

Dept. of Medical Microbiology Dissertation Presentation: "Characterization of a New Class of Major Histocompatibility Complex Controlled Antigens. . .Or 'Nobody Knows But Me and My Macrophage' "—John Monaco, Jr. 1:15 p.m., M114.

Nursing Educational Services Pediatric Critical Care Course Level II: "Congenital Heart Disease." 8 a.m. till 4 p.m., Faber Auditorium, Children's Hospital at Stanford. To register, call Carole Kidder at 497-6366.

Dept. of Structural Biology Seminar: "Dissection of Antigenic Determinants on Human Histocompatibility Antigens"—Dr. Victor Engelhard (Univ. of Virginia). 4 p.m., D102.

THURSDAY, MARCH 3

Nursing Educational Services Critical Care Course Level II: "Shock Symposium." 8:30 a.m. till 4:30 p.m., Faber Auditorium, Children's Hospital at Stanford. To register, call Carole Kidder at 497-6366.

Free Jazzercise session—led by Patty Jones, R.D. 3:45 till 4:30 p.m., north cafeteria dining room (P1060). Part of National Nutrition Month activities. Space is limited and admission will be on a first-come, first-served basis. Dress comfortably and bring a towel.

Dept. of Neurology Grand Rounds: "MS as a Disease of Disordered Immune Regulation"—Dr. Byron Waksman (director of research programs, National Multiple Sclerosis Society, New York). 5:15 p.m., M114.

Dept. of Medicine Grand Rounds: "Drugs for the Third World"—Drs. Philip Lee and Albert Bowers. 8:30 a.m., Fairchild Auditorium.

FRIDAY, MARCH 4

Nursing Educational Services: "Leadership Challenges for Nurse Clinicians." 8 a.m. till 4 p.m., Tresidder Union, Room 282. To register, call Carole Kidder at 497-6366.

Dept. of Pediatrics Grand Rounds: "Herpes"—Dr. Anne Yeager. 8 a.m., M106.

Dept. of Pharmacology Dissertation Presentation: "Characterization of a Serotonin Receptor Coupled to Adenylate Cyclase in the Liver Fluke, Fasciola Hepatica"—Steven McNall. 10 a.m., R358.

Div. of Child Psychiatry and Child Development Grand Rounds: Topic to be announced—Dr. John Bowlby (consulting psychiatrist at the Tavistock Clinic, London). 11 a.m., Faber Auditorium, Children's Hospital at Stanford.

Dept. of Neurology George A. Zimmerman Lecture: "Is Research on Multiple Sclerosis Getting Anywhere?"—Dr. Byron Waksman (National Multiple Sclerosis Society, New York). 4 p.m., Fairchild Auditorium.

SATURDAY, MARCH 5

Dept. of Dietetics: "Trends in Nutrition 1983—A Symposium on Marketing Your Profession in the '80s." 7:45 a.m. till 3:15 p.m., Fairchild Auditorium.

SUMC Auxiliary Volunteer Orientation. 9:45 a.m., W001. For further information, call 497-6636.

MONDAY, MARCH 7

Dept. of Structural Biology Seminar: "Approaching a Structural Basis for Understanding Protein DNA Interaction: Catabolite Gene Activator Protein (CAP) and DNA Polymerase I"—Dr. Thomas Steitz (Yale). Noon, D102.

MARCH 7 and 8

Nursing Educational Services: "Interventions in Neonatal Nursing—Beyond Medical Care." 8:30 a.m. till 4 p.m., Tresidder Union, Room 282. Tuesday's program in Tresidder Union, Room 270. To register, call 497-6366.

WEDNESDAY, MARCH 9

Dept. of Structural Biology Seminar: "X-Ray Diffraction Studies of the Structure of the Gap Junction Channel"—Dr. Lee Makowski (Columbia). Noon, D102.

Nursing Grand Rounds: "The Confusing World of Food and Nutrition Fads"—Registered dietitians Beth Douglas, Diane Madgic, Diane West, and Janet Cecchino. Part of National Nutrition Month activities. 3:30 p.m., M114.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Self-regulation vital for scientists' credibility with public

Following is the text of President Kennedy's Oct. 20 speech at Yale University. A news summary was published Oct. 27 in **Campus Report.**

The Social Sponsorship of Innovation

I

Introduction

Ours is a society that was built on innovation. The Constitution recognizes that: it specifically grants to the Congress the power "to promote the Progress of the Science and useful Arts, by securing for limited time, to Authors and Inventors the exclusive Right to their respective Writings and Discoveries."

Accordingly we have, throughout our recent history, incorporated into our social institutions arrangements for the sponsorship of innovation. Of prime importance was the mid-19th century development, through the Morrill Act and the Hatch Act, of the land-grant university system and the network of State Agricultural Experiment Stations. That created an automatic flow of public funds for agricultural research, and a group of institutions responsible for its diffusion and application.

The base for science of a more fundamental kind was laid with the grafting of the German graduate university concept onto the tradition of liberal humanistic education that had been a British inheritance. Finally—still before the turn of the twentieth century—some relatively new institutions of private character were declaring a strong commitment to the practical arts, including engineering. Among these were first Cornell and MIT, and later Stanford.

The institutional apparatus for doing science was, except for agriculture, a vessel relatively empty of public funds until World War II. The need to do something with it had been recognized—if not widely, at least by an astute few. Shortly after building the house in which I now live, Herbert Hoover, an engineer-scientist of considerable distinction, was named Secretary of Commerce. His major initiative was an effort to raise a fund of ten million dollars from American industry to support basic research in the nation's universities. Hoover argued tirelessly for his project, on the grounds that American industry needed the fundamental research as well as the trained scientists that could be produced by academic institutions. He told industry leaders that they would be losing a form of intellectual capital if they did not make it possible for able researchers in the universities to be relieved of some of their teaching obligations, and equipped to do first-rate scientific work. It was the first effort by a national leader, as far as I know, to link academic research explicitly to productivity objectives.

Hoover's campaign fell far short of its goal, although it did help to create the initial support for the National Research Council and a program that helped keep scientists alive during the Depression. But following World War II, there was a dramatic realization of the Hoover vision—through public instead of private funds. The extraordinary scientific apparatus built for military purposes was transformed, under the influence of Vannevar Bush and others, into a system for the support of peacetime science in the universities. That support began largely with the Department of Defense, especially the Office of Naval Research; but in the early 1950s, it was mostly transferred to the National Science Foundation and the rapidly-growing programs of the National Institutes of Health. As these organizations took over the sponsorship of fundamental research, Defense and other mission-oriented agencies concentrated on programs related to their special areas. The outcome was a complicated patchwork of affiliation. In a large midwestern state university, for example, one would find a department of engineering supported largely by Defense agencies, a physics department mainly dependent on NSF and AEC monies, and two departments of biochemistry—one formula-funded by Agriculture and the other almost entirely dependent upon NIH biomedical research money.

The Trajectory of Innovation

Despite these complexities, the public support of fundamental science has become an effective instrument for meeting national goals, and it has been successfully integrated with our commercial style of product development. As a result of more than three decades of that coexistence, we have developed a fairly standard historical sequence of innovation, within which particular kinds of institutional sponsors play defined roles. The innovative process normally begins in a university or government laboratory. This first phase is characterized by loose, informal organization, very open communication, including quick publication of all the details of an experiment. This phase is publicly funded, and oriented toward the discovery and explanation of **phenomena**. Examples of institutions in which it might take place would be university departments of biology or chemistry or physics, a laboratory in an NIH Institute, or a special industrial organization like Bell Telephone Laboratories.

The second phase is best called **application**. It is focused upon **processes**, and takes place in various settings: applied institutes, some university departments (of engineering, for example), nonprofits (like SRI International or Battelle), and industrial laboratories. There is a mix of public and private funding, and environments that are variable with respect to proprietary secrecy.

In the third stage, **development**, attention is given to practical application—including such matters as scale, rates, and means of economical production. The innovative emphasis is on **products**; funding is by private risk capital, and the environment tends to be closed for proprietary reasons and tightly managed. Essentially all such work takes place in commercial laboratories.

Individual innovations have histories; though these are seldom simple, they usually follow a trajectory that takes them along a sequence from phenomenon through process to product. That trajectory is represented in Figure 1. The curve is concave upwards, because the rate of development normally quickens as the application is first glimpsed and then seen as certain. The ordinate can be expressed in terms of proportion of private financing, or degree of secrecy, or tightness of management control. The three segments marked off on the curve correspond to the three phases I have just described. Although they are arbitrary, they do signify sharp differences in style, control, and financing. And the contrast between the two ends of the curve is dramatic: research of the most fundamental sort is an entirely different social process from product innovation.

Public Understanding of the Innovation Process

That point may not seem worth all the attention I have been giving it. But in fact it has been the subject of important public misunderstanding and, as a consequence, of serious policy errors. A recent case in point is the so-called Small Business Innovation Act passed by Congress in July of this year. This legislation sets aside one and one-fourth percent of the research budget of each major federal research agency and establishes Small Business Innovation programs that will channel these reserves to qualifying small businesses. Like most statutory 'fixes,' this one was well-intentioned: it sought to increase the incentive to innovate in a sector of our economy that has been responsible for many of its best ideas, not to mention most of its new jobs. But, because it mistakes one kind of research for another, it will actually reduce total scientific productivity. Note that public funds will be removed from Area I—fundamental research—and used to support Area III—product innovation. The flow of new ideas **into** the stage at which application becomes possible will thereby be reduced. Furthermore, these public funds will be applied in an area in which, thanks to recent changes in the tax laws, abundant sources of private venture capital already exist to support good ideas. So the net effect will be a transfer of increasingly scarce public funds from basic science that can be supported in no other way to applied science that is already very attractive to private investment.

(Proponents of the legislation argued that funds for the small business innovation programs need not be set aside from basic research programs. But the law permits a diversion of basic research funds to product innovation, and that diversion will surely happen to some extent. Proponents also claim that small businesses are capable of, and want to conduct, truly basic research—a proposition that few scientists would accept.)

How, might you ask, could such a thing happen? It happened, I think, because of authentic confusion about how innovation happens and what kinds of social arrangements we have already made for encouraging it. Small Business is, of course, a good thing to be for these days; indeed the Senate version of the bill came through Committee in record time and was passed on the floor by a 90-0 vote before anyone in the scientific community woke up and looked seriously at the bill. As the **Washington Post** later editorialized, when a piece of legislation is passed in that way you **know** somebody isn't looking very hard. But the House gave the matter less perfunctory treatment, with some encouragement from us, and so proponents had to muster more serious arguments.

(There were some early opponents, notably the American Association of Medical Colleges, but for the most part the political arms of the university and scientific organizationals did not become actively involved until late in the legislative process.)

One sample of their logic is particularly revealing: the Small Business Committee prepared a list of innovations that could be credited to small businesses. Included on it was the invention of penicillin. I do not think the proponents deliberately ignored Alexander Fleming; my own experience in government always inclines me to favor confusion over conspiracy as an explanatory hypothesis.

My point is that misrepresentations that would have produced an outburst of laughter among scientists passed almost without notice in the Congressional debate over this bill. To their credit, the Office of Management and Budget and the President's Science Adviser recognized what was happening and testified forcefully against the bill in the early stages in both the House and Senate—only to have the Administration, for political reasons, reverse itself and actually support the legislation.

More than anything else, the passage of this legislation symbolizes a state of social bewilderment about science and how we should get it done.

There are other signals as well: the hot-and-cold recent history of investment in genetic engineering; the disturbing differences of view between the universities and government about federal authority over the transfer of technology; and the controversy over how much corporate support universities should accept for their research programs, and under what conditions.

I want to devote the rest of this lecture to considering some changes now underway in how we manage innovation. My argument will be that the social sponsorship of discovery is being rearranged in a very fundamental way. Specifically, I shall try to make the case that we are seeing a revolutionary compression of the innovation process I described earlier; and that, as a consequence of that compression, traditional roles are being redefined and well-understood customs challenged. I will conclude by suggesting how the universities and the scientific community might cope with these changes.

Recent Changes

To begin let me list some forces that are tending to compress the innovation process and to blur the relationships that up to now have characterized its three phases. I think I can recognize four.

First a number of scientific disciplines are now being recognized as "ready" for accelerated application. Our perceptions of what is possible are sharpened in such fields; as a discipline matures in power and confidence, leaps from the laboratory to applications that once seemed intimidating become commonplace. That now appears to be the case, for example, in immunology and "genetic engineering" as well as in microelectronics.

Second, there is a growing social awareness of that importance of scientific discovery to national productivity, and a consequent impatience with the traditional time requirements for technology diffusion. In the past fen years, various studies (for example, that by Comroe and Dripps) have demonstrated—particularly for biomedical research—that the time lag between initial research discovery and practical application is very long, of the order of a decade or more. Thus the message from a small but growing body of "research on research" is that we need better devices for speeding technology transfer.

Third, there is increasing concern in the centers of fundamental research—and by that I mean the research universities, where over two-thirds of the nation's basic science is done—about the retreat in public support of that activity. Federal funds for nondefense research have shrunk by about 38 percent in real dollar value since 1968, and half that decline has taken place in the first two years of the 1980s. It is therefore, not surprising that the universities and university scientists are looking for alternative means of support.

A fourth and final cause, perhaps the most unexpected of all, has to do with the venture-capital financing of small research-intensive companies in fields like biotechnology and microelectronics. In the nearly four years since major changes were wrought in the capital-gains tax, the investment available for such ventures has jumped from an estimated $70 million in the mid-1970s to about $1.5 billion in 1982. Very large changes in value can take place with successive generations of private investment in high-technology firms, and larger changes still when the firms go public. At the time of its public offering, Genentech stock was valued at $38 per share. Shortly after the offering had been snapped up, it soared to $80.

As you will observe, things have come back down to earth and Genentech, still without a product to sell, is listed at $30 a share.

But that story is worth telling, even as a cautionary tale. What made Genentech so appealing was the promise of good ideas, of "breakthroughs." Like other high-technology offerings it made much of its affiliation with first-rate university scientists; in short, it promised to short-circuit the technology transfer process.

The lesson—and it made a strong impression in the financial community, despite some subsequent disillusionment about the soundness of biotechnology investment—is that in this new work the big potential is associated with the **early** possession of an idea. The result has been an array of new affiliations between the institutions formerly associated with Stage III innovations and scientists doing Stage I research.

Kennedy speech. . .

continued from page 11

II

Let me pause to summarize what has happened. The familiar trajectory of American innovation has become compressed in time. Once there was clear separation between an early, fundamental research phase, publicly supported and characterized by open communication, and a later, applied phase financed by private risk capital and featuring proprietary protection of information. I have tried to analyze some of the forces that have been led to this compression: the scientific "readiness" of biotechnology and other fields for a broad range of applications; the need for new funds to replace those lost in the federal withdrawal from the support of basic research; and the style of venture capitalization, which places new premiums on the early capture of intellectual property.

The New Environment: Pressures and Problems

The result is an entirely novel mixture of influences upon university scientists and their institutions. For the university itself, there are new and challenging pressures on investment policy (does the institution go into business with its own faculty?), on technology licensing (should the university license inventions to faculty-led ventures? to their competitors? and if yes, under what terms?), or research contracts with industry (what restrictions on communication are acceptable, and should there be full disclosure of terms?) and on policies relating to consulting, faculty conflict of interest, and the protection of graduate student interests. But many of the problems are simply not soluble by the institutions alone. For the scientists themselves, and the "invisible colleges" that hold them together in national and international networks, there are special challenges: how much can or should journals or societies guard against the withholding of information and exchange for proprietary reasons? and how much involvement **outside** a faculty member's primary institutional affiliation is appropriate?

I emphasize the role of the professoriate in this last decision particularly because I doubt that **institutional** regulation will be effective or even very influential in establishing the limits. What is thought to be proper by one's community of scholarly peers will eventually set the standards; the best institutions can hope to do is reinforce those social norms, and perhaps to play some useful role in helping to shape them.

Having said that, what can I suggest as to ways in which we might deal with the compression of innovation and the problems it poses for universities and their faculties? To begin with, I think we need to examine the traditions that have grown up regarding the institutional obligations of the professoriate, for that is the background against which new proposals will have to be evaluated.

The Universities and Their Faculties

Two resources dominate any consideration of the relationship between the faculty member and the university: time and intellectual property. Established tradition is that institutional purposes have exclusive call on the professional time and energy of faculty members during the period of full-time employment. Three things, however, are worth noting. First, institutional purposes are usually interpreted broadly. As a consequence, a variety of activities that might at first be thought private or even self-serving are regularly judged to be in the interest of the university. Service on peer review panels, advice to local and national governments, and work for scholarly organizations and journals "count" as work for the university—often even when the organizations are for profit and the faculty member's participation is compensated. Few universities have carefully-drafted policies on this; the informal test has usually been that the compensation is light (relative, say, to that for consultation) and that the work serves some interest of the discipline and hence—from the university's vantage point—is **pro bono publico**.

Second, limited "consulting" is permitted. Consulting is a professional service, reimbursed at something like the market value of the faculty member's time. It is permitted on the theory that the faculty member will benefit professionally—as may students, and the educational process—from exposure to applied problems which might otherwise never be encountered. It also happens that in many applied fields valuable literature is held under such tight proprietary control that consulting represents the only route of access to it.

The university sometimes has a secondary motive for permitting consulting: it may establish useful relationships between faculty and a source of corporate research support or philanthropy. But the time expended on such activities is limited quite explicitly by most universities, to the extent of about one day per week.

(It is often asked, of course, whether "weekends count." Some universities aren't prepared to say, but government rules aobut professional effort establish a **de facto** policy—and under it, weekends most assuredly **do** count. That is, **all** of the time one spends professionally, whether it is 40 hours per week or 100, constitute "100 percent time." Accordingly, a faculty member who has a government grant and consults Friday, Saturday, and Sunday is accounted as spending three-sevenths time consulting—which is against government rules if that faculty member is reporting the usual 100 percent research effort on the grant. So in practice, one day a week means just that.)

Third, it is important to note that what is being claimed here is **professional** time, not time, period. Neither the University nor the government cares how much "free" time a faculty member spends on remunerative "moonlighting," as long as it is outside the professional role of scholar/teacher—and, of course, as long as it does not infringe on the performance of that role. Thus, paradoxically, it is all right to consult all day Wednesday, but not again on Sunday; whereas it is perfectly permissable to teach skiing on Sunday but never on Wednesday.

Now that you understand the matter of time, let me turn to intellectual property. The difficulty here is that different traditions have developed, chiefly out of convenience, to deal with different kinds of property. As to the most basic issue of all—who owns the rights to a discovery made by a faculty member on university-compensated time in a university facility—there is lack of consistency.

Federal law vests patent ownership with the inventor. A few universities vest ownership in the faculty member where contract or grants permit it, but most claim it for the institution, through required patent agreements with faculty members. The difference is not thought significant, or even known, to most faculty members; but to a few it is critical.

Now, created works are different from patentable ideas. They are subject to the laws of copyright, and in this area federal law gives ownership to the institution rather than the individual. Most institutions assert that ownership—even those that do not do so for patentable processes or devices. Thus the professor who owns the rights for a piece of computer hardware does not own the rights to the software developed to go with it.

But from this zone of apparently sweeping institutional claim, an important class of exceptions has been carved out by custom. The university does not assert copyrights to books written by faculty—scholarly, text, or trade—nor does it try to attach other creative works. Reflected glory, and that alone, is the traditional institutional reward for such faculty **oeuvres**. The issue is not exactly trivial: it is easy to forget, amidst the present excitement, that the universities have sponsored many more millionaire textbook writers than millionaire computerists or cloners.

It is a little difficult to perceive a structural rationale arching over all of this. The difficulty may be pointed a bit if you imagine that you are a space visitor, unfamiliar with our economy or traditions, trying to figure out our rules. After learning the foregoing, you are told that a university employs a surgeon and a sculptor on its faculty. Each has learned extraordinary skills in a demanding course of graduate study; each does campus-based work that is hailed as pioneering; each teaches in credit-bearing courses for advanced students. Which, you are now asked, is allowed to practice it for financial return outside the institution? I suggest that you will be unable to answer the question without some special knowledge—consisting, in this case, of the history of clinical practice restrictions imposed by U.S. medical schools to achieve the "geographic full-time" system, and of some artistic traditions.

It follows that normative judgments are difficult to make in this universe. We place limits upon outside commitments with respect to time, not income—except when special considerations intervene, in which case we limit income. We define some work-products of the creative process as belonging to the university, but others as belonging to the scholar. And—as the sculptor/surgeon example shows—we treat even the same kind of work differently in different parts of the same institution.

So—to summarize this account of university rules—there is not a consistent ethical framework for outside involvement by faculty, or for the ownership of intellectual property. Yet there are, I think, some guides that may be helpful in dealing with the new incentives resulting from "innovation compression."

Dealing with the New Environment: Some Principles

First, one of the real values in our system of fundamental research is the coexistence of research and training. As my colleague Robert Rosenzweig put it so well in the introductory chapter of **The Research Universities and Their Patrons**:

"A research university is one whose mores and practices make it clear that enlarging and disseminating knowledge are equally important activities, and that each is done better when both are done in the same place by the same people."

(Rosenzweig, R. M. and Turlington, B. **The Research Universities and Their Patrons.** University of California Press, Berkeley, 1982.)

The university should, in its own interest and society's, pursue policies that act to retain that connection. These will include resisting proprietary influences upon university research, as well as supplying incentives for faculty members to concentrate their own research activities at the university, under university rules. They will also give careful attention to the rights of students: the right of access to information about research programs, and the right of freedom from exploitation in the interest of a faculty member's research program, whether it is on **or** off campus.

Second, the university is entitled to primary claim upon the time and energy of its faculty. The claim can, in practice, only be pressed so hard—as the University of Chicago found to its sorrow, several decades ago, when it tried to retain all forms of professional income, while offering what is claimed to be "full salary." That experiment failed, probably because tradition is powerful and we retain strong arguments in favor of the University's claim. It is paying for full time, in most cases. It does provide the facilities for scholarly work, not to mention the environment. Its institutional **imprimateur** lends value to whatever the faculty member does, because the outside world has learned to respect its judgments about quality. That does not mean that the University owns the faculty member; but it does constitute a primary claim on time and energy.

Third, there is a balancing flow of benefits that dictates institutional restraint in pressing that claim. **Whatever** a faculty member does that is professionally credit-worthy—and given the quality of our selection process, that should be the overwhelming majority of his or her output—redounds to the prestige of the institution. That should make us wish to be generous about terms and conditions; after all, if we get the credit anyhow, ownership is perhaps not so important.

Policy Directions for the Universities

What position, given all these considerations, should the university take with respect to outside faculty involvement? I think it should continue to make its primary claim, but permit limited outside involvement when that clearly offers benefits **both** to the faculty member's professional development and to the university-based research and training programs.

Disclosure of these relationships should, as now, be required on demand—and, if it proves necessary, as a matter of routine. Management responsibilities outside the university should generally be viewed as inconsistent with the primacy of university commitment—including significant personal respensibility for any regular laboratory operation off campus.

Such roles not only become compelling time commitments; they may lead, as we have learned, to awkward mixtures of proprietary and non-proprietary work. They also encourage the introduction of secrecy to university-based programs, and impose troublesome conflicts on graduate students.

On the other hand, I think that intellectual property rights should be vested primarily in the faculty member. After all, one of the attributes of university research that distinguishes it from that done in corporate settings is its independent, individual character.

If we are to assert primary claims to faculty time and energy, it would seem appropriate to reward that loyalty by assigning the proprietorship of intellectual accomplishment to the innovator. It is then up to us to structure incentives that will encourage inventors to assign rights to the university and to share the returned value with the entire enterprise.

However the university obtains control over intellectual property, it must consider the responsibilities it accepts along with that control. First, there is an institutional obligation to the process of technology transfer. No valuable invention should be delayed in its progress toward human service by the institution's own need for financial return. In most cases, that principle will lead to a first preference for non-exclusive licensing, and a fee structure designed to encourage broad participation by commercial developers. Second, there should be care to avoid pressures on faculty and students to concentrate unduly upon "developable" ideas, or to keep secrets in the course of developing them. Finally, the university-as-licensor must take careful note of its other roles as investor and research proprietor, and maintain a strictly neutral policy with respect to licensing ventures that may be partly owned by the university or its faculty members.

Even if it has solved all of these problems, the university has still another role: the design and execution of policies regarding the acceptance of research projects. In practice this is usually a matter for decision by members of the research faculty—who resemble, as someone has said, a federation of small, sometimes even medium-sized entrepreneurs. The terms are limited by university rules worked out by faculty committees; but if an outside agency proposes terms unacceptable to the faculty member who is to do the work, there will be no project.

The evolution of institutional policy **and** of a tradition of faculty acceptance has been heavily conditioned by the patterns of federal support that has developed in the postwar years. There are no restrictions on publication, and the federal patrons of research have, as I said, not

continued on next page

Kennedy speech. . .

continued from page 12

usually claimed patent rights. By contrast, a number of private research sponsors have asserted such rights in advance, through requirements that they hold exclusive licenses on any patentable discoveries made under their support.

Where the institution claims no such rights, the acceptability of such conditions becomes a matter for the faculty member to determine. But where the institution retains rights to the intellectual property, the decision becomes more complex and difficult. If a faculty member were to assert that a line of important work could only be supported **if** a private sponsor were granted exclusivity in advance, I think the university would agree to take the project. What if the institution were deciding the matter on its own? I confess I would have difficulty. The situation offers too many temptations for **a priori** restraints on communication, too much emphasis on investment return, to leave me comfortable. I expect this to become one of the main policy issues in this area, the more so because large grants of this type have been made to several institutions.

The university does, of course, impose rules designed to protect freedom of access, publication rights, and other features that might be vulnerable where there is strong proprietary interest. In many places these are being reviewed to see if they are strong enough. It is important to note that this is **not** entirely, or even mainly, a response to the proprietary impulse.

For entirely different reasons the government has moved toward the application, in certain research contracts, of restraints upon access or freedom to publish promptly. Because we clearly cannot have one set of rules for industrial research sponsors and another set for the government, these federal actions have added urgency to our consideration of the value of openness in research programs.

The case usually made for freedom in scientific communication rests on the need for rapid transfer of methodologies and ideas from one research group to another, and on the demonstrated utility of published and pre-publication exchange in maintaining the vigor of a discipline. It derives mostly from convincing assertions by working scientists, nearly all of whom say it is essential. A few more formal studies also support the special role played by informal communication in advancing a new idea; notable among these is the analysis by Wolff of the exchange of pre-publication information in the development of our understanding of the role of cyclic AMP as a cellular "second messenger"—a function Wolff wittily attributed to informal exchange among scientists in the title of her paper. I think it is safe to say that both that kind of communication—ranging from laboratory visitation between scientists to attendance at scientific meetings—and the more formal sort of entailing publication are critical parts of the scientific process.

(Patricia Woolf. **The Second Messenger: Informal Communication in Cyclic AMP Research**. Minerva XIII, No. 3, 1975.)

There is a second part of the case that relates only to formal communication. Science relies very heavily on the capacity to replicate experiments; it is the only systematic way we have to recognize error, and the only way at all to correct fraud. Although we referee journal articles, evaluate the logic of propositions, and check arithmetic, we cannot decide, merely from reading a report, that a result is right—only that it is not wrong in some obvious way. Accordingly, we argue that scientific communications include enough detail about the way an experiment was done so that a competent investigator in the field can do it in exactly the same way. This is an exacting requirement; it compels the release of **all** relevant information about methods and techniques. Secret ingredients, magic sauces and your own special glassware are fine in cookery or in product development, but in fundamental science they are **out**.

Proprietary and governmental threats have forced universities to take some recent actions to protect both kinds of communication, and it is not unlikely that the challenge will escalate. Using the regulatory authority provided by the Internal Traffic in Arms legislation, the Departments of Commerce and Defense have attempted to restrict U.S. scientists (and succeeded, in some cases) from delivering papers at international meetings on basic research relating to "critical technologies." Language has been attached to university research contracts that would restrict the access of foreign graduate students or fellows or even faculty members to university projects. And the Department of State has sought to place onerous monitoring requirements on universities receiving Soviet bloc visitors so that the latter will not have access to projects or even conversations on critical topics. We have argued vigorously against these restrictions, sometimes refusing visitors or contracts; and we are trying hard to press upon the government our own conviction that the social value inherent in open science far outweighs the losses we may risk by being too permissive about the transfer of technologies.

As to proprietary influences, most universities—as I have said—refuse any but the briefest delays in publication time, and reject restrictions upon access to programs. They have also had to cope with the increasing threats to informal communication posed by the actions of commercial firms, especially in biotechnology.

Several active or prospective litigations concern the patenting of DNA sequences by companies who obtained required material through informal exchanges with academic scientists. And for each lawsuit, there are a dozen horror stories.

Whatever the merits of these, the perception is that people are prepared to take advantage of naive informality on the part of academic researchers. The latter, predictably, are reacting by becoming more cautious. Meanwhile, the universities are trying to provide them with increasingly aggressive legal protection, and evolving policies for the distribution of research-derived materials that will prevent their commercial appropriation while encouraging academic circulatioin.

Policy Directions for the Scientists

In this as in other areas, however, there are sharp limitations on what the universities can accomplish themselves. I began this section with an assertion that the compression in the course of innovation and the consequential reordering of how and where it is accomplished requires much more than the development of new regulatory policies by universities and new patterns of financial support by government and industry. It also challenges the scientific community itself to develop new rules, because many of the current problems are beyond the regulatory reach of the institutions. Although many people suppose that something vaguely called "academia" has a single position or set of attitudes on such matters, that is actually far from the truth. Frequently the interests of working faculty scientists and the university science administrators who are their former colleagues diverge sharply; indeed, one can now regularly find them giving conflicting testimony before the Congress on such issues as indirect costs and mandatory retirement. In the present case, their interests are not so much divergent as different, and complementary.

Standards of the profession, publication policies, criteria for the acceptance of work, and peer review are functions that the professoriate rather than the academy must regulate. And there are other areas in which regulatory controls by the university, though theoretically plausible and often urged, would probably prove unacceptably corrosive in practice. Extreme forms of regulation of outside involvement, or Draconian limitations on faculty ownership of intellectual property, would be examples.

Thus there are two reasons for the assertion of self-regulation by the scientists and their networks. The first is because the task is more appropriate to them; the second is that failure to do so may invite unwelcome attention from others. I should point out that regulatory attention by the **university** is not the only, and not even the worst, alternative prospect. The Congress is now making concerned gestures about matters ranging from the treatment of animals to scientific fraud, and one hears proposals for government auditing of research to insure proper practice.

What areas are particularly important for self-regulation by scientists? One surely is the firm protection they can give to the open character of scientific work. Journals should not publish any articles from which proprietary information has been held back so as to make the work more difficult to replicate, and societies should refuse to allow papers to be presented at meetings if they are subject to similar restraints. Individual scientists can reject efforts to attach access restrictions or similar provisions to research grants and contracts. In these ways, the scientific community can make clear the essentiality of open communication to the conduct of its affairs.

A second area requiring self-regulation involves the public perception that fundamental science is now "commercial," and that its practitioners are subject to temptations that cast doubt upon their objectivity. I think this is a serious problem, which has been unduly abetted by some biomedical scientists, who have reacted to financial opportunity with an appalling lack of restraint. The use of university facilities to house the back-contracted spillover from an outside commercial venture; the use of a university position and laboratory to promote corporate commercial claims for a new venture; the coercive inducement of graduate students to "join in" on an outside operation; all these have happened at major universities within the past three years.

Surprisingly, there has been little criticism of the researchers involved from within the scientific community. I find that shocking, given the willingness of scientists to engage in frank criticism of institutional practice in these same areas.

Unless there is firm rejection of such behavior, the public will be perfectly entitled to conclude that the scientists are more interested in profits than results.

Fundamental research is still deeply respected in this country, much more so than most professions. Public confidence in its own objectivity is the best thing science has going for it; but without some care we may find one day that "scientific objectivity" has become an oxymoron, a self-contradiction like "express mail" or "easy credit."

Ph.D. Oral examinations

MONDAY, MARCH 7

Anupam Khanna, engineering-economic systems, "An Approach to Modelling Systems of Political Economy: Towards Introducing the Notion of Power in Economic Analysis," 2:15 p.m., Terman 332. **Masami Kojima**, chemical engineering, "Low Reynolds Number Flows Past Drops, Porous Particles, and Colloids," 4:15 p.m., Chemical Engineering Gazebo. **M. Laurentius Marais**, business and mathematics, "Computer Intensive Statistics in Empirical Research in Accounting," 2:15 p.m., Room 243, Graduate School of Business. **Meera Viswanathan**, comparative literature, "Defining the Genre of Courtly Narrative: An Examination of its Development in Medieval English Literature and in Classical Japanese Literature Based on Speech Act Theory," 2:15 p.m., Room 52T.

TUESDAY, MARCH 8

Rose Marie Beebe, Spanish and Portuguese, "Gabriel Miro: Apprenticeship Through the Short Story and Short Novel," 1:15 p.m., Room 282 G. **Nicholas C. Burbules**, education, "Ideology and Radical Educational Research," 2:15 p.m., Room e114, Education Bldg. **Blaine Francis Nye**, business, "Demand for Health Care," 2:15 p.m., Room 243, Graduate School of Business.

WEDNESDAY, MARCH 9

Frederick Dobb, education, "Compliance Management and Manipulation: The Case of the California State Language Census," Room e114, Education Bldg. **Chi-fu Huang**, business, "Essays of Financial Economics," Room 272, Graduate School of Business. **Robert Steven Jaffe**, electrical engineering, "Extended Pulsed Doppler Mean-Frequency Estimation Range Using Mean-Frequency Prediction," 3:15 p.m., AEL 109. **Man Bun Kwan**, history, 2:15 p.m., Room 244, History Corner. **Andrea Lash**, education and psychology, "A Multidimensional Item Response Model with Implications for Use of the Rasch Model," 2:15 p.m., 146 M. Broadie, operations research, "Piecewise Linear Methods for Solving Equations," 2:15 p.m., Terman 217. **Steven Grant Duvall**, operations research, "Parametric Algorithms for the Linear Complementarity Problem," 9:15 a.m., Terman 217. **Christian Jan Faltis**, education, "Transfer of Beginning Reading Skills from Spanish to English Among Spanish-Speaking Children in Second Grade Bilingual Classrooms," 2:15 p.m., Room e114, Education Bldg. **Hyung Sik Oh**, engineering-economic systems, "Product Differentiation in Markets with Congestion," 2:15 p.m., Terman 329.

Stanford Staff Development Courses

March through May 1983

WORKPLACE SKILLS DEVELOPMENT

Challenges of the workplace will be explored in the following courses. each of which is structured to develop skills helpful to effective work performance in many different kinds of jobs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore, please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy. ext. 7-0657.

Telephone Techniques—This workshop focuses on using the telephone and having an effective telephone personality. Topics include an overview of the skills required, tactful phraseology, and examination of issues and problems.

- Wednesday, 4/13, 10-12

Office Interaction: Getting and Giving Cooperation—Does your job include answering questions, giving information, assisting people who call or come to your office? This workshop focuses on how to make these interactions both efficient and productive. Participants will explore the ways that they and the people they work with experience the communication/problem solving process.

- Schedule to be arranged

Office Interaction: Working With Pressure—How to function at your best in spite of the pressure of continuous office interactions. Participants will examine ways to increase concentration and patience for effective workplace relations.

- Schedule to be arranged

Assertiveness Training—Assertiveness Training introduces verbal and nonverbal skills for handling uncomfortable situations. As a result of active involvement in this course, participants will be able to ask for what they want in clear statements, assertively deal with conflict on the job, maintain a feeling of self-worth while effectively dealing with manipulative demands, and make assertive decisions.

- Thursday, 4/14, 8:30-4:30
- Thursday, 4/21, 8:30-12
  (Attend both sessions.)

Career Exploration Workshop assists staff members in making more effective career decisions. It consists of seven sequential one-hour workshops which provide methods for self-assessment (interests, skills, values, career motivations, interpersonal skills), information about Stanford career possibilities, and practice in decision making and development of action plans. Checking ideas against job market reality is emphasized.

Some of the tools used in the self-assessment process include the Strong-Campbell Interest Inventory Test, the Quick Job-Hunting Map, Firo-B and problem-solving and values clarification exercises. Discussion includes reality testing of the kinds of skills the University looks for, the kinds of jobs on campus, and the personal qualities necessary to get ahead. Exercises on strategizing and decision making are used along with the development of short and long term career goals. Instruction and information on resume writing and interviewing are included, with information on the use of the Stanford Employment Department and its organization.

- To register, call Marilyn Gilla, ext. 7-0659.

On-The-Job Goal Setting—How can you focus your energies and skills more effectively to increase the satisfaction you get from your work, as well as the contributions you make? Susan Strong will provide practical steps for setting and reaching well-stated workable goals.

- Schedule to be arranged.

Skills Development Center—The clerical skills program upgrades skills of employees on their present jobs, helps them prepare for additional responsibilities, and provides clerical training specifically related to Stanford's policies and procedures.

For information about the clerical skills program,
call Marilyn Gilla, clerical skills program coordinator,
ext. 7-0659.

Is lack of typing skills getting in the way of effective use of your computer terminal? Marilyn Gilla teaches both beginning and intermediate keyboard skills for staff members starting to use a terminal. For information, call ext. 7-0659.

SUPERVISORY DEVELOPMENT PROGRAM

The supervisory development program includes a two-session orientation to the personnel administration aspects of supervision, two intensive supervisory skills courses, and shorter workshops on specific aspects of supervision. All courses and workshops combine theory and practice and apply directly to participants' on-the-job experience.

Supervisory courses and workshops are given regularly through Staff Development. They may also be adapted to specific departmental needs and presented in departments. New workshops are developed to meet general and departmental needs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy, ext. 7-0657.

Supervisory Orientation explains general personnel processes (employment, classification and compensation, staff development, employee relations, benefits) and outlines supervisory responsibilities in personnel administration. This program is especially useful for supervisors recently promoted or new to Stanford.

- Schedule to be arranged.

Fundamentals of Supervision is a course in how to develop employee performance, establish effective supervisor-employee communication, and establish and maintain the supervisory role. Participants learn through discussion and practice of skills, incorporating new skills into their own supervisory style. An orientation meeting prior to the sessions introduces the basic principles on which the course is based.

Participation in the course requires at least three months of experience as a supervisor. Attendance at all sessions is also required.

Session topics are:

Session 1, Setting Job Standards
Session 2, Teaching a New Job
Session 3, Communicating about Performance
Session 4, Giving Recognition
Session 5, Identifying and Solving Performance Problems
Session 6, (Group Choice of Topic) Review

Fundamentals of Supervision (A)
- Thursday, 4/28-6/9, 9:00-12:00

Fundamentals of Supervision (B)
- Tuesday, 4/26-6/7, 9:00-12:00

Effective Interviewing introduces methods for making productive hiring decisions by getting sufficient appropriate information in interviews. The workshop is centered around practice exercises that are progressively more complex; participants will learn to plan and conduct interviews related to the specific responsibilities and duties of open positions.
is a practical three-step procedure for giving directives of all kinds. Participants will also learn the specific effects of language on directives.

- Thursday, 4/7, 8:30-4:30

Managing Conflicts which can and do occur in any work setting, and when well handled can renew motivation and be a catalyst for innovation. When ignored or mismanaged, however, conflicts can cause serious damage to morale, productivity and well-being. Effective conflict management involves guiding the disputants to solve their own problems. In this workshop participants will learn how to find out the nature and scope of the conflict, how to elicit suggestions, and how to get agreement to an action plan while controlling bickering and outbursts without taking either disputant's side.

- Wednesday, 4/20, 8:30-4:30

Confident Speaking——This workshop is for staff members who regularly present talks as a routine part of their jobs. Special techniques to help you prepare, practice, and deliver your train-of-thought will be demonstrated and practiced in class.

- Tuesday, 4/12, 8:30-4:30
- Tuesday, 4/19, 1:00-5:00
- Tuesday, 4/26, 1:00-5:00
  (Attend all sessions.)

Basic Attending Skills—Listening actively and intelligently is a major communications skill. In this workshop participants learn to follow what is being said, to ask open questions, paraphrase, and reflect feeling. Skills are learned through demonstration, discussion, and practice.

- Friday, 5/6-6/3, 10:00-12:00

SPECIAL INTEREST COURSES

Courses from the Learning Assistance Center

The following courses have been developed by the LAC to respond to specific staff training requests. Each course combines classroom instruction and individual tutorials with the instructor. Class size is limited to provide for maximum participant involvement, and enrollments are accepted in the order received.

Effective Writing: Letters, Memos, Minutes (A)—Is writing an increasingly important part of your work? In Effective Writing, participants review fundamentals of skillful writing, analyze and develop their writing style, and practice purposeful writing of letters, memos, and minutes. The class meets for one hour a week for eight weeks, and the instructor meets with each participant for five individual half-hour sessions.

- Monday, 4/4-5/23, 12:00-1:00
- To register, call Staff Development, ext. 7-0657.

Time Management—Is a day simply not long enough? This workshop helps participants discover where their time goes, set up a schedule and establish priorities, and become more effective at accomplishing what they decide to do. The class meets four times (one hour each time), and the instructor meets with each participant for three individual half-hour sessions.

- Friday, 4/1-4/22, 12:00-1:00

continued on next page

Stanford Staff Development Courses

March through May 1983

continued from page 14

Effective Writing: Letters, Memos, Minutes (B)—Is writing an increasingly important part of your work? In Effective Writing, participants review fundamentals of skillful writing, analyze and develop their writing style, and practice purposeful writing of letters, memos, and minutes. The class meets for one hour a week for eight weeks, and the instructor meets with each participant for five individual half-hour sessions.

- Monday, 4/4-5/23, 12:00-1:00
- To register, call Staff Development, ext. 7-0657.

ESL III—Intermediate Writing and English as a Second Language—Two hours a week of class, four 30-minute conferences, per student. For those who are very fluent in English, but whose writing show significant weaknesses in grammar usage and idiomatic constructions. Focus on understanding and practices the conventions of written English. Limited to 15. Pleace contact the Learning Assistance Center (497-2207).

- Monday and Wednesday, 4/11-6/6, 12:00-1:00

Courses from the Association for Continuing Education

The Association for Continuing Education delivers courses accredited by local colleges and universities. For more information call ext. 7-0657.

BUS 1AS-Principles of Accounting I—This is the first of a two-part, 4 unit course which concludes in the summer quarter. An introduction to the theory and practice of accounting. Analysis of books of original entry and their relationship to the general ledger; accounting equation; classification of accounts; preparation of working papers; adjusting and closing entries; and financial statements as these relate to the service and business enterprise.
Instructor: Staff
Presequisite: None. (2 quarter units)
(Tuition $90; book $34.72.

- Tuesday, Thursday, 3/29-6/2, 12:00-1:00

CPL 102—Introduction to BASIC—A good beginning course in BASIC, the most popular and easily understood computer language available today. Students will learn the computer operations they seek for a given application through a process of self-checking exercises and flow-charting. It will not be necessary for students to have access to a computer to learn from this course. (Certificate only.)
(Tuition $90; book $14.86.)

- Tuesday and Thursday, 3/29-6/2, 12:00-1:00

CPL 105—Introduction to PASCAL—An introductory course in PASCAL for people who want to acquaint themselves with modern programming tools and concepts. It will give students with no previous programming experience a good grasp of the fundamentals and provide a foundation for learning correct and disciplined programming skills. (Certificate only.)
(Tuition $90; book $12.25.)

- Monday and Wednesday, 3/28-6/1, 12:00-1:00

For additional information or to register for ACE courses call Staff Development, ext. 7-0657. The Staff Training Assistance Program provides reimbursement to $75 per quarter for cost of courses related to employee's job performance.

CONTROLLER'S OFFICE WORKSHOPS

The Controller's Office schedules these workshops throughout the year. For more information and/or the current schedule of workshops, call Alice Forbes, 7-4531.

Course 1: Introduction to the Stanford Accounting System—(two two-hour sessions). For employees new to Stanford who monitor either departmental or auxiliary activity expenditure statements. The course includes the organization of the Controller's Office, discussion on account numbers, responsibility for the use of funds and record retention. Practical work includes practice in reading an expenditure statement and in forecasting for future results.

Course 2: Travel— (one two-and-a-half-hour session). For employees who need to understand the University's travel policy (Guide Memo 36.7) to complete travel and expense reports. The Travel Workshop summarizes travel policy, defines allowable travel costs, and provides practice in completing the necessary forms for Advances (SU-34A) and Expense Reports (SU-35).

Course 3: Equipment Administration—(One two-and-a-half-hour session). For employees who are new to the field of equipment administration as well as for those who want to "brush up" and/or need more information on the new computerized system. Teh emphasis of this workshop is on how to use the manual, forms and reports.

Course 4: Payroll/Personnel—(three two-hour sessions). For employees completing forms related to Payroll/Personnel actions and record keeping. This workshop includes a review of policies and procedures, and practice in completing all necessary forms.

Course 5: Fund Accounting at Stanford and How to Read Fund Statements—(two two-hour sessions). The purpose of this workshop is to teach interested employees the fundamentals of fund accounting as practiced at Stanford. The University's financial statements are discussed as well as fund statements and fund summary reports.

Course 6: Fundamentals of Grant and Contract Administration—(four two-hour sessions). This workshop is planned for administrators and others involved with the preparation of proposals as well as accounting procedures for expenditures, monitoring and forecasting for sponsored research projects. Members of the Sponsored Projects Office will participate in the workshop. The sessions planned are:

1. Introduction and Overview of Definitions, Federal Regulations and the role of SPO.
2. Proposal Preparation.
3. proposal Processing and Post-Award Administration.
4. Contract and Grant Rebudgeting, Forecasting and Financial Management.
5. Grant and Contract Closeout, Updates, Issues, and Trends.

Course 7: Grant and Contract Administration Update—(one two-hour session). This new workshop is planned for administrators and other interested employees to discuss current issues and problems in grant and contract administration. A specific topic will be chosen for each update session.

Course 8: Procurement—(two two-hour sessions). This new workshop reviews the procurement process along with criteria for choosing the correct form amongst the SU-10, SU-11, SU-12, SU-13, SU-14, SU-15, SU34A, SU-34B, SU-35, SU-40, SU-41, and SU-43.

Course 9: Grant and Contract Administration Update—(one two-hour session). This new workshop is planned for administrators and other interested employees to discuss current issues and problems in grant and contract administration. A specific topic will be chosen for each update session. The topic for this first workshop is the closing out of sponsored projects. A panel discussion is planned, followed by a guest speaker, Fred Bentley, associate director of SPO, who will speak on current issues.

Draft/

cont. from page 1

calls for the Service to provide, within a two-week period, acknowledgments of thousands of students' registration.

"Yet if Selective Service fails to achieve this extremely demanding standard of performance, many students—through no fault of their own—will face denials or subsequent cutoffs of aid because of delays in receiving their acknowledgment letter; schools will be denied reimbursement for funds advanced in good faith to students in fact entitled to receive them; and students and schools alike will be thrust into the pointless and expensive process of attempted retrieval of funds properly disbursed and properly expended.

"Students who have fully complied with the statutory requirement will suffer from this burdensome and unnecessary system."

Kennedy suggested that the statutory requirement could be met with a simple form as follows:

If you are a male born after Dec. 31, 1959, complete the following:

I certify that I am registered with Selective Service; or

I certify that I am not required to be registered with Selective Service because:

I am in the armed services on active duty;

I am a permanent resident of the Trust Territory of the Pacific Islands or the Northern Mariana Islands.

Signature, birth date, and selective service registration number or social security number.

This would be in keeping with the legislative history of the statute, which says the regulations should "minimize the administrative burden on colleges and universities and the delays in processing aid applications and awards" (House Conference Report 97-749) and that the burden of verification be placed on Selective Service.

"Neither the statute nor the legislative history contains any suggestion that verification of registration status may be required prior to the award of aid," Kennedy noted. This could result "in an actual loss of educational opportunity" for some students.

As drafted, the proposed regulations "place the burden of verification wholly upon the educational institutions. . .require statements from all students seeking federal aid regardless of whether they are required to register with Selective Service," Kennedy said.

The proposed regulations would:

1) Make the verification documentation part of the student's record;

2) Require institutions to attempt to recover funds already disbursed to students who fail to file and verify compliance; and

3) Require institutions to recover as overpayments funds distributed to newly turned 18-year-olds who file affadavits as temporary verification of registration but do not provide additional documentation within 120 days.

"By unnecessarily thrusting the university into the role of primary enforcer of a controversial statute that has other, ample, and far more appropriate methods of enforcement, the regulations are inimical to the traditional relationship between academic institutions and their students," Kennedy said.

His views were expressed in a letter to Andrea Foley in the Department of Education's Office of Student Financial Assistance (Room 4318, Regional Office Building 3, Washington, D.C.).

Barnett explains standards in field

In a statement published by *Campus Report* last week, Prof. Clifford Barnett noted that field work in anthropology "demands a clear demonstration to others in the profession that (the researcher) can be trusted to report events accurately, including the events which involve the behavior of the anthropologist in the field.

"The reasons for this professional imperative for sensitivity to others, prudent judgment and unquestioned honesty are inherent in the nature of the anthropological research process. Anthropological research most often involves a solitary researcher rather than a research team. . .it is difficult for other researchers to go to the 'laboratory' and replicate the findings.

"Anthropologists often study populations which have relatively little power in their national units and are at the mercy of officials and others who have power over them. The study populations often have little realization of the uses that can be made of information collected by anthropologists." Some of these can work against the interests of those who supplied the information.

Anthropologists have a special responsibility not only to protect the confidentiality of those who provide information to them, but to consider and attempt to anticipate the repercussions for their study populations of the content and form of their disseminated research findings. . . .

"One of the ways anthropologists can protect the name of the discipline is to abstain from engaging in activities while in the field that are judged to be 'illegal' in the areas where they work. . . . In some situations, actions judged 'illegal' by a national government may not be perceived as 'illegal by the study population and may even be necessary to protect the interests of the study population.

"Similarly, unconsidered action taken by the anthropologist after leaving the field to further the welfare of the study population may foreclose the opportunity of other researchers to carry out research in the same area, and might harm the populations the anthropologist would like to assist.

"Sound judgment and fully considered action are thus requisites for the professional."

Queen. . .

continued from page 1

President Kennedy has invited the Stanford Band to play during the lunch on the lawn at the back of Hoover House.

The list of those invited to the lunch will not be made public. This is reported to be at the request of the British government, on grounds of protocol.

Thursday will be a very busy day for the Queen, even for a monarch who has been accustomed to grinding schedules for 31 years. She will arrive in San Francisco, Pier 50, aboard the royal yacht Britannia, at 9:30 a.m. Nancy Reagan, wife of the President, will also be aboard, having sailed as a guest from Santa Barbara.

The Queen and the Duke of Edinburgh will go to Davies Hall for a civic reception in her honor.

The royal party will come to Stanford by car. After the Stanford lunch the royal party will visit the Hewlett-Packard plant at Cupertino. By 4 p.m. the Queen and her party will be back at the yacht Britannia, to prepare for the state dinner that will be held that evening at the DeYoung Museum, hosted by President and Mrs. Reagan.

Barricades

Roads around the President's House will be barricaded early Thursday, March 3, as shown above, in anticipation of the Queen's visit.

Police Chief Marvin Herrington urges drivers to avoid the area. No access will be allowed inside the perimeter, except to authorized individuals.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

SLAC

94668-JM (JCC:2296) Program Planner: Develop annual dept'l expense & capital budgets; develop monthly plans of expenditures & manpower requirements; analyze detailed acctg statements; review & update plans; develop proj schedules (CPN) for work being performed by the dept(s) fr develop't stage thru design, fabrications, installation & sys testing; prep written status & progress reports; carry out studies of proposed new projs; participate in prep of long range plans of depts; QUALIFICATIONS: Industrial or Mgmt Engrg degree or equiv required; understanding of the basic concepts of program planning; coureswork should have provided training in budgeting & acctg for proj control, as well as critical path network schedule preparation, updating, analysis & reporting; ability to deal effectively w/ scientists, engrs & administrators; ability to commu effectively both orally & in writing.; C07; $2113-3432. APPLY AT SLAC

94112-JM (JCC:7550) FACIL ENGINEER/COORD I: Respon for daily direction of maintenance & repair work of bldgs & grounds as follows: determines most econimical method of performing maintenance & repairs; directs, monitors & inspects subcontractor performance; QUALIFICATIONS: must have approx 5 yrs exp related to bldg craft trades; be knowledgeable in principles & practices of bldg maintenance, standards & codes, methods of fiscal control & cost analysis; must be effective in oral & written commu; have excel demonstrated interactive skills; must have work exp in a highly complex tech environ & be able to read drawings & interpret tech specifications.; C06; $1854-2354. APPLY AT SLAC

94931-JM (JCC:7902) Laborer/Driver: TMS Unit; drive bus, trucks, forklifts & other vehicles; operate light eqpt; use hand & power tools; move furniture & eqpt; perform other work as assigned; must possess valid Calif. Class 1 or 2 driver's license; ability to perform some heavy work in all types of outside weather conditions; ability to follow job-related instructions.; A18; $1300. APPLY AT SLAC

94679-JM (JCC:2262) Financial Analyst II: Assist in preparing annual budget documents for submittal to DOE; review & analyze cost performance against budget; participate in special analyses as required; asst in long range planning process; establish group/proj budgets; development & maintenance of computer models; QUALIFICATIONS: BS or equiv exp in Bus. Admin., Economics or technical discipline w/ some acctg bkground; MBA desirable; ability to commu both orally & in writing.; C07; $2113-2773. APPLY AT SLAC

Bargaining Unit

9300-TC (JCC:5638) LIFE SCI TECH I: TMS Unit; perform procedures under supvn of triglyceride turnover & cholesterol measurements, glucose values, free fatty acids, & determination of glucose turnover; centrifuging & aliquoting blood specimens obtained fr patients; QUALIFICATIONS: 1 yr prev exp as a lab technician or equiv course work in a lab science.; A18; $ 7.50.

44322-JB (JCC:6604) SR S&E TECH -ELECTRO MEC: TMS Unit; 8-5 w/ some shift work; assist visiting scientists to set up experiments; assure safe efficient operation of the lab by monitoring beam line instrumentation, safety interlocks & radiation; participate in develop't of new beam lines & instrumentation; perform maintenance & repair of existing eqpt; QUALIFICATIONS: Associate of Science Degree in Electronics or Electrical Engr or military Tech school grad or 5-8 yrs of work exp in a lab environ; specialized skills in electronics, vacuum, or computer sciences desired.; A34; $10.97.

Hospital

PAYROLL PROCESSOR—General Acctg—#3326 (C-28): Responsibilities: Audit time cards for accuracy & compliance w/personnel policies; compute, type, & balance interim checks; complete wage & other information for State & Fedl agencies; process personnel action forms; compute retroactive adjustments; able to work under stress, answer phones & employee questions/problems in pleasant manner; interface w/computer. Qualifications: Accurate typing; 10 key by touch; high schl grad or equiv; payroll experience preferred; permanent full time M-F $7.56-$10.38 hrly

TRANSCRIPTION SUPVR—Radiation Therapy—#6022 (C-8): Responsibilities: Under direct supvn of Administrative Asst, for Radiation Therapy, transcribes & types history & physical forms, follow-up repts, letters, treatmt summaries; works w/ dictaphone & word processor; supervises other personnel of section who are performing transcription duties; performs related duties as assigned; Qualifications: minimum of 3 yrs' transcription experience preferred; type at corrected rate of 60wpm; knowl of medical terminology for entire human body including: medicines, chemotherapy, laboratory, pathology & radiology terms; abilities to transcribe dictation & supervise effectively; permanent full time permanent M-F 7:30-4:30pm; $9.19-$12.63 hrly

Nonexempt

23598-PM (JCC:2512) OFFICE ASST III-SPEC: Prov clerical support to Image Understanding/Robotics Research Group & to the Admin Sec for the group to incl screening & responding to calls & visitors, arranging for demonstrations; scheduling appts; opening & screening mail; assemble tech mat'l fr libs & research organizations; make travel arrangements for research trips & local arrangements for visitors; prep of manuscripts, proposals, reports, forms, etc., as well as maintenance of records will utilize the Computer Sci text editing sys; QUALIFICATIONS: typ 60; computer text-editing skills or willingness to learn required; exercise good judgment; knowl of Univ forms & procedures helpful; neat typing skills; good interpersonal skills required to interface effectively w/ faculty, staff & students; send appl/resume to M. Yearwood, Bldg. 460, Room 256.; B12; $1310-1373.

36209-BP (JCC:2554) SECRETARY II: Prov sec'l support to Asst & Assoc Deans in Grad Studies & Research; schedule mtgs & make appts; make travel arrangements; preparing Univ forms; type corresp & reports; word-processing on IBM Personal Computer; filing; working on large mailings; prov support serv for various projs; answer phones; greet visitors, etc; QUALIFICATIONS: typ 60; sec'l exp; accurate typing; good English grammar & spelling skills; familiarity w/ or willingness to train on IBM-PC; good interpersonal skills & ability to interact well w/ faculty, staff & students; exp w/ ethnic minorities desirable; smoking not permitted in work area; send appl/resume to Jean H. Fetter, Bldg. 1, Room 2B.; B11; $1246-1310.

41739-PM (JCC:2596) SECY II-SPEC: Serv as sec to 2 or 3 professors active in copyright & property law; handle all manuscripts, classwork, correspondence, phone calls, expense reports & travel arrangements as needed; data processing on personal computer; able to accept respon to prior own schedule at extremely busy desk; excel skills a must to keep up w/ heavy work load; QUALIFICATIONS: typ 80; excel typing skills; good offc bkground; exp w/ data processing & dictating eqpt; must be detail-oriented & have demonstrated organizational & commu skills in prev work exp; send appl/resume to Dena Landsman, Room 113 Crown Quad.; B12; $1310-1373.

27093-PM (JCC:1747) LIBRARY SPEC I: 50%; lib assistance for North & Latin American Collections; search lib card catalogs & files, standard bibliographic tools, & RLIN data base for book & periodical titles selected for purchase & for books received as gifts; maintain curator files & records; typ letters & reports; asst in their preparation; asst in the preparation of spec bibliographies; answer telephone in curator's absence; QUALIFICATIONS: typ 45; an extensive application of Spanish is nec; prev lib exp helpful; requires typing ability; ability to gain a working knowl of lib operations relating to the work of these collections; send appl/resume to Joseph W. Bingaman, Hoover Institution, Stanford, CA 94305 or call 497-2106.; B10; $595-623.

31098-PM (JCC:1755) LIBRARY SPEC II: Performs duties in Dept of Special Collections; circulation of mat'ls; maintenance of records; paging & reshelving of mat'ls; supvn of reading room; trains, supv & schedules student assistants; processes all photoduplication orders & maintains files of copy negatives; oversees genl maintenance of stacks; collects & reports statistics on public serv & dept'l space; on-line bibliographic searching; retrieves electronic mail & supv terminal maintenance; assts in documenting, updating & revising operational procedures; QUALIFICATIONS: typ 40; required: prev lib exp; prev public serv exp; demonstrated clerical & organizational skills; good commu skills, both orally & in writing; desirable: prev supvry exp; ability to work well w/ students; familiarity w/ academic res libraries, preferably w/ Spec Collections depts; knowl of and/or exp w/ RLIN & WYLBUR; contact: Bob Johnson, Green Lib, Room 223 (497-3152).; B12; $1310-1373.

32590-BP (JCC:2210) ACCOUNTING ASST III: Review documents (salary reqs, check requests, expense reports, etc.) for allowability 7 applicability according to Univ, Gov't & non-Gov't policy; prep contracts & billing as required; answer dept inquiries concerning expenditures; correct reject lists & prep transfer of expense when indicated; prov guidance & assistance to offc assistants; various acct reconciliations, etc; QUALIFICATIONS: 2-3 yrs exp, training or equiv education; requires a thorough knowl of basic acctg procedures as well as ability to use calculator; maturity & judgmental ability required in applying policies; send appl/resume to D. Monica, 30 Encina Hall.; B14; $1440-1514.

31849-BP (JCC:2462) OFFICE ASST III: Respon for maintaining orderly flow of work & prov liaison between two parties in a shared job; typing, proofreading & distribution of gift acknowledgements; maintenance of accurate files & records of monetary & non monetary gifts to Univ; handle some clerical duties for Dir of Commu/Events, w/ a variety of duties assoc'd w/ organizing social events for Univ donors; answer phone; supvn & training of student or part time employees; order supplies, etc; QUALIFICATIONS: typ 50-55; extremely careful regard for accuracy & respect for confidentiality; excel typing skills, incl exp w/ NBI and/or Lexitron; familiarity w/ Univ computer sys desirable; good written & verbal commu skills; proofreading ability & excel memory are vital; send appl/resume to Liz Trujillo, 301 Encina Hall, Stanford, CA 94305.; B11; $1246-1310.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, March. 8, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Carpools

Carpoolers wanted, 8-5, M-F, from Pleasanton, Livermore, Union City, Fremont area to Stanford. Call Patty, ext. 7-2071.

One person to join existing carpool to Stanford. M-F, 8-5. We meet at Stevens Creek & Wolfe Road, Cupertino Please contact Ana Errico at 7-0612.

Carpool wanted from Newark to Stanford, M-F, time flexible. Call Polly, 7-4281.

Carpool wanted to Santa Cruz from Palo Alto M, W, F. Call Mark, 856-2428.

Carpoolers wanted, 7:30 a.m. to 4 p.m., or 7 a.m. to 3:30 p.m. Fremont, Union City, Newark area to Stanford University. Call Tami, 7-6444.

Hortensia de Allende of Chile to speak on human rights

Hortensia Bussi de Allende, widow of Salvador Allende, President of Chile from 1970-73, will speak at 7:30 Monday, March 7 in the History Corner, Rm. 2, Stanford University. She is being sponsored by the Feminist Studies Program.

Sra. Allende, a long-time fighter for the rights of women and the poor in Chile, will speak on the role of Latin American women in the struggle for the preservation of human rights in Chile and in other Latin American countries.

On September 11, 1973 the military coup overthrew the democratically elected government of Salvador Allende. Sra. Allende was in the Presidential Home which was bombarded by air and ground forces on that morning. Several days later, without being allowed to see the body of her slain husband, she was able to escape to Mexico with her daughters.

Since 1973, Sra. Allende has been active in organizing international solidarity efforts for her people and has traveled extensively throughout Europe, Asia, Africa, and the Americas.

For more information contact Elizabeth Fitting, 497-2412.

Letters to the editor

She has sticker but no parking place

Editor, *Campus Report*:

I am confident, based on my daily observations, that my complaint is shared by a large number of employees who purchased "C" stickers for the privilege of securing a parking space on the Medical Center campus.

You are all aware that after 8:45 a.m. all "C" lots are completely full and that in order to make it to work one ends up receiving parking tickets for parking "illegally." I feel this is an unfair practice vis-a-vis "C" sticker holders. If one purchases a parking permit, one expects to find a space and not be penalized for shortage of parking spaces.

To those of you who share my dissatisfaction, please voice your concern to the Stanford University Police Department with copy to Rosemary Hornby (M-118). I am confident that an exceptionally talented, competent and snazzy administration such as I believe and hope Stanford to be can find a fair solution to this problem.

Check, a 1965 etching and drypoint, from the exhibition The Art of William Gropper

Art Gallery exhibits Gropper works

Art works by the social realist William Gropper are featured in an exhibition opening Tuesday, March 8, in the Stanford Art Gallery.

Included are 75 paintings, drawings, prints, and cartoons by an artist best known as a pictorial satirist.

Born on New York's Lower East Side in 1897, Gropper made social injustice the theme of his work throughout a long and productive career. He first came to national prominence as a painter in the 1930s with canvasses of bombastic senators and grim-faced lawyers, subjects that he continued to exploit during the McCarthy days of the 1950s.

Prolific as a figurative painter throughout the heyday of abstract expressionism, Gropper treated also such themes as the brutalities of war and the dignity of work. In murals commissioned by the Fine Arts Section of the U.S. Treasury Department during the late thirties, he depicted the heroic figures of American workers on the assembly lines of Detroit.

But Gropper's authority as an artist is best seen in the powerful draftsmanship of the graphic work he produced for the radical press during the twenties, thirties, and forties. The Stanford exhibition includes many of the original drawings for cartoons published in *Liberator*, *Revolutionary Age*, *The New Masses*, and the Yiddish daily, *Freiheit*.

Gropper got his first formal training by attending night classes at the libertarian Ferrer School in New York City from 1912-1915. There he drew from the live model in the company of such artists as Robert Henri and George Bellows. Subsequently, Gropper attended the New York School of Fine and Applied Arts for two years.

Hired in 1917 by the New York *Tribune* to draw cartoons for the Sunday section, Gropper was soon producing graphics for a wide range of publications, including *The Dial*, *Vanity Fair*, and *Smart Set*. The recipient of many awards and prizes—among them a Guggenheim Fellowship and the Carnegie International—Gropper, who died in 1977, had many one-man exhibitions in this country and abroad.

He spent 1967 at the Tamarind Lithographic Workshop, and the following year was elected to the National Institute of Arts and Letters. His work is to be seen in many public and private collections, among them the Metropolitan Museum of Art, the Museum of Modern Art, and the Chicago Art Institute.

For the exhibition at Stanford, Gropper's works have been lent by a private collector and by the Heritage Gallery in Los Angeles.

The Art Gallery, on the Stanford campus next to the Cummings Art Building, is open Tuesday through Friday from 10 a.m. to 5 p.m.; Saturday and Sunday, from 1 to 5 p.m., it is closed on Mondays. Admission is free.

Murray Perahia plays Beethoven, Schubert, and Lizst at 8 p.m. Friday, March 4, in Memorial Auditorium.

Kaye DeVries will sing the lead in Stravinsky's one-act opera, *Mavra*, at 2:30 p.m. Sat. and Sun. in Dinkelspiel

Kaplan tapestries shown at I-Center

Luz do Sol, architectural-scale tapestries by Annette Kaplan of Berkeley, will be on view at Stanford International Center March 3-30. A reception for the artist will be held there from 5-7 p.m. Friday, March 4.

The large works were all woven at a draw loom in the artist's Berkeley studio. Many tapestries are double-woven and finished on both sides. The artist's designs are bold and often geometricized. She frequently draws on urban architecture for subject matter.

Kaplan earned a bachelor's degree from the California College of Arts and Crafts in Oakland, where she studied with Trude Guermonprez. The artist also has studied in Mexico and Denmark, and has traveled widely in Central America and Europe. Kaplan was a National Endowment for the Arts grant recipient in 1975 and 1976, working in the U.S. Next year she plans to work with artists in Brazil.

Kaplan has had many solo and group exhibitions, beginning in 1972. Her work is included in a number of museum and business collections in the U.S.

Audition now for next two plays

The Stanford Drama Department will hold auditions for the Kaufman and Hart comedy *Once in a Lifetime* Monday and Tuesday, March 7-8, and for Marsha Norman's contemporary play *Getting Out* Thursday and Friday, March 10-11.

All are planned to start at 7 p.m. in Little Theater on campus.

Steven Vineberg, who will direct *Once in a Lifetime*, has requested those interested in auditions to sign up in the Drama Department Office, Room 144 in the back hall of Memorial Auditorium or call (415) 497-2576. Performance dates are May 11-14 and 18-21 in the Little Theater.

Johanna Dickey, second year doctoral student, will direct *Getting Out* performances May 25-28 at the Nitery. First produced in New York in 1978, the play concerns a woman who has spent most of her adolescence in prison, and begins on the day she is released.

Those interested in auditioning may sign out scripts at the department.

Alma Trio plays final concert

Stanford's ensemble-in-residence, the Alma Trio, will perform their last Music Department concert of the year at 8 p.m. Friday, March 11, in Dinkelspiel Auditorium. Trio members are Andor Toth, violin; Gabor Rejto, cello; and Adolph Baller, piano.

Their program will open with the Trio in C Major, op. 87 by Brahms and conclude with Schubert's Trio in B-flat Major, op. 99. Also on the program will be Debussy's cello sonata and the violin sonata in A minor, op. 105, by Schumann.

The Alma Trio celebrates its 40th anniversary this year. Tickets for their concert are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

Nohema Fernandez to play March 9

Pianist Nohema Fernandez, particularly well-known for her interpretation of Spanish and Latin-American repertoire, will perform at 8 p.m. Wednesday, March 9, in Dinkelspiel Auditorium. Her free recital is presented by the Department of Music.

Fernandez will perform sonatas by Larranaga, Freixanet, Cantallos, and Chopin, as well as *A Prole do Bebe* by Villalobos and selections from *Goyescas* by Granados.

Fernandez received her Doctor of Musical Arts degree from Stanford and is presently coordinator of piano studies at UC-Santa Cruz. She will give recitals in Denmark and Sweden in April and tour the eastern U.S. in May. She has performed in her native Cuba, Mexico, France, and throughout the U.S.

Italian architect to speak Monday

Aldo Rossi, Italy's leading living architect, will present a free slide/lecture on his work at 8 p.m. Monday, Mar. 7, in Skilling Auditorium. A reception will follow in the Tresidder Union Small Lounge.

Born in Milan, Rossi has served as editor and frequent contributor to *Casabella-Continuita*, an architectural magazine. He has taught at the School of Architecture in Milan, the Universitario di Architectura in Venice, the Cooper Union in New York City and Yale University. The recipient of a number of awards, Rossi is well-known for his major written work: *The Architecture of the City*.

Rossi's work is intimately related to his writings. Among his principal works are the Unita di Abitazione for the Societa Monte Amiata complex in Varese, 1972-1977. In 1977, working with Carlo Aymonino, Gianni Braghieri, and Vittorio Savi, he won a competition for the design of the Centro Direzionale of Florence. His works and drawings have been described as forms which create "a dream-Italy unmatched since De Chirico's time."

The talk is sponsored by Stanford's Departments of Urban Studies and Italian, University Events and Services, Casa Italiana, and Tresidder Union's program committee, STARTS. It is part of the 20th anniversary celebration of Tresidder Union.

Lecture on Spain

Prof. Gabriel Jackson of the University of California, San Diego, will present a free public lecture on "Spain: From Dictatorship to Democracy" at noon Friday, March 11, in History Corner, Student Lounge, Room 301, at Stanford.

Jackson has been on the faculty of the department of history at UC-San Diego since 1965, where he teaches the history of Spain. He is the author of *The Spanish Republic and the Civil War*, published by Princeton University Press, and *Historians Quest*, published by A. A. Knopf.

Carol Lashof, Jodi Gandolfi, Nancy Beagle, Lila Stuart

"Moments of Being," inspired by Virginia Woolf, set for March 8

"Moments of Being," an evening of music and drama based on the writings of Virginia Woolf, will be presented by the Center for Research on Women (CROW) and the Lively Arts at Stanford, at 8 p.m. Tuesday, March 8, in Dinkelspiel Auditorium. This performance is the final event in the Jing Lyman Lecture Series, "Women in the Performing Arts."

Actress Nancy Beagle, soprano Lila Stuart, and pianist Jodi Gandolfi will be featured in "A Space Between Two Silences," a play by Beagle and Carol Lashof, and "From the Diary of Virginia Woolf," a song cycle by Dominick Argento.

Many accounts of Woolf's life have stressed her recurring struggle with madness and depression.

A Space Between Two Silences does not gloss over the writer's personal troubles, but the authors have also tried to do justice to her joy in artistic creation and her almost equal delight in the less exalted pleasures of routine, daily life.

Woolf was sharply aware of how easily death and meaninglessness can overtake all of us. She wrote in her diary that life is "like a little strip of pavement over an abyss" but found that words could restore her sense of wholeness, form a bridge over the abyss. "A short season between two silences" is the phrase she used to describe individual existence.

Beagle, a doctoral student in Early Music at Stanford, has been seen in Stanford productions of *Belle of Amherst* and *The Good Soul of Setzuan*, She has toured northern and southern California with her own one-woman show, *Musick's Handmayden*, based on prose, poetry, and music of Elizabethan England.

Gandolfi is a lecturer in piano at Stanford, where she received her D.M.A. She has performed extensively as chamber musician, vocal accompanist, and soloist in California, New York, and Europe. She recently made radio recordings for Sender Freies Berlin and Radio Bremen.

Stuart is a professor of music at Stanford, where she teaches voice. She has performed with symphonies and opera companies throughout the U.S., including the Cincinnati Opera, San Antonio Opera, and the Utah Symphony. She was a winner of both the San Francisco and Metropolitan Opera auditions.

Lashof is a doctoral candidate in modern thought and literature at Stanford, where she is studying the fiction of Virginia Woolf and D: H. Lawrence. Her play, *The Story*, was produced by San Francisco's Magic Theatre, and will soon be recorded for National Public Radio.

The performance is free of charge and open to the public. For more information, call 497-2551.

Award-winning Canadian films shown

The Other Cultures Film Series wraps up winter quarter with a showing of ten of Canada's finest award-winning animation shorts. The films, produced by the National Film Board of Canada, will be shown at 7:30 p.m. Thursday, March 3, at the International Center.

Each film extracts a scenario from common everyday experience and explores it with a creative, often humorous, perspective. The filmmakers animate anecdotes, allegories and stereotypes as they present cultural and moral themes at an adult level.

The program will include the following short animated films: "Hunger," "No Apple for Johnny," "Citizen Harold," "A Token Gesture," "Metamorphosis of Mr. Samsa," "My Financial Career," "The Street," "Bead Game," "A Chairy Tale," and "Boomsville."

Admission to the films is free though a 75 cent donation will be requested at the door to help defray costs of the series.

Tribus speaks Friday

Prof. Myron Tribus, director of the Center for Advanced Engineering Studies at MIT, will give a free lecture at 4 p.m. Friday, March 4, in Room 217, Terman Engineering Building.

Tribus, who is a member of the advisory council of the School of Engineering, will speak on "The Design and Management of Systems of People and Machines for Quality and Productivity."

The talk is sponsored by Engineering/Economic Systems.

Fritz Brun plays Don Juan in Drama Department production of Moliere work

The Stanford Drama Department's production of Moliere's *Don Juan* opens at 8 p.m. Wednesday, March 2, in the Nitery Theater on campus.

A presentation of the Graduate Directing Workshop, the play is directed by second-year student Laurence Maslon. Performances continue through Saturday, March 5.

Don Juan is played by Fritz Brun, well-known to Stanford audiences, and a former member of the Danish Royal Theatre and the Bristol Old Vic. He is, as well, a doctoral candidate in drama. The role of Sganarelle is played by Martin Robinson, a sophomore most recently seen in the Drama Department production of *Arms and the Man*. Original live music is composed by Tom Linblade, doctoral student in Drama.

Admission to the production is free. Beginning at 7:30 p.m. each evening programs which serve as the "ticket" of admission will be distributed on a first come basis. Seating is limited to 100 persons.

Moliere wrote his version of the Don Juan legend after suffering from the ill effects of his controversial play, *Tartuffe*. Despite two successful French versions on the same theme, his play was an immediate success and an immediate scandal.

The court objected to two central themes of the play—the heretical libertine (Don Juan) and the comic fool (Don Juan's valet, Sganarelle). Sganarelle is Don Juan's constant companion, forever chastising him for his scandalous actions, forever failing to convince his master of anything.

Since its rediscovery by the famed French actor-director Louis Jouvet in 1947, Don Juan has enjoyed a reputation as one of Moliere's three greatest plays.

Moliere's original setting of Sicily has been retained in the Stanford production, but updated to 1919. The production has a colorful quality reminiscent of some of Fellini's later movies. Director Maslon has served as assistant director for the department's productions of *King Lear* and *Good Soul of Setzuan*. *Chaos and Hard Times*, a play Maslon directed last summer in New York, was named one of the ten best plays of 1982 by *Other Stages* magazine.

Founders' Day observed March 6

Founder's Day 1983 will be observed next Sunday (March 6) in the 11 a.m. services at Memorial Church and by the traditional wreath-laying ceremony at the Stanford Family Mausoleum.

The procession linking the two programs promises to be the most colorful in the history of this annual event. It will include all of the University's academic flags, carried by students from all four undergraduate classes, and the Memorial Church choir in their cardinal red robes. The congregation is invited to join the procession.

The officers of the Senior Class—Joe Del Hierro, Katy Dore, Mary Ruckelshaus and Kevin O'Beirne—will each take part in the ceremonies. Associate Dean of the Chapel Wendy Smith will deliver the Church sermon. Other participants will be President Donald Kennedy; Ray Lyman Wilbur, Jr., president of the Stanford Historical Society; William Stone, director of the Alumni Association; and Chaplain Emeritus Robert M. Minto.

Founders' Day, which honors both Leland and Jane Stanford, is observed on the Sunday nearest to the Senator's birthday, March 9. When the traditional ceremonies are concluded, the Senior Class will add a postscript ceremony of their own—the sharing of a very large birthday cake ordered for the occasion.

Travel to Peru

"Incaland," a travel documentary produced and narrated in person by Stan LaRue, will be presented twice on Monday, March 7, by Stanford University Events and Services.

Part of the regular Discovery Film Series, the film will be shown at 2:30 p.m. in Kresge Auditorium and at 7:45 p.m. in Memorial Auditorium.

The film relates the story of the vast Inca Empire, which reached its apex in the early 16th century in South America.

Tickets are $3 for the matinee, and $4 for the evening showing.

John Zeigler

Zeigler and friends in varied program

The Department of Music presents Stanford clarinet teacher John Zeigler, visiting pianist William Cory, and four members of the San Francisco Symphony at 8 p.m. Monday, March 7, in Dinkelspiel Auditorium.

Zeigler, an acting member of the San Francisco Symphony and former principal clarinet with the Omaha Symphony, will perform *A Set for Clarinet* by Donald Martino.

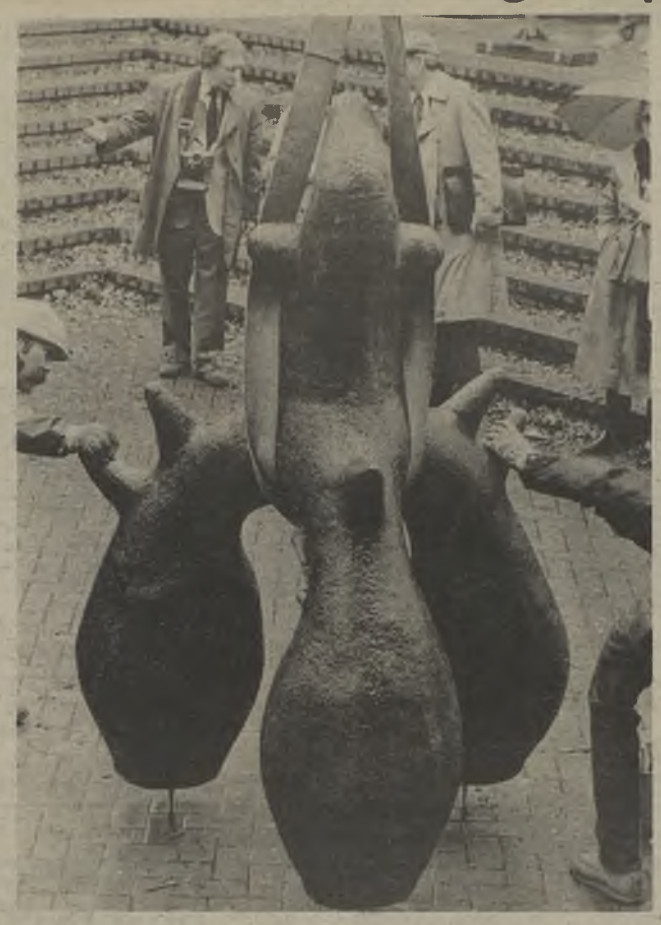
Cory, who received his Doctor of Musical Arts degree from the University of Texas in Austin, will perform two solo works for piano: *Premiere Rhapsodie* by Debussy and *Sonata in E-flat, op. 120, No. 2* by Brahms.

Joining Zeigler for Prokofieff's *Quintet, opus 39* will be San Francisco Symphony members Keith Atkinson, oboe; Nadya Tichman, violin; Nanci Severance, viola; and Brian Marcus, bass.

Tickets are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

Jean Miro sculpture added to Stanford's extensive gallery of outdoor art

Oiseau, a seven-foot high, 1,700-pound bronze bird sculpture by Joan Miro, one of the world's greatest living artists, was installed at Stanford Tuesday, March 1.



Cast in 1981, the sculpture is the gift of Mrs. Madeleine Haas Russell of San Francisco, who has been a generous benefactor of Stanford in the past. It will be placed in front of the Nathan R. Cummings Art Building in the sunken plaza leading to Annenberg Auditorium.

Miro, who is 90 years old and Spanish by birth, cast the first "Oiseau" in iron in 1973 and set it on a chimney of his house near Barcelona. This installation was indicative not only of the artist's playful attitude toward his art, but also of his dislike for sculpture on a conventional pedestal, according to Stanford Art History Prof. Albert Elsen.

Respecting the artist's intentions, the Stanford cast will be installed directly on the plaza pavement.

Miro was a pioneering modern artist who sought to remove art from the category of the previous object. With works such as "Oiseau," he wanted his art to directly confront what does exist with what the artist says can exist, the truth and reality that comes from his imagination, Elsen says.

Miro has been making sculpture intermittently for over 50 years. He has been painting for an even longer period of time.

Oiseau
by Jean Miro

Miro's most intense sculptural productivity has come in the past 15 years. Much of his fame as a sculptor has come from his joyful transforming manipulation of found objects which he assembles in visual nonsequiturs to thereby unhinge logic and open the mind of fantasy.

"Oiseau," however, descends from a smaller and rarer group of bird sculptures ("Lunar Bird, Solar Bird") that were modeled entirely by the artist on a small scale and then enlarged by assistants.

"Oiseau" is in the great historical tradition of imaginative animals already represented on the Stanford campus by sphinxes guarding the Stanford Mausoleum, and a pair of 19th century griffins that once flanked the drive to the Stanford family home, but now front the northern entrance to the Athletic Department.

Calder's "Faucon" in front of the Law School began the modern bestiary on campus that "Oiseau" now joins. Miro's new sculpture focuses on 70 years of making witty and provocative art into a form which testifies to the fact that his imagination is still capable of renewal, Elsen says. A master of visual puns and sculptural rhythm and rhyme, Miro has infused "Oiseau" with his exuberant and optimistic love of life.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., March 2 to cover the week of Mon., March 7, through Sun., March 13.

MONDAY, MARCH 7

Discovery Film Series: "Incaland". 2:30 p.m. Kresge Aud. $3.

Numerical Analysis Seminar: "Symmetric Approximations to Source Problems," by Garrett Birkhoff, Harvard Univ. 4:15 p.m. Room 380-C, Math Corner.

Biological Sciences Seminar: "Co-Evolution Among Competing Species Causes Extinction: An Example with Anolis Lizard Populations from the Eastern Caribbean," by Dr. Jon Roughgarden, Dept. of Biological Sciences, Stanford. 4:15 p.m. Room T-175, Herrin Hall, Dept. of Biological Sciences.

Film Society: "Nashville". 7:30 p.m. Kresge Aud. $2.00.

Discovery Film Series: "Incaland". 7:45 p.m. Memorial Aud. $4.

Music Dept. Concert: John Zeigler, clarinet. Classical and contemporary works for clarinet. 8 p.m. Dinkelspiel Aud. $4/$2.

TUESDAY, MARCH 8

Men's Tennis: vs. Foothill College. 1:30 p.m. Varsity Courts.

Women's Softball: vs De AnzaCollege.1:30 p.m. Roble Field.

Special Condensed Matter Physics Seminar: "Defect Studies in Semiconductors," Dr. P.D. Dobson, University of Birmingham (England) Dept. of Metallurgy & Materials. 2:15 p.m. McCullough Building, Rm. 240.

Communications Design Seminar: "Power and Frequency Performances of Modems for Satellite Data Communications," by Chin-Lin I of Stanford. 4:15 p.m. McCullough Bldg., Room 128.

Fluid Mechanics Seminar: "The Fluid Mechanics of Helicopter Impulsive Noise," with Fred H. Schmitz, NASA-Ames. 4:15 p.m. Skilling Aud.

CROW Women in the Performing Arts Series: "Moments of Being": a program of music and dramatic readings based on Virginia Woolf's diary. 8 p.m. Dinkelspiel Aud.

WEDNESDAY, MARCH 9

Men's Tennis: vs. Utah. 1:30 p.m. Varsity Courts.

Applied Mathamatics Lecture: "The Boss Model for Reflection from Rough Surfaces," by Professor V. Twersky, Stanford & Univ. of Illinois-Chicago Circle. 3:15 p.m. Room 380-C, Math Corner.

Electronics in Medicine Lecture Series: "Development of a Computer-Controlled Intensive Care Respirator," by Mr. Fritz Stawilcke, Dept. of Mech. Eng., Stanford & Hewlett-Packard Laboratory. 4:15 p.m. McCullough 134.

Music Dept. Concert: Nohema Fernandez, piano. Works by Chopin, Ginastera, and others. 8 p.m. Dinkelspiel Aud. Free.

THURSDAY, MARCH 10

Women's Tennis: vs. CSU Fullerton. 1:30 p.m. Varsity Courts.

EE-370 Information Systems Laboratory Seminar: "Speech Research," by John Turner, Stanford. 4:15 p.m. Skilling 191.

Condensed Matter Physics Seminar: "Sound Proofing with Soap: The Breakdown of Hydrodynamics in Smectics A Liquid Crystal," by J. Toner, Univ. of Chicago. 4:15 p.m. Applied Physics 200.

Industrial Engineering Symposium: "The Ethics of Risk," with Prof. Ronold Howard, Stanford. 4:15 p.m. Terman Aud.

Applied Mechanics Division: "Damping Mechanisms in Engine Blades," with Dr. A.V. Srinivasan, Manager, Applied Mechanics Research, United Technologies Research Center. 4:15 p.m. Skilling Auditorium.

Women's Basketball: vs. Long Beach State. 5:45 p.m. Maples Pavilion. $7, $6, $5, $4, Students $2.

Men's Basketball: vs.Oregon. 8 p.m. Maples Pavilion. $7, $6, $5, $4, Students $2.

Spirit of Japan Lecture Series: "Is Japan One Big Disneyland?," by Melinda Takeuchi, Professor of Japanese Art å Stanford. 8:15 p.m. Annenberg Aud. Non members $5, Comm. for Art members & students $4.

FRIDAY, MARCH 11

History Department Lecture: "Spain: From Dictatorship to Democracy," by Prof. Gabriel Jackson, UC San Diego. Noon. Bldg. 200, Student Lounge Room 301.

Music Dept. Concert: Alma Trio, featuring Andor Toth, violin; Gabor Rejto, cello; Adolph Baller, piano. Brahms - Trio in C Major, op. 87; Debussy - Sonata for cello and piano; Schumann Sonata in A minor, op. 105; Schubert - Trio in B-flat Major, op. 99. Dinkelspiel Aud. $4/$2.

Materials Science and Engineering Colloquium: "Stuctural Characterization of Process-Induced Defects in Integrated Circuits". 3:30 p.m. Peterson Lab., Room 550A.

Materials Science & Engineering Colloquium: "Structural Characterization of Process-Induced Defects in Integrated Circuits," by William T. Stacy, Phillips Res. Lab., Signetics, Sunnyvale. 3:30 p.m. Peterson Lab., Room 550A.

Lively Arts at Stanford/Stanford Music Guild: Guitar Master Class, Michael Lorimer. 7-10 p.m. Annenberg Aud. Open to residents of Greater Bay Area.

Stanford Society of the Archaelogical Institute of America: "Town and Country in the Greek World," by Michael Jameson, Stanford Univ. 8:15 p.m. Room 370, Quad.

SATURDAY, MARCH 12

Women's Lacrosse: Round Robin Tournament. 10 p.m. Roble Field.

Stanford Baseball: Alumni Game. 12:00 noon. Sunken Diamond. $2 general, Stanford students free.

Men's Basketball: vs. Oregon State. 8 p.m. Maples Pavilion. $7, $6, $5, $4, Students $2.

The Lively Arts at Stanford: Michael Lorimer, guitar. Works for Baroque and traditional guitar by de Murcia, Corbetta, Villa-Lobos, Bach, Albeniz, and others. 8 p.m. Dinkelspiel Aud. $9.50, $8.50, Students $3 off regular price.

SUNDAY, MARCH 13

Men's Lacrosse: vs. UOP. 1 p.m. Lacrosse Field.

International Center Concert: Irish Music Session. An open music session featuring Bay Area musicians playing traditional Irish music. Irish country supper will be served. 5:30-9:00 p.m. I-Center. Music free, but supper tickets must be purchased in advance.

ASSU Sunday Flicks: "Paper Chase". 7 & 9:30 p.m. Memorial Aud. $1.50.

EXHIBITS

Inventions. An exhibition of books and manuscripts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

"Photographs of Old Russia," by Jack Kollman. Faculty Club. Jan. 17 - March 26.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

" City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Paintings by Marina Goodier. Tresidder Union, Upper Lobby. March 1 - March 31.

Annette Kaplan, *Luz do Sol*, Tapestries. I-Center. March 3 - March 30.

The Art of William Gropper. Art Gallery. March 8 May 8.

CAMPUS REPORT

Volume XV, Number 23 | A publication for Stanford University faculty & staff | March 9, 1983

Operating budget balanced at $227 million for 1983-84

Stanford expects to achieve a balanced operating budget of $227 million in 1983-84, an increase of 7.9 percent, according to proposed budget guidelines approved by the Board of Trustees Tuesday, March 8.

The guidelines assume a 6 percent inflation rate in 1983-84 and 5 percent in 1984-85, with wage and salary increases averaging somewhat higher than this amount. *(Related story, page 22.)*

Two years ago, the University assumed 10 percent inflation in its long-range forecast. The sharply reduced and more stable inflationary expectation now "will be a major boon" to universities nationally, according to the 90-page guidelines document submitted to the trustees.

"As the economy moves gingerly along its current tightrope, alternately leaning toward recovery and then back again toward recession, we in higher education are at the forward end of the rope, urging it along and hoping the much heralded recovery will be strong enough to move the economy without spurring a dramatic increase in inflation."

The University continues to project budget growth at about 2 percent higher than inflation. This reflects two factors;

1) "We are a labor intensive organization, with about 60 percent of our costs going to salaries and benefits. Because salaries in the economy at large grow slightly faster than inflation due to productivity gains, ours too must keep up."

2) "The importance of budgetary provision to support new educational ideas and vital needs in both the academic and support areas."

Where these improvements averaged 3 to 4 percent in the 1970s, in the past three years they have dropped to 2.4 percent, 1.7 percent and 1.5 percent, a figure which may be reduced further in the future.

The current long-range forecast assumes both faculty and staff salaries will grow at the inflation rate plus 1.5 percent.

The University Provost will allocate 6 percent for faculty salary increases to each School except Business and Medicine, which operate on separate budget formulas. When a decision to go above 6 percent is warranted, funds will come from School resources and a small provostial reserve to accomodate special circumstances.

THE WAITING MAY HAVE BEEN THE HARDEST PART...but turn to pages 27-31 for all the details about the Queen's visit to Stanford last Thursday.

Faculty says Mosher conduct in China basis for dismissal

Steven Westley Mosher was dismissed as a Ph.D. candidate for "illegal and seriously unethical conduct" while in China that "endangered his research subjects," the faculty of the Stanford Anthropology Department said Monday, March 7.

These acts "occurred before Mr. Mosher released information regarding the birth control program in China and were not related in any way to his publication of that material," the faculty said.

Mosher, 34, was dismissed by an 11-0 faculty vote Feb. 24. One of the first American anthropologists permitted to do extended field work on a rural Chinese commune, he blamed his expulsion on a popular Taiwan press article he wrote as "Steven Westley" documenting forced abortions in China and on "slanderous" allegations by his former wife, whom he described as "the scorned woman."

Responding to these claims, the anthropology faculty said March 7 that it concurred with an investigating committee report, given Mosher last fall, which said: "We feel that although the Chinese are clearly linking Mosher's article to the restrictions they are imposing on foreign scholars, we cannot hold Mosher responsible for the actions the Chinese are taking.

"Although we believe that Mosher was unwise to publish his article in a popular Taiwan weekly where it would be read as a political attack on the PRC, we cannot judge this act to be misconduct, both because we are not convinced that Mosher fully understood the implications of his choice of publishing medium and because we believe that Mosher's right to publish what he chooses is protected by the right to freedom of speech."

Two Stanford anthropologists specializing in China did not take part in the deliberation or vote which ended Mosher's doctoral candidacy.

The faculty said its finding that Mosher committed "illegal and seriously unethical

Humanities faculty get more time before tenure verdict

New assistant professors in the Stanford School of Humanities and Sciences will ordinarily face "up or out" tenure decisions by the end of seven years, instead of six, Dean Norman Wessells and Provost Albert Hastorf told the Faculty Senate Thursday, March 3.

The professional schools of law, business and medicine have moved toward this practice in the past several years, Hastorf said. Those failing to receive tenure receive a final, one-year appointment.

In a Feb. 11 memo to department heads in humanities and sciences, Wessells said the school will have continue making initial appointments for a three-year period, but the second appointment will be for a four-year period.

Assistant professors reappointed to a second term beginning in September 1983 and all current second term assistant professors will automatically have their appointments extended to include a seventh year, he said.

Sentiment is very strong" among department heads in humanities and sciences to extend the trial period even further, to eight or even nine years, Wessells told the senate.

One possibility would be an initial three-year appointment as assistant professor, followed by five years as a non-tenured associate professor. A terminal year would be added for those denied tenure.

Such a change would require approval by the Faculty Senate and vote by the entire Academic Council, Hastorf noted.

Former dean of humanities and sciences, he emphasized that each school should be free to adopt whatever practice was deemed best by its dean and faculty within the present seven-year limit.

The School of Engineering tried a single five-year appointment standard for new faculty, but now has returned to its former practice of making three-year appointments, renewable once, before a final tenure decision.

Under the "3-3" system there is "some tendency to begin evaluating faculty in their fifth year, earlier than needs be," Hastorf said. "There is a strong feeling by the deans to permit evaluation by the

People

World Affairs Report now on line

Through the 'Dialog' computer system, American scholars, editors, and policy analysts can gain instant access to the full text of *World Affairs Report*, a quarterly analysis of the Soviet press.

Edited by Emeritus Prof. Ronald Hilton of Stanford University, *World Affairs Report* is believed to be the first journal available on line.

As editor of a predecessor publication, *Hispanic American Report*, Hilton was the first person to publicly report the U.S. buildup for the 1961 Bay of Pigs invasion.

"The aim of *World Affairs Report* is not to impose any political outlook or to belittle the Soviet Union," Hilton says. "It is simply an attempt to document, country by country, the Soviet perception of the world and its implications for the West, particularly the U.S.

"Our failure to assess it accurately or take it seriously is not only an indictment of our scholarship but a danger to our security.

"Few American specialists know Russian sufficiently well or are willing to make the unremitting effort necessary to analyze the Soviet press."

Through 'Dialog,' the largest information retrieval system in the world, the full text of *World Affairs Report* will be available at some 15,000 terminals around the world.

Previously only indexes or abstracts of journals have been put on line.

The printed version of the magazine will continue to appear quarterly, Hilton says, although later it may go to monthly or even weekly publications.,

It will be considerably shorter since the text, which is heavily documented, does not lend itself to easy reading by people without specialized interest and knowledge, according to Hilton. The streamlined text should be of greater interest, with those wanting full text able to obtain it on line.

Cartoon and maps will be omitted from the on-line version, but expanded in the print format. Thus the two versions will complement each other.

All 12 volumes of *World Affairs Report* have been put on line. Charles Bourne and Karen Scarpelli of Dialog and Jon C. Sandelin, Virginia Siegman, and Rita Moore of the Stanford Center for Information Tedchnology were among those helping in the transition.

Further information can be obtained by contacting Hilton at Asian Languages Bldg., Stanford, Calif, 94305, (415) 497-4553.

Eight law schools quietly adopt policy on sexual orientation

At least eight law schools, including Stanford, have quietly adopted policies against discrimination in admissions based on sexual orientation, according to Jamie Henderson, president of the Stanford Gay Law Students Association.

The Stanford Law School *Bulletin* for 1982-83 states: "It is the policy of Stanford Law School not to discriminate on the basis of handicaps or sexual orientation in its educational program or in its admissions policy."

Columbia, Golden Gate, Harvard, Hastings, Pennsylvania, the University of Southern California and Wayne State have similar official policies, Henderson reports.

Columbia, Harvard, New York University, Wayne State, Yale, and UCLA also have public policies against discrimination based on sexual orientation in their placement programs. Disputes over Army recruitment have arisen at several of these schools because of Army policies against employment of homosexuals, he notes.

While many law schools have stated privately that they do not discriminate in admissions on the basis of sexual orientation, explicit public statements can assure applicants who might not otherwise mention affiliations or activities that could reveal their sexual orientation, Henderson believes.

"Gays will come here, with or without an official policy," he adds. But without an explicit statement, they could be at a slight disadvantage in gaining admission.

Besides the Gay and Lesbian Alliance at Stanford (GLAS) and the Gay Law Student Association, there now is a Gay Business Student Association, Gay Medical Student Association, Gay Faculty-Staff Association, and a gay counseling group at the Bridge, a peer counseling organization at the University.

About 600 Harvard alumni have organized a half dozen gay clubs across the country, according to Henderson. Similar networks are being formed by Yale, Princeton, Cornell, and Notre Dame alumni, as well as Stanford graduates, he adds.

It is in the best interest of universities to "deal carefully with issues" surrounding sexual orientation, Henderson says. Considerable progress can and has been made without major controversy.

He commented on the national changes during a meeting with University attorneys discussing a proposed scholarship offer from GLAS. Still under consideration, the proposed scholarship would go to a medical student committed to service in the gay and lesbian community. Recipients could be male or female, and would not be restricted on the basis of sexual orientation, according to GLAS.

Counseling experience with an organization helping a predominantly gay population, service on a venereal disease hotline or research in acquired immune deficiency syndrome (AIDS) were cited as hypothetical examples of individual activities which might be taken into account in such an award. None of these would necessarily be restricted only to gays.

GLAS representatives indicated they would seek financial support outside their members for the proposed offer. The GLAS Steering Committee already has collected $550 for this purpose.

Herbert Solomon

Herbert Solomon

Prof. Herbert Solomon, statistics, has been appointed Editor-in-Chief of the *Naval Research Logistics Quarterly*. Beginning with the March 1983 issue, the journal will be published by Wiley-Interscience Journals, John Wiley and Co., New York. For the past 30 years and through the December 1982 issue, it was published by the Government Printing Office.

Articles cover a wide range of topics including: scheduling, networks, linear programming, integer programming, non-linear programming, transportation, reliability, contract alternatives, manpower models, acquisition studies, maintainability models, readiness measurement. The scope is international in terms of readership, contributors, and problems studied.

Erich Striessler

Erich Striessler, professor of economics, econometrics, and economic history at the University of Vienna, is visiting Austrian professor for winter and spring quarters 1983.

Streissler has taught "Economic Theory in Historical Perspective: the Austrian School" this winter quarter and will teach "Postwar Economic Development and Contemporary Problems of Economic Policy in Austria" during spring quarter.

Streissler studied at the University of Vienna (law, history, mathematics, and psychology), as well as at Hamilton College (New York). After receiving a doctor of law degree at Vienna in 1955, he studied in Spain at the University of Valladolid and Vittoria, and in France at the University of Caen.

He also studied and did research during repeated stays at Oxford University in 1956, 1967-68, 1972-73, and 1978-79.

The Visiting Austrian Professorship was endowed by the government and people of Austria on the occasion of the U.S. Bicentennial in 1976. The visiting professors, selected by a committee at Stanford and a parallel committee in Austria, come from a broad range of disciplines.

The visiting professor for 1983-84 will be Prof. Paul Stefanek, who will have an appointment in drama and German studies.

Nominations for subsequent years may be addressed to Prof. Kurt Steiner, political science, who is chairman of the Stanford committee on the Visiting Austrian Professorship.

Gwen Adams

Gwen Adams, graduate admissions assistant in the Department of Electrical Engineering, will present a free recital of organ works by Mendelssohn, Brahms, Saint-Saens and other Romantic composers at 3 p.m. Sunday, March 13, at All Saints' Episcopal Church, Hamilton and Waverley St., Palo Alto, where she is director of music.

Adams began her organ training as an undergraduate at the University of Kansas. She was subsequently awarded a Fulbright Scholarship to Vienna, Austria, where she studied organ with the late Anton Heiller. Upon her return to the U.S. she entered the Yale University Institute of Sacred Music, from which she received the master of music degree.

Clarkson Oglesby

Clarkson Oglesby

Prof. Emeritus Clarkson Oglesby, civil engineering, recently received the S. S. Steinberg Award from the American Road and Transportation Builders Association.

The award recognized Oglesby for his outstanding contribution to transportation education.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

At long last the future of education seems to be hopeful, says Myron Atkin

BY DONALD STOKES

The future of education seems to be more rosy, after a decade of doom and gloom.

There's a new attitude perceptible among government and corporate leaders about means to educate our children better.

Prof. J. Myron Atkin, holder of these views, is dean of Stanford's School of Education, which is top-ranked in the nation in all polls.

"The climate is changing, I can sense it," said Atkin in a campus interview. "The situation is comparable in some ways to the post-Sputnik era—this time triggered, of course, by our economic position, especially our trade position with respect to the Japanese.

"The new attitude emerges in statements made recently by government and corporate leaders. President Reagan is recommending $78 million to help reduce shortages of high school math and science teachers.

"In various states where education has not been a popular subject for politicians during the last decade, the needs of education have now risen to the top. Several governors with national aspirations are urging more help to education. Until recently such stands would have brought politicians nothing but grief.

"Gov. James Hunt of North Carolina, for example, plans to contest Jesse Helms two years from now, and he is making education his top priority. Charles F. Robb, in Virginia, is speaking similarly, and Jerry Brown, before he left office in California, talked of a $30 million plan for technology education.

"Up till recently the outlook had been uniformly grim. Now a more positive attitude is becoming visible. The feeling I sense, that something has to be done, is not one of near panic, as it was after Sputnik, or finger pointing, as it was during the '70s, but rather, 'This is a serious situation, let's roll up our sleeves and get to work.'" That is a distinct change of attitude.

"There are many straws in the wind to show how the new winds are blowing. There are some 25 studies in progress centering on the high schools and how to improve them. These are serious studies, real attempts to see what can be done.

"A new factor, that we did not see at the time of Sputnik, is the interest of the business corporations. Business executives are turning their attention to the problems of education, with a frequency and in numbers we did not see 20 years ago."

Are these mostly high-tech companies?

"The ones I hear about are mostly high-tech, but I think there is growing concern about the quality of the younger work-force and so there is a natural association between this and the educational product.

"However, Henry Levin, one of my colleagues, has made the case recently that the high-tech companies don't seem to need to hire large numbers of highly-trained people. Most new jobs will not require sophisticated skills."

The climate (of education) is changing. I can sense it. In various states...the needs of education have now risen to the top.

—J. Myron Atkin

The changing national mood about education, from deep pessimism to one of hope, is bellwethered by Atkin himself. As recently as June 1980 Atkin said in a public speech: "It is conceivable to envision the dismantling of public education as it has been pioneered in America."

Nor was his gloom on that occasion unwarranted. Scholastic Aptitude Test (SAT) scores, the most frequently used index of high school students' education ability, have been dropping alarmingly.

The government-funded National Assessment of Education Progress found that in science, writing, social studies and math, the achievement of 17-year-olds has dropped regularly every year during the last decade.

"They were unable to come up with any sufficient reasons," said Atkin. "They listed nine. Scores have also gone down significantly for college-bound seniors. That situation is being addressed.

"What we don't often look at is the extraordinary levelling up that has gone on, as well, during the last 30 years. The high schools are serving a much higher percentage of the population now than they have ever done before.

"If you look at the National Assessment figures you find that basic literacy rates and reading scores have gone up dramatically in the last 15 years.

"At the same time we are seeing a levelling down, as the SAT scores seem to indicate. This is due to the fact that when we institute such innovations as minimum competency examinations in various states we have to redirect resources, the primary one being teacher-time.

"In order to lift youngsters who are below the minimum level up to the minimum level, without infusions of new money for more staff, the resources have to be taken from the time and attention given to the above-average students.

"Operationally, the way this pans out, we are facing budgetary constraints in our high schools, but now we have to focus on minimum competency—so what can we do? We have to close small classes. And these small classes are for advanced math, advanced biology, and the other kinds of courses which well served the college-bound youngsters in earlier generations."

Atkin takes great heart from the turn-around in administration policy in education. Last May President Reagan warned that the scarcity of science and math teachers had reached such a deplorable state that it threatened the nation's security. However, noted Atkin, at that time the administration gave little hope that funds could be provided to improve the situation.

"All that has changed. Reagan has just announced that a total of $200 million should be made available. This money will go to the states, largely in forgivable loans to those who will teach science and math.

"Among other things, the newly available funds will provide scholarships of up to $5,000 to college graduates who can be trained as math or science teachers within one year.

"Just hearing that jobs are available will attract some people to the schools. Initially, Reagan's plan will bring in the better-trained teachers, but simple arithmetic shows that this will not compensate them for what they might be earning in industry."

Atkin was asked whether the overall federal cuts in public spending would affect the schools very much—the funds for math and science clearly would benefit only a few.

"We go through cycles in our support for education, as we do in most things," replied Atkin. "During a period when our values tend to focus on egalitarianism, for example, we concentrate our attention on the youngster who seems to be excluded. If we are concerned about common purpose or common vision then our research shifts somewhat.

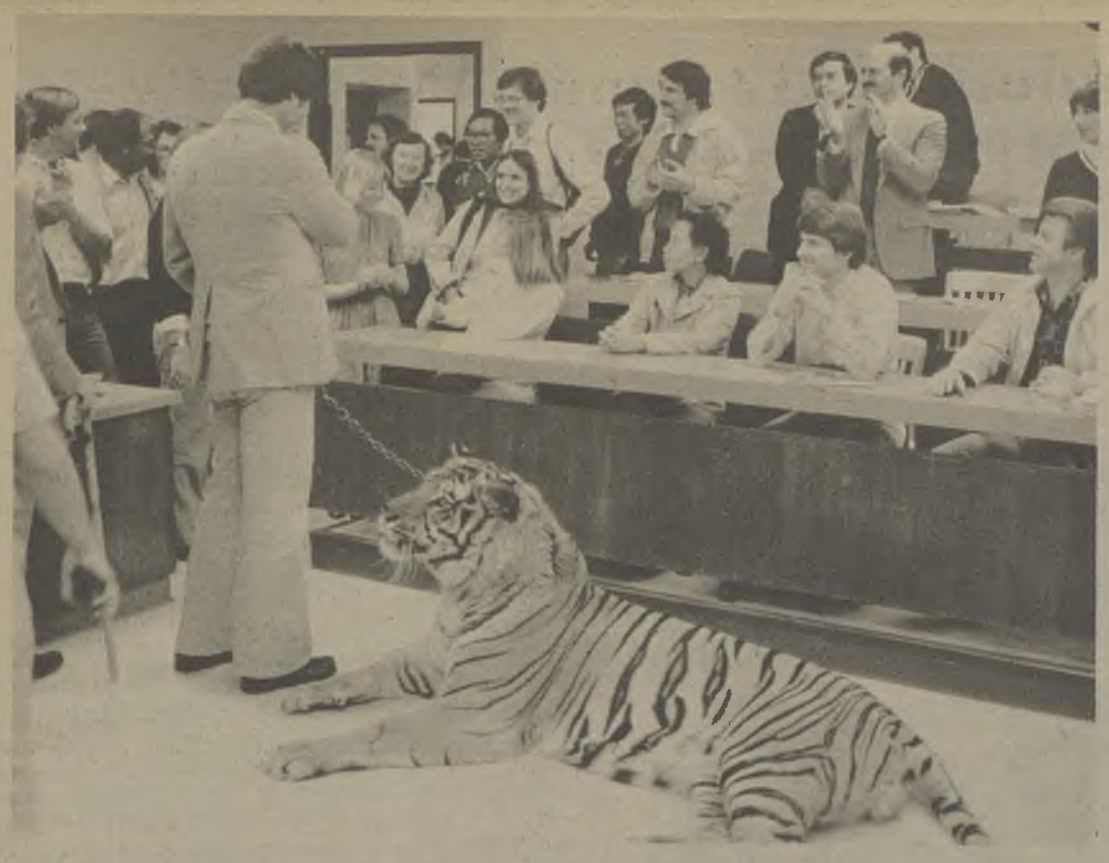
"Let me give you a specific example. A friend of mine did a study about eight years ago on the effects of mainstreaming (the term used for placing handicapped children in regular classes). He found that 92 percent of the studies were on the effects of mainstreaming on the handicapped. Only the remaining eight percent took even a passing look at the effects on the teachers or the majority of the children affected.

"So I think what happens is, our social preferences or our political values change over time, and this alters the way we conduct and interpret our research in certain areas.

"Also, experts often seem to change their minds after key political decisions are made. Example? The public is advised to desegregate schools in order to improve educational achievement. Years later, the public is told, often by the same experts, that desegregation has had unanticipated negative consequences, and that academic achievement has not improved to the degree anticipated."

Atkin's new optimism about the education scene is tempered by worries that school districts are having great trouble finding teachers with an intellectual orientation.

"I hope this will change. There are several problems in that area. One is in recruiting people with substantial ability to enter schools. Next is to create an atmosphere that will make them want to stay.



"To retain teachers with strong intellectual backgrounds we have to recognize the fact that schools are places that are meant not only to train children, but also teachers; this may not sound felicitous, but it is a fact. Stanford University, for example, nurtures its professors as well as its students. The best high schools pay explicit attention to teachers as well as to the students.

"On a practical level, it is imperative to take good care of teachers. For now that the formal qualifications for a teaching credential, in terms of the number of years of college-level preparation, is coming to approximate the requirements for other, more lucrative occupations, those who make the investment in additional education have greater choice.

"Beginning teachers now receive an average annual salary about 80 percent that of their nonteaching contemporaries with bachelor's degrees, and their starting salaries are lower than those for any other college graduates except social workers.

"Teachers are paid less on the average than service workers, farm workers, engineering technicians, sales workers, and nurses. Furthermore, their jobs are scarce and uncertain. In many high

Nadji the tiger takes the Graduate School of Business with a grain of salt.

Management practices lecture includes tiger

A 500-pound Bengal tiger named "Nadji" helped to illustrate a lecture on successful management techniques before a classroom of somewhat startled and gaping MBA students at the Stanford Business School on Friday, March 4.

The tiger accompanied Marine World-Africa USA owner and President Michael B. Demetrios, who was invited to lecture on the operation of the large entertainment complex in Redwood City. The MBA students are enrolled in a course entitled "Management Practices in Large, Top-Performing American Companies," which is taught by Business School Management Lecturer Thomas J. Peters. Peters is coauthor of the national best-selling book, *In Search of Excellence: Lessons from American's Best Run Companies*.

The tiger's trainer, Peter Gros, used a short, thick chain to guide the animal through the halls of the Business School building. Despite the dozens of people surrounding it, the tiger remained remarkably calm, issuing only a few muffled grunts and roars.

Atkin/ continued from page 3

schools all teachers with fewer than 10 years of employment within the system have been dismissed."

Is this the main reason for the low morale among teachers?

"It is the uncertainty and the pressures which loom very large. Schools are under pressure because of the condition of the economy and the popularity of tax-limitation initiatives. Funding is jeopardized both from local taxes and from the state treasury.

"Every spring school districts send layoff notices to thousands of teachers because of uncertain budget prospects for the following year. In many cases the teachers are 'rehired' during the summer when budget problems are at least temporarily resolved, but the lack of security is widely publicized, and the attractiveness of the profession is further diminished."

So teaching is no longer a "calling"?

"Colleges have always had a large complement of idealistic young people committed to fostering social justice and individual improvement through community service. Such motivation has led many a gifted person over the decades to the high school classroom.

"But it has become common now in many quarters to adopt a kind of fatalism about the enhancement of human potential, to express the belief that economic, political, demographic and other social factors overwhelm the effects of schooling or other forms of personal intervention.

"There is thus reduced opportunity for an individual teacher to have much effect. Catching the mood, and partly as a result, young people often seem more self-centered in making a career choice than in previous eras.

"Indeed, several occupations that have been as much 'calling' as 'profession' have similarly suffered a decline in quality. This phenomenon may in part be a result of successes of the women's movement. In earlier periods women were assumed to be predisposed to social services, to occupations in which they provided direct assistance to needy people on an individual basis.

"This 'predisposition' has been used to justify policies such as low pay and lack of promotion opportunities. This point of view is passionately rejected by most women and men today. A consequence is that young women tend to make occupational choices based on the same values that have influenced young men: competition, power, status, and wealth.

"The effect of the quality of people drawn to the service-oriented professions, at least in the short term, seems devastating."

You no longer think it possible that the public schools will decay to the point where they are used only by the handicapped, the poor, and the disadvantaged?

"In general, if people feel good about themselves and optimistic about the country, they are satisfied with the public schools. If there are doubts about the country, people look critically at the institutions that represent and are expected to strengthen the common heritage. Schools both sustain and reflect their communities.

"Therefore, the explanations for changes in the nature of the secondary school teaching force are as complex as explanations of America's loss of optimism, prestige, and sense of nationhood.

"Awareness of the criticisms contributes to a decline in the attractiveness of teaching as an occupation. When the prevalent pessimism about our national ability to modify peoples' personal circumstances lifts, or when we rediscover our sense of national unity, there probably will be a change in the attractiveness of teaching in the public schools for people of ability."

Atkin also points out that the schools have had to assume functions which in many cases they could not carry out adequately. They have also been forced by the courts and legistatures to carry out duties which result in a lowering of the overall quality of education.

He gave as an example how, acting out of concern for the civil rights of the individual, laws have been passed about the rights of handicapped children. "Only modest budget increases were made in order to make provision in a serious way for the schooling of the handicapped, whether handicapped physically, mentally, or psychologically.

"Take the Education of All Handicapped Childrens Act of 1975. It stipulates that such children shall be put in the 'least restrictive environment.' So the emphasis is on what is least restrictive for the individual, which is laudable. But when an affected youngster is placed in a class that is the least restrictive to him it turns out to be more restrictive for the other youngsters in the class.

"The regular class members are unable to secure as much of the teacher's time. So for the best of reasons the lawmakers want to improve the lot of handicapped children but end up penalizing the rest of the class.

"Moreover, the parents of handicapped children have a special say in the education of their children, under what is called the Individualized Education Plan that is negotiated between the teacher and the parents. This is laudable, but, again, its overall result is that less time and effort goes to the majority of the students.

"Another example is juvenile delinquents. In order to protect the rights of young people, it is far more difficult now to expel trouble-makers than it ever was. In many ways this is a good thing. But judges will often send offenders back to the classroom where frequently they are just as disruptive as they ever were.

"The 'rights' of the offender have been met, but in doing so they deprive the rest of the youngsters from a certain amount of the time needed to learn.

"These are only a few examples of how the schools have to handle the results of a general societal concern about civil rights."

The schools often end up as a dumping ground for society's human problems?

"What often happens is that many of those parents who can afford it, and perceive that their children are being penalized because of the way the public schools are being distorted in their objectives, simply send their kids to private schools.

"I am not so discouraged by this trend as I was a few years ago. But at one point it was possible to fear that the public school system would become dismantled.

"The percentage of children being sent to private schools has gone up only slightly in the last three years, from eight percent to 11 percent.

"The biggest growth in private schools is in the fundamentalist Christian schools. That is partly a reaction in the South to desegregation laws. Many such schools are racist institutions.

"So the real growth of private institutions has not been all that great. Maybe this is due to the poor state of the economy.

"The main change is that there are clear signs of an alteration of attitude toward education. To the extent that this country rediscovers a sense of common purpose, we shall remind ourselves of the vital role of the public schools, the common schools.

"So long as we regard ourselves, as we tended to do during the 1970s, as a fragmented society, with special interest politics flourishing, and each group doing all it can to get as much as possible from the taxpayers, without much regard for the common good, then I don't think we shall be able to progress as a unified society.

"If we determine to rediscover our national sense of purpose, what we share as a people, then we can be hopeful about the future of the public schools. After all, the public schools are the proven social institution for helping us understand what we have in common."

Tiro Project brings computers to 132 humanities faculty

CIT staff members instruct a small group of humanities faculty members in use of computers

CIT hopes to change people's work lives

Training has started in the Tiro project, which offers Stanford humanities faculty members an introduction to word processing and information handling, and aims at making the participants independent and self-sufficient microcomputer users.

Begun at the initiative of Dean Norman Wessells of the School of Humanities and Sciences, Tiro promises technologically creative support to faculty scholars in the humanities.

"Tiro will be an exciting innovation to Humanities and Sciences as it introduces computer technology into the process of scholarly research in the humanities," says Wessells.

The Tiro program began last summer with a three-month pilot project that offered Humanities faculty members the chance to use and evaluate three microcomputers: the Apple II Plus, the TRS-80 II, and the IBM PC. At the end of the pilot program, the IBM PC and the WordStar text-processing system were chosen for the Tiro project microcomputer package.

Computer and printer

Current plans provide for 132 humanities faculty members to receive instruction on IBM Personal Computers. Each will receive one of these computers and a small printer for scholarly work in the office or at home.

In addition, approximately a dozen departmental work stations, with letter-quality printers, will be installed, and staff personnel will be trained in their operation.

Initial instruction is focused on how to use the WordStar text-processing system; intermediate training will introduce more advanced techniques, including printing. Further development and instruction are planned in networked communications, which will provide users with access to library catalogs, other computer systems, and electronic mail. Special workshops may also be offered.

The first phase of training and equipment distribution will be completed by spring quarter.

Instruction is being provided in the Stanford Microcomputer Instructional Laboratory Experiment (S.M.I.L.E.) at CIT, with the technical assistance of CIT staff.

"CIT's primary interest in the Tiro project is to learn the ways in which personal computers will change people's work lives, so that we can anticipate and facilitate that change," says Michael Carter, director of the Instruction and Research Information Systems division.

"Secondarily, we expect that the enormous amount of intellectual energy brought to bear upon this phenomenon by the humanities faculty will help focus our attention on the limitations present in information technology today."

The Tiro project is named after a slave of the Roman statesman and orator, Cicero. Marcus Tullius Tiro served as Cicero's secretary, taking dictation and copying manuscripts, but he was also accomplished in his own right. He invented one of the first forms of Latin shorthand (called "notae Tironianae") and the Tironian shorthand symbol, "℈". Cicero eventually freed Tiro in return for his outstanding work. —**Jane Kingston**

Residences' phone numbers change

During the month of March, Pacific Telephone will begin changing certain pay phones located on campus. The changes will be in the form of new telephone numbers and conversion from rotary dial to touch-tone service.

Most of the phone changes involve student housing facilities which are identified in the campus directory by the pay phone telephone number. To minimize the inconvenience experienced by such a number change, the telephone company will refer calls for the old numbers to the new numbers. The target date for changeover is approximately March 14-18.

Terminals put in at Green Library

The Center for Information Technology, in cooperation with the Stanford University Libraries, has installed computer terminals in the Green Library typing rooms on the second and third floors of the Library's East Wing.

A third terminal will be installed in the typing room on the lower level at a later date. The terminals connect to all CIT systems and can be used by all library patrons who have CIT accounts.

Library users will now be able to use library materials in conjunction with computer-based systems with relative ease. CIT's text editing capacity may be particularly useful for students working on theses and dissertations. If the experiment proves successful, CIT and the libraries hope to expand the program.

Individual departments can experiment with ways to mitigate quarter system

continued from page 1

Stanford will stay on the academic quarter system, the Faculty Senate decided Thursday, May 3, without dissent.

But individual departments and faculty members should be encouraged to experiment with new arrangements that overcome its shortcomings, the Senate indicated.

Prof. Anne Mellor, English, suggested that students completing a course might be given the option of writing an additional paper, with three units credit, if faculty were allowed teaching time for appraising it in depth.

The Senate action followed the recommendation of an ad hoc committee headed by Prof. Edwin Good, religious studies. Its report, published Jan. 19, noted that "for many departments, courses lasting longer than one quarter might help to overcome the perceived faults of the quarter system. . . .

"A course might last, say, five weeks into a second quarter, after which it would be over. Nothing in the present regulations forbids doing this. . . .

"Such experiments must take great care to avoid impeding access to courses by students from outside the school or department" concerned.

Humanities and Sciences Dean Norman Wessells suggested that this experimentation might best be tried with graduate and advanced undergraduate level courses. He would be "happy" to work with departments to devise "equitable teaching loads."

But he said it was important for departments to be "very careful to keep in mind undergraduates with strict schedules," especially those in the natural sciences and engineering.

Prof. Gerald Gillespie, German, suggested that the period of experimentation not be too long, lest the trials "drift into fragmentation" and "make life miserable" for undergraduates.

Prof. Ronald Rebholz, English, a strong proponent of the semester system, said that the present calendar makes dead week "a mockery," especially in spring quarter.

When it comes to exams, students usually do "a fairly reckless job. . .they spout out what they can remember and then forget the subject for the rest of their lives."

He noted that MIT operates "very successfully" on the semester system, and that Berkeley has decided to switch from quarters to semesters.

President Donald Kennedy said he was "perplexed by the data base," noting that Berkeley was "strong in the humanities" even with the quarter system. (Berkeley outranked Stanford in perceived quality of its graduate faculty in all nine fields of the humanities covered in a recent national evaluation by faculty members.)

Prof. Marsh McCall, chairman of classics, was "appalled" at the growing tendency to move final exams into Dead Week.

Registrar Sally Mahoney said this problem was "particularly intense" last fall. "We're seeing faculty (and teaching assistants) who wish to be out the door in a hurry" before Christmas. As a resident fellow, she was surprised at the "substantial number" of freshmen who finished on the second day of exam week.

More courses now are being scheduled for Tuesday and Thursdays, she observed.

But the tendency to end the quarter early is "not nearly so intense" now as it was before the Christmas holidays, when airline flights may have been a contributing factor.

Apply for the Stanford Publishing Course by Wednesday, April 20

Applications are currently being accepted for the Stanford Publishing Course, to be held June 20 to July 1. Sponsored by the Stanford Alumni Association, the program is designed for those involved in any facet of publishing and offers extensive coverage of both book and magazine publishing.

The format of the 12-day program consists of general sessions attended by all participants followed by separate book/magazine sessions and workshops. The workshops include hands-on projects that allow students to develop their own special interests. The program will include editing, copywriting, design, advertising, marketing, and finance. Some 50 speakers and workshop leaders prominent in their fields will come from throughout the U.S. and will include experts from the Stanford faculty.

Della van Heyst, director of publications at the Alumni Association and course director, notes that the course is designed to give an in-depth overview of the publishing industry, increase participant's knowledge in his/her area of expertise, to establish professional contacts, to learn problem-solving techniques, and to exchange knowledge with other professionals.

Tuition for the course is $875 ($550 for members of the Stanford faculty and staff). Included are books, working receptions, two dinners, and all lunches. For those wishing to reside in Roble Hall, the rooms are $222 for a single room and $168 per person for a double room. Application deadline is April 20. Further information may be obtained by contacting William Peabody at Bowman Alumni House, (415) 497-2021.

Carpools

Carpoolers wanted, 8-5, M-F, from Pleasanton, Livermore, Union City, Fremont area to Stanford. Call Patty, ext. 7-2071.

One person to join existing carpool to Stanford. M-F, 8-5. We meet at Stevens Creek & Wolfe Road, Cupertino. Please contact Ana Errico at 7-0612.

Carpool wanted from Newark to Stanford, M-F, time flexible. Call Polly, 7-4281.

Carpool wanted to Santa Cruz from Palo Alto M, W, F. Call Mark, 856-2428.

Marina Timoshenko-Goodier

Nature-inspired art shown at Tresidder

Paintings by Marina Timoshenko-Goodier will be shown in Tresidder Union's upstairs lounge during the month of March.

The artist was born in St. Petersburg, Russia, and lived in Yugoslavia before coming to the U.S. She studied art at the Carnegie Institute of Technology, then at Pennsylvania Academy of the Fine Arts in Philadelphia, where she was awarded the Cresson Traveling Scholarship for two successive years.

Timoshenko-Goodier has exhibited in Peninsula libraries, hospitals, and banks as well as on the Stanford campus. She believes that art should have a worthy purpose—hers comes from the wholesomeness, harmony, and delight she finds in the beauty of nature.

She is the widow of Stanford Prof. J. N. Goodier, engineering mechanics.

Vicky Holt

Holt is president of S.F. arts center

Vicky Holt, director of Stanford University Events and Services, has been named the new president of the New Performance Gallery of San Francisco, a multi-disciplinary arts center.

The New Performance Gallery functions as an art sponsorship, training, and technical assistance organization which programs and manages the facility jointly owned by the Oberlin Dance Collective and the Margaret Jenkins Dance Company. Through its programs, the New Performance Gallery seeks to provide a lively environment in which artistic ideas can develop and thrive.

Recreation schedule

FACILITY	FINALS WEEK March 14-18	SPRING BREAK March 19-27	REGISTRATION DAY March 28

Golf Course (show ID)	T-F: First available starting time	T-F: First available starting time after 11 a.m.	Closed

Open for the entire period are the Olympic Gamefield, Perrier Parcourse, Angell Field, the tennis courts, and the golf course driving range (7 a.m. until one hour before dark).

Taylor Field and the IM Fields North and South must be reserved; call 497-0505.

Youth Opportunity Program benefits the University, too

While youth unemployment statistics climb higher than ever, Stanford offers high school students a learning and earning experience through the Youth Opportunity Program.

The employment program is designed to give high school students from disadvantaged backgrounds the opportunity to earn money while learning valuable job skills. Students also receive career, and if desired, college guidance.

"We're trying to teach them marketable skills as well as provide them with supplemental information about college," says program coordinator Michael Britt.

The program, which began in 1969, is administered through the Employment section of the University's Personnel department. It has two components. Most students initially join the program during the summer, working approximately six hours daily for seven to eight weeks.

Last summer 55 students participated. Y.O.P. sponsored training activities in addition to the jobs. Workshops focused on such skills as filing, typing and career opportunities.

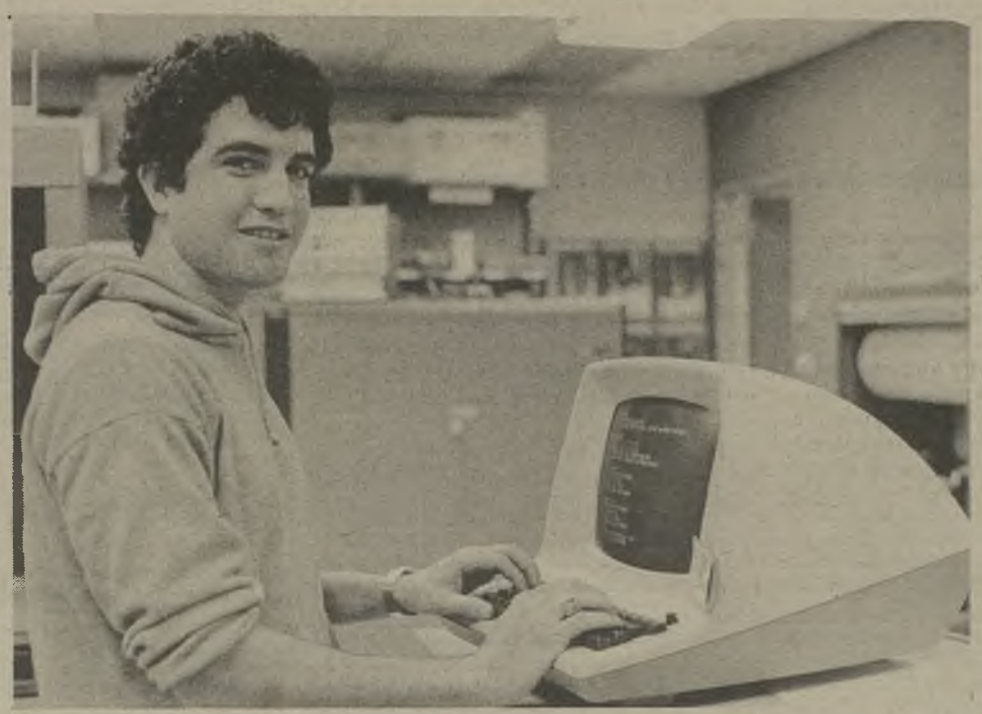
Students were paid minimum wage, but most left with more than money. "I learned a lot, earned some money, and had some laughs," wrote one participant.

Exceptional students from the summer program are selected for after-school jobs, which are tailored to meet the individual training and education needs of each student. Currently there are 14 in this track.

Students are matched with supervisors, who in the past have included technicians, faculty, research assistants, clerical support staff and other University employees.

"We try to identify staff members who can serve as good teachers and role models," Britt says.

Since most of the students have no previous work experience, students usually learn skills from supervisors. Margie Garcia, one of the program's earliest participants, says that she learned her first office skills from Lenita Feddersen (now retired), her supervisor in News and Publications, where she was placed.



"I was matched with supervisors who were willing to teach," she says. "I did not have good typing skills and I was really nervous. But the coordinators kept in touch; they were always around when I needed them."

Now a compensation analyst and office supervisor in the University's Compensation Department, Garcia says that her career growth was guided by her supervisor's capacity to invest time and energy in her training.

"Exposure to the office setting gave me a better flavor for what an office job involved."

Margie Garcia (left), one of the first YOPs on campus, is now a compensation analyst and office supervisor.

John Skinner (below), assigned to C.I.T. two summers ago, currently works there full time while attending a community college.

The experience can be mutually valuable for student and supervisor. Wayne Duckworth, a Y.O.P. supervisor for student John Skinner, says his department has "recovered 10-fold the cost of investing staff and faculty time to train John."

Skinner was originally assigned to C.I.T. two summers ago to develop skills with computer laser printers. Currently he serves as a full-time dispatch operator at C.I.T. while continuing his education at a local community college.

"John continues to impress our staff with his ability to solve complex problems, identify potential problems, and efficiently handle a $500,000-plus piece of equipment," Duckworth says.

For students like Skinner who don't see office experience as an end in itself, Y.O.P. teaches marketable skills that can be used while attending college. Eltonia Thomas, a senior at Woodside High School, has worked in Nurse Recruitment for three years while planning to attend college.

"I think Y.O.P. is really good because it will give me experience that will help me to get a part-time job while I'm in college," she says.

All students are assigned to a Y.O.P. counselor, who provides information about and assistance with both college applications and careers.

"I needed help for my scholarship essays, and they helped with that," Thomas says.

However, Britt says that the program takes pride in its ability to serve both students who are college-bound and those students who have made no decision about higher education.

"We're not interested in convincing every high school student that he or she should attend college, nor do we hold to any firm belief that every disadvantaged student should become an engineer or a medical doctor," Britt says.

"I'd love to see the job market saturated with former Y.O.P. participants holding engineering, computer, or medical credentials, but I realize that many young people are not aware that making a living is only one phase of life."

Britt says that this broad appeal has earned Y.O.P. praise and support from the other Bay Area youth employment programs. It has also won loyalty from past supervisors.

"The program has been well monitored by the administrators," says Betty Miller, a supervisor for one of the Y.O.P. students at the Career Planning and Placement Center.

"Y.O.P. provided follow-up of the physical location of the worksite, the learning situation for the student, and the student's attendance record and work performance."

Y.O.P. statistics are impressive. According to Britt, during the past two years, 88 percent of the participants stated that Y.O.P. helped them to clarify career goals.

During the 1982 summer program, 84 percent of the students were placed in positions within their areas of career interest. Twenty-eight percent of these who had no plans to attend college are consequently planning a college career.

The program could become even more successful if it had additional funding sources, Britt says. "We could have matched at least 20 more students with positions if the funding for the positions had been available."

However, a few departments, like the Department of Psychiatry, have already submitted their requests for a Y.O.P. student for next year's summer program.

For questions about the program or if you can provide a valuable work experience for a Y.O.P. student, contact the program staff at 497-1144.

Amy Bernhard

Controlling alcohol use in dorms

Alcohol abuse in the student residences at Stanford is best controlled through alcohol education programs, not by rewriting the University's liquor policy, about 40 students in a forum sponsored by the Dean of Student Affairs Committee on Alcohol agreed Feb. 23.

Robin Cooper, student member of the committee and leader of the forum, said students must first help the University locate where and with whom alcohol problems exist on campus. "Only then can we take steps to help students avoid the trap of over-drinking," she said.

"Stanford's liquor policy is written on a piece of paper and doesn't make much sense really. If we're to be effective, we have to focus on a variety of things not policy-oriented."

Nonalcoholic alternatives to having fun at a student party are strongly encouraged by the committee because "it's the student who gets hurt in the long run if nothing is done to help him or her recognize when drinking is dangerous," said Cooper.

Alice Supton, assistant dean of residential education, agreed, saying "I think if you're smart enough and creative enough you can find really wonderful things to do that don't require alcohol."

Mike Boennighausen, a resident assistant at Roble Hall, said that students in his dormitory believe alcohol determines whether a party will be a success or failure. "Parties are judged by how many kegs it has," he said.

But fraternity and sorority representatives disagreed.

"Nobody is persuading you to drink. Everybody is free to do their own thing," said Sigma Alpha Epsilon president Mark Landsberg.

And according to Barbara Chen, Delta Gamma sorority member, "alcohol is only a problem with the individual abuser, not the result of group peer pressure. We are constantly reminding ourselves that we are legally liable for any accidents that happen."

In a *Stanford Daily* editorial, freshman student Mark Roble recently recognized the University's legal liability for alcohol abuse in certain cases. "When someone drives from a dorm function in a state of inebriation—and has an accident—the University is among the long chain of parties that can be sued," he wrote.

Stanford's current liquor policy stipulates that every student residence is required "to adopt and maintain regulations. . .(which) shall seriously take into account the age distribution of its members so that the legal status of those students who are not yet 21 years of age shall be accorded recognition and appropriate protection."

Supton explained that the committee is not interested in revising the current liquor policy but would rather spend time soliciting student opinions on how the existing policy could work better.

"We realized that we didn't even know what the definition of the problem was. But this time we're letting students help us recognize what it is and how to deal with it."

Letters to the editor

More questions about parking

Editor, *Campus Report*:

Like Mery Clausen (*Campus Report* March 2), I, too, have a complaint about parking.

In the process of researching the problem on my side of the campus I ran across some interesting information, as given to me by the Police Department.

The parking lots that serve Encina Hall, Encina Commons, Old Pavilion, the Eating Clubs, and those employees in the Hoover Buildings who choose to park there, have a **total** of 160 "A" spaces. Elementary common sense tells me that there are many more "A" stickers sold to the work force in these buildings than the available space can accommodate (even though I was told that the total number of "A" stickers is "unavailable").

This leads me to ask but one question: "Is the program being deliberately oversold to generate the higher revenue that $75 per car produces?"

I, for one, am tired of paying $75 per year to park in a "C" lot which is exactly what I must do if I arrive after 7:45 in the morning, or if I am foolish enough to vacate my parking space during the day and try to return.

I don't mind paying the parking fee—I resent not getting what I paid for.

Controller's Office

Tides of expediency worry Ranahan

Editor, *Campus Report*:

Prof. Robert Cohn's letter in the *Campus Report* of 2/2/83 struck a chord for me. It was carefully nurtured, well-expressed, and, I'm sure, not word-processed.

All around me I hear the virtues of computers and word processors extolled for the way they expedite matters to a direct end. They eliminate so many steps, I'm told. Prof. Cohn made me think a little more about those lingering, searching, enriching steps. After all, what are steps?

Why stand and wait for the sun to rise when you can switch on a light? Why pull in sails at dusk when you can flip off a motorboat switch? Why plant a garden when you can buy artificial flowers?

If the question LIGHT/SEA/FLOWERS were put to an average, well-programmed computer, it could flash up LAMP/MOTORBOAT/DIMESTORE without blinking a video eye. And I would be pleased with my solutions. That is, as long as I had never stood at a sunrise; trimmed my sails to the wind; or selected, planted, and nurtured my own flowers from seed.

Like Prof. Cohn, I'm concerned about the time when the rising tides of expediency wash away the steps, and the generation arrives that isn't aware of what it's skipping when it jumps on rapid transit quests. That is the generation that may well begin to ask questions that neither the computer nor the programmer can answer. I have this recurrent nightmare wherein the operator punches, "WHY?" The computer answers, "WHY?" and this one word discourse continues with the fury of a heated tennis match until finally, admidst failing video energy and profuse human sweat, both organisms break down.

That's the darker side. The lighter side is that I don't think humanists like Prof. Cohn are going to let this happen.

Maggie Ranahan, R.N.

The way it was....

75 YEARS AGO (1908)

Cooper Medical College in San Francisco became part of Stanford University when Dr. Lane, its founder, deeded the property to Stanford on condition that the University should in perpetuity continue the study of the theory and practice of medicine. In 1912, when the last Cooper student would graduate the directors and faculty of Cooper were to resign and transfer the school, with its large five-story building and Lane Hospital and its endowment to the Stanford Board of Trustees.

* * * *

President Jordan, speaking in Spokane, said, "Within five years we expect to have only juniors and seniors at Stanford. It will be a place for only those who have a definite object in pursuing a university course and not for those who are merely gathering up the odds and ends of an education. We have just succeeded in developing a fine law school and made arrangements to acquire the Cooper Medical College."

In making his report to the Board of Trustees, Dr. Jordan explained, "Governor Stanford said in 1892 that he wanted the institution to be a university in the highest sense, beginning where the state university leaves off." Dr. Jordan expressed the belief that in the sixteen years since that time, the state university had expanded and had gone further in the realization of the ideals of Governor Stanford than Stanford University had gone.

50 YEARS AGO (1933)

President Ray Lyman Wilbur returned from Washington and was back at his desk in the Administration Building within four days after his duties as Secretary of the Interior were terminated by the inauguration of President Franklin Roosevelt. He praised the effective handling of the presidential duties by Dr. Robert Eccles Swain during his absence. He said that he would turn his attention immediately to the falling enrollment, down to 2,823, and to the dropping off of endowment increases. Acting President Swain announced plans to travel at the end of the quarter and to do research work in chemistry.

* * * *

A depression dance sponsored by the Glee Club was the last effort of the quarter to raise money for needy students. Fifty cents admitted one couple or a single rough and fifteen cents opened the door to any member of the "500." Checks were accepted because of the cash shortage caused by the nation-wide bank closure. The basketball pavilion had been picked as the scene of the hop to do away with the necessity of paying the Women's Gym $20 for a waxless floor and a tuneless piano.

* * * *

The Hoover War Library opened an interesting exhibit of German and Russian currency from the hectic inflation period of 1923-24. One ten-trillion-mark bill was worth $6,666 at the time it was issued. On the following day its value had declined to $31 and 18 days later it was worth $2.38.

* * * *

The Board of Trustees decided that Stanford professors and instructors whose income was already more than $1,000 a year would receive 10 percent less the next fall unless the University's income should exceed the amount expected.

* * * *

Four members of the Japanese College Good-Will Tour group that visited over 33 universities throughout the U.S. declared Stanford was the most attractive—intellectually, physically and culturally. The tourists found that American students were more interested in current problems than were most young people in Japan, due largely to the adverse economic conditions which made hard labor obligatory for most Japanese.

* * * *

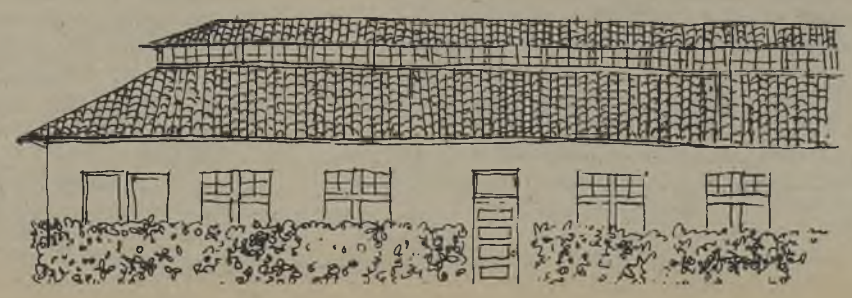
Menlo Park soft drink proprietors sold 3.2 percent beer, with Stanford students composing the bulk of the trade, in spite of a state law prohibiting the sale of liquor, intoxicating or not, within 1½ miles of a university campus. A federal legislature ruling had declared that 3.2 percent beer was not intoxicating. One student passed the Palo Alto police sobriety test after he had consumed eight bottles (one gallon).

25 YEARS AGO (1958)

Spring quarter registration was at 7,649 students with 5,681 men and 1,968 women enrolled, 124 above the previous year.

* * * *

A crowd of 300 students protested against the nuclear tests planned by the U.S. The Soviet Union had just completed a series of tests and had announced that it was stopping testing. Krushchev had said he would agree to inspection.



* * * *

Prof. L. I. Schiff, executive head of the Physics Department, disclosed that Stanford would soon be the site of the world's largest linear electron accelerator if the project should be approved by federal agencies. It would have a thousand times greater intensity than other contemplated accelerators.

* * * *

A plan for the ultimate housing of the 24 fraternity chapters in six groups, each consisting of four separate 50-man houses served by a central kitchen, was developed. The units were to be University-owned with the fraternities and the University sharing the cost, estimated at $300,000 per house. Eighteen of the houses at that time were in need of major structural and mechanical work merely to bring them up to modern code standards, the cost of which ranged up to $132,000 a house.

Defense Department classifies index returned by librarian

Hochschild seeks technical abstract bulletins

In November, Peter Hochschild, a Stanford graduate student in computer science, wanted to find out the military relevance of some Stanford research projects from an index of research published by the Department of Defense.

As soon as he asked for the index, the engineering library returned it to the DoD, which promptly classified the material. Now, three months later, a shuffle of DoD paperwork prevents Hochschild from seeing other similar documents, and he says one professor has accused him of "opening a can of worms."

The documents were the Technical Abstract Bulletins (TABs) from the DoD's Defense Advanced Research Projects Agency (DARPA). According to the library index, they were not classified.

But librarian Celine Walker mailed the TABs back to the DoD. She explained to Hochschild in a letter that because they were "for limited access and must not be generally disseminated," it was "inappropriate for the library to hold the TABs."

Walker says the documents have since been classified, but Hochschild isn't satisfied.

"These things should be available to anyone," he says.

Dependence on defense

Hochschild is part of a 15-member group that is trying to increase awareness of Stanford's growing dependence on DoD funding, and the military implications of DoD-funded research.

The group was formed last spring by computer science graduate student Jerry Plotnick, and includes Bernie Roth, professor of mechanical engineering, and Terry Winograd, professor of computer science.

Winograd, in a paper on military funding, said that the "great majority of academic researchers would rather not do weapons work, and go to some length to characterize their work as 'basic research.' "

Hochschild agrees. "Most professors want to believe that they're doing pure research, and the DoD is just being generous."

Hochschild tried to get the information from other unclassified documents, called Work Unit Summaries. The summaries contain technical objectives and the military relevance of each research project as well as the professor's research specifications. The forms are required to be filed by the contracting military agency.

The summaries are stored on computer files at the Defense Technical Information Center. The files themselves are under no access restrictions, but the computer accounts which make access possible are limited to DoD-approved users. Professors with research contracts may have accounts, and the library had one as well. However, the library canceled its account when it returned the TABs.

Hochschild says that he could have obtained access to the files by using a friend's or a professor's computer account, but he wanted to see them without resorting to "connections."

Hochschild filed a request Dec. 7 under the Freedom of Information Act. Lt. Col. Duane A. Adams, of DARPA, wrote on Jan. 6 that the forms Hochschild requested had not been filled out—even though they were required.

Instead, Hochschild was offered a choice, which he explained in a letter to the professors whose summaries he had tried to obtain: "either I could withdraw the request, or DARPA would ask you to fill in the Work Unit Summaries."

Additional paperwork

Adams says that this additional paperwork wasn't an attempt to keep Hochschild from seeing the documents, and that professors are often asked to fill them out when the DARPA staff is shorthanded.

"It is our option to get them filled out however we want," he says.

Hochschild dropped his request to spare the professors the additional paperwork. However, he says, the professors would have only filled out research information, which he already knew. Without the DARPA statement of military relevance, the forms contain no new information.

Three of the professors to whom Hochschild mailed his letter were not available for comment; another, James Meindl of electrical engineering, says that he has no knowledge that the TABs of the Work Unit Summaries were unavailable.

A report on DoD-sponsored research at Stanford, prepared in 1971 by students in a Stanford Workshop on Political and Social Issues (SWOPSI), reported that even though researchers were often unaware of, or were unwilling to admit to any military applications for their research, DoD funds did affect the kinds of projects undertaken.

"The influence of the military has skewed the direction of research at Stanford and it is the faculty's responsibility to restore the integrity of the process of discovering the truth," the report stated.

Hochschild agrees, saying that "fields heavily supported by the DoD may veer in directions not justified on scientific grounds." In addition, Hochschild says that because many graduate students naturally tend toward well-financed projects, DoD funding is also career channelling.

"This is, in fact, one of the reasons that the DoD does fund research," he says.

Reluctance to recognize the military relevance of DoD-funded research has not diminished since the SWOPSI report.

Lieberman comments

Prof. Gerald Lieberman, statistics and operations research, vice provost, and dean of graduate studies and research told the *Stanford Independent* on Nov. 17, 1982, that the results of his DoD-funded research are not directed toward a specific objective.

"As long as I can work on problems I'm interested in," he told the *Independent*, "I don't look down the line."

Lieberman said his research is in reliability and quality control, and their applications to the manufacturing process. The Work Unit Summaries state that his research is also "to better the Navy's weaponry by creating improved operations research methodology for designing, modeling, analyzing and evaluating complex weapons systems and the acquisition process."

Research like Lieberman's may have non-military applications, but it *must* have military relevance. According to the Mansfield Amendment, introduced in 1970, the DoD may appropriate research funds only if the intended project has "a direct and apparent relationship to a specific military function or operation."

Ironically, the amendment was introduced by two senators who were concerned that the military's substantial resources would make it too influential.

According to figures from the Sponsored Projects Office at Stanford, last year the Defense Department spent nearly $24 million on research contracts and grants for all University departments. This is an increase of $2 million from 1981.

The National Science Foundation spent slightly less than $25 million for all Stanford departments last year.

In the Computer Science Department alone, the DoD outspent the NSF by two to one, providing more than $3 million, a figure Hochschild and others say is two-thirds of the department research budget. In the School of Engineering, the DoD outspent the NSF by three to one, sending more than $12 million. Non-government funding in the School of Engineering amounted to just under $2 million in the same period.

I do not believe that it is realistic now to push for the Computer Science Department to stop taking all military funding. Given the national situation, that would be economic suicide for our research and educational programs.

—Terry Winograd

This year's Congress has approved a $5.32 billion (or 13.4 percent increase in DoD funding tagged for basic research.

Many professors rely on DoD support because of a lack of alternative funding.

"I do not believe that it is realistic now to push for the Computer Science Department to stop taking all military funding," Winograd wrote. "Given the national situation, it would be economic suicide for our research and educational programs."

Winograd avoids military contracts despite the loss of funding because he believes that "increased levels of military technology will not help the future of this country, and in fact will be counterproductive."

However, some professors favor military research.

"I think that we need a strong defense," Meindl says. "Military funding certainly doesn't have negative connotations to me."

Military funding for research is defensible on non-ideological grounds, too, he says. The benefits to society which have accrued directly from DoD-contracted research are reason enough to continue to accept support.

"Very high-speed integrated circuitry is critical to our defense, it's critical to our economy, and it's critical to our health care," he says.

Other examples include some of his work in techniques applied to health care which "without DoD research support we would never have had," he says.

"Electronics is very very good for mankind, and I want to participate in making those benefits better."

Although it is true, as Meindl says, that there is no classified research going on in Stanford labs, documents which are supposedly unclassified can be difficult or impossible to obtain.

Export restrictions also affect research. A 1980 DoD memorandum said that certain kinds of devices made under the very high speed integrated circuit program needed permission from the Department of Commerce to be shown outside the country.

The memo also said that "it is the preference of the Program Office that only U.S. citizens and immigrant aliens who have declared their intention of becoming citizens" participate in certain kinds of research.

This poses a problem, as Roth notes, "since approximately 50 percent of all (graduate) engineering students in the U.S. today are foreign nationals. These rules would prevent many faculty and students from continuing their education and research programs." (Roth's disclosure of proposed State Department restrictions on a Soviet scholar's visit to Stanford sparked national controversy last year.)

Hochschild believes "Universities that conduct large amounts of research will be in a poor position to argue against prevalent secrecy and 'export control' restrictions." (On Feb. 27, 1981, the presidents of Stanford, MIT, Cal Tech, Cornell, and the University of California jointly expressed "grave concern" at Federal efforts to apply export controls to academic teaching and research in a letter to the Secretaries of State, Defense and Commerce.)

In the meantime, Hochschild says he'll "probably take up the issue again," and continue to try to make people aware of questions concerning who will set priorities for academic research.

Physician agreement reached. . .

Hospital Board ends dispute on laboratory access

Lawrence Crowley

Walter Arons

R. Hewlett Lee

An extended policy governing access of community physicians to Stanford University Hospital's sophisticated equipment and specialty laboratories was approved Friday by the Board of Hospital Directors.

The policy establishes:

- a method of deciding how community physicians would be granted access to both present and future hospital specialty laboratories;
- a permanent hospital board committee to advise the directors on access issues, and to monitor the implementation of policies;
- a mechanism for appealing decisions; and
- representation of community and faculty physicians on access committees at the departmental and board levels.

The new policy was recommended by a committee headed by hospital board member Dean Morton after deliberations of 15 months. The committee was made up of board members, and included faculty and community physicians.

Morton termed the recommendations "a significant improvement" in the policies and procedures adopted by the hospital board in August 1981. The policies in question were the result of negotiations between the university and community physicians, which reversed an earlier hospital policy limiting future use of the specialty laboratories to full-time faculty only. That agreement set up a formula through which local doctors who then had access to the laboratories could be replaced by community specialists when they resigned or retired.

But access to other equipment, including future technologies, remained still an issue. In addition, community doctors applying for access to the specialty laboratories complained that some clinical service chiefs were not acting promptly on their applications.

In his report to the hospital board, Morton said all clinical services of the hospital now had functioning access committees in accordance with hospital policy.

"The Anesthesia access committee has acted to replace several physicians," Morton said. "Access to the Cardiac Catheterization and Angiographic Lab has been available and utilized by two community physicians for the past 11 months, and formal affiliation agreements were recently signed." In addition, the Radiology Service has granted access to two physicians.

Morton said access arrangements for community physicians were being discussed by the Radiology Service with respect to CT scanning and Ultrasound laboratories.

Similarly, Morton added, a Neurology Service access committee was meeting to act on outstanding replacement positions for the Electromyography and Electroencephalography laboratories.

Dr. Lawrence Crowley, vice president for medical affairs, termed the agreement "a good compromise" that balances the desires of private practitioners against the needs of the Stanford Medical School to fulfill its role in patient care, teaching, and research.

"The policy," he said, "guarantees an opportunity and process for community physicians to make their case on access issues all the way to the hospital board, if necessary.

"It also assures the full-time faculty that access to the laboratories will be limited and that academic program quality will be recognized as of great importance along with the provision of optimal patient care."

Crowley noted the agreement recognizes that technology, financing mechanisms, utilization rates and staffing needs constantly change.

"The hospital board," he said, "with the advice of its access committee, will continuously review these changing circumstances and adjust its policies from time to time."

He said the agreement "places the access issue with other important policy issues within the jurisdiction of the hospital board where it belongs."

"It's the board," he said, "that has the authority and responsibility for the successful operation of the hospital."

Committee members at the Friday board meeting gave qualified support for the committee recommendations.

"The important aspect is that for the first time we have a document for dealing with future issues equitably," said Dr. Walter Arons, a community physician.

"There are faculty physicians and local doctors who are not particularly happy with the concept of limited access developed by the board in 1981," said Dr. Ronald Castellino, associate professor of radiology.

"But we all felt it was essential for the good of this institution to come up with the best we could do."

The document, Castellino added, establishes procedures to implement the board's 1981 policy on limited access, and in that respect it represents a reasonable report.

Dr. R. Hewlett Lee of the Palo Alto Medical Foundation said very divergent philosophies had been thoroughly explored and after one and a half years of meetings a "consensus document" had been agreed upon by the community and faculty physicians and board members of the access committee.

Lee termed the new policy as "a foundation for solutions to the access problems."

Dr. Robert Jamplis, president of the Palo Alto Medical Foundation, also echoed a cautiously optimistic view.

When vested interests are involved, he said, "there's no way you're going to get a document that satisfies everyone. This is as good a document as one could get. I'm certain it will work if reasonable people on both sides can come to some reasonable conclusions.

"I hope it works for the sake of the community and the Medical School. We're so interdependent that we've got to make it work."

"It's a consensus document," agreed Dr. Wilbur Mattison of the Menlo Medical Clinic. "It means there are still reservations and points of disagreement between the physicians on the committee. But we think it is a very reasonable and workable document that provides us with procedures to put into effect the 1981 board policy."

Last August the Palo Alto City Council became involved in the access issue when it gave conditional endorsement to Stanford University Hospital's modernization project. The Council reserved the right to rescind its endorsement if the Morton committee had not made what Council members deemed sufficient progress toward settling longstanding discussions about community physician access to the specialty laboratories.

Council endorsement is not required. However, the state and regional agencies which must approve all hospital construction projects, review local community support while assessing whether the requested improvements are needed in the local area.

The membership of the Morton committee included Drs. Ronald Castellino, Duncan Govan, Sharon Hunt, R. Hewlett Lee, Wilbur Mattison, Richard Popp; and Linda Meier and Geraldine Steinberg; with Drs. Walter Arons, Crowley, and Stanford University President Donald Kennedy serving as ex officio members.

—Spyros Andreopoulos

"The policy guarantees. . .a process for community physicians to make their case all the way to the hospital board. It also assures the full-time faculty that access to the laboratories will be limited."

Nobel laureate to deliver two Lane lectures

Dr. Aaron Klug, winner of the 1982 Nobel Prize for Chemistry, will deliver two lectures at Stanford University School of Medicine March 14 and 16.

Klug, of the British Medical Research Council Laboratory of Molecular Biology in Chemistry, is the 38th invited speaker since the Course of Lane Medical Lectures was established in 1896.

The talks, now held every two years, were established to draw outstanding scientists from around the world to speak to members of the medical profession, students, teachers, and research workers in medicine and allied sciences.

The series was founded by Dr. Levi Cooper Lane, and held at Cooper Medical

Aaron Klug

College in San Francisco until that institution became Stanford's medical school.

Klug, who received his Ph.D. from Cambridge University in England in 1952 after getting an M.Sc. earlier at the University of Cape Town in his native South Africa, was cited by the Nobel Prize committee primarily for his contributions toward understanding the structure and complexes of proteins and nucleic acids. He was also cited for his development of crystallographic electron microscopy.

In addition to his position at the molecular biology lab, Klug serves as joint head of the division of structural studies at Cambridge. He is the author of numerous publications in his field.

On March 14, Klug's talk will be "Structural Analysis of Macromolecular Assemblies by Electron Microscopy and Image Reconstruction." On March 16, he will discuss "From Viruses to Chromatin." Both lectures are to be held from 5 to 6:15 p.m. in Sherman Fairchild Auditorium.

Did you know that red bags get burned?

Dump your garbage with safety in mind!

Last week, a couple of incorrectly disposed aerosol cans exploded in the Hospital incinerator. Fortunately, the nearby operator was properly shielded from the blast.

An incident such as this, warned Ruben Perez, assistant director for safety, endangers the incinerator operator as well as the entire hospital with the possibility of ensuing fire and other hazards.

Perez displays the before-and-after evidence above, as Manuel Repancol operates the incinerator in the background.

The Health and Safety Offices of the hospital and campus remind everyone that the red garbage bags must be used for burnable, potentially infectious trash only—*not *aerosol cans and other non-combustible items. Any questions about proper disposal and use of red bags should be addressed to Infection Control, 497-5386.

Fire and chemical safety in the workplace are also of vital concern, Perez stressed. If you have questions, or are aware of a hazardous situation on the premises, please call the offices above at 497-7225 or 497-0448.

Kids invited to learn about health at upcoming faire

A children's health faire, aimed at teaching youngsters between the ages of three and 18 about good health, will be held from 10 a.m. till 5 p.m. Saturday, March 19, at the Stanford Shopping Center. The event is cosponsored by Children's Hospital at Stanford and the pediatrics department of SUH.

More than 35 booths on the mall, all with hands-on exhibits and demonstrations, will teach children about health-related topics ranging from sports injuries, good nutrition, and massage for kids, to first aid and paramedic rescue, communicable diseases, and poison control. The theme of the faire is "Up with Health."

As an example of the displays planned, a gastrointestinal booth run by Eileen Walsh, R.N., will feature the "chew-chew" express as it travels through a paper mache human digestive track. The owner of the Golden Spike restaurant donated a model train for the exhibit, in which nurse "conductors" will describe the various stops along the way.

Some booths will offer different types of health screening to children, and provide medical referral slips in the event that concerns arise. The cardiac booth, for instance, will offer blood pressure screening along with its exhibit of small anatomical models of the heart and electrocardiogram (EKG) simulation.

Some booths will offer information

about what children might expect if they are ever admitted to the hospital, or require ambulatory surgery.

A number of local physicians and community groups will also participate, including the Palo Alto Fire Department and Sheriff's Department, the Palo Alto Paramedics, Touchstone, and the Ronald McDonald House.

The event, free and open to the public, is being sponsored in connection with Children and Hospitals Week. It was organized mostly by nursing staff in conjunction with other interested professionals.

Participants from SUMC include dietary, the blood bank, respiratory therapy, audiology, pharmacy, community relations, pediatrics, the north intensive care unit (cardiovascular), the intensive care nursery, orthopedics, operating room, ambulatory surgery, infection control coordinator, and critical care transport.

For further information about the children's health faire, call the community affairs office at Children's Hospital, 327-4800, ext. 363, or SUH community relations, 497-7167.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Med Center boundaries extended: dialysis in the comfort of home

Alison Lindt has no kidneys. They were both surgically removed after a long bout with incurable kidney disease. Now she relies, like 60,000 other Americans, on lifesaving hemodialysis to do the job her own diseased kidneys couldn't—the vital task of cleansing impurities and extra fluid from her blood.

But for Alison and her husband John, being able to administer dialysis at home has meant a normal lifestyle, uninterrupted by trips three times a week to a special dialysis center.

Now settled in Michigan, the Lindts were graduate students living in Livermore, Calif., when they enrolled in a special home dialysis training program at Stanford University Hospital.

The four-hour procedure "doesn't really demand a lot of attention once you're used to it," said John. The machine in their living room is self-regulated and an alarm sounds if anything goes wrong.

"Patients who dialyze at home tend to feel better physically and more independent," said Pam Simmons, R.N., clinical nursing coordinator for the Stanford hemodialysis unit.

Training nurses visit each patient's home every few months to check that the machine (on loan from Stanford) is in good repair. Phone contact between the dialysis unit and the patients ensures that any problems are identified early.

"Reduced cost is another advantage of home dialysis," said Dr. Robert Swenson, associate professor of medicine and director of the dialysis units at Stanford and the Veterans Administration Medical Center in Palo Alto.

Karen Berman, social worker at the Palo Alto VA dialysis unit, cited an innovative program in which helpers are recruited and paid, for those patients who wish to home dialyze but don't have a relative or friend at hand.

Health career fair for students

Stanford is one of 10 hospitals participating in an upcoming Health Career Fair, to be held from 11 a.m. till 4 p.m. Saturday, March 19, in the Community Hall at Eastridge Shopping Mall, San Jose.

The Fair is designed for high school and college students, their parents and counselors, to provide information about the various health professions available and the education required to enter them. The public is invited to attend free of charge.

The Fair will feature display booths by local hospitals as well as medical and dental societies. The booths will offer hands-on exhibits, information and the opportunity to talk to practicing health professionals and representatives from the health care educational programs in Santa Clara County.

Stanford's will be the Fair's first booth, presented by management engineering. Kevin Volkman of that department will be on hand with a microcomputer display to offer students an overview of available health careers. They will also have a chance to see the types of equipment, reports, and graphic displays used in management engineering at SUH.

Other fields represented in the Fair by the various area participants will be: clinical laboratory services, dentistry, dietary, financial aid, health promotions, hospital administration, junior volunteers, medicine, nursing, pharmacy, physical therapy, radiology, respiratory therapy, and social services.

The Health Career Fair is cosponsored by the South Bay Area Health Education Center (AHEC), the Santa Clara County Hospital Conference, the Santa Clara County Dental Society, the Santa Clara Medical Society, and the Santa Clara County Office of Education.

Participating hospitals besides SUH include: Alexian Brothers Hospital, Community Hospital and Rehabilitation Center of Los Gatos-Saratoga, El Camino Hospital, Good Samaritan Hospital, Kaiser Foundation Hospital, O'Connor Hospital, San Jose Hospital, Santa Teresa Hospital, and Santa Clara Valley Medical Center.

The South Bay AHEC is affiliated with the Stanford University Regional AHEC, based in the division of family medicine since July, 1980. The AHECs are part of a federally funded state and nationwide program designed to improve the geographic distribution, supply and quality of health manpower in the nation's health care delivery system. The recruitment of minorities into the health professions is another AHEC goal.

The Stanford and South Bay AHECs have worked cooperatively in planning program activities that began last year. For further information on the Health Career Fair, call (408) 275-8981.

...News Notes...

A revised diet manual for the Hospital has been prepared and is available for professional personnel, announced Jane Woeckener, assistant director of dietetics/nutritional services.

* * * *

Dr. W. Warren Mills, assistant clinical professor of medicine, has been elected president of the division of allied health of the Board of Medical Quality Assurance. Mills is a Sunnyvale internal medicine specialist.

* * * *

Dr. Melvin Britton, a rheumatologist and associate clinical professor of medicine, has been certified in the specialty of quality assurance and utilization review.

* * * *

Stanford University Hospital is among 41 "magnet" hospitals selected by the American Nurses Association's American Academy of Nursing as "models of hospital nursing practice with demonstrated success" in attracting and retaining nurses.

Chosen from a list of 165 hospitals across the country that were cited by nurses as satisfying places to work, the magnet hospitals have three overall factors in common: knowledgeable leadership that provides for nursing input in policies affecting nursing practice; the opportunity to practice fine professional nursing in collaboration with high-quality colleagues; and provision for nurses' professional growth and involvement in programs to upgrade patient care.

* * * *

Hospital Forum, the Journal of the Association of Western Hospitals, *has named the publication* **Nursing at Stanford University Hospital** *winner of honorable mention (magazines, larger hospitals) in the* **Forum's** *1983 publications contest, "the Best of the West."*

The awards will be presented at the 1983 AWH Convention, April 24-27, in Anaheim, California, during which many educational opportunities will be presented to participants.

* * * *

During the week of March 14, the Marsh and McLennan and Kemper Fire Insurance representatives (the carriers for SUMC), as well as the Palo Alto City Fire Inspector, will conduct their annual week-long fire/safety inspection. The entire Medical Center complex is scheduled for inspection. Department heads and supervisors may be asked to accompany the inspectors through their areas of responsibility.

The Safety Office reminds all departments to remove corridor obstructions, such as tables, chairs, and file cabinets, and to clear access to fire alarm and suppression equipment. These are general guidelines which should be followed throughout the year.

Additionally, flammable liquids, when not being used, should be kept in either a flammable safety can or flammable safety cabinet. Any large items (like filing cabinets or refrigerators) that need to be discarded or moved, and require the assistance of the Operation and Maintenance Department, should be handled through a work order request.

For further information call the Safety Office at 497-7225.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MARCH 9

Dept. of Structural Biology Seminar: "X-Ray Diffraction Studies of the Structure of the Gap Junction Channel"—Dr. Lee Makowski (Columbia). Noon. D102.

Dept. of Nursing Grand Rounds: "The Confusing World of Food and Nutrition Fads"—Registered dietitians Beth Douglas, Diane Madgic, Diane West, and Janet Cecchino. Part of National Nutrition Month activities. 3:30 p.m., M114.

Div. of Orthopedic Surgery Grand Rounds: "Experimental Investigation in Acute Hematogenous Osteomyelitis and Their Implication and Treatment"—Dr. Raymond Morrissey. 8:30 a.m., M114.

Basic Science Research Colloquium: "Cyclic Nucleotide Cascade of Vision"—Dr. Lubert Stryer. 5 p.m., Fairchild Auditorium.

Progress in Medicine Lecture: "Newborn Intensive Care: Survival—What Price?"—Dr. David Stevenson. Part of public series on ethical dilemmas of intensive care. 7:30 p.m., Fairchild Auditorium.

Dept. of Electrical Engineering Seminar on Electronics in Medicine: "Development of a Computer-Controlled Intensive Care Respirator"—Fritz Stawlicke (Dept. of Mechanical Engineering and Hewlett-Packard Lab). 4:15 p.m., McCullough 134.

THURSDAY, MARCH 10

Nursing Educational Services: "The Legal Workshop." Emphasis on state and federal regulations and other standards, policies, and protocols of nursing practice. 8:30 a.m. to 4:30 p.m., Holiday Inn, Palo Alto. To register call Carole Kidder at 497-6366.

Dept. of Medicine Grand Rounds: "The Automatic Implantable Defibrillator"—Dr. Roger Winkle. 8:30 a.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "Inside-Out Thylakoid Membrane Vesicles and Their Use in Photosynthesis Research"—Prof. Per-Alce Albertsson (Univ. of Lund, Sweden). Noon, M316.

FRIDAY, MARCH 11

Dept. of Gynecology and Obstetrics Grand Rounds: "Endometrial Biopsy and Progesterone"—Dr. Christine Pillet (UER Des Medicine de Nantes, France). 8 a.m., A336.

Dept. of Pediatrics Grand Rounds: "Diarrhea and Methemaglobinemmia in an Infant"—Dr. Bertil Glader. Case presentation by Dr. Dana Rosenberg. 8 a.m., M106.

MONDAY, MARCH 14

Dept. of Gynecology and Obstetrics REI Conference: "Fertilization"—Dr. Alan Shapiro. 8 a.m., A336.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Audiological Assessment of Central Auditory Disorders"—Sally Johnson, M.A., Holly Hosford-Dunn, Ph.D. 7:30 a.m., R117.

Dept. of Medical Microbiology Seminar: "Permeability of Outer Membrane, or How *E. coli* Changes its Clothes According to Weather"—Dr. Hiroshi Nikaido (UC-Berkeley). Noon, M114.

Office of Postgraduate Medical Education 38th Course of Lane Medical Lecture: "Structural Analysis of Macromolecular Assemblies by Electron Microscopy and Imagery Construction"—Dr. Aaron Klug. 5 till 6:15 p.m., Fairchild Auditorium.

TUESDAY, MARCH 15

Dept. of Biochemistry Seminar: "Sex Change Operations in the Fruitfly: Implications for Regulatory Gene Functioning in Higher Eukaryotes"—Dr. Thomas Cline (Princeton). Noon, M316.

WEDNESDAY, MARCH 16

SUMC Auxiliary Volunteer Orientation. 9:45 a.m., W001. To register for the program, call 497-6636.

Office of Postgraduate Medical Education 38th Course of Lane Medical Lecture: "From Viruses to Chromatin"—Dr. Aaron Klug. 5 till 6:15 p.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "Molecular Analysis of the Antennapedia Complex of *Drosophila*"—Dr. Matthew Scott (Indiana University). Noon, M316.

SATURDAY, MARCH 19

Pediatric Health Faire at Stanford Shopping Center: sponsored by Children's Hospital at Stanford and Stanford University Hospital. 10 a.m. till 5 p.m. For information call 497-7167 or 327-4800, ext. 363.

MONDAY, MARCH 21

Nursing Educational Services Critical Care Course, Level I: "Selected Topics in Medical-Surgical Critical Care." 8 a.m. till 4:30 p.m., Faber Auditorium, Children's Hospital at Stanford. Call Carole Kidder for registration and other information at 497-6366.

MARCH 23, 24, and 25

Nursing Educational Services Symposium: "Advanced Perinatal Concepts." Intended for nurses working in a high risk care environment to broaden their understanding of physiological, ethical and legislative issues. Small group presentations each afternoon will offer a more in-depth exploration of specific questions raised. Continuing education credit available; fee to be charged. Registration on a first-come, first-served basis. 8 a.m. till 4:30 p.m. Wednesday and Thursday; 8 a.m. till 12:30 p.m. Friday; room 270, Tresidder Memorial Union. For further information, call Carole Kidder at 497-6366.

THURSDAY, MARCH 24

Nursing Educational Services registration deadline: for "Pediatric Critical Care Course, Level I" to be held March 31. Geared toward nurses caring for children who undergo cardiac surgery. Addresses physiological, surgical and social service considerations of care for these patients. Registration required, fee charged, and continuing education credit available. Room to be announced. For further information, call Carole Kidder at 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Perinatal nursing: high risk care

"Advanced Perinatal Concepts: A Nursing Symposium" will be held March 23-25, in room 270, Tresidder Memorial Union, on the Stanford University campus.

Cosponsored by Nursing Educational Services and the Perinatal Nursing Region of SUH, this symposium is designed primarily for the perinatal nurse practicing in a tertiary level center. It is offered to broaden the nurse's understanding of high risk care.

Selected disease states, ethical and legislative issues will be discussed, as they pertain to maternal/fetal/neonatal management and outcomes. In addition, innovations in management and health team communications will be presented. Small group presentations in the afternoon will encourage in-depth examination of specific problems particular to each patient group.

Faculty will include many professionals from Stanford University Medical Center, as well as several guest participants.

For more specific information on the program, registration, fees, lodging (if necessary), educational objectives, continuing education credit, faculty, and specialty topics, call 497-6366. Early registration is advised.

Speaker stresses civic education

Civic education should be the cornerstone of public support for America's schools, R. Freeman Butts, visiting scholar at Stanford's Hoover Institution, told educators in Detroit Thursday, Feb. 24.

In remarks prepared for a joint meeting of the Society of Professors of Education, the John Dewey Society, and the American Association of Colleges of Teacher Education, Butts said "the civic purpose of universal education in a democracy is its most fundamental purpose. . .

"Our public rhetoric and rationale for free universal education for nearly 200 years has been primarily to prepare citizens for a democratic republic."

Courses and schools for teacher training trace their origins to the need for "free universal, common schools. . . deemed necessary to prepare the young. . . as citizens," he added.

"The fundamental relationships between universal public education and teacher education is inescapable. When one falters, the other does."

The civic purposes of teacher education today have diminished to the point where they are "scarcely recognizable" compared with pressures for greater educational discipline, competency-based education, and many other competing goals.

Butts served 40 years, from 1935 to 1975, as a faculty member at Teacher's College of Columbia University.

The academic community and the educational professoriate "must convince the public that education is primarily a public good rather than primarily a means to private fulfillment or private preferment," he said. "Only then will funds again begin to flow to education. . . .

"It is no accident that the rise of privatism in educational discourse comes at a time when attitudes toward schools of education also are at a low ebb. . . . Poor faculty trying to train poor students cannot produce good teachers for the nation's classrooms.

"So, the argument goes, let's turn to the private schools which will attract better students and better teachers and greater parent choice and parent involvement."

In 1826, he noted, James G. Carter condemned the spread of private academies in Massachusetts as "hungry corporate beings" which would undermine the free public schools.

Besides similar pressure today, Butts observed, "there is the rising clamor to impose 'traditional values' of morality and religion and family upon the public schools.

"The New Right, the Moral Majority, the Creationists, the pro-family and free enterprise groups want the public schools to straighten up and teach the 'right' values that made our country great. . .

"I do not think the schools of education can ignore or dismiss this mood or simply counter-attack from a value-neutral position.

"I believe rather that educational professoriate is on sounder ground if it asserts that indeed teachers should not take sides on matters of personal or religious values, but that the civic values of a democratic polity are the historic business of the schools in preparing for citizenship—not simply the knowledge of government and civics as taught in history and social studies but careful, scholarly and deliberate study of the ideas and values that pervade a democratic polity."

Anthropology faculty responds to comments on Mosher case

continued from page 1

acts" is based on "persuasive evidence that cannot be revealed without endangering innocent persons.".

"The innocent persons in question are not Chinese officials or Mr. Mosher's former wife.

"Mr. Mosher is on record as stating that the crucial evidence against him would physically endanger innocent persons and appropriately he has not released that critical information."

"Mr. Mosher has in his possession all of the evidence against him and the 47-page page report drawn up by the (investigating) committee. He has had every opportunity to refute it.

"No findings were based on uncorroborated statements of interested parties, or on statements of persons unrevealed to Mr. Mosher. At the outset of the investigation, the committee agreed to consider only evidence whose source could be made known to Mr. Mosher and the full anthropology faculty.

"Mr. Mosher asked that any other allegations about his conduct, coming from sources whose identity could not be disclosed to him, be destroyed—and this was done. The information was never released to the faculty."

At a news conference immediately after the Feb. 24 decision, Mosher showed a copy of the report to journalists, but refused to make it public, saying this would "undermine" future legal action against the University. He said "the only innocent person harmed was myself."

Talking with reporters Feb. 24, Mosher said the faculty "never questioned the truth of (my) charges" about birth control. "What they have questioned is my right to say the truth at a time and place of my choosing."

"Perhaps I should have seen" that the popular article "would upset many" and "perhaps I should not have permitted the photo to be printed," he conceded. This showed a woman naked around the waist being prepared for an abortion.

The faculty noted that "the investigation and the decision resulting from it has been in the hands of the Department of Anthropology alone. University officials have not participated in the investigation, except to provide:

"Full graduate financial support for the entire 1981-82 academic year to Mr. Mosher;

"Partial financial support to the department so that Mr. Mosher could make two fully paid-for round-trips, from Taiwan to San Francisco, to meet with the (investigating) committee and to appear before the faculty; and

"Partial financial support to the department for costs related to the investigation.

"The committee also offered their assistance to Mr. Mosher to obtain any evidence he deemed relevant to the case.

"The University's grievance procedure is available to Mr. Mosher. This guarantees that all allegations of error or fault in the department investigation or decision that Mr. Mosher might allege would be reviewed by officials above the department. To date, Mr. Mosher has not filed a grievance with the University."

In a brief statement following the Feb. 24 decision, the anthropology faculty noted that "Mr. Mosher has a copy of the report and of all the documents that were utilized in drawing up the report.

"The cover of the report states that 'it contains information that may be injurious to innocent third parties. Mr. Mosher has remarked on the truth of that statement in a letter he wrote when he received a copy of the testimony contained in the report."

The faculty said its March 7 statement was "made in response to the many public statements made by Mr. Mosher and the incorrect conclusions reached by others in response to those statements."

Rural development requires long-term effort—Johnston

Global problems of rural poverty won't be solved by revolutionaries, master planners, or technological quick fixes.

Rural development remains essentially a long-term educational effort, involving lots of trial and error, focused on higher production, jobs, health and family planning.

These are some of the broad conclusions reached in a recent Johns Hopkins University Press book, *Redesigning Rural Development: A Strategic Perspective* by Prof. Bruce F. Johnston of the Food Research Institute at Stanford and William C. Clark, ecologist and policy analyst at the Institute for Energy Analysis at Oak Ridge, Tenn.

Given the many obstacles to rural well-being, "the odds are steep against *any* approach, ours included," they admit.

"Sustainable progress will be measured in decades, not years."

Political pressures all too often favor urban development and short-term results of little real help to the rural poor, they point out.

"Short-term tactical solutions emphasizing a relief-and-welfare approach are simply not equal to the task. . .

"Development is essentially a learning process. The growth of organizational competence and personal knowledge are as fundamental a requirement as the growth of capital. . . .

"The desire to by-pass the errors, to teach answers instead of encouraging learning, is as strong—and as disastrous a long-term strategy-in rural development as in child-rearing. . . ."

The policies and incentives of aid agencies and academic circles "continue to encourage elaborate but immature model-building exercises, costly but often meaningless experiments, and short but expensive appraisal visits which are uninformative because they focus on isolated projects independent of their strategic context," they declare.

But the evidence is "relatively unambiguous" on at least one point: "it argues strongly that broadly based efforts to achieve production gains are superior to efforts that concentrate on a few large, highly organized, and relatively capital intensive ventures."

"Ultimately, development is about neither numbers nor solutions; rather, it is about people. Our bias for hope derives from our inclination to see people not only as the ends of development programs but also as the means for those programs' effective implementation."

Professors charge Mosher 'endangered his research subjects' in China

The faculty of the Stanford Anthropology Department is issuing the following statement in response to the many public statements made by Mr. Steven Westley Mosher and the incorrect conclusions reached by others in response to those statements.

The principal reason for Mr. Mosher's dismissal from the Ph.D. program was that he abused his status as an anthropologist to engage in illegal and seriously unethical conduct while in the People's Republic of China, and in doing so he endangered his research subjects. Those acts occurred before Mr. Mosher released information regarding the birth control program in the PRC and were not related in any way to his publication of that material.

The unanimous finding reached by secret ballot, that he committed illegal and seriously unethical acts is based on persuasive evidence that cannot be revealed without endangering innocent persons. The innocent persons in question are not Chinese officials or Mr. Mosher's former wife.

Mr. Mosher is on record as stating that the crucial evidence against him would physically endanger innocent persons and appropriately he has not released that critical information.

Mr. Mosher has in his possession all of the evidence against him and the 47 page report drawn up by the Committee. He has had every opportunity to refute it. No findings were based on uncorroborated statements of interested parties, or on statements of persons unrevealed to Mr. Mosher.

At the outset of the investigation the Committee agreed to consider only evidence whose source could be made known both to Mr. Mosher and the full anthropology faculty. Mr. Mosher asked that any other allegations about his conduct, coming from sources whose identity could not be disclosed to him, be destroyed—and this was done. The information was never released to the faculty.

Mr. Mosher has charged publicly that the faculty dismissed him because the Chinese government allegedly restricted research opportunities for other scholars in retaliation for Mr. Mosher's publication of information on the excesses of the Chinese birth control program.

The Committee Report, endorsed by the faculty, is quite explicit on this point: "We feel that although the Chinese are clearly linking Mosher's article to the restrictions they are imposing on foreign scholars, we cannot hold Mosher responsible for actions the Chinese are taking. Although we believe that Mosher was unwise to publish his article in a popular Taiwanese weekly where it would be read as a political attack on the PRC, we cannot judge this act to be misconduct, both because we are not convinced that Mosher fully understood the implications of his choice of publishing medium and because we believe that Mosher's right to publish where he chooses is protected by the right to freedom of speech."

The investigation and the decision resulting from it has been in the hands of the Department of Anthropology alone. University officials have not participated in the investigation except to provide: full graduate financial support for the entire 1981-82 academic year to Mr. Mosher; partial financial support to the Department so that Mr. Mosher could make two fully paid-for round-trips, Taiwan-San Francisco, to meet with the Committee and to appear before the faculty; and partial financial support to the Department for costs related to the investigation. The Committee also offered their assistance to Mr. Mosher to obtain any evidence he deemed relevant to the case. The University's grievance procedure is available to Mr. Mosher. This guarantees that all allegations of error or fault in the department investigation or decision that Mr. Mosher might allege, would be reviewed by officials above the department. To date, Mr. Mosher has not filed a grievance with the University.

Kennedy comments on procedures in Mosher case

Following is a March 7 statement by President Donald Kennedy of Stanford:

A number of letters received by officers of Stanford University, as well as editorial comments in some newspapers, have been critical of the University's failure to release the details of the Department of Anthropology's decision to expel Stephen Mosher, and the text of the inquiry conducted by the Department's *ad hoc* committee. These criticisms have been especially difficult to confront because a number of senior University officials, including the President, are unable to comment substantively on the matter.

This is one of those unfortunate cases in which we find two important social values in collision. Persons concerned with what they perceive as possible infringements on academic freedom, or about the operation of "political influence," would like full information so they can reach their own conclusions. And we at Stanford, because we believe we would pass any tests based on these values, would like to divulge it. But an equally strong set of values attaches to the need for privacy. Some of the information contained in the *ad hoc* committee's report could be damaging to other individuals, including the subjects of research. Mr. Mosher has assumed this risk himself.

Furthermore, as a matter of general policy, individuals who are the subject of such proceedings are entitled to confidentiality. Even in the interest of wider public understanding—and, incidentally, of the University's reputation for fairness—these values must, in our judgment, be given the greater weight.

Accordingly, we have not made the committee's report public. Although we want to provide as much by way of substantive explanation as we can, there are limits here as well.

At Stanford an array of due process requirements apply to cases of this kind, including a route of appeal that extends right up to the President. While that possibility remains open, it would clearly compromise the process for any of us in the appeal route to delve into the facts, prejudge the matter and proceed to comment on the substance.

A good deal *can* be said about process, however. We think those inclined to be critical of the University may find some reassurance in the account given by the Department of Anthropology of the procedures it followed, by the description of the due process provided students by University policy and by the Department's most recent statement. I have attached copies of applicable documents; and I hope those who have questions about Stanford's actions in this case will take the trouble to read them carefully. *(Documents available from News Service.)*

Faculty salary curves, 1982-83

The accompanying graphs, with noted exceptions, display the 1982-83 salary distribution curves for full, associate, and assistant professors in the seven schools of the University. The exceptions, which have not been included, are associate and assistant professors in the Schools of Earth Science, Law, and Education, and associate professors in the School of Business. These categories are not included due to insufficient population (fewer than ten).

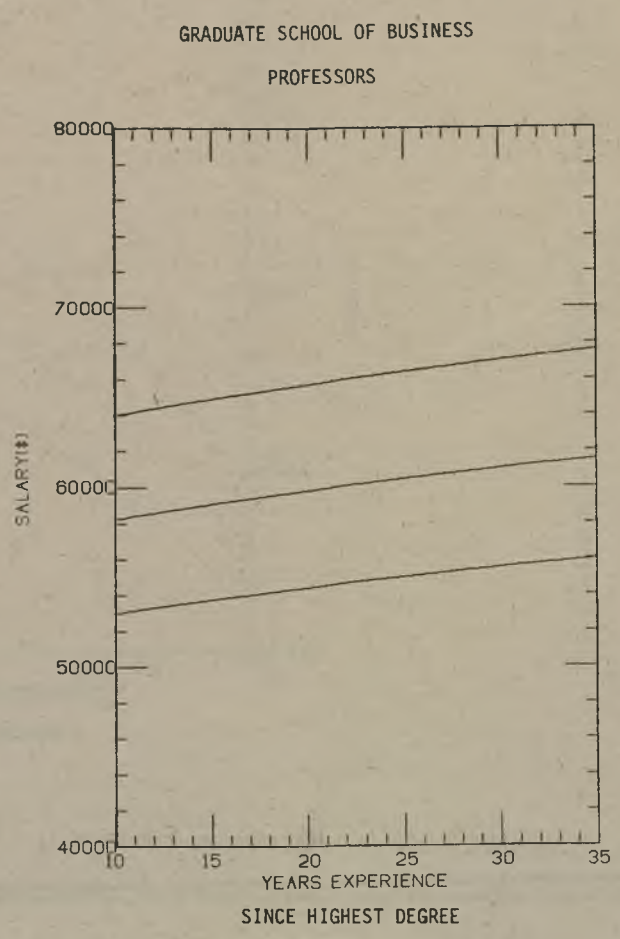
This information was prepared by Elizabeth Ball in the Provost's Office in collaboration with Vice Provost Gerald Lieberman. This is the fifth such report done in response to a June 1978 request for such data from the Academic Senate Ad Hoc Task Force on Faculty Salary Disclosure.

Each graph includes three curves which represent, respectively, the 75th percentile (top line), the median (middle line), and the 25th percentile (bottom line) of salaries based on various indices of years of experience as noted on the bottom of each graph. All salaries are on a nine-month base **except** for the School of Medicine, which is on an 11-month base.

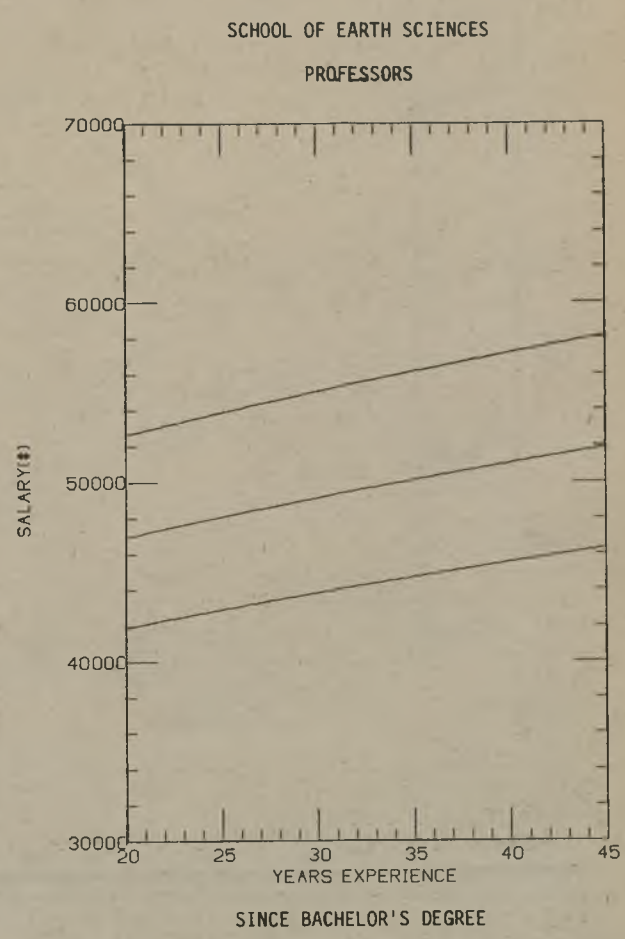
Please keep the following points in mind when reviewing the curves:

1) The data shown on each cover the spread of years that encompasses at least 90 percent of the professors in that category.

2) If the actual salaries were plotted on the graphs, approximately 25 percent of the salaries would be above the 75th percentile band on each graph. 25 percent would fall between the 75th percentile and the median. 25 percent would be between the median and the 25 percent percentile band, and 25 percent would be below the 25th percentile band.

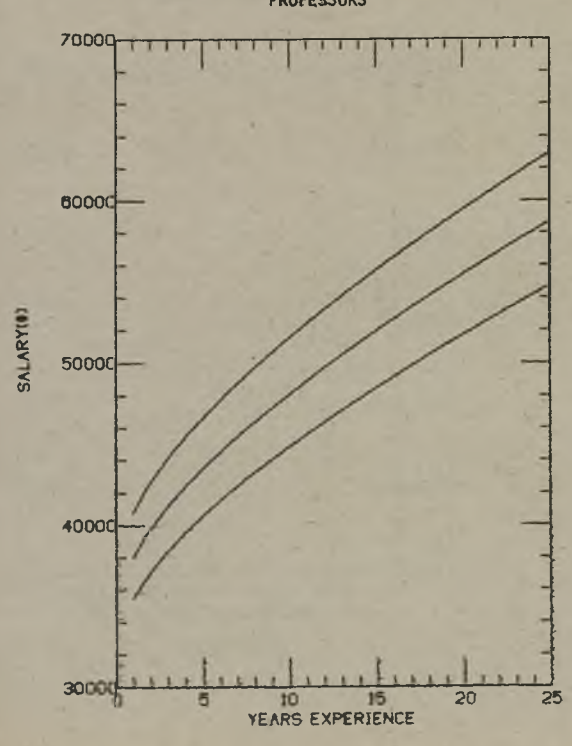


3) In interpreting the curves, it is important to note that a few unusually high or unusually low salaries can have impact upon both the slope of the curve and the width of the 25th and 75th percentile bands.



Each dean selected the particular index of experience which would be the most meaningful for his School: Humanities and Sciences, Education, and Medicine use the number of years in rank (elsewhere as well as at Stanford); Engineering and Earth Sciences use years since bachelor's degree; Law uses years since J.D. or LLB; and GSB uses years since highest degree.

The curves were constructed on the basis of a regression analysis, using the logarithm of salary versus the square root of years of experience. An assumption was made that a direct relationship exists between salary level and years of experience. As with any mathematical model, such an assumption represents an approximation to reality, and in several cases, results in curve fits where the data exhibit a large degree of variability.



Professorial salaries at Stanford are based on merit, equity, and market considerations rather than on length of experience per se. (An exception is the salary levels of assistant professors in the School of Humanities and Sciences which are determined primarily on the basis of years in rank).

Budget guidelines: salary increases, gap closing, lowered service outlook

continued from page 1

Non-exempt staff members will receive a general range adjustment of 5 percent and normal increases for employees on the steps. Employees in the merit zone will receive increases subject to a 7 percent control (or average for the group).

Bargaining unit staff members will receive the negotiated range adjustment of 5 percent and normal step increases.

The salary program for exempt staff members includes merit increases averaging 6.3 percent of salary base, plus 0.2 percent for special adjustments.

The guidelines call for increases in graduate stipends as follows: course assistant, to $5,202 from $4,704; teaching assistant to $5,664 from $5,319; and teaching fellow to $6,321 from $5,853.

Due to frozen or reduced federal and state scholarship programs, the University estimates that $1.9 million additionally will be needed in undergraduate financial need to continue its "long held and high priority policy" of "assuring that no one is denied admission or is unable to enroll and continue for economic reasons."

Total scholarship and grant aid from all sources to undergraduates is expected to reach about $28.7 million this year—about 22 percent of the total costs incurred by undergraduates (tuition, $9,027; room and board $3,812; books and personal expenses, $1,200; and travel, average amount $646).

Self-help expectations for 1983-84 amount to about one fourth of the student budget, which is estimated at $14,039 for 1983-84. This expectation of $3,560 is about evenly divided between term-time work and loans. Hourly rates of pay are adjusted so most students can meet the requirement with about 10 hours work per week. Overall, Stanford's self-help expectations are about the same as those institutions with which it has the most candidates in common.

With continuation of the University's three-year $10 million belt-tightening effort, some encouraging signs are beginning to emerge in the long-range forecast. Besides slower inflation, these include a lowering in the expected growth rate of utility costs and a spectacular rise in the stock market. Even though the University "smooths" returns from endowment over a three-year period, payout has increased by 12 percent, becoming the fastest growing component in operating budget income except for unrestricted gifts.

Administrative and support services showed the greatest reductions in the continuing belt-tightening process. *(See Table below.)*

Discussing the need for lowered expectations in the provision of services, the guidelines include the following summaries of possible cuts and the decisions made for 1983-84:

Reduce campus mail delivery from twice to once daily.

Discussion: With sufficient advanced planning most departments can get along with once-a-day service. For those that cannot, we can make a second delivery available for a reasonable annual charge.

Decision: Make the reduction.

Reduce student loan collection staff as attrition occurs.

Discussion: Stanford has one of the lowest student loan default rates in the country. It is important to maintain the standard so that loan obligations are met and repayments made available for loans to later generations of students.

Decision: Don't make this cut.

Reduce litter pickup in classrooms, auditoriums, and commons areas.

Discussion: With increased care on the part of students and other members of the community, litter, cans, and other trash can be reduced. But classrooms are more easily policed by their users than the more public areas.

Decision: Reduce classroom pickup from five to three times per week, but keep auditorium and commons areas on a five times per week schedule.

Reduce staff in shop maintenance areas.

Discussion: Modest reductions in staff will cause a delay in responding to maintenance problems of non-emergency nature. Improved scheduling and attention to planned maintenance is now in place, however, and this should begin to reduce the number and seriousness of breakdowns.

Decision: Make small cuts so long as delayed response time does not unduly impair the ability of faculty/staff to use affected space.

Reduce special services with cash advances and reimbursements.

Discussion: Careful planning on the part of departments can often eliminate or sharply reduce the need for special processing of check requests. Moreover, use of various credit mechanisms, petty cash funds, and other local resources can reduce the need for very expensive special processing in the Controller's Office.

Decision: Experiment to see what reductions in central services can be achieved without impairing essential functions.

Overall, expenditure reductions of approximately $2.2 million and new income alternatives of $412,000 were incorporated in the 1983-84 guidelines.

Continued uncertainty over the funding outlook for federally sponsored research has been reflected in a projected shortfall of as much as $6 million in indirect cost recovery for 1983-84. The budget guidelines are based on the current indirect cost rate of 69 percent, but caution that "the final decision has not yet been made (on indirect recovery rate) and cannot be made until more is known about federal actions." Recent reports from Washington point to a possible increase in federal funding of basic research, if Congress approves the President's recommendations.

The recommended operating budget for the School of Medicine for 1983-84 is estimated at $28.9 million, an increase of approximately 7.6 percent. For the Business School, the recommended operating budget is $11.5 million, an increase of 12.5 percent.

The University's consolidated budget for 1983-84 is projected at $590.7 million. Besides the operating budget of $227 million, this includes $101.7 million in sponsored research, $75.9 million in other restricted budgets; $56 million in auxiliary enterprises, such as the residences and dining halls, athletics, and University Press; $38 million in the faculty practice program of the Medical School; and $92 million for the Stanford Linear Accelerator Center.

The operating budget guidelines were developed by the President, Provost, Vice President for Business and their respective staffs. Associate Provost Timothy R. Warner oversaw the preparation of this year's guidelines. Charlotte Hanna and Charles Upshaw, graduate students in education, aided in preparation of the document, as did many University staff members.

Gap closing...

Area	Approximate Percentage Reduction in the Adjusted 1982-83 Budget Base	Percentage of the Budget Base Supported with New Restricted Funds	Total Gap Closing

Electronic device implanted in lamb monitors six weeks prior to birth

A lamb born in Calgary, Canada, made scientific history by being the first animal to have its vital signs monitored continuously during the birth process. The monitoring was accomplished by a Stanford-designed radio transmitter in the lamb's chest.

Implanted like a pacemaker six weeks before birth, the device monitored the lamb's heart and lungs, and sent the measurements to researchers via radio signals.

Researchers say that the device could provide the basis for insights into disorders that afflict newborn children.

"We are trying to determine ways of finding out when the fetus is in distress or is having a problem," Andy Ford, a physiologist working on the project, says.

Sheep are often used in experiments involving the birth process because the female sheep's uterus is particularly strong, and spontaneous abortion rarely occurs. Successful experiments using sheep have led to such human medical breakthroughs as fetal surgery for hydrocephalus, commonly called water on the brain, respiratory distress syndrome, and blocked kidneys.

The feedback on vital physiological signs like heart action and movements in the muscles that control breathing provides previously unknown information about the factors that control how baby animals develop in the womb.

It is possible to "study the birth process and actually understand what happens to the cardiovascular and nervous systems when the fetus actually comes alive," Prof. James Meindl says.

He is the director of a team of researchers who designed the device, called a telemetry implant. It uses integrated circuits to take measurements and send those measurements to researchers without using wires that go through the skin; at the same time, it is small enough and consumes low enough levels of energy to be safely and comfortably implanted.

The project has been in development for about 15 years. Stanford is working in coordination with a group of Canadian researchers at the University of Calgary, where the lamb was born Nov. 11.

Stanford's part of the research is "mainly in designing and producing the telemetry units," Ford says. Similar experiments are also being conducted at the Stanford Medical School and SRI.

Before the telemetry implant was developed, other devices were used to monitor heart rate, blood pressure, and lungs. Because these used wires through the skin to relay measurements, they couldn't be used to monitor an animal during birth. The wires would be pulled out in the process. Also, the measurements transmitted were often inaccurate, Ford says, because the anesthetic necessarily

The telemetry implant provides what researchers say are more accurate measurements, and are "a lot easier on the animal," Ford says.

Newspaper insert on nuclear issues set by students

Although conservative newspapers are currently springing up on college campuses, right wing politics will not be the only voice to reach the student's ear—at least in California.

Two Stanford graduates and a medical student are piloting a project to bring issues concerning the prevention of nuclear war to campus readers. With the support of the *Bulletin of Atomic Scientists*, they have started a monthly magazine called *Taking Off*, which will be inserted in campus newspapers.

The first issue on March 30 will go to seven Bay Area colleges, including Stanford, Cal-Berkeley, and Santa Clara. Circulation for the second issue will be 125,000, reaching most major campuses in Northern California.

Editorially, *Taking Off* will take a centrist approach. The magazine aims to arouse the curiosity, hope, and awareness of those students who are now indifferent toward disarmament issues.

"We want to reach the average, apolitical college student through means that will capture the student's interest: humor, interviews, and, for example, articles connecting the arms race with financial aid cuts," said Mike Shuman, one of the founders of the new magazine. "We don't want to depress them with gore."

Shuman, a Stanford law graduate, along with Eric Horvitz, a medical student, and Hal Harvey, an engineering graduate, are the founders and directors of UCAM/West, a branch of the national organization United Campuses to Prevent Nuclear War. *Taking Off* is UCAM/West's most recent project.

Senate report

Kennedy comments on searches, Hastorf on tenure terms

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 9

Summary of Actions Taken by the Senate
March 3, 1983

At its meeting on March 3, 1983, the Senate took the following action:

The Senate, by unanimous voice vote with one abstention, accepted the report of the *Ad Hoc* Committee to Study the Question of the Length of Academic Terms.

Minutes of the Fifteenth Senate
of the Academic Council
March 3, 1983
(Draft subject to approval by the Senate)

A meeting of the Fifteenth Senate of the Academic Council was held on March 3, 1983, beginning at 3:18 p.m. in Room 180 of the School of Law. Present were 36 representatives, 6 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on February 3, 1983 were approved as submitted.

Report of the Steering Committee

A. L. Fetter, Chair, pointed out that *Guidelines for Preparation of Reports and Proposals for Senate Approval* had now been distributed to all Senate representatives. These Guidelines are intended to expedite Senate business, and suggestions for their improvement will be welcomed by the Steering Committee. He also called attention to an addition on the list of forthcoming Senate agenda items. The report on Alternatives to TIAA-CREF is expected to reach the Senate by late next quarter.

After welcoming two new members of the Senate: G. F. Franklin (Engineering) and T. H. Jackson (Law), he announced that the spring quarter meeting of the Academic Council would be held on Friday, April 1, 1983 beginning at 4:15 p.m. in the Physics Lecture Hall (ph100), and expressed the hope that all Senate representatives would be able to attend.

Finally, he thanked those responsible for distributing the *Operating Budget Guidelines* by hand late Tuesday in order that Senate representatives might have the opportunity to see them before the meeting.

Report of the President

The President commented first on faculty responsibilities under the Honor Code, recognizing that the Honor Code serves us all well even though it isn't perfect. The student initiative in developing and maintaining the code is its greatest strength, but faculty should be aware of their obligations and responsibilities under the Honor Code. Faculty who adhere to the code are expected to do the following:

1. Refrain from proctoring examinations.
2. Refrain from taking unusual or unreasonable precautions to prevent dishonesty.
3. Avoid creating temptation to violate the Honor Code.
4. Accept "third-party responsibility" (reporting) when suspected violations come to their attention. They will, not adjudicate informally; they will, instead, use the established system of due process (the Stanford Judicial System) to deal with suspected violations.

The full text of President Kennedy's remarks on faculty responsibility under the Honor Code appears elsewhere in this issue of *Campus Report*.

The second focus of President Kennedy's report was on the administrative searches currently in progress. He reported on the following searches:

Director of the Stanford University Press

This search is in its final stages. Several candidates have visited the campus; others will be coming in the near future. The committee report is expected soon.

Vice-President for Development

This search is in a similar stage, with several candidates having visited. The report of this committee is expected within the next two or three weeks.

Vice-President for Public Affairs

Robert Freelen is now serving as Acting Vice-President for Public Affairs, as he has done in a destinguished capacity before. During this period, a small consultative group, chaired by G. Lieberman, is evaluating candidates inside the University for this post, and is expected to advise the President shortly on whether or not the search should be extended outside Stanford.

Vice-President and General Counsel

The President noted in closing that, as reported in *Campus Report* on 2/23/83, John Schwartz's title has been changed from University Counsel to Vice-President and General Counsel, a change only in title, made to conform to current practice in other universities and institutions with which we deal.

At the conclusion of his report, President Kennedy was asked the inevitable question about lunch with the Queen of England. He responded: "Lunch was served and eaten. It was chicken. It was very good. It didn't rain. I think that our royal visitors had a good time. They had some stimulating exchanges with Stanford students and with your colleagues on Stanford's faculty. I thought everybody did themselves proud. I actually found myself enjoying the occasion after perhaps 20 minutes had gone by. For the first 20 minutes, I think I was scared out of my mind."

Asked then about the cost of the event and what was the motive in giving the lunch, he responded that there were several motives. Events "with a capital E", he said, even when they are only social events, often stimulate useful reflections on the culture we share, the culture we don't share, our intermingled futures, our own history. It was an unusual experience for a number of the young people who were able to participate. Even though, unfortunately, the number couldn't be larger, there is a ripple effect. It was an experience, he said, that he would have been reluctant to decline on behalf of Stanford.

Asked then about the recent SLAC employees' petition concerning weapons-related research at the Stanford Synchrontron Radiation Laboratory, the president responded that the situation is not clear enough at present for comment. Meetings are being held with the Dean of Research, the Director of SSRL, and the Director of SLAC, but a number of factors potentially affect the outcome and any prediction of resolution now would be premature.

Report of the Provost

After commenting briefly on the search for a new Director of the Stanford University Press, the Provost reported a memorandum he had recently sent to school deans regarding the University tenure policy as it pertains to the appointment of assistant professors. As indicated in the *Faculty Handbook*, assistant professors may be appointed for terms up to five years, and the system allows the flexibility of appointing assistant professors for four years plus three years, or three years plus four years, or three years plus three years.

Over the past few years, some consistent patterns have been emerging. The Graduate School of Business has been appointing assistant professors for four years plus three years, and the School of Law for three years plus four years. The School of Humanities and Sciences has recently chosen to move from its traditional 3 + 3 year pattern to a 3 + 4 year pattern in order to provide more time for junior faculty to prove themselves and to keep the tenure review from creeping into the fifth year.

The Provost's memo, which will appear in *Campus Report*, points out that the present system, without any legislative change, provides sufficient flexibility that schools may adopt the system most appropriate to school needs. Deans should make certain that school policy is made clear to all school faculty.

On the completion of his report, Provost Hastorf was asked who represents the humanities on the Press search committee, and if that committee had the firm objective that under its new director, the Stanford university press should move into the forefront of university presses with publications in the humanities. L. Bach, (GSB), who chairs that search committee, responded that the committee was aware of the problem and had received welcome letters from concerned faculty. Though the committee has had no formal instruction on this aspect of the search, all committee members have been aware of its importance. He commented that all of the likeliest candidates have strong interest in the humanities and social sciences. The search committee membership also includes G. Lieberman (Operations Research), W. Chace (English), J. Gibbs (Anthropology), P. Suppes (Philosophy), W. Falcon (Food Research), and T. Grey (Law).

A number of questions were asked for clarification on the term appointment policies for assistant professors at Stanford, primarily from faculty who had believed the 3 + 3 pattern mandatory. Provost Hastorf responded that the overall system does permit various options, and different ones have been elected, but not in as orderly a procedure as is being recommended at this time. Policies need not, however, be identical across schools.

Dean Lieberman added that the School of Engineering once used a 3 + 3 pattern, changed to a 5-year pattern, and then changed back again to the 3 + 3 pattern, which it intends now to retain. The Advisory Board operates in full knowledge of the relevant school pattern.

The School of Humanities and Sciences has traditionally operated under the 3 + 3 plan. Dean Wessells' statement on this change in school policy appears in the 3/9/83 issue of *Campus Report*. He also reported that the H & S change within the system was made only after talking to 28 department heads, and, that the sentiment is very strong that the period should be even longer than seven years. There is a trend toward favoring eight or nine years before tenure, e.g., three years as an assistant professor followed by five or six as an untenured associate professor, more like Yale's current system than our own. He intends to say more about this matter in his report to the Senate in spring quarter.

The Provost added that such a proposal on tenure policy change would not only require discussion in the Senate but also a vote of the full Academic Council.

In clariflying the range of flexibility already available within the present system, Provost Hastorf pointed out that the rules prescribe that notice of non-renewal of a term contract be given by July 1 of the penultimate year. If it is not, the faculty member is entitled to a terminal year which does not count toward the accrual of tenure by length of service. Whether this is a seventh or an eighth year of appointment for a given individual depends on the appointment pattern adopted by that particular school. This is the limit of the flexibility possible within the present system. The 3 + 5 possibility mentioned by Dean Wessells would necessitate a legislative change in university policy.

In response to questions about why the H & S policy change had not been discussed in the Senate, Dean Wessells responded that it hadn't been considered Senate business. The school's policy had been developed and reaffirmed by a series of successive deans, and the new policy was determined after two years of consultation with department heads and H & S policy groups. The nearly unanimous sentiment was for the lengthened term.

There were some expressions of strong dismay that the availability of the seven year option was unknown over the years to some individuals and departments within Humanities and Sciences. There were also some expressions of surprise that the options for alternatives to the 3 + 3 pattern were, in fact, unknown to some individuals and departments. Historically, within H & S, both individual and department patterns have deviated from the 3 + 3 standard from time to time on good grounds.

To continued assertions that discussion of this matter was, in fact, appropriately Senate business, Provost Hastorf reiterated that no change in University policy was being currently proposed. If and when it is proposed, it will be both Senate and Academic Council business. In the exercising of options within present University policy, however, the appointment system chosen is properly a matter of school choice, providing only that the faculty of the school both understand and agree to it.

Report of the *Ad Hoc* Committee
to Study the Question of the
Length of Academic Terms

As the discussion reopened on the report from the *Ad Hoc* Committee to Study the Question of the Length of Academic Terms, there were no further remarks to be made by E. Good, *Ad Hoc* Committee chair.

A. L. Fetter, Senate chair, pointed out that the report had come to the Senate with a recommendation moved and seconded from the committee that the report be accepted. Since this discussion would be the third held on this subject by this Senate, he proposed that the Senate vote on that motion at the close of the discussion.

R. Rebholz spoke in defense of the semester system,

continued on next page

Senate report

Quarter System to continue: Budget guidelines discussed

continued from page 20

summarizing many of the points he made in his written statement in the 2/9/83 issue of *Campus Report*. He concluded by saying that a canvass of his Senate colleagues had convinced him that there would be an insufficient number of votes for a substitute motion to the acceptance of the report. Therefore, he closed by recommending that the dean and department chairs take very seriously the *Ad Hoc* Committee's recommendation to explore alternative course scheduling plans within the quarter system.

Dean Wessells also endorsed the recommendation for experimentation with scheduling courses. His office will cooperate with faculty and departments in working out equity in teaching loads. He advices that such experiments be tried first at undergraduate and advanced graduate levels.

He urged departmental curriculum committees to address the problem, and department heads to be flexible and understanding if faculty want to experiment with course scheduling. He warned potential experimenters, however, not to shortchange possible enrollees from engineering and the sciences by precluding their enrollments because of incompatible scheduling for humanities courses.

A concern was expressed that too much experimentation for too long a period would disrupt student schedules. It was pointed out that the new H & S Curriculum Committee should be concerned with this question, as it is with the question raised in the 2/3/83 Senate of unilateral changes in scheduled courses once they have been arranged in the Time Schedule.

To the question of whether the *Ad Hoc* Committee had examined the patterns of incompletes in the quarter system for the information that might yield on the amount of time needed for good writing, Professor Good responded that there were some figures on incompletes but they were not definitive on this question. No comparisons of incompletes for graduate/undergraduate or Stanford/other university had been done.

The comment was made that even the ten-week quarter is being infringed upon by exams moved into the Dead Week period. Registrar Mahoney pointed out that any non-scheduled exam time is only an alternative, and the exam must be made available to the student at the exam time originally scheduled. One rescheduling into Dead Week, however, has traditionally been specifically allowed in the Time Schedule, and with the wider use being made now of that particular teaching time, these exam infringements on Dead Week have become more common. Autumn Quarter 1982-83 was one of the worst for both faculty and students trying to finish early. This Winter Quarter seems not nearly that bad. We need more data on how many examinations are actually given and when, however, before we can address the problem.

A. Mellor, after citing some effects on student writing and faculty productivity which were attributed to the quarter system, recommended that certain humanities courses be offered for the usual quarter and number of units with an examination, and that students who wished to do so could enroll for another 3 or 4 units the next quarter to write an extended paper based on that course. An instructor who graded a number of such papers could be given an appropriate amount of course relief. This could improve both student writing and faculty productivity.

President Kennedy reported that the quarter/semester split at UCB was fairly even within disciplines and not a split along disciplinary lines as is being argued here. Since many institutions with distinguished faculties in the humanities operate on the quarter system, we need better data before we accept the notion that the quarter system is a selective disadvantage to the humanities.

There being no further discussion, the question was put to a vote and the report of the *Ad Hoc* Committee to Study the Question of the Length of Academic Terms was accepted by unanimous voice vote with one abstention.

Report on the Operating Budget Guidelines

Provost Hastorf opened the report on the *Operating Budget Guidelines* by acknowledging the tremendous effort made by R. Bacchetti and T. Warner to get the *Guidelines* prepared under severe time pressure, and the help of the staff who hand delivered it to Senate representatives before the meeting.

In presenting an overview and highlighting some portions of the printed report, he began by remarking that if the economic conditions stay as they are, the gap predicted in the Long Range Forecast for 1985-86 will be substantially smaller than the gaps we are struggling with now.

Considering this as a four-year cycle, we are now talking about the budget for the second year of that cycle, 1983-84. This institution is, of necessity, tightening its belt some and taking a hard look at its costs. In doing so, it is disrupting its academic programs as little as possible.

Last year, all departments and units were asked to cut their budgets by 1%. For 1983-84 and 1984-85, we will have to cut by 4-5%, by 1985-86, the remaining gap, we hope, will be relatively small, but that depends on federal policies regarding indirect cost recovery, research funding, and student support.

A major feature of the *Operating Budget Guidelines* for 1983-84 is that the proposed growth in the University's operating budget goes to 7.9% from the 14.5% that it had been from last year to this year. That is a substantial change in real growth, even granting some reduction in inflation, and it has been a result of all of our efforts to contain costs.

We have made budget cuts in these *Guidelines* of $2.2 million. We have generated new income of $.4 million. We have shifted sabbatical funding to the staff benefits pool, netting the operating budget close to a million dollars.

In addition, we have cut back on our planned real growth. We have cut back 1983-84 plans for Consolidations and Improvements by $400,000. Finally, we have limited increases in faculty and staff salaries.

A unit of the University can contribute to budget control in two ways: 1) by cutting budget items, and 2) by generating or reassigning restricted income to support the operating budget. The 1983-84 *Guidelines* show examples of both kinds of contribution.

In the schools of Humanities and Sciences, Engineering, Earth Sciences, Law, and Education, no faculty billets have been removed in this budget cutting. There has been pressure to freeze some billets, however, and some may have to be given up to close the gap in a future year.

There are no Consolidation and Improvement commitments in this year's budget because of our continuing commitments to Western Culture, to LOTS, and to the Humanities Center. There will be $400,000 for Consolidations and Improvements in 1983-84, not yet committed. School deans will be asked in April for their proposals for possible allotments from this fund.

The Provost then turned to some highlights in regard to income aspects.

The 1983-84 tuition increase is projected at 9.8%. This would appear to put Stanford near the lower middle of the group among our peer institutions. When all student cost increases are considered together (tuition, fees, room, and board) the Stanford increase (10.3%) puts us somewhat above the middle of the group, but not at the top. If inflation remains down, a tuition increase of around 9% may be more than we will want to charge.

Concerning indirect cost recovery, the Provost reported that Stanford's research volume at present is about as predicted. Budget officers are now taking a very hard look at the cost pools for our indirect cost rate, and the Budget Advisory Committee, chaired by R. Cannon, is also focusing on that problem. This is an effort to get closer to full recovery of indirect costs without having to raise the rate.

The operating budget shows an increased contribution to undergraduate aid. Approximately one quarter of the overall cost increase to students, i.e., one dollar out of four, has to be contributed to undergraduate aid. This has been necessary because of state and federal cutbacks to student aid for undergraduates. Graduate fellowships for 1983-84 will go up by about 12%.

Of the two schools that do not appear in the operating budget, the School of Medicine is also cutting its budget and the Graduate School of Business is not. With a new dean and substantial sources for funding, GSB plans to increase the size of its faculty, especially in its international activities. It is projecting a 12% growth for 1983-84, as contrasted with the University figure of 7.9%.

As to faculty salaries, increases in 1983-84 will be less than the 7.5% initially projected. School deans will receive 6% of their faculty salary base to be available to them for allocation. There will be a small provostial reserve to be used in discretionary allotments. Two schools, Law and Earth Sciences, are adding restricted funds to the amounts the University can provide for faculty salary increases.

Vice-President W. Massy added a few words about income and expenses before presenting a Table of Financial Highlights from 1952-1982.

He pointed out two pieces of good news: 1) a 12% increase is being realized from the endowment, and 2) we did better than we expected to do on energy expenses. Energy costs are down about $1 million, largely due to the drop in oil prices and the rain which cuts hydroelectric costs.

Non-exempt staff salaries will generally go up 5% plus the normal step increases, with an additional 2% possible on performance for those at the end of a step.

Exempt staff salaries will increase by about 6.3% with a possible small reserve to adjust to special market conditions in certain cases. Units may choose to hold back a portion of the total 6.3% allotment to provide for other special problems.

With respect to budget reductions (see Table, page 8, *Operating Budget Guidelines*), he detailed the cuts which had been planned to effect the necessary reductions in the area of Business and Finance.

He then called attention to the Table of Financial Highlights, 1952-1982, noting a few corrections. This Table appears in corrected form in the 3/9/83 issue of *Campus Report*.

He pointed out the changes over time in the organized research percentages as a result of changes in government and University policies in the late 1960s.

Increases in institutional support in recent years are largely attributable to utility costs, to the addition of a great deal more academic space much of which is high technology space and considerably more expensive to maintain, and to the renovations made during that period (e.g., to the McCullough Building).

He pointed out that administrative expenses have increased over this period. His office is aware of faculty concern over this administrative growth, and he indicated that the administration itself is concerned about it. It is not uncontrolled growth but it does merit close scrutiny, he believes.

The higher percentage of Auxiliary Activities in the earlier years is due to the fact that housing and food costs represented a higher percentage of the total when the University was primarily an undergraduate institution. This percentage has risen somewhat in more recent years largely because of the clinical operation, the Faculty Practice Plan.

He called attention especially to the change in the percentage of federally sponsored grants and contracts over time. Even excluding SLAC, this source of funds represented a peak of nearly half of all sources of funding in 1967, and has declined to around one-third at the present time.

Provost Hastorf added, on the matter of faculty salaries, that Stanford is in remarkably good shape in comparison to its peer institutions, and that the increases projected should hold us even. Graphs on faculty salaries for 1981-1982 will appear in a future issue of *Campus Report*.

He pointed out, in summary, that the Long Range Forecast projects a $4 million gap and that the administration proposes to close that gap by generating new income (the more the better) and by budget cutting (the less the better). Two important external factors will affect the process: 1) possible arbitrary reductions in the federal allowable indirect cost recovery, and 2) uncertainties in the outlook for undergraduate financial aid.

He emphasized again the importance of the inflation rate in computing estimates for faculty/staff salary increases and the importance of the scrutiny presently being given all the indirect cost recovery pools. He closed by commending the remarkable effective work done by R. Bacchetti and T. Warner in putting the budget together and communicating it. He especially recognized Warner for his first-authorship of the 1983-84 budget, K. Creighton, F. Ratts, and F. Riddle for their contributions, and T. Keenan for his skillful final coordination work.

In the discussion period following these reports, the question was asked why the staff figures have increased so markedly over time while the faculty figures have remained relatively steady.

W. Massy responded that there are two large jumps in staff figures. The one between 1962 and 1967 is largely due to the staff hired to implement the huge increase in sponsored research grants during that period. The latest increase is attributable to several factors: to increases in plant operations, in administration, and especially to increases in auxiliary services. Smaller numbers for these categories should appear in the 1983-84 figures. He acknowledged that this disproportionate growth needs to be controlled and the administration is currently working in that direction.

Asked if the terms "gap" and "deficit" are here used synonomously, Provost Hastorf replied that a gap represents a potential deficit and will become one unless

Industry ties exciting, but government must back basic research—Kennedy

While new university-industry ties are "exciting and full of promise," Stanford President Donald Kennedy said Wednesday, March 9, that "the federal government must reaffirm its role as the dominant. . .source of funding for fundamental science."

Former commissioner of the Food and Drug Administration, he testified before the U.S. Senate Subcommittee on Science, Technology, and Space in Washington, D.C.

Even if the President's budget for fiscal 1984 is approved, he noted, "federal funds for non-defense research (have been) reduced by about 43.7 percent in real dollar value since 1967, and a significant decline has taken place in the first two years of the 1980s."

Kennedy cited the new Center for Integrated Systems at Stanford and the new Center for Biotechnology Research as promising examples of new industry ties that leave university research intact.

Industry support level

But business still funds only 4 percent of the basic research done at universities nationally, he noted. Even at Stanford, a 25-percent gain in industry funding would be required to offset a 1 percent drop in federal research support.

"It is of paramount importance that the federal government, pressed by tight budgets not try to purchase science at bargain rates by forcing universities to assume a greater proportion of the costs of government-sponsored research than they can reasonably be expected to bear," he added.

"Specifically, the federal agencies should continue to reimburse full indirect costs" as properly accounted for under circular A-21 of the Office of Management and the Budget.

In addition, "the federal government should move rapidly to repair the long neglect in (research) instrumentation and facilities, he said.

The link between research and training has contributed greatly to American excellence in science and "should be supported through adequate scholarship and fellowship programs" for graduate students.

Kennedy, who convened the Pajaro Dunes conference on university-industry ties, expressed confidence that "new and creative" links can significantly improve the rate at which new technologies can be transferred into human service "without sacrificing the extraordinary character of American basic research."

He cited the Center for Integrated Systems as a "stimulating and productive example." The center will pull together scholars in computer science, electrical engineering, materials science, and related fields in microelectronic chip development.

Backed by $750,000 from each of 18 industrial sponsors, "its purpose is not to get a jump on the market by developing the next generation of integrated systems but to advance the state of knowledge by orders of magnitude."

The industrial support will pay for a new building, scheduled for groundbreaking later this spring. "Federal funds for science facilities construction all but dried up in the late 1960s," he noted, "and raising private money for bricks and mortar is increasingly difficult."

Once the building is completed, sponsoring firms will contribute annual dues to the Center. In return, the companies may send one visiting scholar, approved by the University, to work with the CIS faculty on fundamental research.

"We think this contact between CIS faculty and students and industry scientists will be stimulating and productive," Kennedy said.

"The rules under which research is conducted at CIS are quite clear: all work is subject to the same canons as all other university work. Thus a free and open flow of ideas and swift publication of results are its operating conditions.

"Industry in general gains from such ventures by assuring that fundamental work in this area will be undertaken. The particular affiliated firms gain through their expose to new ideas in these fields and to the faculty leaders who are asking the new questions.

"Perhaps most important, the sponsors have a chance to become acquainted with bright students, whose education we also hope to enrich through the Center."

The new non-profit Center for Biotechnology Research provides a different model. It will fund research in genetic engineering, and is affiliated with a for-profit firm, Engenics Inc., which will seek to develop commercial opportunities in the same field.

Biotechnology Center

Six major companies funded both Engencis and the Center, which owns a 30 percent share of Engenics. Any capital appreciation and dividends realized by the Center will be devoted to further support of basic university research.

"Stanford is fortunate enough to be one of three universities awarded research agreements by the Center, but the conditions for the conduct of the research are the same as for any other industry-sponsored research programs," Kennedy said.

"Stanford owns no equity in Engenics, nor will Stanford lay any special claims to research funds available from the Center.

"The six sponsoring firms of the Center and Engenics will have licenses to any patents developed in the Center's funded projects, but these licenses will be offered at commercial rates and in accord with existing policies at the universities. This is something open to any sponsor of research; it is a perfectly normal arrangement.

"The novelty of the research agreements with the Center comes not from any special conditions developed by the universities, but from industry's willingness to form a new funding consortium for university-based research. The participation by the universities is unexceptional.

"These new forms of industry involvement. . .did not emerge easily; they evolved out of a process of hard negotiation.

"The condition under which university research flourishes—open and free exchange of ideas—is really quite different from the proper and necessary secrecy that shrouds end-product development. . . .

"Sponsoring research is not the same as making a charitable contribution, and the same firms that make charitable contributions for philanthropic reasons rightly insist on getting some return, even if it is long-term, from sponsored research."

However interesting and promising these developments may be, he cautioned, the funds involved are not large compared to the total resource needs of fundamental science across a broad spectrum of fields.

For Stanford alone to support its present level of research without any government support would require an endowment of $3.75 billion, roughly six times its current endowment, "with every dollar of its income devoted to research at the expense of instruction," he noted.

"It is, in short, difficult to exaggerate the importance of public-sector support to this beginning segment of the innovation process."

Hastorf sees bright spots in long-term economic outlook

Some bright spots are beginning to appear on the long-term economic horizon for Stanford, but the Washington outlook remains clouded, Provost Albert Hastorf told the Faculty Senate Thursday, March 3.

Federal proposals to arbitrarily cut indirect research cost reimbursement to universities by 10 percent "may well reappear," he noted.

The prospect for undergraduate financial aid remains one of "clear ambiguity," he quipped.

And the University still faces hard decisions in its three-year $10 million belt-tightening program, he noted.

While no faculty positions have been lost so far, there has been "genteel but firm pressure. . .to put some (vacancies) in the freezer. It would be lovely if they could be defrosted." But some may have to be given up.

A "major feature" of the proposed operating budget guidelines for 1983-84 is that the University's projected fiscal growth rate would drop to 7.9 percent from 14.5 percent this year.

"This is a substantial change even after inflation is taken into account," he observed.

As indicated to the Senate earlier, when projected tuition increases were trimmed, faculty and staff salaries "are not going up at the rates we'd like to see them go up," Hastorf observed. Funding for program improvements also has been curtailed.

Stanford's 10.3 percent increase in tuition, room and board rates for 1983-84 compares with 8.5 percent at Wesleyan, 8.7 percent at Harvard, 8.9 percent at Dartmouth, 10.1 percent at Yale, and 12 percent at Princeton, he noted. Completion of the new 800-unit Governor's Corner housing project for undergraduates contributed to a much larger than normal increase in room rates for 1983-84.

About $1 of every $4 increase in the tuition rate now goes toward financial aid, he noted. Stanford is strongly committed to "need-blind" admissions and has attracted an economically and racially more diverse student body than most comparable private universities.

The University currently projects that tuition may grow about 8 percent in 1984-85, or 3 percent above an anticipated 5 percent inflation rate. The long-range forecast assumes salary increases about 1.5 percent above inflation. These assumptions are subject to periodic review in the University's budget process.

Graduate scholarship stipends have been boosted 12 percent in 1983-84 "to try and catch up with the ravages of inflation," Hastorf noted.

William F. Massy, vice president for business and finance, noted that slower than expected growth in utility prices might trim about $1 million from previously forecast increases in next year's expenditures. The strong stock market performance also is a bright spot.

Massy's operations generally took the largest percentage cuts of any sector in this year's belt-tightening efforts.

Prof. Marsh McCall, classics chairman, noted that data presented by Massy showed a sharp gain in staff members in recent years.

Massy replied that some of the biggest increases came in the auxiliary enterprises. Large increases in staff also followed the sharp increase in federally funded research at Stanford in the mid-1960s, his data suggested.

Hastorf described the proposed guidelines as "a safe and sane budget." There is "no clear, obvious exposure. . . ."

"Things can occur, especially in Washington. . .but never fear, we can put (President) Don (Kennedy) on a plane and disaster can be avoided," he said with a smile.

Senate/continued from page 21

continued from page 21

action is taken.

Asked what happens to the gap if inflation is much larger or smaller than projected, W. Massy responded that if there is unanticipated inflation that is much higher, things get somewhat better in the short run but you have to pay the piper in the longer run, e.g., on salaries. However, if interest rates go up, that is reflected immediately in our investment income.

The advantage of projecting salary increases on the model of inflation-plus- —% becomes apparent in comparing the short term and long term effects of unanticipated inflation on budget planning.

The assumption that research funds and staff figures should increase proportionally was questioned, and the suggestion made that it might be useful to designate the proportion of staff directly involved in research.

As the Senate prepared to adjourn, Provost Hastorf commented that he thought President Kennedy had been exceptionally low-key in his earlier Senate comments about luncheon with the Queen. It was an extraordinarily fine affair, he said, with the English being, as usual, remarkably great conversationalists. He speculated about how the luncheon might have gone with, for example, the German royal family.

Vice-President Massy added that one of the high points for him was hearing Sandy Fetter explain to the Duke of Edinburgh just exactly what is the faculty Senate. Then Fetter said that we also had a student Senate and the Duke said, "Wow!"

As the meeting broke up, G. Gillespie reminded the Provost that the English royal family changed their name during the first World War. . . .

"Right! Hanover to Windsor," said the Provost.

. . . because they were German.

On this note, the Senate adjourned by consensus at approximately 5:35 p.m.

President Kennedy reminds faculty of Honor Code obligations in Senate talk

Following are comments on the Honor Code, delivered to the Faculty Senate by President Donald Kennedy March 3, 1983.

The past two years have seen a welcome revitalization of student interest in the Honor Code and its various provisions. During this past year, the Honor Code Commission has been especially active in trying to remind undergraduates of the responsibilities they assume under its provisions.

We all recognize, I think, that the Code is not without imperfections. Nevertheless, it has, in my judgment, served Stanford well; and repeated surveys over the past two decades have indicated a continuing respect for the Code and its provisions and a constant and, on the whole, rather encouraging constancy in the rate of student adherence to it.

I promised the Associated Students that I would try in every possible way to reinforce the belief we all have in the Code as the essential principle governing the conduct of academic work in the University.

It is a principle for which students assert primary responsibility, and that is good. But it is also one to which faculty members owe significant duties, and I want to take this opportunity to remind my colleagues of them.

The faculty has three major obligations:

1) "Refraining from proctoring examinations" (see (2) att. for fuller explanation).

2) "Refraining from. . . taking unusual and unreasonable precautions to prevent" dishonesty.

"An instructor should not require students to identify themselves before being admitted to an examination room or require students to submit in advance to being searched for notes or other materials or maintain surveillance upon students who leave the examination room. Nor should the instructor take deliberate steps to invite dishonesty to entrap students."

3) "The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code."

"Examples of undesirable procedures include the following: failure to give clear directions and instructions concerning course requirements; treating required work casually as if it were unimportant; carelessness or inconsistency in maintaining security of examinations or tests; **reusing an examination which is neither kept secure from public exposure nor made available to all students.**"

Take-home examinations should not be closed-book exams.

Provided that alternate seats are available, tests will be taken from the classroom only with the consent of the instructor.

One additional responsibility, and a very important one: in terms of third-party responsibility, "faculty members have like responsibilities when suspected violations come to their attention." That is, the faculty member should not necessarily depend on students to pursue suspected violations.

There is a system of due process.

Current financial aid policy will apply to those not registered for draft

Stanford current financial aid policies will be applied to those not registering for the draft, President Donald Kennedy has announced.

Students who decline or fail to apply for government aid are considered on an individual basis for long-term loans and jobs through the University. These loans are more costly to students and must be repaid within five years after graduation.

About a dozen individual cases already are handled in this fashion every year, according to Financial Aids Director Robert Huff.

The University plans no addition to existing job and loan resources to meet possible needs arising from students who do not register with Selective Service by July 1.

No decision has been made how these resources will be allocated if they prove insufficient.

About 4,200 Stanford students currently receive assistance under one or more federal programs funded under Title IV of the Higher Education Act. These include Pell grants, supplemental educational opportunity grants, state direct incentive grants, national direct student loans, guaranteed student loans, auxiliary loans to assist students (called CLAS in California), and college work-study jobs.

Among the Stanford recipients, close to 2,000 are male students born after Dec. 31, 1959, required to register for the draft.

Stanford is committed to undergraduate admissions on a "need blind" basis. It makes admissions decisions without regard to financial need, and meets the calculated need of those enrolling through a combination of student self-help, loans and jobs.

Approximately 46 percent of all Stanford undergraduates now receive scholarships and grants-in-aid. When loans are included, the proportion rises to 71 percent.

The University awards its own financial aid with the expectation that students will apply for and obtain government assistance for which their financial situation makes them eligible.

When students fail to do so, decisions are made on an individual basis after consultation by the student with a member of the advising or senior staff of the Financial Aids Office.

Government Student Aid and Selective Service Registration

It has been University policy to award its own financial aid with the expectation that students will apply for and obtain any governmental assistance for which their financial situations make them eligible.

When students have declined or failed to apply for such governmental assistance, the University has been willing to consider replacing it with its own long-term loan and job resources. Decisions in such cases are made on an individual basis after consultation by the student with a member of the advising or senior staff of the Financial Aids Office.

It should be noted that the terms and conditions of University loans are less favorable—that is, more costly to the student—than aid from governmental programs: Most University long-term loans bear an in-school interest charge and must be repaid within five years of graduation.

The University plans no change in this policy.

The reason for restating it at the present time is that, effective July 1, 1983, all men who are required by law to register with Selective Service and have not done so are ineligible for federal student aid under Title IV of the Higher Education Act. The specific programs included are Pell Grants, Supplemental Educational Opportunity Grants, State Student Incentive Grants, National Direct Student Loans, Guaranteed Student Loans, Auxiliary Loans to Assist Students (called CLAS in California) and College Work-Study jobs. It is estimated that 4,200 Stanford students are currently receiving assistance under one or more of these programs. Of this number, close to 2,000 are male students born after December 31, 1959.

The University does not plan any addition to existing loan and job sources; no decision has been made about how these resources will be allocated should they prove insufficient.

Tenure/ continued from page 1

early part of the seventh year," which would be possible with a "3-4" or a "4-3" system.

Each dean should make the school's practices "very clear" to faculty, he said. "This doesn't mean that someone can't be evaluated earlier."

History Prof. Carl Degler was "surprised" to hear of the change and English Prof. Ronald Rebholz was "appalled."

"I'm put in an odd position with my colleagues," he said. "I've been here 22 years and always thought the whole University operated on sixth year evaluation" for tenure.

Hastorf said the changes became "visible" only in the last two or three years, by "slow accretion." Vice Provost Gerald Lieberman, dean of graduate studies and research, said there had been several examples of "good, extenuating reasons" for individual exceptions within humanities and sciences.

Prof. Bernard Roth, mechanical engineering, said it was "appalling" for Wessells not to think his school's practices were any business of the Faculty Senate.

Lieberman said each school "decides what it wants to do" and the Advisory Board reviews individual tenure decisions according to the school's policy. An elected group of seven professors chosen by their colleagues on the Academic Council, the Advisory Board reviews all tenure decisions.

Degler said the History Department "assumed there was no choice" other than the "3-3" system.

Wessells replied that this "3-3" practice was endorsed by Hastorf as dean in 1972 and reaffirmed three years later by Dean Halsey Royden. Now there is "nearly unanimous sentiment" for a basic "3-4" pattern.

Prof. Gerald Gillespie, German, said the additional year should be viewed as a qualitative as well as a quantitative change. "It's a lot more difficult to qualify (for tenure) in six years," he said. To earn tenure, Stanford faculty must be judged at or very close to the top in their specialty nationally.

New appointment policy for H&S given

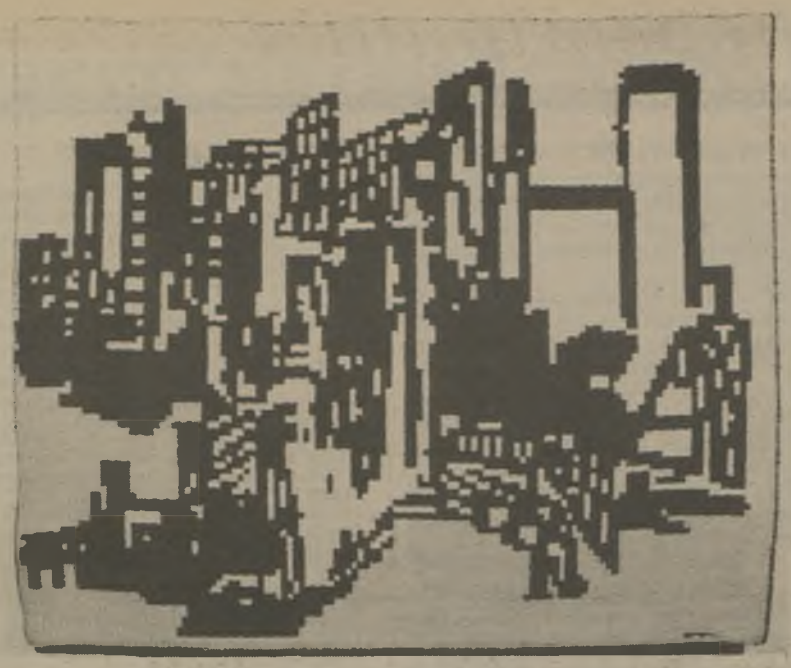
Following is a Feb. 11 memo to department chairpersons in Humanities and Sciences from Dean Norman K. Wessells concerning appointments as assistant professor:

This letter establishes a new appointments policy for assistant professors in Humanities and Sciences.

The initial appointment will be for a three-year period, just as in the past.

The second appointment will be for a four-year period.

Persons worthy of being considered for tenure will be evaluated at the beginning of the seventh year of employment. If promoted, they will become tenured associate professors in the eighth year. If denied tenure, individuals that so desire may be reappointed for an eighth terminal year. Such persons will not gain tenure by length of service.



Exceptionally talented assistant professors may be reviewed for tenure prior to the seventh year. Arguments in favor of such a procedure for a given individual should be presented to our office prior to initiating the early review.

Assistant professors currently on their first three-year appointment will be considered at the normal time for reappointment to a four-year term. Assistant professors reappointed to a second term beginning in September of 1983, and all current second term assistant professors, will automatically have their appointments extended to include a seventh year. The tenure review will be delayed to that year unless departments make argument to the contrary and we agree. These general rules do not apply to any special cases of persons already in the seventh year, such that tenure by length of service might be obtained.

The new policy on assistant professor appointments does not affect policy on maternity leaves or sabbaticals. It will remain the case that sabbaticals cannot be given for the terminal year of employment at Stanford; hence, persons reappointed for a terminal eighth year may not take sabbatical leave during that year (assistant professors may take sabbatical leave during the seventh year, if recommended by the department, and if the person will commit to returning to Stanford for an eighth year if tenure is denied).

Our objective in this change in policy is to provide longer time to assistant professors prior to the tenure judgment. We trust that the extra year will improve the opportunites for young scholars in certain fields to complete and publish work that may be used in the evaluation process for tenure.

We expect that even this modest increase in time will permit departmental faculties and our office to make better judgments in promotion cases. No more important task than that faces the faculty of this school; if you have ideas about our appointment and promotion procedures that might improve policy even further, the associate deans and I would welcome hearing about them.

Tapestries by Annette Kaplan are at the I-Center through March

Sign up now for YMCA Half Marathon

The second annual King Games/YMCA Half Marathon will begin at 8 a.m. Sunday, March 27, at Stanford Stadium.

The race, sponsored by the University and the Palo Alto Area YMCA, is the kick-off event for the Martin Luther King Games scheduled for the week of March 29-April 2 at the Stadium.

Registration is $10 before March 15, then $12 through race morning (YMCA members $8 before March 15). The price includes long-sleeved green-on-white tee shirts.

Running again this year will be Stanford anesthesiology resident Duncan McDonald, 34, who placed first among 850 registered runners last year.

There will be 10 age-group categories, with trophies for first-place winners and medals for second- and third-place winners. The course is reputed to be scenic and pleasant, with some "fairly decent" hills in the Frenchman's Hill area of the campus.

Applications are available in sports and running shops and at the YMCA Fitness Center, 755 Page Mill Road. For more information call 858-0661.

Vlastos speaks on Socratic problem

Prof. Gregory Vlastos, the distinguished classicist and philosopher currently associated with the Institute of Society, Ethics, and the Life Sciences at the Hastings Center in Hastings-on-Hudson, New York, will speak on "A Crack at the Socratic Problem" at 4:15 p.m., Friday, March 11, in Building 300, Room 303.

Vlastos, who serves as a member of the Stanford Humanities Center's Advisory Board, will speak under the sponsorship of the Humanities Center. The public is welcome.

Rental housing

HOUSING AVAILABLE

□ **April 10 to July 15, '83:** London Hampstead nr Heath Regency Hse; beaut. furn. 3BR/2BA, study, dshwsher, W/D, garden. Details, photos avail. from owner. Avil. for future occasions. Call Himmelweit, 321-2052 (day).

□ **April 15 to June 15, '83:** Palo Alto nr Stanf. 2BR/2BA, study, lrg. LR w/frpl, DR, pool w/spa. Adults only, nonsmokers, no pets. Sec. dep. req. $1200 (8 wks) incl. hseclean., pool serv. Call 856-9696.

□ **Beg. Mar. 19:** Fully furn. 3BR/3BA hse, beaut., spacious, Palo Alto nr. Stanf. New kitchn, W/D, piano, frpl. Fenced yd. No pets. (Flex. time per.) $1550/mo. incl. grdnr, water. Call COLLECT (602) 299-4499.

□ **Aug. 1, '83 to summer '84:** Fully furn. campus hse, 5BR/4½BA, lrg. study, DR, decks, 1+ acre. 1 yr. lease. $1600/mo. Call 497-4547 (day), 327-4277.

□ **June 16 to Sept. 5, '83:** Spanish style hse, central Palo Alto, fully furn., 5BR/5BA, balconies, spiral staircase, new kitchn, enclosed crtyd, pool, jacuzzi w/dress. rms. Acre, creek on prop. No pets. $3000/mo. + util. Call 327-1142.

□ **Beg. June 1:** Summer rental and/or 1 yr. High Portola Valley (Ladera). Beaut. 3BR/2BA fully furn. hse. Atrium, lrg. self-maint. grdn; oaks, pool, tennis. 7 min. to Stanf. $1500/mo. Call Pat Mueller-Vollmer, 324-1624 (eve), 327-3505.

□ **NOW:** No. Tahoe/Incline village. Furn. 2BR condo, long term rent; 6 mo. or more. $350/mo. Call (415) 361-1859 (eve. & wknd).

□ **Beg. June 10, '83:** Sunny, attrac. lrg. modrn priv. apt. 1BR, in Frenchman's Hill hse. Fully furn. w/self-def. frig, self-clean oven, cov. priv. patio, sunbath patio. Summer only $900/mo. $850/mo. incl. util. & furn. Call Shirley 856-6049.

□ **Regularly avail:** 1, 2, & 3BR furn. & unfurn. apts. & twnhses & 3BR/2BA hses in Palo Alto & Menlo Pk in good nghbrhds. Close to campus. $595 to $1200/mo. Call Shirley, (415) 856-6049 or Jane, (415) 968-4957.

□ **April 9 to June 5, '83 (flex):** Fully furn. hse., 2BR/1BA, W/D, gar., yd. Great loc. in Palo Alto nr Stanf. $650/mo. Call 324-1509 (eve).

□ **April 5 to July 12, '83 (flex):** College Terr., walk to campus. Lovely furn. 1BR/apt. Patio, TV, gar. $525/mo. Call 494-4917 or 857-0585.

□ **March thru June:** Oak Creek apt. 2BR/1-1/3BA, furn. Built-in bar, gar. space avail. Util. furn. Call Alice, 321-2625.

□ **July 1 to Dec. 31, '83:** Fully furn. & equipped hse in Sharon Hgts. 4BR/3BA, study, FR, DR, 2 frpl, 1/3 acre. 1 mi. to Stanf. $1500/mo. incl. grdner. Call 497-3785 (day), 854-7471 (eve).

□ **NOW:** London flat, fully equipped. 1 min. Willesden Green Stn. undergrnd. 2BR/1½BA, central heat. $600/mo. Call (415) 661-4067, (415) 387-7300.

□ **NOW:** Attrac. furn. 2200 sq. ft. hse. 4BR/2½BA, study, DR, FR, patio, 3 car gar. W/yr lease incl. ktchnware, linens, 2 TV, grdnr. Lrg. front & back yd. Quiet, safe nghbrhd. $1400/mo. Call (415) 965-1302 (eve).

□ **NOW:** Ski cabin—So. Lake Tahoe. 2BR, frpl, color TV, phone. Adj. natl forest, walk to lake, Tahoe Keys. $120/wknd, $200/wk (5 days). Call Janine, 497-2501 (day), or (408) 739-3141 (eve).

□ **NOW:** Spacious 2BR apt in Barron Pk. Share w/female. Balcony, piano, W/D. $300/mo. + ½ util. + dep. Call 325-0566, 365-6961.

□ **April 10 to Oct. 15, '83:** 2BR/2BA hse, 4¼ mi. to campus, wooded setting, suitable for 2-3 adults. Furn. or partially furn. W/D. $1100/mo. Call 941-6444 (eve).

□ **July '83 1 yr lease:** Renewable lease, 4BR/2BA ranch-style hse. nr Rinconada Pk. Unfurn. or partially furn. $1250/mo. Call Sue Sherman, 328-2864, 328-7477.

□ **April 1 to Nov. 15, '83:** Fully furn. hse. 4BR/2BA, LR, FR, lrg. cov. patio, easy upkeep, auto. sprinkl. Palo Alto. Adults. No pets. $1200/mo. incl. water. Call 858-0880 (eve).

□ **Aug. '83 to Jan. '84:** Fully furn Cape Cod Colonial hse in Palo Alto. 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr. schls, park, com. ctr. Prof. going on Sabbat. $1500/mo. Call 325-1709.

□ **Mar. 27 to Sept. 15, '83:** Fully furn 3BR/3BA, FR, hse in So. Palo Alto. Mbshp in nghbrhd pool ass'n, grdnr, 15 min. to Stanf. Walk to shops. Ideal for children. $1100/mo. Call Cornish & Carey, 325-6161 (day); Rita Benedict 327-7190 (eve).

□ **July, Aug.:** Very attrac summer rent. Dwntwn Palo Alto, fully furn. 1BR/2BA condo, suitable for cpl. Library, w/spiral staircase, balc., pool, secure. 18th C. European style. $1500/mo. Call (415) 324-1624 (eve), 327-3505.

□ **Aug. 1, '83 to June 30, '84 (flex):** Fully furn campus hse, BR/3½BA, LR, DR, study, lib., frpl., pool, view, acre. $1600/mo. incl grdnr, pool serv., water. Call 327-5204, 497-4732 (day).

□ **July & Aug. '83:** Dutch cpl seeks hse in or nr. Los Altos for vacation period (4 to 6 wks). EXCHANGE for hse in Oegstgeest (nr Leydon) Netherlands; 8 mi to beach, 8 mi. no. of The Hague, 25 mi. so. of Amsterdam. Call 969-1924.

□ **June 19 to Aug. 26, '83:** Furn. campus hse, 4BR/2½BA, FR, piano. Will EXCHANGE for London hse/flat, or RENT for $1500/mo, incl water, cleaning, grdnr. Nonsmokers, no pets. Call 493-8874.

□ **Beg. Apr. 1:** Earlier if neces. Prof. woman seeks female rmmate to share lrg. unfurn. 2BR/2BA apt in Palo Alto. Good nghbrhd. Bike to campus. $337.50/mo. + ½ util., + dep. Call Nancy 321-4741 (eve).

□ **April 1 to June 1 (flex):** Los Altos. Fully furn. 2BR/2BA hse. Lrg. LR, FR, AEK, 2 frpl., 2TV. Park-like 1/3 acre. 1 queen, 1 dbl bed. Quiet, dead-end st. Car poss. $1050/mo. Call 967-2918.

□ **Beg. Mar. 18; beg. Apr. 1:** Two rms in old Victorian priv. hse. Fully furn, ktchn priv., laundry, walk to Stanf., dwntwn. Short term rent. pref. $400/mo. Call Peggy 327-2510.

□ **Apr. 11 to June 9, '83:** Wooded, wine cntry retreat, 5 mi. above Calistoga. 3BR/2BA, study, pool. $550/mo incl. caretaker. Call 497-3254, M-Th; 11-12, or after 3 (M-W). 854-3932 after 9 pm Sun-Wed.

□ **NOW:** Ski Northstar. Tahoe. 2BR/2BA condo, sleeps 8. W/D. Free shuttle to slopes. Ideal fam. ski resort. Day care avail. Call Rosemary (415) 564-5324.

□ **April thru June '83:** Fully furn hse in Los Altos. 2BR/2BA, LR, DR, den. 2250 sq. ft. 10 min. to Stanf. Adults only. $899/mo. incl. grdnr. Call 948-6370.

HOUSING NEEDED

□ **NOW:** Stanf. staffer, resp, quiet, no pets, age 35, a musical writer; seeks own unfurn. 1BR cottage or apt nr campus. Excel. loc. refs. Call Julia, 497-3811 (day), (415) 648-4835 (eve).

□ **Beg. April/May:** Prof. female, nonsmoker, seeks long term rental, 1-2BR hse or cottage. Palo Alto, Menlo Pk, Stanf. area. Call 497-7921 (day).

□ **NOW:** Extremely resp., conscientious cpl seeks hsesit/caretak. arrang. or rental of cottage/gar. apt. on lrg. estate. All situations considered. Refs. avail. Call Mark or Ginny, (415) 941-5713 before 9 a.m. or eves.

□ **Sept. '83:** French visit. scholar seeks Stanf. hsng in EXCHANGE for 2BR apt. on Mediterranean shore (nr Montpellier). Please contact J. Schmidt, 28 Montee Saint-Laurent, 69005 Lyon, France. Tel. (7) 837-6280.

□ **July or Aug. thru Dec. '83 (flex):** Humanities Ctr fellow & fam. seek 3 or 4BR fully furn. hse or apt in Palo Alto or Stanf. area, poss. in EXCHANGE for our Ann Arbor, Mich. 4BR hse. Call 493-1359.

□ **July '83 to June 30, '84 (flex):** Carnegie Inst. Fellow, spouse, 2 children, seek hsng Palo Alto-Stanf. Area. Will rent or EXCHANGE our Berkeley hse: 5BR/3BA hse, LR, DR, library, frpl w/yr of wood, piano. 1 acre, lush grdn, auto. water. Incl. maid, grdnr, sec. system. Call (415) 483-8484 (day), (415) 548-1735, eve & wknds.

□ **June to Sept. (flex):** Visit scholar, family, seek EXCHANGE: 5BR/2BA apt in Paris & car for 4 or 5BR hse in Palo Alto or STanf. Call Mrs. Flexer, 493-5088, 962-0100, X259; or write Mr. Paoletti, 84 rue Michel Ange, Paris, 75016, France.

□ **NOW:** Housesitting. Prof. cpl seeks home to caretake. Refs avail. Call Peggy or Bill (408) 977-1509 (eve).

□ **Sept. 1, '83 to June 15, '84:** Visit Prof, wife seek 2BR furn. apt. or hse nr. Stanf. Call Jean Lee, 497-3322 (day). Or write Robert Cohn, Dept. of History & Religions, Northwestern Univ., 1940 Sheridan Rd., Evanston, Ill. 60201.

□ **Sept. '83 to June '84:** Prof. on sabbatical (U. of Iowa Med. Sch.), wife, 2 children (4 & 7), seek hsng on or nr Stanf. Call Betty Bray, Dept. Biochem. 497-6161 (day).

□ **Apr. 9 thru Apr. 30, '83:** Fac. wife seeks small apt. on or nr campus. Call 857-0255 or 857-0201.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

94111-JM (JCC:2070) ADMIN ASST II: Prov admin assistance to Plant Officer & professional staff, e.g., prepare repts, assemble audits & appraisals; schedule mtgs; review budgets; supv clerical staff; Qualifications: sevl yrs of applicable exp & educaiton in admin, policies & proceds; good interactive skills; supvry exp or ability; contracts admin exp desir; C05; $1670-1890; APPLY AT SLAC (854-3300 ext. 2353)

32593-JB (JCC:2168) ACCOUNTANT III: Analyze complex & detailed regulations; propose changes; prepare repts for mgmt; solve wide range of problems concerning Govt & Institutional policies & proceds; requies an exp'd, service-oriented person who is analytically inclined & has ability to initiate, respond to & coord both policies & people; study feasibility of computerizing repts; support mgr & staff; supv an exempt acctg staff & other duties as assigned; Qualifications: BA/BS in Acctg/Bueiness Admin and/or 4-8 yrs related work exp; requires skills in acctg, mgmt, & computer sys operations; C07; $2113-2724

30505-AW (JCC:2270) FIN/MGMT ANALYST III: Imparts broad & specific tech aspects of informa sys to user community in Facilities & Svcs; coord indiv & group training sessions for users; prov staff assistance in identifying potential D.P. applications & in preparation of annual plan; prov staff assistance in D.P. production & maint activs; represents organization w/other organizations on campus; may act as mgr of D.P. projs; aids in preparing, conducting & interpreting statistical mgmt studies; supv Admin Asst; Qualifications: combination of edu &e xp equiv to Masters Degree in Business Admin, Computer Sci, Statistics or related field & min of 4 yrs work exp; excel knowl of Business Sys; ability to teach applied data processing concepts; excel oral & written commu skills; C08; $2464-3139

9297-TC (JCC:5588) LIFE SCI RES ASST I: Perform radioisotope labeling of lipoproteins; study interaction of 125I-lipoprotein w/ hepatocytes & steroidogenic cells; study specificity of 125I-HDL binding to cellular membranes prepared fr livers 7 ovaries; isolation of lipoproteins as well as apoproteins fr human & rat plasma using prepative columns & high pressure liquid chromatography; confirm purity of isolated lipoproteins & apoproteins w/ agarose & polyacrylamide gel electrophoresis; supv lab technician; organize students' & other lab workers' scheds & work load; orer lab supplies; perform theory-related work of limited scope requiring initiative & judgmt based on knowl & understanding of scientific theory; plan scientific work, interpret results; change procedures & participate in write-up of matls used for publication; Qualifications: prev exp in biochemical lab proceds; BS & 6 mos lab exp or equiv combination; C05; $1670-2086

22828-DS (JCC:7384) FOOD SERVICE SUPVR I: Respon to Unit Mgr for mtg objectives of dept in production of quality food & serv for hall residents; supv & schedule full time & student employees in various work duties in food preparation, serving & sanitation; keep records of food & eqpt inventories, wkly & mthly food cost repts, etc; assume full respon in absence of Unit Mgr; asst Mgr in scheduling & training of employees; asst in purchasing of designated food items & supplies, etc; Qualifications: Bachelor of Sci degree in Institutional Mgmt or Dietetics; knowl in basic food production, employee training & sanitation principles; C05; $1670-2086

22827-DS (JCC:7392) FOOD SERVICE SUPVR II: Respon for operation of a 350 person new student residence food serv under directio fo Mgr of Univ Food Srvc; respon for mtg objectives of Food Svc Dept in produciton & quality of food & svc; Qualifications: Bachelor of Sci degree in Institutional Mgmt or Hotel & Restaurant Mgmt or Dietetics; 3-5 yrs exp as Food Serv Mgr; expd in food production, ordering, quality & control, employee scheduling & raining; C06; $1854-2312

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, March. 15, in Room 270, Tresidder Union.

The sessions are open to all new employees without preregistration.

SLAC

94245-JM (JCC:8880) ENGRG PHYSICIST: Participate in advanced dvlpmt of accelerator sys for very high gradient high energy lectron accelerators, incl superconducting accelerators & dvlpmt of novel accelerating structures at non cryogenic temperatures; high power rf switching devices & laser & plasma devices; Qualifications: PhD in Applied Physics or EE w/ trianing in microwave theory & techniques; sevl yrs exp in microwave physics & applied superconductivity essential; supvy ability for inception to final completion & technical support staff; ability to commu tech informa both/orally & in writing; C99; $2700-3500; APPLY AT SLAC (854-3300 ext 2353)

94322-JM (JCC:6406) SCI & ENGR ASSOC I: Review designs of microwave tubes & related components; coord production; formulate plans to keep parts manufacture flowing; formulate planning charts for inventory & cost control; respon for assurance of timely completion of prototype & production requiremts; Qualifications: AS degree in Mechanical Engrg sciences or equiv; must be familiar w/ machine shop & drafting practices; exp in scheduling for production & coordination of shpo activs; must be familiar w/ planning charts for inventory & cost control; exp in matls selection & processing of special metals & ceramics desir; C99; $2300-2700; APPLY AT SLAC (854-3300 ext 2353)

94429-JM (JCC:6492) LAB MECHANICIAN III: TMS unit; day & swing shift; perform variety of unusually complicated tasks in fabrication of precision instruments & microwave components; Qualifications: requires full model maker skills; ability to work fr blueprints & sketches; be familiar w/ copper machining techniques; ability to operate all machine shop tools; familiar w/ standard shop practices; NC exp desir; A41; $2250; APPLY AT SLAC (854-3300 ext. 2353)

94623-JM (JCC:6492) LAB MECHANICIAN III: TMS unit; day & swing shift; perform variety of unusually complicated tasks in fabrication of precision instruments & microwave components; Qualifications: requires full model maker skills; ability to work fr blueprints & sketches; be familiar w/ copper machining techniques; ability to operate all machine shop tools; familiar w/ standard shop practices; NC exp desir; A41; $2250; APPLY AT SLAC (854-3300 ext. 2353)

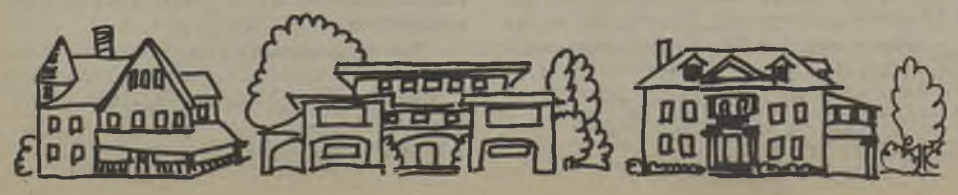
91596-JM (JCC:6646) SR S&E TECH—ELECTRON: TMS unit; all shifts; perform diagnostic, corrective, scheduled & preventive maint on wide variety of simple to highly complex accelerator electronic sys, sub-sys & eqpt; reqd tech knowl & skills acquired thru college courses & related exp or equiv; Qualifications: ability to troubleshoot eqpt down to component level using schematics & diagrams; sevl yrs exp maintaining high power modulators & fmiliarity w/ thyratrons, thyristors & klystrons desir; working knowl of conventional solid state circuits & associated hardware; able to climb ladders & asst in heavy lifting; familiarity w/ CAMAC desir; A34; $1901; APPLY AT SLAC (854-3300 ext 2353)

91594-JM (JCC:6774) ELEC PHOTOTYPE FAB: TMS unit; perform work such as printed circuit board high-speed stack drilling, setup, operate & maint p/c photofabrication processing machines i.e. high speed drill incl computer numerically controlled, routers, photoresist laminator p/c laminating press, photopolymer developer, precision cameras, film exposing, etc; perform p/c solder-reflow, solder-masking, silkscreening & wave-soldering processing; Qualifications: ability to demonstrate proficiency in all aspects of p/c photofabrication processing & proceds incl chemical mixing & safety standards; ability to work w/ fractions, decimals, metric sys, precision calipers & micrometers w/ sevl yrs related exp; A28; $1647; APPLY AT SLAC (854-3300 ext. 2353)

91595-JM (JCC:6774) ELEC PHOTOTYPE FAB: TMS unit; perform work such as printed circuit board high-speed stack drilling, setup, operate & maint p/c photofabrication processing machines i.e. high speed drill incl computer numerically controlled, routers, photoresist laminator p/c laminating press, photopolymer developer, precision cameras, film exposing, etc; perform p/c solder-reflow, solder-masking, silkscreening & wave-soldering processing; Qualifications: ability to demonstrate proficiency in all aspects of p/c photofabrication processing & proceds incl chemical mixing & safety standards; ability to work w/ fractions, decimals, metric sys, precision calipers & micrometers w/ sevl yrs related exp; A28; $1647; APPLY AT SLAC (854-3300 ext. 2353)

Bargaining Unit

30393-TC (JCC:5638): LIFE SCI TECH I: TMS unit; 50%; Tue & Thu, 7-11; Mon, Wed & Fri, 8-12; work as member of team conducting intl clinical trial concerning cholesterol & prevention of heart disease; duties incl phlebotomy, blood prssure & weight measuremts, admin of med interview according to specific protocol, centrifugation & separation of blood samples, & completion of pertinent forms, filing, xeroxing, etc; Qualifications: trained in venipuncture on humans, use of lab eqpt such as flame photometer, AutoAnalyzer II, centrifuge; prep of reagents; prep & use of quality control samples; ability to deal comfortably w/ human subjs; A18; $7.50



16283-TC (JCC:5644) LIFE SCI TECH II: TMS unit; fixed term 5/1/83-5/1/84; surgical operations on Xenopus involving genl anesthesia & removal of oocytes; prep of oocytes for micro injection; learn to do microinjection & other micromanipulation; biochemical analysis of oocytes, incl extraction of proteins & nucleic acids; polyacrylamide & agarose electrophoresis of RNA & DNA molecules; feeding & maint of Xenopus colony; recombinant DNA cloning tech; nick translation of DNA probes; in vitro translation sys; knowl & exp of experimental tech for recombinant DNA experimts; Qualifications: 2 yrs college sci or equiv work exp; 2-3 yrs of lab exp in use of recombinant DNA technology & handling & manipulation of Xenopus & Xenops oocytes; extensive biochemical & molecular bkgrd w/ practical exp for processing of injected oocytes; A24; $8.65

32394-PB (JCC: 5835) ANIMAL CARE ASST I: TMS unit; 50%, Mon/6 hrs, Wed/8 hrs & Fri/6 hrs; respon incl custodial care for animals (rats, mice) housed in animal care facilities; clean cages; feed & water; perform genl cleaning of areas; sterilized cage eqpt, bottles, & sawdust; Qualifications: ability to follow very detailed verbal & written instructions; habits of cleanliness & neatness; willingness to handle animals; familiar w/ animal facility & use of autoclave; handle 25-30 lb bags of feed; able to work where there is sawdust; A12; $6.54

15006-TC (JCC:7074) STOREKEEPER I: TMS unit; 80%, 9:30-12 & 1-5; receives & distributes lab shipmts; checks shipmt against original order & against shipping documents; contacts Purchasing or Stores about any discrepancy in orders; respon for all ordering for Lab Storerm fr Univ Stores or fr certain outside vendors; respon for maintaining Storerm in clean & orderly condition; will transport Lab supplies as needed; involve use of Lab van; Qualifications: must have current, valid Ca driver's lic & good driving record; must be systematic & orderly; ability to keep current inventory records & to work constructively w/ Lab personnel; A17; $7.33

Hospital

TELECOMMUNICATIONS SUPVR—Telecommunications — #4577 (C-5): Responsibilities: Under genl supvn of Telecommunications Mgr, Supvr is respon for implementation of deptl policies & proceds applicable to all Med Ctr cost centers. Plans, directs & supervises operational functions for assigned shifts. Maintains personnel & payroll records, estab work schedules & provides overall training instruction. Assists w/ deptl planning related to systems, analysis, computerization, radio-paging, overhead paging, emergency/disaster usage, customer satisfaction, budgeting & related projects. Qualifications: High Schl grad or equiv; high interest in Telecommunications field. Prior exper in computer terminal usage w/ knowl of Wylbur/Spires languages helpful; must be good trainer; previous supvy/Sr. Operator or related "directing" exper necessary; should have personality to deal w/ wide variety of people within very busy office; prior Telecommunications exper not necessary, tho helpful; Permanent Full-Time, M-F, 8-5pm (occasional evening work may be reqd); $9.23-$12.92 hrly

Nonexempt

30045-BP (JCC:2630) SPECIALIST TYPIST: NBI & Lexitron word processing operator; hands on appl/input of variety of data; on-line formatting; keyboarding & setup tabs & line-endings simultaneously; off-line formatting; compute setup to horizontal/vertical scale; determine tabs, headings, & line endings; text editing applications are used each time matl is revised; print documents on variety of paper style & pre-printed forms; analyze how matl should be glossaried; proof document upon completion of assignmt; Qualifications: typ 75; prev secl exp & knowl of standard offc proceds; knowl of word processing eqpt; ability to set prior & to meet deadlines when under pressure; accuracy extremely important; good grammar/editing skills; send appl/resume to Susan Sterner, Old Pavilion; B12; $1310-1373

17035-TC (JCC:6188) PATIENT TEST TECH II: Primary respon involves monitoring of physiological parameters during sleep; parameters incl electroencephalogram, electro-oculogram, electromyogram, respiratory & heart rate, arterial oxygen saturation, endoesophageal pressure & pH; familiar w/ sleep disorders at tech level; routine maint & minor repqir of eqpt; Qualifications: prior patient contact; exp w/ operation of polygraph; data entry exp desir; CPR certificate; bkgrd in social or biological sciences desir; B13; $1373-1440

42656-PM (JCC: 1747) LIBRARY SPEC I: 50%, flexible as needed (nights/wkends); subj to temporary layoff during summer qtrs; charges out reserve books & other circulating matl; prov genl informa to lib users; issues lib cards; registers patrons; monitors eligibility of public for access to lib and for borrowing; interprets & carries out lib policies & proceds; files & maints records; answers genl phone inquiries; search for matls for Public Svcs use; collect fees & fines & maint cash records; opens & closes lib, insuring security of facility; may assist w/ simple computer files & machine memory sys, etc; Qualifications: demonstrated ability to work w/ public; ability to follow specific proceds & carry out instructions; exp in interpreting & carrying out detailed, written policies; phone answering skills needed; able to remain on feet for better part of day; lib exp is major advantage; send appl/resume to Karen Kieffer-Gillette, Jackson Lib-GSB, Rm 119, 497-2162; B10; $595-623

36305-BP (JCC:2454) OFFICE ASST II: File Coordinator for Sponsored Projcs Qffc; respon for maint of grant/contract & other files as assigned; prepares files, types labels, pulls & refiles folders as appropriate; asst in retiremt of completed files; asst w/ maint of security files; sorts & distributes daily incoming mail for SPO, etc; Qualifications: type 40-50; knowl of alpha, numerical & subj filing essential; knowl of grant/contract proposals & awards helpful; organizational skills, detail oriented very important; must enjoy working w/ people in cooperative atmosphere; ability to qualify for security clearance; send appl/resume to Fred Gustafson, SPO, Encina Hall, Rm 40; B09; $1130-1189

36364-BP (JCC:2454): OFFICE ASST II: Answer phone & dir questions to proper payroll desk; type statemt of earnings for aliens; type spec checks for salary paymt; type W-2 forms; typ misc letters, forms, & journals; asst in opening & closing offc; stamp (date) & disburse mail to appropr payroll desks; order supplies; asst counter traffic; inventory supplies; some filing; Qualifications: prev offc work; accurate typing ability to reason & work under pressure; ability to use calculator & electric typewriter; excel interpers skills needed to deal w/ customers; send appl/resume to M. Willis, 20 Encina Hall; B09; $1130-1189

22439-PM (JCC:2570) SECRETARY III: Sec to Stanford Intl Dvlpmt Education Program & 2 busy profs; full range of secl duties, incl typing, dictation, & transcription; maint student records; monitor budgets; administer SIDEC recruitmt program; prep budget & expense repts; make travel arrangemts; compose corresp; heavy student & fac contact; counsel students regarding progress thru their degree programs; Qualifications: typ 60-75; work independently w/ constant interruptions; compose own corresp; fast accu typing; knowl of word processing or willingness to learn; cross-cultural sensitivity nec; good counseling skills; send appl/resume to Diane Gunderson, Education 105, 497-2119; B14; $1440-1514

29961-PM (JCC:2562) SECRETARY III: Prov secl svcs to 2 Chem profs, incl prep of manusripts, proposals, corresp; maint scheds; arrange travel; monitor budgets; prep reqs, forms, etc; extensive use of word processor for manuscripts & grad student admissions; prep grant proposals; develop proposal budgets; admin research expenditures w/in guidelines estab by Univ & funding agencies; Qualifications: typ 75; solid secl exp usually 3-5 yrs actual exp; good English skills; prev word processing exp highly desir, or willingness to learn; no smoking in offc; send appl/resume to Janet Shaw, 121 Seeley Mudd; B14; $1440-1514

18669-PM (JCC:2596) SECY II-SPEC: 75%, 8-3; could also be 100% time position w/ added duties such as operating word processor (either NBI or Xerox 860); prov secl svcs for sevl consulting faculty in outlying offc of Petroleum Engrg dept; asst mainly the professor & TA's respon & for large-enrollmt energy industries survey courses; type, edit, & copy repts & class matls; make arrangemts for visitors to campus & rental of buses, vans for field trips; maint complex filing sys for class notes, tapes of lectures, & matls regarding energy resources; asst in typing tech papers (incl Greek letters & Symbols); Qualifications: type 60; s/h 60; ability to work under pressure w/ lmited supvn; ability to set prior & establ an atmosphere of efficient cooperation; send appl/resume to Jean Cook, Petroleum Engrg Dept; Mitchell 360; B12; $983-1030

Queen's visit leaves Stanford beaming

When Queen Elizabeth II visited Stanford Thursday, March 3, the sun broke through for the first time since the royal visit to California began five days earlier.

And the Queen left her hosts and their guests beaming.

"Everybody did themselves proud," President Donald Kennedy said. "I actually found myself enjoying the occasion after perhaps 20 minutes. Eor the first 20 minutes I was scared out of my mind."

Leaving scores of clicking and whirring cameras outside Lou Henry Hoover House, the Queen and the Duke of Edinburgh quickly made the event what Jeanne Kennedy had always planned, an exhilarating occasion.

"Respect, tradition, stability, discipline and elegance—all these are embodied in her," commented Kim Schnurpfeil, one of 18 student guests. "The Queen's composure is fantastic. . . . What I will most remember is the ideal of civilization which her every action represents. She inspires excellence in spirit and character."

The overwhelming impression of nearly all guests as they emerged was summed up by Elizabeth Eilart, another student. "The Queen was so human and so *interested* in what was being done at Stanford." Fellow students Raga Elim and Vladimir Bukovsky nodded agreement.

Frank Hack, a gardener for 24 years at Stanford, said "It exceeded my wildest expectations. It was formal, yet delightfully informal. It was quite the best occasion my wife and I have ever attended." Mrs. Hack curtsied as the Queen approached.

The Duke noticed that John Gardner, manager of student aid accounting in the Controller's Office, was wearing a Royal Air Force tie and came to talk with him. Doris Gardner, John's wife, said "It was marvelous. The Queen is very, very charming."

The Queen drew a cheer when she waved at the 80 members of the Leland Stanford Junior Marching Band and 100 spectators clustered behind police lines at the foot of the large lawn behind the President's House.

The band played a special arrangement of "Rule Brittania" by Prof. Arthur Barnes. Under Drum Major Simon Streets, it played "Come Join the Band," "William Tell Overture," "Sultans of Swing" and "Everybody's Everything," selections chosen by manager Gary Robinson.

Tight security was imposed before and during the Queen's visit. On Thursday, the Secret Service turned away Joe Frassetti, a University carpenter leader who had been asked to fix a potential leak in the living room ceiling at Hoover House.

Jeanne Kennedy was briefly barred from entering her own home after she stepped outside to take a quick picture of the news media.

About 20 minutes before the Queen's scheduled arrival at 12:30 p.m. Friday, all the assembled guests, the Kennedys, and their staff were asked to stand in the roadway while the Secret Service did an electronic sweep of the house. Police used a specially trained German shepherd dog to check shrubbery around the house.

About 70 officers were stationed on the grounds and surrounding area, while a helicopter patrolled overhead throughout the Queen's hour and 40 minute stay. One plane flew over the campus trailing a streamer that read "Brits Out—Victory to the IRA."

President Donald Kennedy greeting the Queen: ***For the first 20 minutes I was scared out of my mind. After that I found myself enjoying the occasion.***

Police did not disclose the Queen's route to campus, but hundreds of people, including lunch-time joggers and a small contingent of protesters, gathered at various intersections off Junipero Serra Blvd. to catch a glimpse of the motorcade.

A roar of cheers and applause went up from about 250 at Santa Maria and Gerona Streets as the Queen's car sped by. Several waved Union Jacks and Canadian flags exuberantly, while others took pictures.

Protesters from Irish Northern Aid, yelling "Queen of Torture, Go Home!" were drowned out by the crowd's cheers.

About a half dozen protesters held signs saying "Free Ireland Now." Largely ignored by the crowd, one demonstrator was overhead to say, "She (the Queen) had a good-looking bonnet on, anyway."

On the opposite side of the President's House, at the intersection of Mayfield and Santa Ynez, about 20 Club of Life supporters, protesting international monetary policy, used a large megaphone beside their big banner to exchange views with students holding a large Union Jack on the deck of a nearby residence.

Inside Hoover House, the luncheon proceeded. Chancellor Wallace Sterling sat next to the Queen, who a decade earlier had bestowed on him an honorary knighthood for his services to Britain as head of the Marshall Scholarship Committee in the western U.S. for two separate terms.

Sterling spoke to the Queen "about her cousin, Prince William of Gloucester, who was a graduate student here years ago, and she spoke fondly of him." The first member of the royal family to study at an American university, Prince William studied at Stanford in 1963-64. He died in a plane crash in 1972.

There were eight tables for the 92 people. Two students, Elizabeth ('Buffy') Eilert and Vladimir Bukovsky were among those at the main table, with the royal couple, Chancellor Sterling and the Kennedys, besides several of the royal entourage.

One of the features of the residence admired by the Queen was the Victorian doll's house, made in 1907, which has come down to Mrs. Kennedy from her grandmother.

Various arrangements of flowers brought color to all the rooms and were massed at the entrance to the house. The flowers included roses, Dutch iris, tulips, gerbera, with many branches of flowering quince and peach blossoms.

The Queen received two gifts—a copy of the Stanford Alumni Association book, *From the Foothills to the Bay* and a Stanford T-shirt from Yolanda Townsend, a member of the Associated Students Council of Presidents. "The Duke said 'I can't wait to see her in it,' " Townsend told *The Stanford Daily*.

The sun broke through just as the Queen emerged for the next stage of her journey, a visit to the Hewlett-Packard plant in Cupertino. As photographers scrambled to adjust, the Queen stopped to chat for a minute with student helpers for the luncheon, gathered all in a row to bid her farewell.

Those from Stanford assisting caterer Victoria Emmons and chef Janet Mace included John Dean, Britta Jaffe, Valeria Matsumoto, Thomas Mosher, Penny Ann Russell, Linda Schott, Frances Taylor, Katherine Weinert, Ann Walecka, Denise Albanese, Sylvia Applegate, Wendy Bracewell, and James Campbell Dean.

After the Queen's limousine departed, Hack's colleagues in Operations and Maintenance came by in a car to escort him and his wife home.

After the Kennedys and interested guests gave their impressions of the Queen to the media, President Kennedy hopped on his 10-speed bike in time to catch the regular Faculty Senate meeting.

The big Event was over.

(Harry Press, Karen Bartholomew, Donald Stokes, and Bob Beyers contributed to this story.)

Queen Elizabeth chatted with faculty and students before last Thursday's luncheon

Mrs. Kennedy tells what is involved in a visit by royalty. . .

"It was a particular pleasure to lunch with the faculty and students at Stanford. . ."

—Queen Elizabeth II, in an address at the Capitol in Sacramento.

"We were absolutely delighted with Stanford. We were sorry to leave."

—Duke of Edinburgh, to a Stanford staff member at a San Francisco reception.

It all began on a note of paradox.

When Jeanne Kennedy, wife of Stanford President Donald Kennedy, heard late one evening last December that she would be hostess to the Queen, her very first reaction was disappointment.

For she had been hoping that the original idea, for the Queen to tour Stanford University Hospital would be approved—and Mrs. Kennedy is director of community relations at the Hospital.

"In the next moment I mentally put on my other hat, that of the wife of President Kennedy," she said in a campus interview. "I was delighted at the idea of having the Queen at our residence, Hoover House, and of being hostess to the Queen."

The first contact came in November last year when the British Consul General in San Francisco, John Beaven, called Sheldon King, director of the Hospital, to inquire about the possibilities of a royal visit to Stanford University Hospital.

In her role of Director of Community Relations for the Hospital, Mrs. Kennedy handled that inquiry, and arranged for a visit to the Hospital by a group that represented the British and American governments.

Among those who came to look over the Hospital were Ambassador Selwa Roosevelt, chief of protocol of the U.S., the British Ambassador, Sir Oliver Wright, and Robert Fellowes, assistant private secretary to the Queen.

Late that evening Consul General Beaven phoned the Kennedys and said that the idea of including the Hospital had had to be abandoned, because the Queen had visited so many hospitals. However, would the Kennedys by prepared to have the royal party to tea, as part of a proposed visit to Silicon Valley?

Mrs. Kennedy expressed her delight at the idea. For several weeks after that there was near silence, except that the proposal changed from tea to lunch. The Kennedys kept strictly to the protocol that nothing should be said to anybody about the proposed visit until it was finalized.

They remained silent until just after Christmas, when it was officially announced that the lunch had been approved.

The Kennedys are accustomed to very large-scale entertaining, for the number of distinguished visitors to Stanford is considerable, and often it is appropriate to have a considerable number of guests.

On the evening when the Kennedys heard that the lunch for royalty was fixed, they had just finished their plans for a dinner for 92 people (exactly the number who were later to come to the royal lunch). The dinner was in honor of Parmer Fuller III, who was retiring after 25 years of service on the Board of Trustees.

When necessary, in order to accommodate as many guests as possible, Mrs. Kennedy has experimented with various configurations of tables and seating. A particular problem has always been the main table where the guests of honor are seated. For the royal lunch she decided to have 16 guests; it worked well.

At no time did the logistics of the operation ever trouble Mrs. Kennedy. "We have held so many large functions, of so many varieties, that we knew our team, with all the experience we have built up, would be able to cope.

"I suppose the largest function we have ever given was the Commencement reception we gave for 5,000 students, their families and the faculty."

Mrs. Kennedy has been able to rely on a team of people who have each grown seasoned in their respective areas of responsibility. There is house manager David Voss; housekeeper Billie Bell; caterer Victoria Emmons (who is married to History Professor Terence Emmons) and flower arranger Katsy Swan.

A three-woman team which has worked before on large-scale functions took charge of the tactical planning, each of them dealing with a specific area.

The team consisted of Patricia Boesch, director of donor relations in the Office of Development; Marlene Wine, special assistant to President Kennedy; and Elizabeth Marincola, assistant to Mrs. Kennedy.

Beyond these, many of the departments of the university were called on to help with their particular specialities.

The picking of the guests was the most difficult problem tackled by the Kennedys. "The royal party had indicated from the start that they would like to meet as many students as were convenient. This pleased us very much," said Mrs. Kennedy, "for it fitted in with our own ideas. We decided to invite 18 students.

The exact size of the royal party was not known, but it was thought at that time it would be about 25 (it proved to be somewhat less). This meant that, allowing for the Kennedy family, about 44 seats

continued on next page

President Donald Kennedy, Queen Elizabeth, and Rhodes Scholar William Halter

Mrs. Jeanne Kennedy with the Duke of Edinburgh

. . .knottiest problem of Queen's visit was picking guests

continued from page 28

were left to represent all the various sides of Stanford life.

The question arose as to whether spouses should be invited. Not to invite them would double the number of seats available. "I was absolutely adamant that we would have spouses," said Mrs. Kennedy. "This meant in effect that we could invite only 22 more people and their spouses."

Picking those 22 proved to be a worrying task that occupied the attention of the Kennedys for a considerable time. A number of eminent members of the Stanford community qualified automatically, and this further reduced the number of seats with which to recognize all the other important areas of university life.

Wrenching decisions had to be made. How, for example, could the tens of thousands of supportive alumni be represented? The final solution was to invite the past president of the Trustees, Dr. Peter Bing, and Mrs. Bing, to represent them and also the past trustees.

William Kimball, chairman of the Board of Trustees, was chosen to represent the board. How to represent the other trustees? A draw was held and the winners were Edward L. Ginzton and Thomas W. Ford.

In all cases of those named for invitations, alternates were also drawn for, in case the invitations could not be accepted.

Draws were also held to find representatives for the vice-presidents, the deans of the various schools, and the faculty (this draw comprises members of the Advisory Board).

When it came to choosing staff it was decided not to hold a draw. "Instead, we have been impressed by the number of letters we had received from the staff suggesting colleagues who should be invited. Out of those suggestions we picked John Gardner, Frank Hack, and their wives.

"Picking the students was very difficult because so many wanted to come. What we did was to announce that all those hoping for invitations should write letters to us explaining their reasons. We received about 250 letters, and these helped us decide. However, we also wanted the diversity of the students represented.

"Some of the students were ingenious in their attempts to draw attention to their claims. Two students delivered an English breakfast to Don, with a copy of the London *Times*, and also baked him a large cake.

"These two students got on the alternate list, but there were so many others whose claims were greater, such as Rhodes Scholars. We tried to make sure our students' wide range of achievement in scholarship, athletics, and the arts was represented."

Picking the guest list was the hardest part of all the work of organization, said Mrs. Kennedy.

I am sure that a number of people who had every reason to expect they might receive an invitation were disappointed. However, when it became clear to everybody how difficult the choices were, there was understanding and good sportsmanship.

"Don and I have heard of no cases of people failing to accept the circumstances and our most difficult problem. For this we are most grateful."

Mrs. Kennedy had decided from the start that the menu should be simple and light, with California fruits and vegetables well represented. "I was very pleased that we were able to include California raspberries, which were found at the last minute, and also chanterelles, wild mushrooms."

Mrs. Kennedy was asked to tell her outstanding impression of the preparations for the lunch.

"It was the multiplicity of details," she replied. "Any large function means a mass of details, but the royal lunch, with the added problems of protocol and security, was extremely detailed.

"We had a very good team working on them, and every single person involved was exceedingly conscientious in carrying out the details."

Mrs. Kennedy was back at her office desk at eight o'clock the next morning, after having been a guest, with her husband, at the State dinner for the royal party in San Francisco.

She summed it all up: "Ever since I was a little girl I had always looked up to Princess Elizabeth, as she then was, and her sister Margaret Rose. I remember reading about how the princesses were growing up. They were a part of my life for as long as I can remember.

"Once or twice that flashed into my mind as we did our planning. The princess whom I had watched grow up, who was older than I and so glamorous, whom I had looked up to, was coming to our home. It brought back so many memories. It was all so marvellous because it tied up with my childhood. I never dreamed it would happen.

"Above all, it was so wonderful for Stanford."

—Donald Stokes

Queen's luncheon guest list

Donald Kennedy, Stanford University President
Jeanne Kennedy, Stanford Hospital community relations director
William Kimball, president, Stanford University board of trustees
Collie Kimball
Dr. Peter Bing, past president, board of trustees
Helen Bing
Edward Ginzton, trustee
Artemas Ginzton
Tom Ford, trustee
Joan Ford
J. E. Wallace Sterling, Stanford chancellor
Albert Hastorf, vice president and provost
Barbara Hastorf
John Gardner, university staff
Doris Gardner, university staff
Frank Hack, university staff
Marie Hack
Sheldon King, executive director, Stanford Hospital
Arden King
Dr. Glenn Campbell, director, Hoover Institution
Dr. Rita Ricardo Campbell, senior fellow, Hoover Institution
Peter Stansky, professor of history
Norman Wessells, dean, School of Humanities and Sciences
Dr. Lawrence Crowley, vice-president for medical affairs
Madeline Crowley
Dr. Robert Chase, professor of surgery
Ann Chase
James Adams, professor of engineering
Marian Player Adams
Dr. Alexander Fetter, professor of physics and chairman of academic senate
Kenneth Arrow, professor of economics
Selma Arrow
J. Myron Atkin, dean, School of Education
George Dekker, professor of English
Linda Jo Bartholomew
William Massy, vice-president for business and finance
Robert Jaedicke, dean of Graduate School of Business
Marilyn Jaedicke
Dominick Purpura, dean, School of Medicine
Penny Purpura
Thomas Stamey, professor of surgery
Kathryn Stamey
Joseph Oliphant, professor of biological sciences
Lucy Oliphant
Robert Freelen, acting vice-president for public affairs
Sally Freelen
Wolfgang Panofsky, professor and director of Stanford Linear Accelerator Center
Adele Panofsky
Don Knuth, professor of computer science
Jill Knuth
Eugene Webb, professor of business administration
Mimi Webb
John Ely, dean, School of Law
Carolyn Gunn

Julia Kennedy, President Kennedy's daughter
Jeffrey Pinsker, guest of Julia Kennedy
Miriam Gooch, guest of President and Mrs. Kennedy

The queen's party included:

Queen Elizabeth
Prince Philip
The Duchess of Grafton, mistress of the robes
The Right Honorable Philip Moore, private secretary to the queen
Squadron Leader Adam Wise, equerry-in-waiting to the queen
James Beaton, superintendent
Lt. Cmdr. Andrew Wynn, equerry-in-waiting to Prince Philip
Lady Susan Hussey, lady-in-waiting
John Beaven, Her Majesty's consul-general
Mrs. John Beaven
Surgeon Capt. Norman Blacklock, medical officer to the queen
Robert Fellowes, assistant private secretary to the queen
Michael Shea, press secretary to the queen
Michael Deaver, deputy chief of staff and assistant to President Reagan
Ambassador Selwa Roosevelt, chief of protocol of the United States
Josephine Louis, wife of U.S. ambassador to the United Kingdom
Colin Smith, deputy assistant commissioner

Most of the Stanford guests at the lunch for Queen Elizabeth II and the Duke of Edinburgh were picked either by draw or because of their representative status. However, four of the guests were chosen at the urging of their own colleagues, because of their strong claims and their popularity. They were...

...John Gardner, a Briton who works in the Controller's Office, and his wife Doris, who is on the Food Research Institute staff. The Duke spotted Gardner's Royal Air Force tie and asked him about his wartime experiences.

...William Hack, another Briton, is a member of the University staff. With him is his wife Marie. The Hacks were ceremonially picked up after the lunch by Hack's colleagues and driven back to work.

The table setting at the lunch, as seen by the Queen. The flowers before her included Dutch tulips and sprays of spring blossoms from peach and quince trees. President Donald Kennedy sat on the Queen's left, and Chancellor Wallace Sterling on her right.

Queen's visit...

Supreme of Chicken Florentine
Potatoes Anna
Sacramento Valley Asparagus
Mushrooms (Chanterelles) in Butter
Grgich Hills 1978 Napa Valley Chardonnay

Reine de Saba with Fresh Raspberries

The President's Toast

Ladies and Gentlemen:

May I beg your attention for just a moment.

My Stanford colleagues and I are honored to welcome our Royal visitors to the University. Your presence here not only does us honor; it climaxes a period of reflection on our own historical origins, the culture we share, and our intermingled futures. That kind of reflection is a central purpose for a great University. So we are thankful for the stimulus to thought, as well as for your welcome presence among us.

Now will you please rise, and join me in a toast.

To Her Majesty
and
His Royal Highness

The royal couple say goodbye to some of the 14 helpers, clad all in white, who worked in the kitchen or in serving. L. to R.: Mrs. Jeanne Kennedy; the Duke of Edinburgh; President Kennedy; Queen Elizabeth; a Secret Service agent.

Guitarist Lorimer plays March 12

The Lively Arts at Stanford will present the American guitarist Michael Lorimer at 8 p.m., Saturday, March 12 in Dinkelspiel Auditorium.

Michael Lorimer

Lorimer will play works by de Murcia and Corbetta on an original Baroque guitar, In addition, the program includes pieces by Villa-Lobos, Leslie Bassett, Bach, Turina, Ponce and Albeniz.

Lorimer, a protege of Andres Segovia, came to the attention of American audiences in the early 1970's, through tours arranged by the late Sol Hurok. He was the first American guitarist invited to perform in the USSR, where he toured the major cities in 1975 and 1977.

Known for his command of the Baroque guitar, he has given numerous American premieres of guitar concerti and solo works for the modern guitar, including a number written especially for him.

Lorimer regularly gives master classes at universities and conservatories all over the U.S., and was a visiting professor at the University of North Carolina for the academic years 1980-82.

Seen on the PBS special "The Art of Michael Lorimer," he also writes a monthly classical guitar column for *Guitar Player* magazine.

For ticket information, call Tresidder Ticket Office, (415) 497-4317.

Lorimer to conduct master class

Classical guitarist Michael Lorimer will conduct a master class from 7-10 p.m. Friday, March 11, in Annenberg Auditorium.

Lorimer is a protege of Andres Segovia and has a broad repertoire ranging from new works written especially for him to Baroque guitar music performed on an original instrument.

Students for the class were chosen by auditions which were open to residents of the greater Bay Area. They are:

Michael Goldberg of San Francisco, playing the first movement of Bach's sixth Cello Suite and Lauro's four Venezuelan Waltzes; Philip Johnson of Kensington playing Brouwer's De el Homenaje a Falla and De un Fragmento Instrumental, and Villa-Lobos' sixth study; Mark Limber of Santa Cruz playing the first movement of Berkeley's Sonatina; William Russell of Berkeley playing Villa-Lobos' Mazurka-Choro and Brindle's El Polifemo de Oro; and Sam Shaio of Stanford playing Ruiz-Pipo's Estancias and Lauro's Variations on a Venezuelan Children's Song. In addition, Augustin Wiedemann of San Leandro is the alternate and will be prepared to play Villa-Lobos' Schottisch Choro (Suite No. 2.)

The class is sponsored by the Lively Arts at Stanford, the Stanford Music Department, and the Stanford Music Guild. Proceeds will go to the Music Scholarship Program of the Stanford Music Guild.

Tickets are available at Tresidder ticket office and at the door. Tickets for observers are $5. Tickets for other students and senior citizens are $3. Stanford students may attend free.

Sheep are the backbone of New Zealand's economy

Producer narrates New Zealand film

"Incomparable New Zealand," a travel documentary, will be narrated by its producer, Ken Armstrong, in two screenings on Monday, March 21.

Presented by Stanford University Events and Services as part of the Discovery Film Series, the Film will be shown at 2:30 p.m. in Kresge Auditorium and at 7:45 p.m. in Memorial Auditorium.

Armstrong has filmed New Zealand's major cities and industries, the native Maoris, and the dramatic countryside of the both North and South Islands: fjords, peaks geysers, glaciers, and highlands.

Tickets are $3 for the matinee, and $4 for the evening showing.

Children's Dance class schedule given

Children's Dance at Stanford announces the Spring Session class schedule as follows:

Classes in rhythms and movement, movement and music, dance for boys, and modern dance will meet once a week on weekday afternoons or Saturday mornings.

The classes are open to children ages three to 13. Additional classes for nine to 13 years olds include ballet and a modern dance performance workshop.

The spring session extends from March 22 through June 4. Tuition is $31.50 for nine weeks of classes. All classes meet in Roble Dance Studios on the Stanford campus.

For registration information and a brochure, call instructors Elizabeth Larkam and Joy Weston at 497-4254.

Children's Dance at Stanford is sponsored by the Stanford Dance Division within the Department of Athletics.

Irish come to I-Center

Ireland comes to the International Center beginning at 5:30 p.m. on Sunday, March 13.

Bay area musicians will gather then for several hours of informal music. Dancers will be on hand to demonstrate various forms of traditional Irish dance.

An Irish supper will be served for those who have purchased supper tickets in advance. The tickets will go on sale at the I-Center on March 9 for $3.25.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., March 9, to cover the week of Mon., March 21, through Sun., March 27.

MONDAY, MARCH 14

Medical Microbiology Seminar: "Permeability of Outer Membrane, or How E. coli Changes Its Clothes According to Weather". 12 p.m. M114, Medical Center.

TUESDAY, MARCH 15

Applied Physics Colloquium: "Diagnostic Capabilities of NMR Imaging with Superconducting Magnets," by Prof. Leon Kaufman, UC San Francisco. 4:15 p.m. Applied Physics 200.

PANIC/ U.S. Peace Council Lecture: "The Path to World Peace," by Linus Pauling, Nobel Laureate. 7:30 p.m. Memorial Aud.

WEDNESDAY, MARCH 16

Condensed Matter Physics Seminar: "A Solvable Model for Hindered Rotors with Implications to Molecular Scattering and Desorption from Surfaces," by J.W. Gadzuk of the National Bureau of Standards Center for Chemical Physics. 2:30 p.m. Applied Physics 200.

Biological Sciences Seminar: Dr. Allan Spradling, Dept. of Embryology, Carnegie Institution of Washington. 4:15 p.m. Room T-175, Herrin Hall.

THURSDAY, MARCH 17

Condensed Matter Physics Seminar: "Dynamical Properties of Granular Superconductors," B. Muhlschlegel, Univ. of California, Irvine & Univ. of Cologne, Germany. 4:15 p.m. Applied Physics 200.

The Winter Nuclear Weapons Film Series: "The War Game". 7:30 p.m. Meyer Forum Room.

FRIDAY, MARCH 18

Men's Gymnastics: PAC-10 Invitational. 7:30 p.m. Maples Pavilion. $5 Adult, $3 Child.

SATURDAY, MARCH 19

Men's Gymnastics: PAC-10 Invitational. 1 p.m. Maples Pavilion. $5 Adult, $3 Child.

Baseball: vs. USC. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Men's and Women's Track & Field: Army/ Yale/ Iowa/ Bakersfield. 11 a.m. Stanford Stadium. $3 Adults; $2 Child.

SUNDAY, MARCH 20

Baseball: vs. USC. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Associates of Stanford Libraries Lecture: "Introducing Sir William: William Nicholson 1872-1949," by Stephen Gale Herrick. 3 p.m. Braun Auditorium.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

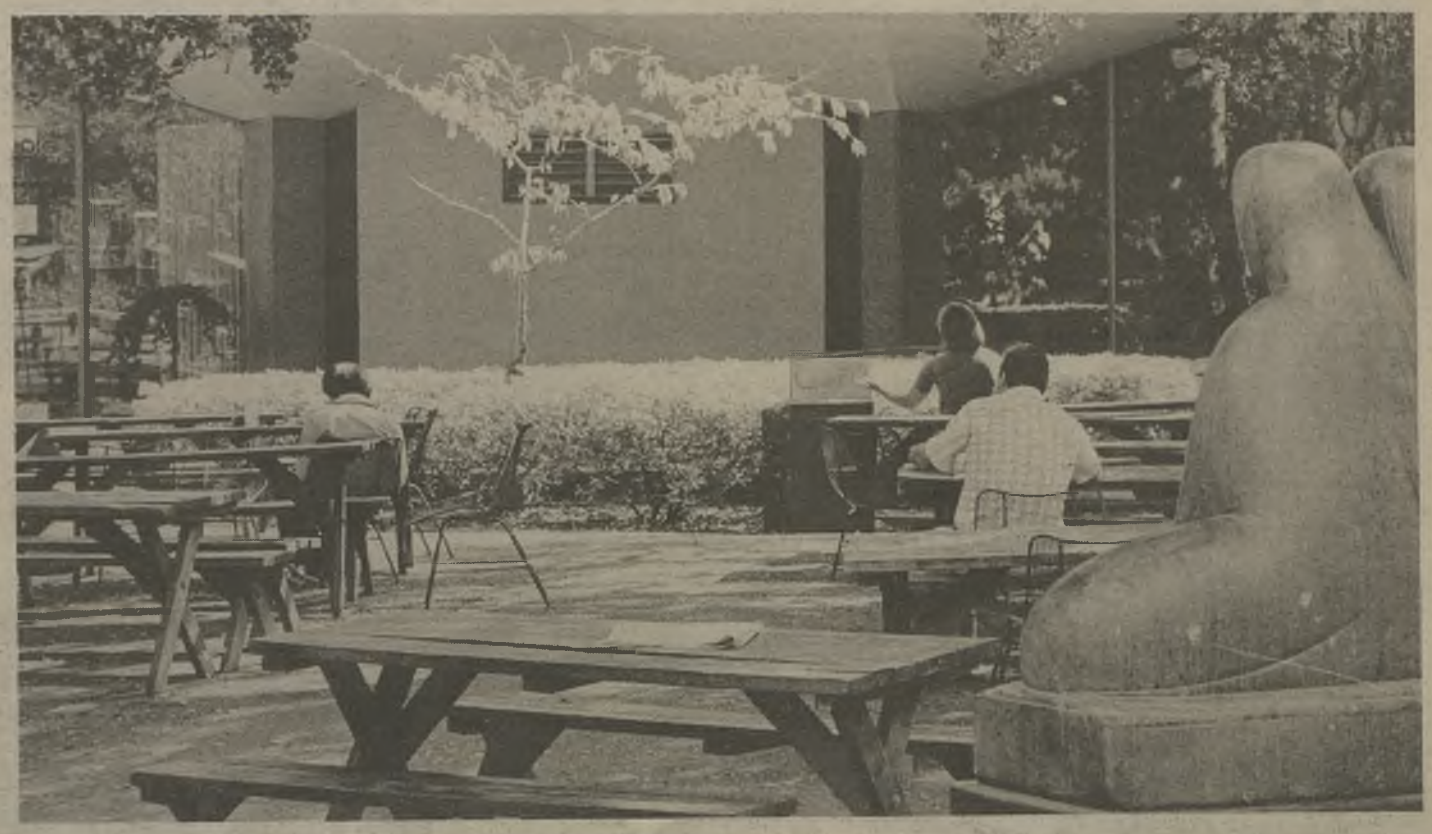
"Photographs of Old Russia," by Jack Kollman. Faculty Club. Jan. 17 - March 26.

Ski Experience. Rare photographs of Yosemite by Ansel Adams. Stanford Museum, Miedel Rm. Jan. 18 - March 20.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Paintings by Marina Goodier. Tresidder Union, Upper Lobby. March 1 - March 31.

Annette Kaplan, *Luz do Sol*, Tapestries. I-Center. March 3 - March 30.



The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

CAMPUS REPORT

Volume XV, Number 24 | A publication for Stanford University faculty & staff | March 16, 1983

Dick Lyman, Wally Sterling hung together

"There were a few moments back in 1968, when I wasn't sure we might not be hanged together, Wally—not hung," Stanford President Emeritus Richard W. Lyman recalled March 9 at the unveiling of his portrait in Green Library.

"I remember, too, Dick," responded Chancellor J.E. Wallace Sterling, who headed the University then.

More than 100 faculty and staff veterans of that era attended the unveiling at the Lurie Rotunda.

"A university is the result of people's aspirations—presidents, yes, and faculty members, staff members, students, friends and supporters," Lyman said. "Or rather it is the result of the impact of those aspirations, and the hard work individuals put into trying to realize them, on a complex reality. For often what emerges is not quite what anyone envisaged—and sometimes even greater than everyone's aspirations combined."

Described as "mysterious" by portrait artist Arthur DeCosta, Lyman noted that "Gertrude Stein is said to have sat 80 times for Picasso while he worked on her portrait. Finally, complaining that he couldn't 'see' her any more, he packed up his things and went off to Spain to paint the portrait without her.

"When people subsequently complained that the finished picture didn't resemble Stein, the artist replied that someday she would look like the portrait.

"Thus does vision help to mould reality. We can all be thankful for the many people of vision, and patience, and determination who have made this the wonderful place that it is."

Lyman was described as "a likeable but serious, no-nonsense leader" by Cecil Green, who with his wife, Ida, capped the Campaign for Stanford with the lead gift for Green Library.

"You have always stood for nothing less than excellence, a tradition passed on to you by two other good friends, Wally Sterling and Fred Terman," Green told Lyman. "The fact that Stanford stands so high in recently announced ratings of graduate programs speaks well for the strength and capability of your leadership

Investment banking 'hot' on job grapevine

Investment banking and consulting have become "hot items" for liberal arts students seeking jobs through the Career Planning and Placement Center at Stanford, Director Christopher Shinkman reports.

"There's a lot of talk on the student grapevine about Morgan Stanley, Merrill Lynch, and similar opportunities," he notes. These firms rank at the top of student preferences expressed in a new point "bidding" system used to eliminate long lines and overnight waits for student job seekers.

Such "old faithfuls" as IBM and Procter and Gamble also rate high among undergraduates, Shinkman says.

While more than 100 companies have conducted campus interviews for liberal arts seniors, about 10 to 15 percent of those firms planning to come this year cancelled, citing job freezes or layoffs.

This will change when the economy improves, Shinkman says. "The only question is when that will be."

Whether campus interviews are up or down, he adds, they represent only one segment of the job market. Companies doing campus recruiting tend to be large national or multinational firms, particularly in manufacturing and technology.

"It's wrong for students to think that's what's available," he says. Even in good times, relatively few small firms, government agencies, non-profit organizations and social service agencies recruit on campus.

"Some students think the campus interview is their only chance—that if they don't get an offer it's all over. Students need to be active and aggressive on their own, checking out local opportunities when they're home between quarters, for example."

The Career Planning and Placement Center offers a wide variety of programs to help students, including peer counseling, panel discussions, alumn, contacts,

Civil rights class dropped after black students object

Black student protests have led to cancellation of a proposed civil rights class at Stanford this spring, similar to one that stirred national controversy at Harvard in recent months.

The proposed undergraduate course on "Racial Discrimination and Civil Rights" would have been taught by Jack Greenberg, executive director of the National Association for the Advancement of Colored People's Legal Defense Fund, and Julius Chambers, its president-counsel.

They withdrew as teachers after learning of the protests. "They don't want to be at the center of controversy again," said Seth Linfield, head of the Associated Students Guest Professorship Board (GPB), which would have funded the course with $9,800 from student fee assessments. It had been approved for credit through the Department of Anthropology.

President Donald Kennedy said it was "singularly unfortunate that the threat of controversy resulted in a worthwhile experience not being made available to Stanford students."

The Black Student Union (BSU) at Stanford officially opposed the course because "we are in solidarity with the national boycott of the course sponsored by the Black American Law Student Association (BALSA)." The BSU sharply criticized the GPB's selection methods and said "the course is not cost-effective."

Leaders of the Stanford BALSA chapter chose not to endorse the course, noting it would be identical to the one offered at Harvard.

"The symbolism of the course transcends the identities of the individuals involved," Rosalind Wiggins, Jude Kearney and Cynthia Robbins said.

"The problem is not Jack Greenberg or Julius Chambers. The problem is the wave of reactionary cutbacks and affirmative action rollbacks that are afflicting Third World people."

BALSA noted there is only one tenured black professor in the Stanford Law School and "only one other Third World person, who is not tenured.

"Because tenure decisions are presently being made, it is especially appropriate

Senora de Allende can't come here, but State Department won't say why

The U.S. State Department has denied a visa to Hortensia Bussi de Allende, widow of Chilean President Salvador Allende. The Bay Area Ecumenical Council for Chile reported Thursday afternoon, March 3.

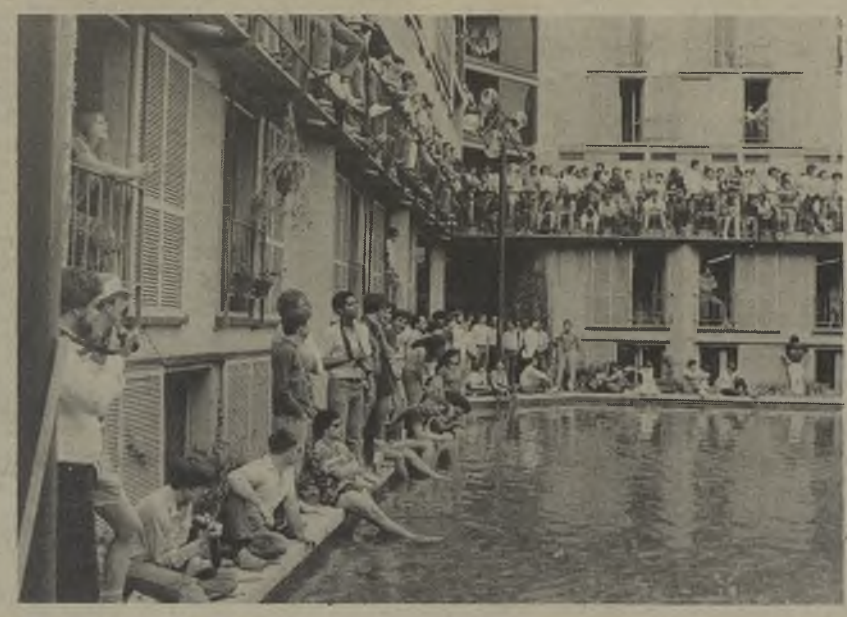
She had been scheduled to speak at Stanford at 7:30 p.m. Monday, March 7, under the sponsorship of the Feminist Studies Program as part of a 10-day trip to the U.S. May 4-13.

President Donald Kennedy called the visa denial "absolutely incomprehensible."

Mrs. Allende has visited the U.S. several times. The official denial was communicated from the office of Thomas Enders, assistant secretary of state, to Congressman Pete Stark. The Ecumenical Council said Stark was told her visit "is prejudicial to the U.S. interest because she is a highly placed official in the World Peace Council, and the Peace Council is affiliated with the Soviet Union, both ideologically and financially."

Prof. Fernando Alegria, internationally known Chilean scholar at Stanford said he was "appalled" by the "unfair" decision, which has no appeal.

Elizabeth Fitting of feminist studies said it was "shocking" for the government to "fear freedom of speech." She plans to visit Allende in Mexico soon.



Cecilia Burciaga, assistant provost at the University, said "not allowing her to come is unconscionable. I'm very disappointed that a woman at age 71, a leading proponent for women's rights, is denied entry" for an occasion marking women's contributions to society.

Dianne Rennack of the Ecumenical Council said "Mrs. Allende is an international spokeswoman for human rights, the first lady of democratic Chile, and a symbol of the struggle for democracy and self-determination.

"If the State Department finds her threatening or subversive, we'd like a further explanation. Where's the offense? Where's the threat?"

Prof. Bernard Roth, (left,) mechanical engineering, watches student Allen Fox trail a device designed to proceed down the path beside the Terman pool, stop, and pick up a $20, $50 or $100 bill. Fox's device literally worked off the wall, but failed to collect. Julie Kuark and David Baszuki got $50 each.

Hoover receives Deukmejian papers

Governor George Deukmejian has selected the Hoover Institution at Stanford University as the repository for his papers as State Assemblyman, 1963-1967, State Senator, 1967-1979, and Attorney General of California, 1979-1983, Institution Director W. Glenn Campbell announced Friday, March 11.

The papers totaling some 112,000 documents, have already been transferred to the Hoover Institution where they join the archives of other distinguished Californians who have been in government service. His papers will provide future scholars with primary source material on many public issues during a critical period in California history.

Campbell commented: "I am particularly gratified that the new Governor of California has decided to deposit the papers from his distinguished career in the State Legislature and as Attorney General at the Hoover Institution. We are looking forward to a long and cordial relationship."

The Hoover Institution Archives is one of the largest private archives in the United States and holds over 27 million documents on social, political, and economic change in the twentieth century.

Faculty openings

VTS needs two new lecturers

The Program in Values, Technology, and Society, Stanford University, announces two openings for 1983-84 as Lecturer, to teach in "Western Culture and Technology," one of the courses designed to fulfill the undergraduate requirement in Western Culture. Appointment is for one year, renewable to a maximum of three years.

Duties: leading four discussion seminars weekly in autumn quarter, three in winter and spring quarters, averaging 17-18 students each; reading and grading written work for those students; consultation in planning the course for the three quarters; occasional lectures; some light administrative work in the course.

"Western Culture and Technology" examines the history of Western culture from prehistoric times to the present, focusing on the ways in which intellectual currents, social orders, and material culture are related to one another at various times. Seminars are devoted mainly to discussion of major primary works, such as the Iliad, Plato, Aristotle, Augustine, Thomas Aquinas, Machiavelli, Thomas More, Shakespeare, Descartes, the **Encyclopedia**, Goethe's **Faust**, Darwin, Marx, Nietzsche, and others.

Qualifications: Ph.D. completed by August 31, 1983; good record of teaching, willingness to work on material outside one's specialization. No particular specialty prescribed; ability to handle historical, literary, philosophical, scientific, and technological materials and their interrelationships at the appropriate level over the whole span of Western culture.

Salary: approximatey $18,000 full-time. The position as described above is just over half-time. The program offers the opportunity to teach an additional one-quarter course in VTS, bringing the position to 75 percent. Such a course, subject to approval by the VTS Program's Administrative Committee, ought to deal, for undergraduate nonspecialists, with some aspect of the relation between technology or science and social structures or aspects of the humanities.

Please send dossier, including letters of reference, and a letter of application, indicating interest in the position and stating qualifications, together with a proposal of an independent course, by April 15 to: Professor Edwin M. Good, Values, Technology, and Society, Building 370, Room 372, Stanford University, Stanford, CA 94305.

Inquiries and questions may be addressed to Professor Good at the above address or by phone at (415) 497-0473.

Stanford University is an Equal Opportunity Employer. Women and members of minorities are especially encouraged to apply.

Annelise Anderson senior research fellow at Hoover

Hoover Institution Director W. Glenn Campbell has announced the appointment of Annelise Graebner Anderson as senior research fellow, effective immediately.

Until recently associate director for economics and government in the Office of Management and Budget, Anderson has been a research fellow since 1978 and has been on leave since 1980.

While on leave, she was a senior policy adviser in the 1980 Reagan Presidential Campaign and associate director for economic affairs in the Office of the President-Elect.

Anderson was the first project manager at the Law Enforcement Assistance Administration in the U.S. Department of Justice and wrote *The Business of Organized Crime, a Cosa Nostra Family* (Hoover Institution Press, 1979).

Anderson graduated from Wellesley College in 1960, received her M.A. from Columbia University in 1965, and her Ph.D. in Business Administration there in 1974.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Education will face a teacher shortage, says Myron Atkin

The answer is schools where year 30 on the job is not like year three

BY DONALD STOKES

A crucial problem looms over the fact that at long last more funds and support seem to be coming to help pull the public schools out of their dumps.

It is: Where are we going to get the teachers to put the schools on their feet?

For more than a decade the quality of people going into teaching has been dropping. Not entirely coincidentally, the SAT scores of pupils have skidded drastically.

There is a man who is in a key position to hazard some answers. He is Prof. J. Myron Atkin, dean of Stanford's School of Education, which is generally ranked as the best such institution in the U.S.

I sense a new atmosphere," he says. " The government and business corporations are getting behind education. Funds are promised, many studies are being made. The outlook is promising for the first time in a decade. But the problems are legion."

With teacher morale at a new low, and with many of the most suitable people avoiding the profession, how does one recruit and train a new generation of efficient and self-confident teachers?

"We have to create a non-threatening atmosphere," says Atkin, "a place where teachers can reflect about their own work and how to improve it. A place that is not so high-pressured as is common today.

"Above all, we need schools where year 30 on the job does not look quite as much like year three. In other words, where there are opportunities to acquire more responsibility and intellectual satisfaction without necessarily leaving the classroom and moving into administration.

"We need schools where experience and talent can be recognized. This is in addition to all the obvious things such as smaller classes and higher pay, and a curtailment of the tendency to dump onto the schools many of society's problems that the schools are ill-equipped to handle. All this is a tall order.

An interviewer suggested that it needed a very special type of person even to attempt teaching in some of the urban schools, in view of the high level of violence, drugs, and teacher harassment.

"I think that is no longer the case," Atkin replied. "The situation may be bad in some cases, but the Sunday supplement horror stories are five years out of date.

"When I go to the schools, which I do very frequently, including schools in rough districts, I see that they have their problems, particularly with drugs and security, but they are much more serious educational institutions than you would infer from some of the media articles.

"The students are serious. Perhaps that is because of hard economic times. The students have a purpose, they want to get as much as they can out of their schooling. The teachers are serious in their methods and aims. I have been impressed by what I have seen.

If events go as I foresee, we shall find ourselves in a situation roughly comparable to what happened after Sputnik, when the nation put enormous efforts and funds into training people in math, science, and foreign language teaching.

"If our attitude to the schools changes that may spill over into more general support. We shall perhaps see the demand for teachers exceeding the supply. In any case a major problem will be to upgrade the type of person going into teaching.

"I was talking today with a school principal in San Mateo, and he told me that he sees the need for massive hiring of teachers before the end of this decade.

Prof. J. Myron Atkin

"Already we have shortages of math and science teachers. We shall be hearing of other shortages before long. Does the supply of teachers go in cycles? Well, we had shortages in the 1960s, a surplus in the 1970s, and now we are heading toward more shortages.

"It is very hard to keep supply and demand in balance. Twelve years ago the nation was worried about a shortage of engineers. Today there is a surplus of lawyers.

"However, the task of rebuilding our teaching force will be a truly immense one. Many secondary schools now have no teachers who have been on the job for more than 14 years. The rest have been dismissed for economy reasons, or else have quit for better-paying jobs outside the profession.

There is powerful evidence that the academic ability of those entering teaching today is distressingly low, lower than at any time in the last 50 years. In 1979, college-bound high school seniors who intended to teach scored an average of 392 on their SAT verbal exams. They were the worst group of all, with the single exception of those planning to go into ethnic studies.

"There are many reasons beyond the obvious one of low pay to explain why entrants into teaching today rank low in ability. One can list violence in the schools, limited opportunities for advancement and increasing government dominion over teaching.

"More fundamentally, perhaps, there has been a loss of optimism about America's potential to alter individual opportunity through social programs, and therefore able young people who want to improve the general welfare choose other occupations.

"It is all the more remarkable that there still remains an able and dedicated group of teachers in the high schools today. We find them up and down the Peninsula, but also at some of America's most difficult schools, places in decrepit neighborhoods where many of us would hesitate to walk.

"One of the most moving experiences for me personally is to visit such schools and observe the dedication and ability of an extraordinary number of teachers.

"They care about the children. They know their subject. They keep trying, heroically sometimes, in the face of all odds. Also, the students in our own master's level program that prepares secondary school teachers are quite able; they compare very favorably with other graduate students at Stanford in all intellectual dimensions.

"So there is a core of people with which to build in our attempt to enhance quality.

"One of our major problems is that during the 1970s each of the special-interest groups in America tried to advance its own cause with little regard for the general welfare. Special-interest groups for minority ethnics, for the handicapped, women, homosexuals, and the aged were just a few of those that moved to new, aggressive activity.

"The new power was used to influence the schools. Paradoxically, while governmental initiatives were falling under a cloud and people were resisting government programs because they felt such programs were ineffective or unnecessarily intrusive, the same people often were trying to use government to advance their own causes.

"The loss of national consensus was reflected by increased fragmentation within the education community. Policy came to be formulated less by those empowered to advance the welfare of the entire education system—school boards, for example—and more by groups representing various segments of the community, depending on their political power.

As confidence in the schools seemed to diminish during the 1970s, and as public expenditure for welfare and health programs began to increase markedly while the school population started to decline, state legislators interested themselves more in education affairs. Their aim was to exert greater control over the schools, to bring them to account. Political figures, reflecting the public mood, showed concern about falling test scores, teacher competency, and efficient use of the dollar.

"There were experiments with performance contracting, competency-based teacher education, legislatively-mandated program evaluation, education vouchers, and, most recently; minimum competency testing.

"In addition the state legislatures as well as Congress began to respond to the pressures exerted by special interest groups. Efforts were pressed to strengthen programs in vocational education, alcohol-abuse education, special education for handicapped children, education for the gifted, bilingual education, and education in the history of the various ethnic groups.

"Just as Congress began to require special attention to various subpopulations, so, too, state legislatures began to do the same thing."

How can Stanford, as a pilot in education, help the national situation?

"Our special obligation, as a university, is to monitor and help improve the intellectual activity one finds in elementary and secondary schools. A primary method of meeting this obligation is to focus on teacher education and curriculum questions.

"What we do here has a significant influence on those we touch directly but there is also an indirect impact because of our reputation. We shall do well to capitalize on both opportunities.

I think that Stanford can be an influential force for improving high schools. I think it is possible and desirable for scholars in English, foreign languages, sciences, social sciences, and in other fields that constitute the high school subjects, to take steps to reinvigorate the high school curriculum.

"The American dream has been to educate virtually everyone. Unfortunately, we seem to forget

Filing state, federal reports a growing function in California schools

Federal and state education agencies required a typical California school district with 30,000 students to file 153 reports in 1979-80, a new Stanford study shows.

The study was conducted in an unnamed district by Mary Bankston, doctoral candidate in sociology and reported in a recent issue of *Policy Perspectives*, published by the Institute for Research in Educational Finance and Governance at the University.

"The inordinate demands of report preparation shift administrative attention up toward the regulatory agencies, rather than down toward instructional activities," Bankston said.

Categorical programs

More than 100 reports were required for categorical programs administered by the district. Seventeen of the 53 central district administrators were retained and funded through these programs.

"Discussions with 25 district administrators in all revealed that no single administrator was able to describe what happened in other departments," she said. "Some of the administrators, particularly those supervising categorical programs, were hard-pressed even to know all of the facets of the programs for which they were directly responsible."

Seventy percent of the reports were for various California Department of Education offices, with the rest for the U.S. Department of Education.

The self-perpetuating momentum of the bureaucratic phenomenon is hard to stem.

Although it provided only eight percent of the district's income—or $6 million—the U.S. Department of Education required 30 percent of the reports.

In contrast, local government, which supplied 23 percent of the total income, only required copies of certain fiscal reports sent to the state.

Bankston's tally did not include many short forms prepared due to special circumstances or on an "as required" basis for federal and state agencies.

Most reports tended to be lengthy, with many more than 50 pages long, she found.

"Report writing. . .was spread throughout the district. Twenty departments within five district divisions were occupied with writing reports. . . . Indeed, this activity appeared to be the primary activity of many departments.

"Each unit prepared and submitted reports on an individual basis, and little integration or coordination could be discerned at the district level."

Consolidated reporting

While the California Department of Education has developed two separate "consolidated reporting systems" for some of its categorical programs, "the resulting reports were longer and did little more than change the manner in which (the reports) were delivered to the state.

"In fact, as soon as these consolidated reports were sent to the state, they were separated by section and sent to staff personnel handling specific programs," she said.

To meet reporting demands imposed by outside agencies, the district's administrative structure became larger, more differentiated, and increasingly complex.

"As new programs were implemented and expanded, the school district found it necessary to expand its facilities for administrative operations," she added. "This has resulted in a scattered and disjointed physical plant. . .(and) make(s) it increasingly difficult to maintain an overarching framework within which to conduct the overall educational enterprise. . . .

"Advocates of deregulation anticipate that new laws may make it feasible and attractive for districts to reduce the size of their administrative units. . .which have grown due to burdensome reporting requirements.

"Given California's record in consolidating its reporting, and given the fact that so many school district administrators are currently supported by categorical program funds, the task might be a most difficult one.

"The self-perpetuating momentum of the bureaucratic phenomenon is hard to stem, even at the local school district level."

Copies available

Copies of Bankston's report, "Organizational Reporting in a School District: State and Federal Programs" may be obtained for $2 by writing IFG, School of Education, CERAS Building, Stanford, Ca. 94305. Phone (415) 497-2754.

Atkin. . .

or ignore the extraordinary degree to which we have achieved that goal. However, many educational tasks have become progressively more difficult. For example, school districts find it harder for financial reasons to support special classes for bright youngsters. In contrast, the schools are obliged to support a considerable range of other types of children with particular problems.

Fortunately, the university community is beginning to stir itself about these problems. It is beginning to recognize that its own well-being depends on the quality of the high schools. A harbinger of this was, I think, the report of the Commission on the Humanities, titled 'The Humanities in American Life,' that identified the improvement of elementary and secondary education as the prime strategy for improving the state of the humanities in the United States.

"The commission was chaired by Richard Lyman, Stanford's former president. Donald Kennedy, our present one, helped launch the report at a press conference.

"It is not easy for professors and school teachers to work together. For 100 years professors have not hidden their low regard for school teachers. On returning from a brief World War II stint in the Navy and telling my college chemistry professor that I had decided to become a high school science teacher he did not conceal his disappointment.

"Schools in almost all ways are reflections of the communities that support them. The time seems to be ripe to emphasize the academic side of a high school education. Regardless of the debates about the schools as instruments for social change, there is full agreement by all parties that one unquestioned purpose of these institutions is to produce educated people.

"We have fallen into the habit in recent decades of examining questions of educational policy almost entirely in sociological and economic terms. In that process we have focused less on what we teach.

"We need a period during which we examine education as an end in itself. What inherent value does it have? What does it mean to be an educated person? What knowledge is of most worth?

"There is disarray in curricula both in high schools and in colleges. It seems to me that in this very area universities have much to contribute, though it would be an error to be sanguine about the prospects."

In 1979 Atkin visited China at the invitation of its Ministry of Education to study Chinese pre-college science education. Asked what contrasts he had found between the two societies, and whether the U.S. could learn anything, he replied: "We are probably not able to learn anything from them in an imitative sense, but the Chinese methods remind us of the powerful roles played by supporting institutions in a society.

"If the family, as well as the teacher, regard education as a prime function in society, then the child is much more likely to take education seriously. In China, homework is frequently supervised by the parents.

"In other cases, very often it is supervised by the grandparents, who tend to play a considerable role in China; they retire early on fairly generous pensions, and play a useful role in the family while the parents are working.

"One remarkable fact occurred to me. A good many of the grandparents aged over 55 who were supervising the children were probably illiterate! I asked the guide how they could perform as supervisors. 'That is easy,' said the guide. 'They simply keep saying, "Do your homework!" and make sure that the children do.'

"The whole family structure in China forms an environment favorable to a child's learning. This occurs also among many Americans of Chinese descent. My daughter has a Chinese-American friend who has been explicitly told by her parents that her role in the family is not to help with the dishes or in cleaning the house; she is expected to do her homework or to practice on the piano; that is her work.

"I was sternly reminded that my daughter is expected to help with the household chores."

On the other hand, Atkin found aspects of Chinese education distressing: "All too often there was mindless repetition, a sing-song in chorus. There was very unimaginative use of the time of talented children. In special science classes I saw youngsters winding motors, or wiring up electronic devices which were the equivalent of a Heath kit here, without much understanding of the basic principles that made the devices work.

"I was looking for what the Chinese did for their bright youngsters, and found it distressing. They asked me what I thought and I told them frankly."

The most important educational institution that Atkin himself attended, he says, was Stuyvesant High School in New York City.

"This was a science-oriented high school, and youngsters who passed the exam could go to it, from all over the city. It was a stimulating place to be. I went to it from a Brooklyn elementary school that had a depressing homogeneity, and it was great to find myself, at Stuyvesant, among kids from all over the world, of every conceivable race, religion, and color."

Atkin moved rapidly through the public school system, and at the age of 16 went to City College of New York, where he got his B.S. in chemistry at the age of 20.

"By the time I had been drafted at 18 I already had close to three years of college. I went into the Navy and my experience there convinced me that I didn't want to be a chemist, that war was horrible. I wanted to help ameliorate some of the world's problems and the best way, I thought, would be to go into education.

"I decided that since I had a science background, I would become a high school science teacher. I gained my M.A. in science education at the age of 21."

After teaching chemistry and biology at a small school in Manhattan for two years he spent five years as an elementary science teacher at Long Island schools. During this time he was a summer session instructor at Lehigh University and New York University.

In 1955 he joined the College of Education at the University of Illinois as assistant professor of science education. He rose steadily and became dean in 1970, a post he held for nine years before coming to Stanford in 1979 as dean of its School of Education.

He has published some 15 books and monographs on various aspects of education, and 39 articles.

As dean of the leading school of education in the country his views have been widely sought, and he has been given many grants or awards to study various aspects of education.

In addition to his travels in China, he has studied first-hand the educational systems in France and Great Britain.

"Education faces problems everywhere," he says, "and America's are as serious as anywhere. They require serious attention, but I sense that we are going to get more support in meeting them."

Lila Stuart: opera singer, voice teacher, mother of five

BY JULIA SOMMER

Being an opera singer, voice teacher, and mother of five can get hectic, but Lila Stuart seems to have gotten the best out of all three.

Appointed professor of music (performance) at Stanford this year, Stuart has fascinating tales to tell.

She was reared in Boise, Idaho, the sixth of seven children in a musical family. "I decided I wanted to be a singer when I saw my older sister in high school plays. I was enthralled by her performing."

Stuart studied piano and violin, but didn't take voice lessons until a senior in high school. "Starting voice lessons at 17 is early enough; before that, it's more important to develop your musical background," she explains.

Shortly after high school graduation, Stuart married tenor Val Stuart and promptly had three children in four years. "I got married before I knew there were such things as not getting married," she says. "My mother did the same thing."

But Stuart knew she wanted to go to college and knew she wanted to be a singer. With children aged five months, one-and-a-half, and three, she entered the University of Utah, graduating in voice three years later. She then taught voice at Utah for one year, having her fourth child during Christmas break. "I had Valerie New Year's Eve, and was back teaching Jan. 4," she recalls. "Four weeks later I did *La Boheme*!"

Asked how she managed school, career, and family, Stuart laughs and says: "You just *do* it."

In 1962, Stuart was Rocky Mountain regional winner of the Metropolitan Opera auditions, thereby winning a place in the Merola summer training program at the San Francisco Opera. "I farmed my babies out to relatives," she recalls.

When their fourth child was six months old, both Stuart and her husband received generous graduate assistantships at Indiana University's School of Music. They spent the first two years earning their M.M. degrees, and in their third year were made artists-in-residence.

"We performed a great deal—60 or 70 performances. It was marvelous training. In fact, when we moved to Southern California, we were amazed at how inferior the opera companies were compared to Indiana's."

Indiana could not hire both husband and wife, so the Stuarts decided to move to one coast or the other to pursue their singing careers. They felt New York was not a good place to raise children, and opted for Southern California.

There, Lila Stuart was hired by the University of Redlands, where she taught for 13 years before coming to Stanford. She replaced Marie Gibson, who had been hired by Stanford and now, coincidentally, replaces her again.

"Ideally, my singing career should have come before the children or teaching," says Stuart. "It's difficult to perform, teach, and be a mother and wife all at the same time. And since my husband preferred me at home, I slowed down my performing career and zeroed in on teaching." (Stuart is now divorced.)

"In any case, it's impossible for singers to make a living in this country, except for the super-stars. There aren't enough opera companies in the U.S., most of them don't pay their singers a living wage, and there aren't enough performances to support all the very talented singers we have. I knew from the beginning that I would have to do what I'm doing now, so I worked at becoming the very best teacher possible."

Germany is the best place for an American opera singer to go because there are so many opera companies and they hire American singers. But I really couldn't drag all my kids over there. They needed stability, and I knew I would, too, eventually."

While living in Redlands, Stuart's husband started a road construction business, which she helped run. One of her sons now has his own road construction business, another is in the army in Germany, and her eldest daughter lives in Salt Lake City.

If you can get through an opera, you can get through anything. There's always the unexpected—stage hands listening to baseball games backstage while you're performing, scenery falling over, costumes falling off. And any time you have children or animals on stage, you know you're in trouble. ***—Lila Stuart***

Recalling some of the dramatic moments in her performing career, Stuart describes a notable performance of the Masked Ball (*Un Ballo in Maschera*) in which she sang Amelia. "I was singing an aria bewailing the fact that my lover was dying, when all of a sudden I thought a spider was crawling down my face! Actually, it was a false eyelash falling off. So, in the middle of my aria, I made a dramatic gesture upstage, pulled it off and stuffed it down my front. Then I became so distracted by the remaining lash that I had to repeat the gesture, but I made certain my acting covered it.

"If you can get through an opera, you can get through anything. There's always the unexpected—stage hands listening to baseball games backstage while you're performing, scenery falling over, costumes falling off. And any time you have children or animals on stage, you *know* you're in trouble."

Stuart recalls a performance of *Aida* with Grace Bumbry. Traditionally, various exotic animals are brought in for the Triumphal scene.

For this performance an elephant, a cougar, and a pregnant camel were hired.

(The cougar's trainer was disguised as one of the crowd). The camel went to the bathroom on stage. "There was no chance to clean it up," says Stuart. "Aida had to practically jump over the mess to get on stage and sing her aria! The audience was cracking up, and so were we backstage. It wrecked the opera."

A similar misfortune happened when Stuart sang the Marschallin in *Der Rosenkavalier*. Traditionally, the "lave" scene in the opera uses an afghan and a lap dog. The very first night the afghan, in a fit of nerves, did the inevitable. But this time a "super" had the presence of mind to hurry off stage, returning with a broom and pan to clean up the offending pile.

"We made much of it, holding hankies to our noses, incorporating the commotion into the scene," laughs Stuart. "But the next day the SPCA called, complaining of cruelty to animals. So, to avoid any fuss, we made do with just the lap dog from then on."

Stuart has also sung with Schwarzkopf in *Der Rosenkavalier*—"a marvelous woman, both on and off stage. . . a real lady"; Otto Edelmann and Ann Moffo—"what I would say about her you couldn't print"—among other big names.

Stuart's 18-year-old daughter and eight-year-old son live with her at the Peter Coutts housing project on campus. "I may never do professional opera again because of my son," says Stuart. "He's just too young to leave for periods of time and I feel strongly about raising this child well. Once Valerie goes away to college, I'm totally responsible for him. I couldn't leave him for six weeks."

Other memorable tales from Stuart's opera days include a tree falling over while she was singing *Donna Anna* with the Kentucky Opera and an excruciating 16 minutes singing in a potato sack in *Rigoletto*. "As Rigoletto's daughter, I was stuffed into a brand new burlap potato sack back stage for my long dying aria. By the time Rigoletto opened it, I could barely breathe, let alone sing!"

Another notoriously scary maneuver for sopranos is the final scene in *Tosca*, when Tosca jumps off a parapet to her death. "It's worse than death itself," says Stuart. "The stage director usually arranges the type of landing pad pole vaulters fall on, and you just pray the stage hands have put it in the right

Letters to the editor

As faculty learn computers, Cohn worries 'a tad more' about humanities

Editor, **Campus Report**:

Granting that computers and word processors have their point in terms of efficiency for routine work, what interests me here is their use for humanistic purposes which involve original thinking or creativity.

A major characteristic of creative writing is the freedom or gratuitousness assigned to it by Kant. It is holistic, nondirected (autotelic) and nonlinear in that sense. This implies an organic continuity with overall reality to the extent that the "inspired" writer sees himself ideally as a voice of the world, of life as a whole, or nature, with inevitably some implication of divinity or the sacred. Producing art of this kind can be a solemn, sacrificial affair with ritual invocations of a muse and a serious attempt to get the ego out of the way through self-effacement and humility, even into our time.

Mallarme saw his task as "yielding the inititative to the words" in this way; T. S. Eliot intoned that the cost was "not less than everything"; Thomas Mann begins his final novel with a moving prayer out of Dante; Northop Frye alludes to the attempt at anonymity on the part of the ambitious symbolists, and so on.

This humble homage to what surpasses us all around, as opposed to the blinkered manipulations of "Faustian" technology, is the main reason why monuments are raised to and sites are named after leading artists and seldom to professors or technicians; the best books or canvases are freely open to the world at large and the world reciprocates in this way, through a mutual "affair."

Now, art of any sort involves a process of conversion from a whole (conception in the artist) through a serial, linear or "metonymic" **articulation**, to end in another whole, the conception in the receiver. This is analogous to the processes of physical procreation whether the "dumbbell" shape of the relation between sexual partners or the deeper structure whereby a whole human moves through a genetic serial code (DNA) to a new whole human, the heir.

In artistic creation as opposed to procreation, the instrument is the hand rather than the sexual device, and it articulates the code with pen marks or brush-strokes, and the like. The mouth can also serve in this way (as well as body-gestures), but its articulations are more ephemeral. The characteristic device of the writer-as-artist remains the pen or pencil, which is clearly the spontaneous way of going about this deep organic business, based on the obvious analogies (which have often been acknowledged).

The question arises now: why not use ten fingers on a keyboard, a word processor's, and enjoy the added efficiency of being able to see it all on a screen, automatically erase, etc. Pianists use those fingers and artistically, so?

It would be hard to rule out this happening: one **can** imagine an Emily Dickenson or a Keats emerging from the "shipwreck" which Sartre sees as indispensable to poetic conception—in this sense the pen can be a spar, the scrawl a lifeline—subsiding into the hushed, prayerful mood propitious to authentic expression, perhaps falling on their knees, and then seating themselves in front of an Atari or IBM computer, turning on the switch and pushing the keys.

But surely this is problematic. In the first place, seeing one's utterances displayed as perfect letters on a luminous glassy screen is not conducive to humility.

This is what glibness means: an outstripping in space and time (e.g., perfection of the letters, premature rendering) of form over substance. It is far closer to unpretentious organic evolution if one first sketches on scraps of paper, backs of menus, matchbooks, etc. whatever is beginning to take shape in that authentic and holistic "computer," the psyche; or scribble on pads and see those early drafts for what they are, abortive, incomplete.

The job of getting wholes into linear sequential equivalents is devilishly demanding; one knits one's brows, sweats, frets, **concentrates**. The resistance of the medium helps in this respect, just as hard marble helps the sculptor, says Rodin, or intricate verse-patterns supported the efforts of poets like Valery. Conversely, the efficiency of the machine (or dictating) tends to induce you to run on too fast for deep innovation and rounded complexity, which is a "looping" affair, involving all sorts of concerns of the past and surrounding the project.

Precisely, one **loops**, with the pen. It is more **painstaking** in this sense, as a top-drawer engineer said to some of us, explaining why he used a pen for serious composing. One occasionally sees earnest scriveners imitating that looping with their mouths or even, in a way, the whole body behind the effort, which is as it should be: "One must think with one's whole body" (Marllarme). And even beyond, you draw on the entire past and the environment for the enterprise, so that the ritual trimmings, the paper with its pure innocence daring you to violate it, the good smell of the eraser, the affectionate aggression of the Act, all that is part and parcel of the creation, members of the wedding.

The other way, with the glossy gadget, is at least a little bit like procreating with a bionic instrument, or say, a priest's dispensing the ritual Host from a streetcar conductor's change-dingus. Again, it is conceivable. . . . But this leads me to a nagging query.

Knowing that glorious masterpieces have emerged from pens, what is the cottonpicking hurry and why take such a risk? I mean, of course, for serious work, those "moments of truth" when you are going to make it or not in an important way and you feel some awesome figures staring over your shoulder (I'd die of embarrassment to see one of them reflected in the glass screen). The tiniest deflection or defection in instants like that is likely to be fateful. . . .

By the same token, I don't understand humanistic colleagues in a time and place which is so distorted toward quantity, technology, material success, and other illiberal values not feeling an instinctive revulsion from that mass program, urged on them by businessmen. I know that some of them do feel revulsion because they have told me so. But what of the others, the 132 who signed up for the "Tiro Project" (named fittingly after Cicero's slave-amanuensis)?

Well, it depends on what they intend to do with the machines. If some of them plan to write meaningful books or articles on them, we should start worrying at least a tad more about the future of the humanities at Stanford. I'm afraid there are signs here of an all-too-familiar drift. . . .

Prof. of French

Lack of 'A' parking space riles staffer

Editor, **Campus Report**:

I, too, am confident the University has sold something they do not have, namely, "A" parking places. Like the others in their letters to **Campus Report** (Caldwell 3/9 and Clausen 3/1) I do not object to paid parking, but I would like to know that for my $75 I don't have to hike two or three blocks after I park.

At the Medical Center cars are parked in the red zones, in the dirt, on the side of the roads, etc., so why buy any sticker? I also arrive at 7:45 a.m. to be assured of good parking. However, if I take my car out during the work day, I cannot be assured of finding a parking place in any lot at all when I return to work.

I would like to see the **Campus Report** publish an article giving the number of A and C stickers that have been sold and the actual number of A and C parking places that are in existence.

It would not surprise me a bit if there were more stickers sold than there are parking places. Sounds a bit illegal.

Lila Stuart...

continued from page 5

place, and that they will be there to catch you if you bounce off!"

The same type of blind faith helped Stuart in *Norma*, when, in the last scene, Norma walks into a fire with her lover. "There was lots of smoke and I had to climb down 12 feet without being able to see a thing. I just prayed I would hit the steps and not fall 12 feet to the ground."

And then there are the funny moments. "When I sang *Abduction from the Seraglio* a coconut was left on stage, so I kicked it into the orchestra pit to get it out of the way. I was told later that it landed in one of the horns.

"Opera is extremely demanding and unforgiving. Besides the singing, you have to get the drama across. But after you've sung a role many times, especially a comic role, you can start having fun with it and even play tricks on each other. In Britten's opera *Albert Herring*, the lead has to guzzle quantities of alcohol. We surprised him one night by substituting the real thing. Of course, he had to drink it."

Opera is not only singing, but acting, memorizing, make-up, and stage savvy. Stuart has never taken formal acting lessons, but acting has come easily to her. "You pick it up fast. It's a matter of observing, reading, feeling out what works best. I insist my students learn the basics about their bodies. Singing prettily just isn't enough."

Stuart has all her students watch themselves in her studio mirrors so they don't pick up weird tricks. "You can't be singing 'I love you' when your hands look like you're going to sock him in the jaw!

"You have to learn how to do you own make-up, too. Most singers know better than make-up artists how to make themselves look good."

As for memorizing everything, Stuart says, "you simply have to become a quick memorizer. I've had to memorize many operas in two-and-a-half weeks, and I've often worked on three or four operas simultaneously. But the memorization gets more difficult as I get older.

"The longer you keep your body healthy, the longer you keep the voice healthy. You have to eat well, sleep well. Unfortunately, I have a fetish for chocolate, but I go as long as I can without it. And I'm an excellent candy-maker." Regarding exercise: "I love to dance. Inside me is a 100-pound ballerina."

Stanford's voice students are enthusiastic about Stuart's arrival: "Not only does she have an excellent knowledge of the voice and vocal literature," says DMA candidate Sharon Paul, "but her enthusiasm for teaching is inspiring and motivating."

Stuart is pleased with her move to Stanford, too. "I am delighted with the intellect of my students," she says. . . "not only my music majors, but I particularly enjoy my students from across campus. Most of my students already have a second language, so I don't have to spend valuable lesson time teaching diction."

Stuart will give her first Stanford recital at 8 p.m. Tuesday, April 5, in Dinkelspiel Auditorium with pianist Jodi Gandolfi. She will sing lieder by Schubert, Strauss, and Schoenberg; the aria "To This We've Come" from Menotti's opera *The Consul*, melodie by Debussy, and *La Bonne Cuisine* by Leonard Bernstein—four songs based on outlandish recipes (a subject close to Stuart's heart).

On Tuesday, April 26, Stuart will give a joint recital with baritone William Ramsey, tenor Gregory Wait, and mezzo Wendy Hillhouse. The highlight of their concert will be the *Liebeslieder Waltzer* by Brahms, accompanied by pianists Naomi Sparrow and Jodi Gandolfi.

Hear musical notes on your shoulder? Could be a computer!

BY JOEL SHURKIN

The clear sound of the flute, strong and breathy. The sound changes, it is a soprano singing one clear, lovely note. Now there are many women singing in harmony. Now they are gone.

A bell tinkles to your right. It moves into a position behind you. A larger bell chimes in the corner, then both bells seem to fly across the room, meeting and passing over your shoulder, exchanging places. A drum-like sound from everywhere announces the transposition.

Blue grass guitars, a solid foot-stomping rhythm. As soon as you catch the rhythm, it shatters. The plucked strings rise in crescendo, going higher than any guitar can go, faster than any fingers can pluck. The sound becomes organ-like. Now it sounds unlike anything you have heard before.

Computer music.

All of the impossible sounds were generated by a computer. The composer-player has done the work, not with the pen on lined composition paper, but at a keyboard hooked to a video display terminal and a digital computer. The computer not only produces the sounds but contains the software that enables the composer to produce the musical form desired.

Stanford is one of the world's leading centers for research in the use of computers to make music, and to analyze sound.

Computer music may be the music of the future. That computers should be used for musical composition is only logical; music is almost always mathematical (that's why Einstein so loved Mozart), and what instrument is better able to process the mathematics better than a computer?

The scope of the music produced by computers ranges from "Silicon Valley Breakdown," written by graduate student David Jaffee, a gentle satire on bluegrass, to Michael McNabb's "Dream Song" which makes use of some recorded natural sounds, such as people talking, or Dylan Thomas reading poetry, along with the artificial sounds made by the computer.

Another variant is "Turenus," an early work by Stanford Prof. John Chowning, full of bells, chirps, and flying whistles, what might be expected from a former percussionist.

To a large extent the history of Stanford's computer music program began with John Chowning.

Chowning came to Stanford in 1962 with a degree in composition, and after three years in Paris with Nadia Boulanger, the grande dame of modern composition teachers.

Contemporary music at the time was heavily into electronics, but made use of analog devices, electronic gadgets which produced sound by measuring the relationship between objects and transmitted electromagnetic waves. Chowning was interested in electronic music but he found that Stanford had no studios or synthesizers.

He read an article by Max Mathews of Bell Laboratories who had written a computer program to generate accoustical signals. Mathews' work involved digital computers, computers which count discrete objects, usually binary numbers.

"I thought, well, that sounds interesting, and looked around campus and found that the Artificial Intelligence project had acquired the first DEC (Digital Equipment Corp.) machine, a PDP-1," Chowning said. "They had this connected to an IBM 7090, (the main campus computer) through a shared disk drive."

Since Mathews' program was written for a 7090, Chowning acquired a copy and got it to work through the PDP-1.

"It was all very primitive; not much was known about acoustics or psycho-acoustics," he says.

(Psycho-acoustics is the study of what happens to sound once it is perceived by the ears, how it is transmitted to the brain, and what the brain does with it.)

All of this is important because it has to do with the efficient way one uses this machine, the richness of sound and all that. It became overwhelmingly important because the sounds)from the computer) were so dull, and one didn't know how to improve them.

"One of the things I got interested in right away was localization of sounds. Here you have these two speakers. The sound was dry and seemed to be always located at these two loudspeakers. I thought, well, our natural listening environment is much richer than that, we might be able to use computers to simulate this."

Modern recordings of concerts or in studios were in stereo and could simulate depth, but that was "free" stereo—the engineers did not have to produce it. All they had to do was accurately record the sound as it existed in the concert hall.

"There wasn't much known about how distances were perceived."

Chowning wanted to be able to place sounds, move them around, have the listener locate them in space. He experimented with writing his own programs in FORTRAN with the help of an undergraduate, David Poole. The programs enabled him to move the sounds about using either two or four speakers.

"It was reasonably successful; the illusions were compelling enough. . . . I was able to do this myself without having any technical background, and in a relatively short time."

But, the process yielded more than he asked for. It was clear to him that computer languages held the secret; there was no necessity to alter the hardware, to solder, connect, move, rewire machinery.

Programming languages allow conceptual contact with a whole world that I thought was denied me; namely this world of system design and processing. . . . All I had to do was learn to program. If a composer can write counterpoint. . . . that's a lot harder than learning programming."

"All this was eye-opening," he says.

Chowning's enthusiasm lapped over to his adviser, Leland Smith, now professor of music. Smith wrote a program to aid in composition. The two programs—Smith's composition program and Chowning's systems program—enabled the two and their students to actually produce music on the computers. "Quite a bit of music—and good!" he adds.

"I think it was notable elsewhere because of the quality of the sound, the spatial aspects, plus the

John Chowning

The computer not only produces the sounds but contains the software that enables the composer to produce the musical form desired.

Personnel update

Hire retirees for temporary work

Both retirees and campus departments have been happy with a program started in July 1982 by the Employment section of the Personnel Department.

The program serves departments interested in hiring Stanford retirees to do temporary or part-time work on campus by providing (on request) lists of available retirees and summaries of their experience and qualifications.

While Employment cannot guarantee that qualified retirees will be available to meet all departmental needs, departments which have taken advantage of the program indicate that it has been very helpful to them. Those who would like a copy of the list summarizing information regarding the retirees available for work should contact Janelle Sumida at 7-1888.

Also, retirees, interested in the program should call Sumida for more information or to request a retiree form.

Updated lists will be available by March 16.

Graduate awards to handle fellowships

Beginning March 31, Graduate Awards will assume responsibility for the review, approval and preaward administration of individual graduate and postdoctoral fellowships now being submitted through the Sponsored Projects Office.

Graduate Awards will stock the individual fellowship application kits now available through SPO, maintain the current pending and active application files being transferred from SPO at the end of the month, and take responsibility for signing any necessary activation notices.

Termination notices requiring institutional approval will be handled by Lloyd Randall in PBR.

SPO will continue to handle training grants and other similar "institutional" awards to Stanford (e.g., NSF Doctoral Dissertation grants, NASA Graduate Student Researcher grants, and the OE and NSF block grant fellowships).

The change is expected to result in more effective support to Stanford graduate students and postdoctoral fellows by providing a single focal point for administration.

Mary Lou Scott, assistant to the dean of graduate studies, will be responsible for the proposals and awards being transferred. Proposals and requests for application kits should be sent to her attention at the Graduate Awards Office, Building 590, Room 209; ext. 7-2644.

Stanford to host Child Language Forum

The Stanford Linguistics Department will host the 15th annual Child Language Research Forum Friday through Monday, March 25-27, in Terman Auditorium.

Annette Karmiloff-Smith, a former student of Jean Piaget currently affiliated with the MRC Cognitive Development Unit, London, will present the keynote address. "Beyond Successful Output: Children's Processing of Linguistic Input."

In addition to presentations of papers, the conference will include three workshops on topics of special interest.

Lois Bloom of Columbia University will discuss "Acquisition of Complex Language for Complex Ideas," focusing on the acquisition of means for expressing causality.

Kenji Hakuta of Yale will address the question: "Do Children and Adults Learn a Language in the Same Way?"

Dan Slobin of UC-Berkeley will lead a workshop of "Studying Language Acquisition Cross-Linguistically."

There will also be a session on the use of the Apple II Computer in the analysis of free speech samples.

The Forum will be of particular interest to people in anthropology, computer science and cognitive studies, education, linguistics, and psychology. Registration fees are $15 for students and $20 for nonstudents, payable either in advance or at the door. Checks should be made out to SCLRF '83, and may be sent to the Department of Linguistics.

For further information contact Kurt Queller or Eve Clark, SCLRF Coordinators, Department of Linguistics (Building 100, 497-4284).

No more Ticketron at Tresidder

The Tresidder Ticket Office is no longer the only ticket center in the Bay Area to have both Ticketron and BASS systems.

Effective February 14, the Ticketron system was removed from the Ticket Office, which is located on the second floor of Tresidder Union. The BASS system, which the Ticket Office will continue to have, offers all of the Bay Area special events.

The Ticketron exclusives that the Tresidder Ticket Office will no longer be able to offer are Hearst Castle Tour tickets and campsite reservations. The nearest Ticketron outlets are at the Stanford Barn and the Record Factory.

For information about tickets and upcoming events call 497-4317. The Ticket Office's hours are Monday-Friday 10 a.m.-5:30 p.m. and Saturday 12 noon-4 p.m.

United Way sets record: $92,888

Long after the United Way Campaign is over for everybody else in Santa Clara County, it keeps on going at Stanford. Even after the deadline for payroll deduction pledges was passed in January, checks continued to come into the Cashier's Office.

The United Way solicitation last fall that was headed by Lois Fariello, the Manager of Conferences, was presumably over when the campaign went past its $90,000 goal in January, but the final count was a record $92,888, at the end of February. That is $5,356 more than the previous record set in the 1981 campaign.

The same thing happened after the CHAD (Combined Health Agencies Drive) campaign was over last spring. The report in June gave a total of $39,234, but checks continued to drift in until after Christmas and the final accounting was $45,234!

Given the number of solicitations by other means that the people who are employed in the Hospital, at SLAC and on the central campus encounter, a combined total of $138,122 in gifts to the United Way and CHAD is unheralded evidence of their generosity and good will toward good causes.

When either the United Way or CHAD campaign begins, questions start coming to Jan Skrove in the Public Affairs Office, mostly from newer employes: "What's this? Didn't I get a letter like this one a few months ago?" The answer is yes, something like it, but from a very different source.

CHAD and United Way are two large umbrella organizations that serve different, yet highly worthy, causes. They are different in organization and methods of operating. Still, they are each dependent on solicitations of people where they work and the means of obtaining gifts pledged through payroll deductions.

United Way is geared heavily to volunteer worker support and to making its allocations through local boards of volunteers who are familiar with their community's human service needs. The United Way does not encourage, although it permits, donors to designate which agencies they wish to support.

On the other hand, CHAD encourages designation by donor, although it allocates funds by formula for those donors who do not wish to pick and choose among its agencies. In contrast to the majority of the United Way's smaller local agencies, CHAD's are prominent among the large national medical research support organizations.

Stanford is assigned to the United Way of Santa Clara County, although part of the University's operations are located in San Mateo County, and about one-third of our employees live outside Santa Clara County. Funds collected where people work are distributed according to where they live. That is the long-standing policy of the United Way.

Officially CHAD is known as the Bay Area Combined Health Agencies Drive, part of the parent statewide organization. Questions about specific agenices and their operations should be directed to:

CHAD, Bay Area Combined Health Agencies Drive, 560 San Antonio Rd., Palo Alto, Calif. 94306; 494-2640.

United Way, United Way of Santa Clara County, 2323 Homestead Rd., Santa Clara, Calif. 95052; 247-1200.

CIT forms a SPIRES consortium

Invitations were recently extended to 30 universities by Stanford's Center for Information Technology (CIT) to join a SPIRES Consortium.

SPIRES (Stanford Public Information Retrieval System) is the data base management system (DBMS) that has been selected for Stanford's administrative systems development. (Some major development efforts using SPIRES include the Office of Development's alumni records system, the new core accounting system of the Controller's Office, and the Registrar's online student records system.)

The 30 invited universities already have licenses from Stanford to use SPIRES, but the degree of their typical use is significantly less than that at Stanford.

According to Jon Sandelin, CIT associate director and Consortium general manager, the Consortium will function to increase the sharing of applications developed with SPIRES and to provide better underlying support to installations using SPIRES. Membership in the Consortium will entitle the institution to special SPIRES consulting assistance, which may be used when installing or using SPIRES.

"Software products like SPIRES require effective training aids, good documentation, and the availability of knowledgeable consulting assistance, before computer center directors will (or should) commit to the product as a production service," Sandelin notes. "The Consortium will provide support in these areas."

Each member institution will have one representative on the Consortium Advisory Board, which will give direction in formulating governing policies and provide a forum for overseeing the proposed evolution of SPIRES.

An online catalog of SPIRES applications will assist member institutions in comparing and perhaps matching their data base system needs with already existing SPIRES-based systems at other places. A quarterly newsletter will serve to alert Consortium members about applications development activities and other items of general interest.

An example of a sharable SPIRES application is the CONCTACT/EMS electronic messaging and retrieval system developed at Stanford. EMS is transportable to other universities that have adopted SPIRES. These SPIRES-based electronic mail systems will be connectable in the future, and will thus provide an alternative method for faculty and university administrators to exchange information with colleagues at other places.

Cold sores? Call now!

Persons suffering from recurrent cold sores, fever blisters or "herpes" of the lips and mouth are urgently needed to assist in research aimed at determing the reasons for these recurrences.

For further information please contact Tony Cunningham M.D., Postdoctoral Fellow, Division of Infectious Diseases, Stanford University Medical Center, 497-5908.

To Ellen Noddings, *Caring* is a book and a way of life

Twice voted an outstanding teacher, she's also the mother of 10 children

The petite, light brown-haired woman sits in the chair behind her desk comfortably, almost casually, but her dark brown eyes command attention without asking for it. They draw the listener in imperceptibly, with an insistent directness as she quietly says, "There's a difference between asking, 'How can I get a share of that pie?' and asking, 'How can I make that a better pie?'."

Nel Noddings, assistant professor in the School of Education, explains this and other theories about education in her forthcoming book, currently in press, titled *Caring: A Feminine Approach to Ethics and Novel Education*.

Noddings analyzes caring by exploring what it means to care and to be cared for, how the caring ethic relates to a larger moral picture, and how caring ultimately functions in an educational context.

The book is a culmination of Noddings' lifetime teaching career, of which the last six years have been spent at Stanford. Here she has twice been voted outstanding teacher by her students, more than 20 of whom call her adviser as well.

"Nel is very unusual. She has the most incredible capacity for personal togetherness of anyone I know," says colleague Prof. Elizabeth Cohen.

Noddings has 10 children, and because of her family commitments, she came to her scholarly career later in life than most academics. At age 53, her Stanford Ph.D. is not quite 10 years old. Nevertheless, her prior years of teaching are rich background for her current work.

"She has a knowledge of the real world as well as a great analytic capacity," says Prof. David Tyack. The fact that she comes to an academic career later in life than many only adds to the maturity of her perspective, he continues.

Adds colleague Prof. Denis Phillips: "It helps to have something to 'philosophize' about."

Many of her observations and experiences about teaching are encapsulated in *Caring*. "What she's doing is all of a piece," Tyack says in reference to her twin responsibilities of family and career, "and it comes together in her book."

Practical ethics

An "essay in practical ethics from the feminine view," the book explores a distinction between masculine and feminine ways of relating. Although Noddings is quick to point out that characteristics are not exclusively confined to one sex or the other, men more often display the traits designated "masculine," and women more often display "feminine" traits.

For example, Noddings says that competition is a masculine trait, and cooperation is feminine. Similarly, using broad principles or formulas to solve problems is masculine, and looking at the related parts of a specific situation to solve problems is feminine.

Noddings calls the feminine problem-solving attitude "relatedness." It is an attitude that allows an individual to perceive a situation not merely by observing it (as one would through "masculine," principle-oriented thinking), but by "receiving" it—by putting oneself into the situation mentally and emotionally in order to experience and truly understand it.

This receptive, attentive attitude creates successful teaching, Noddings says.

"What it tends to do is to so enliven the situation that it tends to enhance skills and concepts," she says. "I guess I believe that what education needs now is a spiritual and intellectual revival.

"Do we want people who are going to be mindlessly obedient, or do we want people who will be autonomous, self-disciplined, and raise questions? If the answer is the latter, then we have to find a way to find means that are compatible with ends of that sort."

She has high hopes for *Caring*, which has received good preliminary reviews. She expects it to be "very much hated by some, and very much liked by others." Tyack, who has read the book, gushes: "It's sort of like Picasso talking about beauty."

Early interest in education

Noddings' interest in education started when she was young. "I guess I always wanted to teach; from a little girl on, I wanted to teach."

After graduating in 1949 from Montclair State College in New Jersey with a degree in mathematics and physical science, Noddings remained in New Jersey to teach grades six through nine, and later, to head a high school mathematics department.

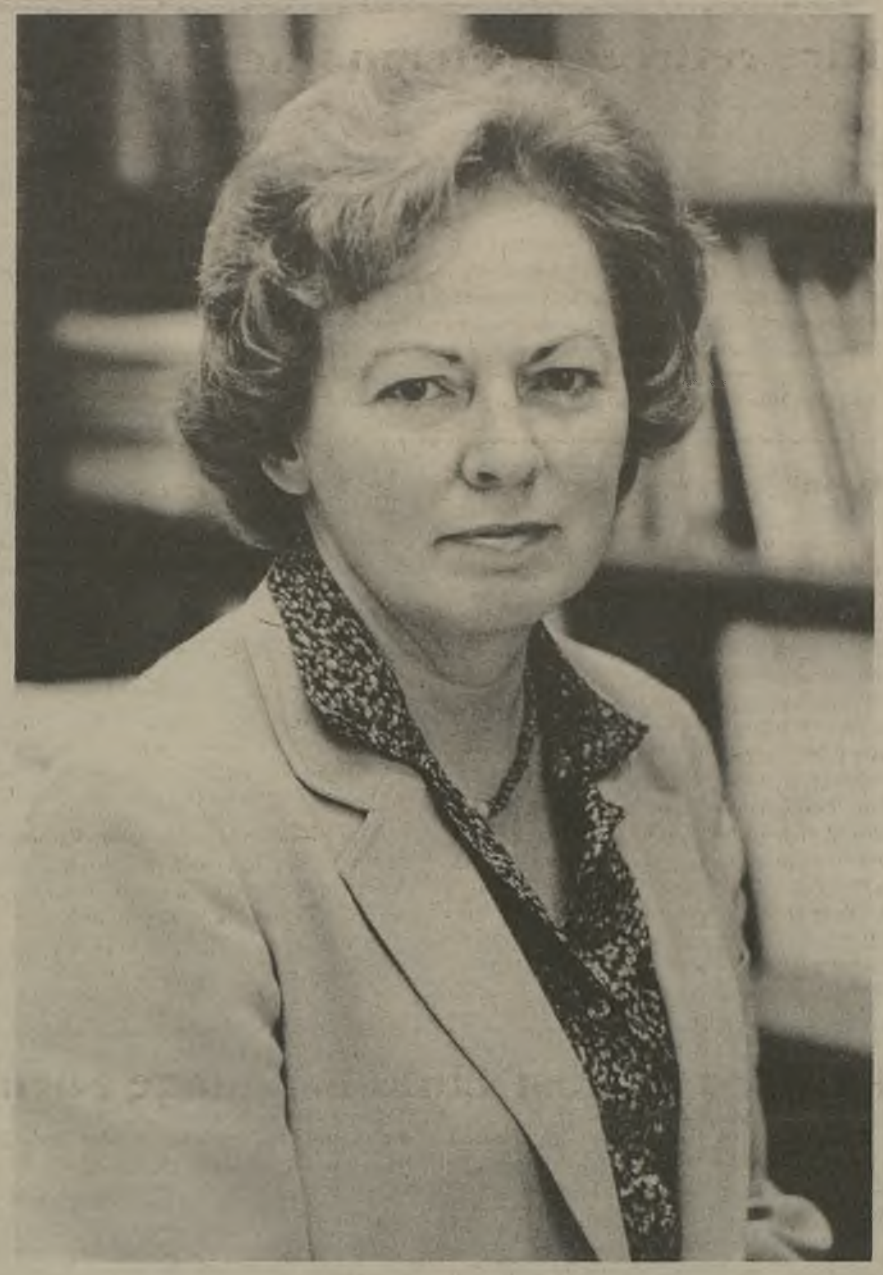
In 1962 she took two years off from teaching to get her master's degree in mathematics at Rutgers. She returned to teaching in New Jersey until 1972, also acting as a department chairperson, assistant principal, and curriculum superviser.

Her only "time off" occurred from 1952 to 1958, during which time Noddings had four children. When the youngest was five months, she returned to her career.

After her fifth child was born, the Noddings decided not to have any more children—as Noddings shyly explains, they were too embarrassed by Paul Ehrlich's announcement of a population explosion to further add to the world population.

However, they had planned a large family, so they eventually adopted five children.

Noddings admits that teaching while taking care of a family of 10 required a supportive husband and children, as well as a lot of energy.



"For me, it was fortuitous that I had a high energy level, and I loved teaching."

High energy level

It's a sign of her high energy level that she finds gardening a "restful activity." Similarly, the family "vacations" are weekend camping trips with "dozens of people," one friend says.

"I don't know when she gets time to eat or sleep," Phillips says, echoing the sentiments of other faculty members.

Noddings' youngest child is now 16 (the oldest is 30), leaving more time for academia. Her colleagues and advisees unanimously agree that she is a superb teacher.

Ellen Noddings

What education needs now is a spiritual and intellectual revival. Do we want people who are going to be mindlessly obedient or do we want people who will be autonomous, self-disciplined, and raise questions? If the answer is the latter, then we have to find a way to find means that are compatible with ends of that sort.

—Ellen Noddings

"Professor Noddings is really a terrific educator: receptive, respectful, and stimulating," student Leslie Swetnam says. "She places a lot of responsibility on the student for learning and a lot of responsibility on the teacher for providing a stimulating environment."

Another student, Kathleen Gilbert, agrees that Noddings lives up to such praise. "She's very concerned about stimulating her students in academic work, helping them reach high goals. She always has time for her students; and she takes time, from reading their papers to discussing things."

Noddings says that helping her advisees is one of the most satisfying aspects of her work. "What is absolutely delightful is to have someone come in with a vague idea which he or she is excited about, and turn that idea into a research project."

When asked about her future plans, Noddings simply comments, "I just want to go on the way I am."

In her work and in her personal life, Noddings is an example to the young women who ask for advice about having a career and a family.

To these students she says, "I tell them to try to have it all. You can have it all, but you need to have super energy, super vitality. The myth of the superwoman is not dead."—**Amy Bernhard**

In the intensive care nursery. . .

Raising quality of life as important as survival rates

Dr. David Stevenson presented a picture of a healthy, smiling five-year-old in bobby socks and pig tails as a symbol of the major contribution of intensive care units to premature infants in the past 25 years.

"Our major contribution really is in the survival of normal people," said Stevenson, assistant professor of pediatrics and associate director of Stanford University Hospital's intensive care nursery.

Just as important as raising the survival rate of infants born too soon, is raising the quality of life for those infants saved, the physician said in a public lecture at the Stanford Medical Center last Wednesday evening.

"If we stopped intensive care (for premature infants) right now, there would be a lot of deaths," he said. "But there would also be a great increase in the number of people surviving who would be severely injured."

The pig-tailed child in the slide on the screen was "Jamie," one of Stevenson's tiny patients five years ago. Born three months prematurely to a teen-age mother, Jamie weighed only 1.5 pounds.

When physicians performed surgery a week after her birth to remove dead and dying portions of her intestine, Jamie's bloated abdomen was scarcely wider than three of the surgeon's fingers.

The surgery was risky. The infant girl faced a 60-70 percent chance of dying and, even with successful surgery, would need months of hospitalization, round-the-clock care, and intravenous feeding. Stunted growth and malnutrition were possible if the salvaged intestine was unable to absorb food adequately.

But after consulting with surgeons and other members of the health care team, Jamie's mother consented to the surgery. Five years and $100,000 later, Jamie shows no signs of illness, Stevenson said. The cost of care for her first months of life were shared by family, the hospital, and, indirectly, the public, through increased insurance premiums.

Most patients in the intensive care nursery stay only a few days or weeks, with a much reduced hospital bill, but Jamie's case demonstrates an extreme example of both the costs and therapeutic capability of such a nursery, said Stevenson.

A child Jamie's size born today has an 80-85 percent chance of surviving, with the help of intensive care, he said. These children virtually all go on to lead normal lives, he added.

Modern obstetrical advances are major contributors to the improved survival rate, said the physician. Such advances include the development of drugs that halt premature labor long enough for other drugs to be administered that speed the maturation of fetal lungs. But the modern techniques have limits.

A critical time in the development of the fetus occurs around the fifth month after conception, when blood vessels develop close enough to the lungs' tiny air sacs to permit a healthy exchange of oxygen and carbon dioxide.

"If that has not happened (by the time the baby is born), the best of ventilators will be of no use," Stevenson said. "No matter how much gas you move in and out of someone's air saccules, no gas will be exchanged, and the child will die.

"Therefore, there are children who are born alive, who move spontaneously, who respond to stimulation, who cry out for help, who cry out for someone to attend to them, that you may not be able to avoid letting die."

In such dilemmas, "compassion wrestles with duty" in the intensive care nursery, Stevenson said. "We have a dual charge in medicine, not only to save lives, but to alleviate suffering.

"A physician should still act in concert with his oath, which is to avoid doing any harm—not to start technologies which are senseless in view of someone's developmental state, and to assist in any way possible to make sure that this person does not suffer."

"We have a dual charge in medicine, not only to save lives, but to alleviate suffering."

—David Stevenson

Stevenson described a child whose intestine, somehow twisted and crushed in the uterus, is completely nonfunctional at birth. Although normal in every other way, that baby will die within two weeks, Stevenson said. Life-long intravenous feeding is not an option because it would result in infections and other complications that would also kill the child. "There is nothing anyone can do.

"If I can't save that baby's life, I'll do everthing in my power to make the baby as comfortable as possible for as long as that baby is alive," Stevenson said.

"We don't withdraw support, we simply shift the emphasis of support to something that is more appropriate for this person. That shift of emphasis would be to nurturance—to love, to warmth, to those things which any human being deserves to have."

Advances made in neonatal nurseries in the next decade will continue to improve the quality of life for survivors, Stevenson predicted. But the secret to preventing prematurity may come instead from improving education and nutrition of high risk mothers.

"There are other things which we may perfect as we work on drugs to stop labor and drugs to mature the baby's lungs functionally. But those drugs are not without risk.

"I would say that prevention (of prematurity) is going to come through other means beside pharmacological means, ultimately," he said.

Stevenson spoke at the fourth in a series of "Progress in Medicine" lectures, held this season on subsequent Wednesday evenings to acquaint community members with the technical and ethical issues encountered in intensive care units.

Tonight's (March 16) session will feature a panel discussion of health care professionals on "Who Suffers More—the Health Care Team or the Family?" while the last lecture on March 23 will be given by Ernle Young, medical center chaplain, on "Ethical and Emotional Issues in the Care of the Dying Patient and Family."

Both lectures will begin at 7:30 pm in the Sherman Fairchild Auditorium at the medical center.

—Deborah Franklin

Johns Hopkins scholar to deliver 1983 Pfizer Lecture

Dr. Paul Leitman, director of the division of clinical pharmacology at Johns Hopkins University, will present the fifth Pfizer Lecture in Clinical Pharmacology Monday, March 21, at the School of Medicine.

In his lecture, entitled "Aminoglycoside Nephrotoxicity—Clinical and Biochemical Aspects," Leitman will summarize his research findings, which have both immediate and future implications in the use of aminoglycoside agents.

Leitman, who has both M.D. and Ph.D. degrees, holds the Burroughs Wellcome Chair in Clinical Pharmacology at Johns Hopkins. He is a leading authority in the area of aminoglycoside nephrotoxicity, a significant complication of therapy in many patients requiring these important antimicrobial agents.

Leitman and his colleagues have performed careful clinical studies examining the incidence of this complication and comparing the incidence with various aminoglycosides and combinations of antimicrobial agents. They have identified a number of clinical and laboratory variables which are useful in predicting the likelihood of aminoglycoside toxicity in the clinical setting.

At the biochemical level, Leitman and his colleagues have studied some of the biochemical changes induced in kidney cells by the aminoglycoside antibiotics which may be important in mediating their nephrotoxic effect.

The Pfizer Lectureship, ,started in 1978, is sponsored by Stanford's division of clinical pharmacology, and funded by Pfizer Pharmaceutical, Pfizer Inc. of New York City. Previous speakers have included Drs. Robert Lefkowitz, Ferid Murad, Daniel Nebert, and Peter Goldman.

This year's lecture, open to members of the medical community and the public, is jointly sponsored by the divisions of clinical pharmacology and nephrology. It will begin at 4:30 p.m. in room M114 of the Medical Center.

New association proposed to market biotechnology tools

Companies would be able to "one-stop-shop" for biotechnological patents at U.S. universities if a concept unveiled at an industry association meeting is adopted.

The proposal calls for creating a nonprofit corporation—tentatively called University Licensing Association for Biotechnology (ULAB)—which would market certain biotechnology tools patented by participating universities.

The institutions would share the licensing revenues based on the volume of their patents used by industrial customers.

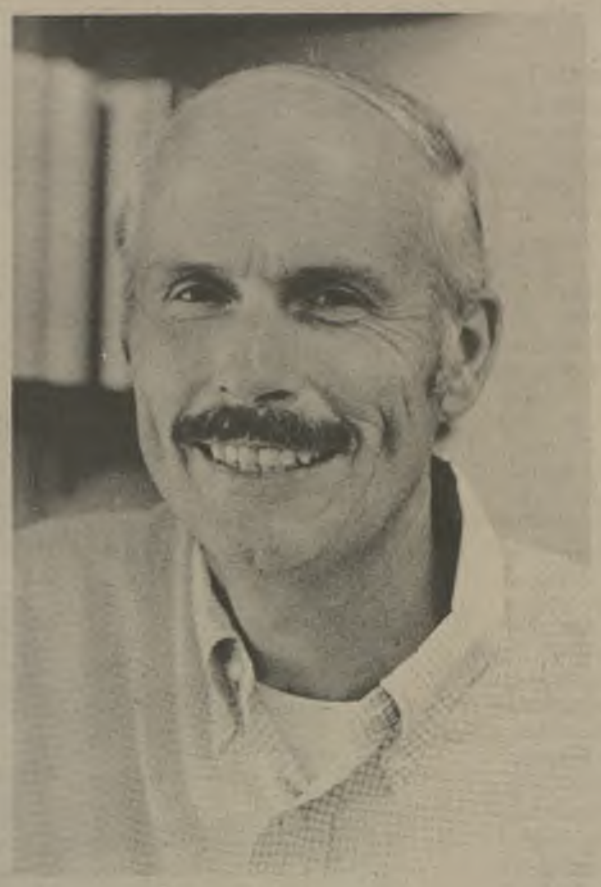
The proposal, based on a preliminary feasibility study, was presented in San Diego March 3 at the meeting of the Industrial Biotechnology Association (IBA) by Roger Ditzel, director of patent, trademark and copyright matters for the University of California system, and Niels Reimers, director of Stanford's office of technology licensing.

IBA is a high technology industry group. Most of its approximately 25 members are among the 73 firms which have licensed Stanford and UC's basic gene cloning patent.

Stanford and UC's patent covering basic gene splicing techniques was issued in December 1980. The discoveries were made by Drs. Stanley Cohen, professor of genetics at Stanford, and Herbert Boyer, professor of biochemistry at UCSF.

"That patent, broadly covering gene cloning techniques, would not be affected by this potential association," said Reimers. "The technology handled by ULAB would be specific biological tools, rather than the entire gene cloning process."

A biotechnology tool is defined essentially as a technique used by a scientist in the making of genetically engineered microorganisms, which in turn make possible the production of industrial or consumer products.



It has been estimated that 200 patent applications for biotechnology tools have been filed by U.S. universities which might be potential members of ULAB.

"We are at a unique stage in the transition from academic discovery to industrial application, characterized by a relatively rapid path from a scientific finding to commercial development," said Reimers.

"And large numbers of patent applications are being filed and granted for what amount to the basic tools used by the scientist.

"We are at a unique stage in the transition from academic discovery to industrial application, characterized by a relatively rapid path from a scientific finding to commercial development."

—Neils Reimers, director of Stanford's office of technology licensing

"There is great potential for significant and possibly unnecessary transaction costs when license rights to these patents are negotiated."

Ditzel continued, "It is conceivable a company would need a dozen licenses from a dozen universities for any particular genetically engineered product. Many biotechnology tools might be used only once in making the microorganism needed in a process."

Reimers and Ditzel contacted colleagues at other universities and in industry who were similarly concerned. With gift support of $3,000 each from seven companies, a study of the concept was conducted by Mark Edwards, a student at the Stanford Graduate School of Business.

"To better focus the concept, it was prepared in a business plan format," Ditzel added.

Reimers said the ULAB concept currently has received the support of many researchers and administrators at universities but has not been officially endorsed by any institution, including UC and Stanford.

Under the proposal, potential users would be able either to license patents individually, or they could secure blanket rights to all patents in ULAB's portfolio.

Edwards' plan hypothesized a fee of $25,000 per year or one percent of net sales—whichever is greater—to enable a company to secure blanket rights to all patents offered by the association. Projections of the business plan indicate that if ULAB were chartered by 10-12 businesses and/or universities, each contributing about $50,000 in start up money, total gross revenues through ULAB during the next five years might amount to about $12 million, Edwards said.

However, Ditzel emphasized that while any eventual plan might have different terms or even a different structure, such an association appears to offer some substantial benefits to a rapidly growing industry.

In presenting the concept, Reimers wrote:

"In university laboratories there has been a growing concern that desire for proprietary knowhow or rights may stifle the open communication of scientists, particularly between scientists who have involvement with different companies.

"The (ULAB) concept would seek to reduce this secrecy and/or delay of publication and competition by making all biotechnology tools available to all scientists.

"Selection of a tool would be made by the industry scientist based on what was the best process rather than simply the single process which might have been selected by his company's management."

Reimers said the ULAB concept has been under study for about a year.

Income to universities would be expected to be used for research and education, and researchers and administrators at each university would have to endorse ULAB before their university could join the association, Reimers suggested.

ULAB could be set up as an independent nonprofit association. Alternatively, a high technology company or existing association could administer ULAB's business, Ditzel said.

Currently, revenues from the Cohen-Boyer patent have brought in more than $2 million in license fees, although so far insulin has been the sole product to be marketed in significant commercial quantities from bioengineering techniques based on the Stanford-UC patent.

"We are looking ahead about a decade to see the most significant end product developments from the patent," said Reimers. "That is why the next five to seven years is the period we would expect to see the most activity from ULAB as research is continued at universities and industrial uses expanded."

Stanford currently is responding to the tentative rejection last year by the U.S. Patent Office of a second Stanford-UC bioengineering patent.

Reimers said that Stanford membership in a future ULAB-type association would not hinge on the outcome of the current patent application, particularly since the university owns a variety of patents not related to the one currently pending.

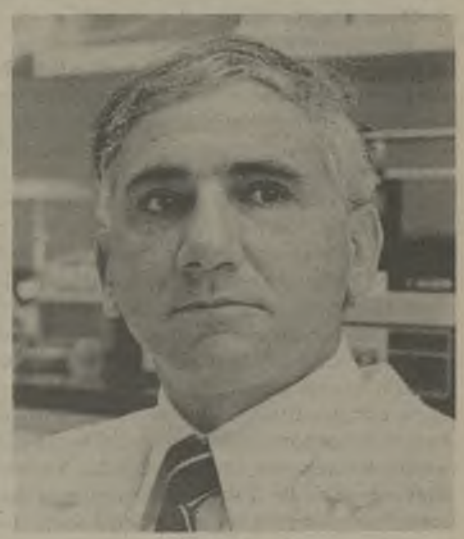
—Mike Goodkind

Perlroth made full professor, Myers granted tenure by Board of Trustees

Mark Perlroth

Dr. Mark Perlroth has been promoted to professor of medicine (clinical), and Dr. Bryan Myers has been granted tenure in action last week of the Board of Trustees.

Perlroth, who received his M.D. degree from Harvard in 1960, came to Stanford as a resident in 1965. He joined the faculty as an instructor two years later, and was promoted to associate professor of clinical medicine in 1977.



He is the author of a textbook *Fifty Diseases: Fifty Diagnoses*, and is widely recognized as a clinical scholar. His research has included studies of kidney toxicity from drugs administered to transplant patients.

A faculty member in general internal medicine, he is the recipient of numerous honors, including the Arthur L. Bloomfield Award for Excellence in Teaching, and the Henry J. Kaiser Award for Teaching.

Myers, who serves as director of clinical nephrology, is an associate professor of medicine (nephrology).

He is credited for innovative contributions to the study of kidney diseases. Specialized research includes the mechanism of the acute kidney failure which frequently complicates cardiovascular surgery. A second area is the mechanism of protein leak into the urine that complicates a variety of chronic kidney diseases.

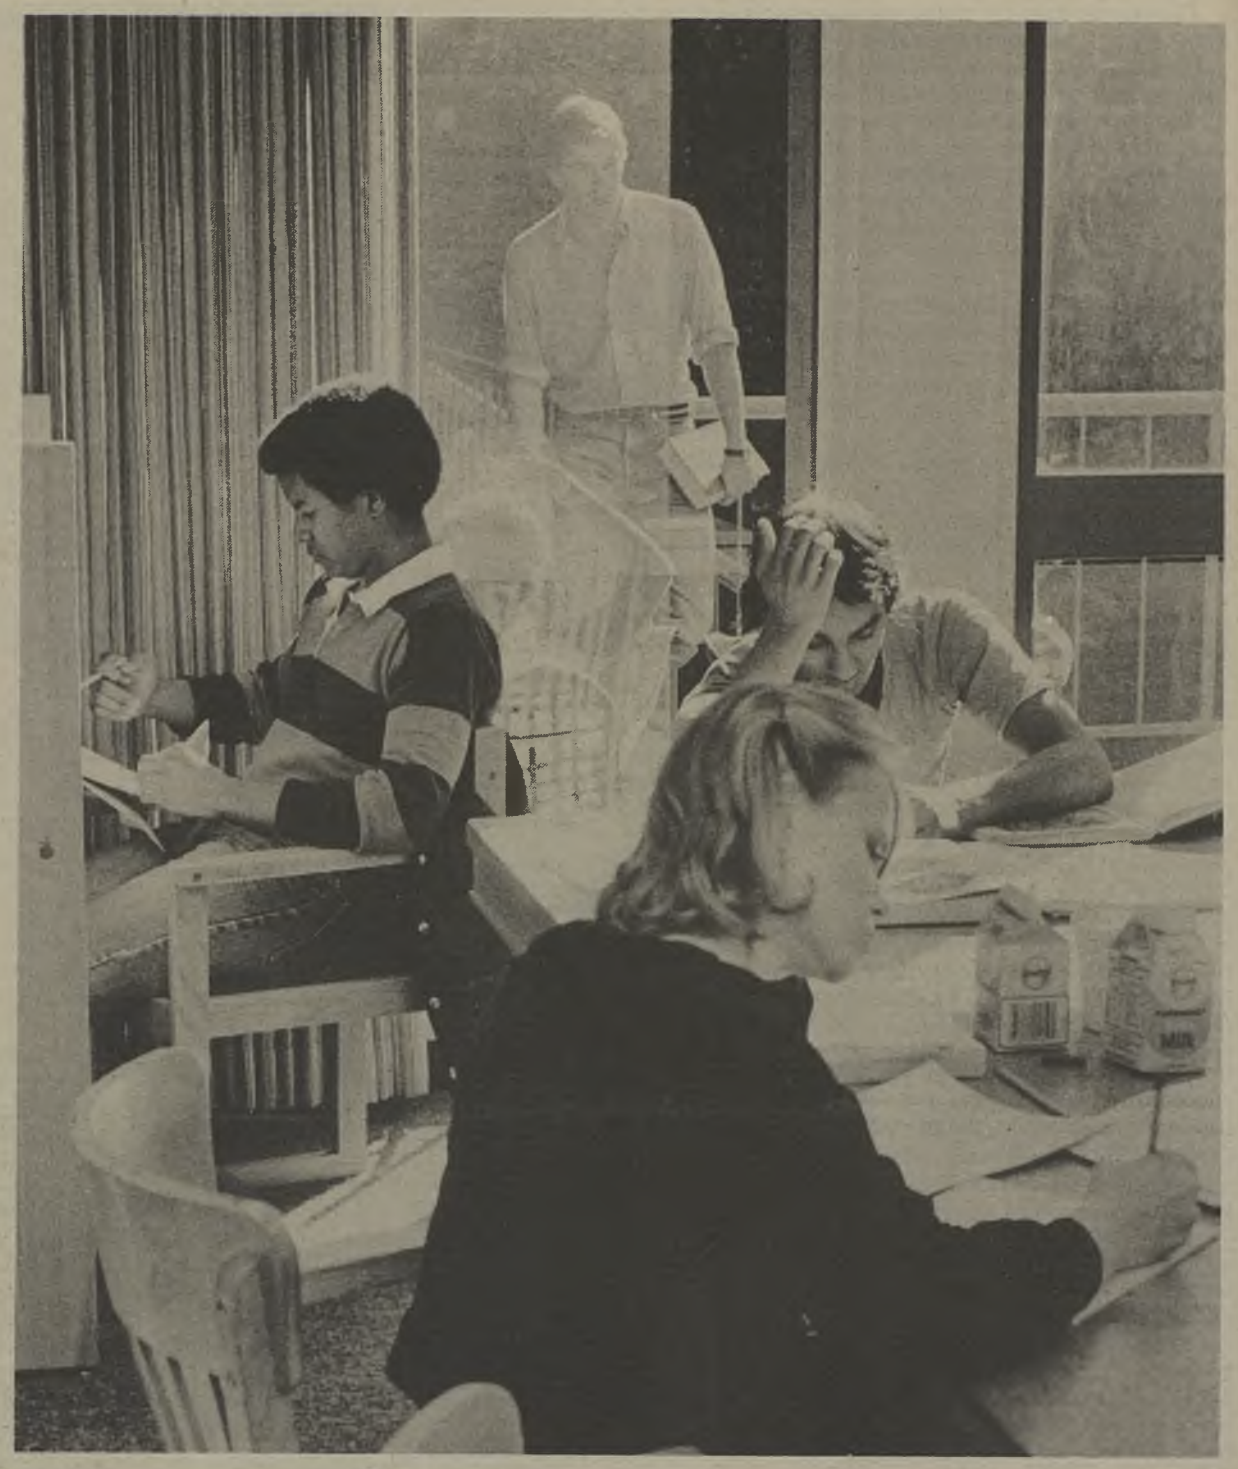
Myers received his medical training at the University of Cape Town, South Africa in 1959. He came to Stanford as an assistant professor in 1976 from a post as chief of nephrology at Meir Hospital, University of Tel Aviv, Israel. He became an associate professor in 1981.

Bryan Myers

The emotional side of medicine deserves a closer look...

BY SHIRLEY KRAUS

The desire to be a good doctor—warm, sensitive, caring—is part of every medical student's dream. Yet students at Stanford University School of Medicine say most medical schools do not encourage the development of these very qualities. In fact, many students learn to suppress, and even eliminate them during their medical education.



Now, for the first time since the Abraham Flexner report on medical education in 1910, medical educators nationwide are questioning the process that leads to the denial of the emotional side of medicine by its practitioners.

The trend starts early on, according to Dr. Saul Rosenberg, professor of medicine. During a year-long sabbatical researching the effects of the "pre-med syndrome," he found that in their competitive quest to get accepted to medical school, high school and college students often sacrifice liberal arts courses for more science courses, and extra-curricular activities for more hospital or research laboratory work.

And it continues on into internships and residencies, said Dr. Harvey Weinstein, assistant clinical professor of psychiatry, a time when physicians-in-training—no longer students but not yet fully accepted as doctors by the medical community—have no group support but more than their share of responsibility for patient care. With strenuous work schedules, often forcing them to stay up for days on end, controlling their lives, studies show interns and residents are the most susceptible for impairment.

It's the time in between however, Weinstein continued, the average of four years spent in medical school, that the qualities that will last through the students' medical careers are planted and developed.

They come to medical school, considered the cream of the crop and used to excelling in all they take on, and suddenly find themselves at the bottom of medicine's hierarchical ladder. Faculty treat them as if they know nothing, and the relationship, many say, is like that of a parent and child.

The academics, students agree, are the easier part of medical education. It's learning how to be a doctor—the socialization process—that makes medicine one of the most difficult careers.

Medical school and training is regressive. It pushes people backwards in time in a sense, into a situation where they're constantly told they don't know enough and have to be taught," Weinstein said.

"There's a terrible fear of not being a good doctor. Everyone wants to be one but no one knows what it is exactly," said Nancy Harris, fourth-year student.

And so, to ensure their chances of being a "good doctor," students give up just about all extra-curricular activities, substantially limit relationships, delay having children, and submit themselves to the stresses of too much to do and learn in not enough time. Faculty encourage them to "eat, sleep, and breathe medicine."

The academics, students agree, are the easier part of medical education. It's learning how to be a doctor—the socialization process—that makes medicine one of the most difficult careers.

"Medicine is taught as a left-brain, scientific, factual profession," said Dr. Peter Finkelstein, who completed his psychiatry training at Stanford. "The quality of individuals' outside lives, and their internal thinking doesn't hold much value. In medicine you get credit for knowing and doing everything, and not for feeling."

"Most physicians learn to shut down their feelings," said Michael McGee, fourth-year student. "Their emotions are in a little box in a corner of their minds, unavailable to them. They lead their lives mechanized, they know the techniques of their profession, they're consumed by the amount of time they spend at it. They haven't integrated the meaning of their profession with their work.

"Here we are, learning to deal intimately with peoples' lives. So, we should be humane, caring and sensitive. But when do you learn to start caring? From a few lectures in a course? You learn how to be sensitive and caring from the environment. Here you see very uncaring, status and hierarchy-oriented doctors. It's the whole medical machismo syndrome of being the superhuman, all-knowing, tough doctor. If you're going to care for other people, the reasoning goes, you can't be weak. And feeling is considered weak."

Students begin to pick up on the machismo from day one.

"The first thing you do in medical school is walk into the anatomy lab," described Sally Rubenstone, fourth-year student. "No one ever tells you there are going to be 40 dead bodies in there. It's shocking. But no one says that, so you think you can't show that it bothers you. Then you just start slicing these bodies open. Never once during the entire course does someone say anything. You learn from early on you're not supposed to react."

"Students pick up a lot of norms right away: a preoccupation to master cognitive material, cooperation, teamwork, good spirits," said Finkelstein, who has been observing students' responses for four years as part of a research project.

"Superficially, someone looking in on an anatomy laboratory may think things are okay. There are a lot of things going on they don't feel comfortable with, but they hesitate to express these feelings," he said. "It may be that the process of medical training promotes 'psychic numbing,' so to speak."

This psychic numbing—not connecting what students see with what they feel—is propagated by not giving students the opportunity or the time to assimilate their experiences, Finkelstein added.

"To truly produce a reflective, deep physician, the level of assimilation needs to be much greater. There is no opportunity to do that," he explained.

"The enemy of emotion is lack of time," said Bruce Bowman, a resident at Stanford University Hospital.

Med students' stress...

continued from page 12

After two years of being overwhelmed with facts, students switch course and are thrust on the hospital's units where for the first time, they deal directly with patients. This, they say, is a whole new ballgame.

On one hand, many patients look up to the students as doctors, responsible for their care. But again, as prescribed by the hierarchy, the students are repeatedly told by the powers above they know nothing, Harris explained. They are grilled on facts in front of patients, other students, interns, residents, and attending physicians, often humiliated and intimidated if they do not know the answers to questions they're asked.

"Learning how to assume that doctor role—when to enter a room, where to stand, how to present a case—no one helps you at all," she said.

Adding to their dilemma is justifying patient care, when they may not agree with the prescribed treatment.

"The hardest thing was to deal with my emotions about moral and ethical issues," Harris said. For example, she recalls, she once helped care for a 94-year-old man with terminal pneumonia. "He came in at 5 p.m. one day and was dead by noon the next. The doctors decided to give him round-the-clock enemas to lower his potassium levels. I was the only doctor who stayed with him practically around the clock.

"He was moaning, wimpering, pleading with us to stop and let him die. Every time you touched him he shrieked in pain from the pneumonia. I had to get an IV in him. I was sickened by the whole thing."

"Is it right to have 15 people in white coats tear open a patient's curtain, tell him to undress and do all sorts of dehumanizing things?" Harris asks. "Is it right to tell someone he's dying of cancer, with everyone standing around taking notes?

"As a medical student you see things you don't necessarily like. Suddenly you don this white coat and you see the same things and you're caught in between. You don't know whether you should join the club and start treating patients this way—whether it's right or wrong. If you back away you're told you aren't being aggressive. To be aggressive—to be willing to try any and every procedure—is the ultimate compliment."

These types of emotional dilemmas may be verbally suppressed by most students, but they surface in many other ways, such as depression, insomnia, loss of appetite, and anxiety, Weinstein said.

"Feeling bad about some things is normal, but there's no provision throughout medical school to deal with those feelings. Students are expected to treat the remarkable in a casual way. It's okay to feel anxious about an exam, but not about illness or death," Finkelstein added.

To work these emotions out, students say, they have to go to outside resources such as friends and family. Up to one-fourth of each class seeks professional help at some point during medical school, Weinstein said. Within the school, there is little help.

"I have been in a number of traumatic situations. I have told young people and old people they have a disease from which they'll probably die. I've gone through the grieving process with hundreds of people. Yet I can think of only two times in almost four years that someone has asked me how I feel," Rubenstone said.

"I've asked other students and doctors who I know have to go tell someone they're going to die, for example, how they are. They always reply they're just fine, when they're obviously not fine. But if you ever wince in any way, if you come out of a patient's room and say it was heavy, the response is that you'd better get used to it.

"I don't want to get used to it. I want to be able to deal with it effectively. If you shut down your feelings, that's it. But that is what is demanded in medicine. It's an occupational hazard. This profession promotes, sustains, and supports shutting down your feelings, and that leads to impairment," she concluded.

Some efforts are being made to help students deal with the emotional side of being a physician. On a national scale, the Association of American Medical Colleges is conducting a three-year study on medical education. Preliminary reports, and regional hearings and symposia held by medical educators in response to the study, have discussed ways that medical education could be humanized.

At Stanford, a Committee on Well-being for Medical Students and Housestaff (CWBMS) was established in 1978 to address some of the socioemotional aspects of medical education and training. The goal, Weinstein said, is to positively influence the learning climate.

To help students with the massive amount of resource information on medical school topics, such as clerkships, internships, and national boards, a room called Broca's Area was established. All such information is available there.

Students have formed support groups that meet once a month. The meetings are "intense," students say, giving them a chance to discuss their feelings about what they're experiencing. Unfortunately, only about 45 out of about 340 students participate.

In response to a need established by the CWBMS, a course titled "The Human Costs of Medical Education" was offered for the first time in 1982. It was designed to let students know they are not the only ones experiencing rough times, it's all right to feel what they may be feeling, what they may go through farther along in their training, and ways to cope with potential problems, Weinstein described. Despite overwhelming effort and enthusiasm from faculty and community physicians, the course was cancelled during 1983 because only a few students came.

Weinstein, who headed up the faculty for the course, speculated that it failed because many students may not admit the need to attend such a course. "You have to feel okay about not feeling okay to find a place to go for help," Rubenstone said. Others, Weinstein continued, may not have wanted to spend what may have been their only free afternoon in yet another course. Other faculty say the course simply "got the shaft" by the curriculum committee because of the time slot it designated for the course.

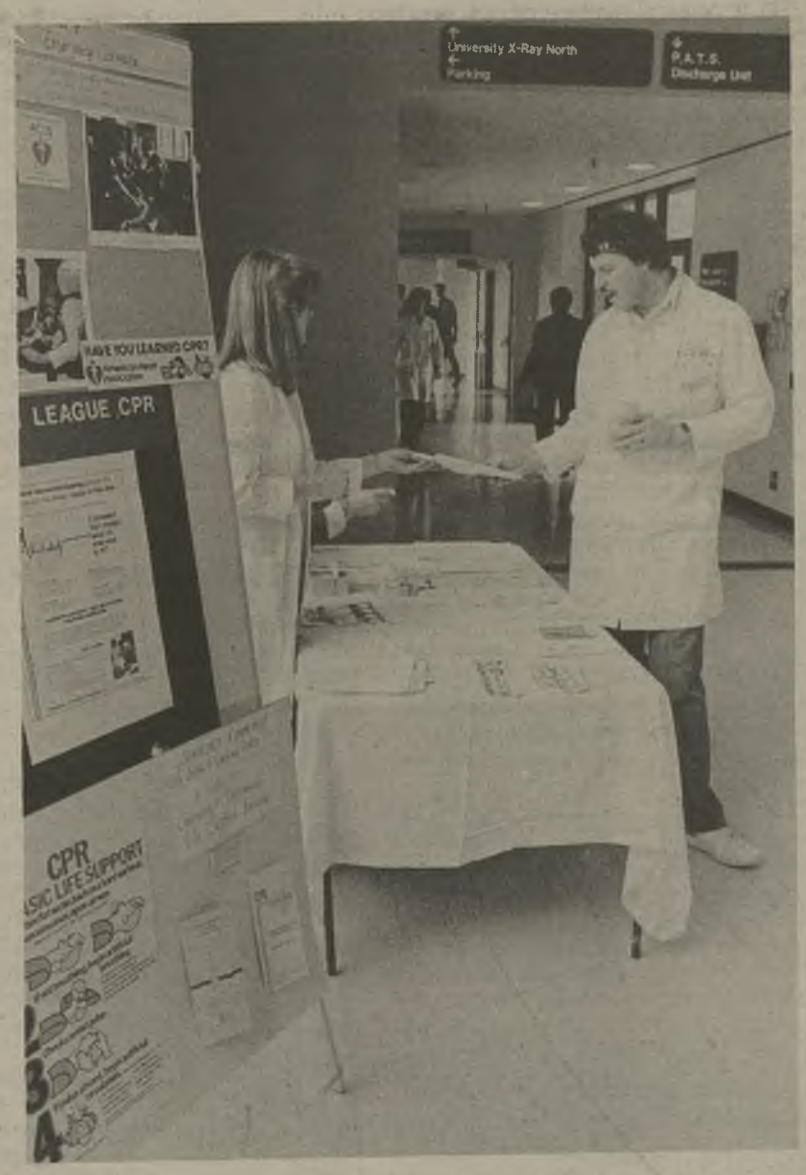
The faculty as a whole has just not committed itself to dealing with the emotional side of medical education," Weinstein said.

And while faculty and other physicians sympathetically listen to concerns with which students find themselves struggling, their response often begins with "When I was in medical school. . .," followed by a fond recollection of what at the time was a horror situation.

This attitude may be due in part to the fact that many physicians view the socialization process as somewhat of a hazing. The underlying thought seems to be if they could get through it and survive, so can today's students.

But is this the best way to experience medical education? Should students be taught to deny their feelings and be "tough"? The mere fact that physicians are now publically vocalizing their doubts about the process, which has never happened before, is a big step forward, said Dr. John Steward, associate dean of student affairs.

"Figuring out what to do to change the situation is not nearly as difficult as understanding the problem completely," Finkelstein added.



"If you learn to deal with your emotions and take care of yourself," McGee summed up, "you have a lot more to give to your patients and other people. And that is what being a doctor is all about."

Monday's lunchtime passersby were greeted outside the main cafeteria by a display courtesy of the Life Support Training Center.

Here, phlebotomy lab assistant Calvin Brodbeck pauses to chat and pick up some informational materials.

The center, which serves as a community and inhouse teaching ground for the basic techniques, cardiopulmonary resuscitation (CPR) and advanced cardiac life support (ACLS), is part of Stanford's department of emergency services.

This week's "promotional day" was staffed by Madolyn Kaminski of the center (left) and Ginger Beaman, chairman of the CPR project for the Junior League of Palo Alto. They handed out applications for upcoming classes and wallet cards on emergency CPR information. Posters and photos helped them explain what the training center is all about.

A dietitian's day: from teaching to taking complaints in stride

"Can I have Brie on my diet?" the patient asks. "I love Brie."

"Cheese is high in fat and calories," is the reply. "But if you want to reduce the number of eggs you eat, you could replace them with the cheese."

"How about more vegetables?"

"Vegetables are good, even though the cooked ones may have more calories than raw. You can have all the raw vegetables you want."

So goes a typical conversation that a patient on a low cholesterol or weight loss diet might have with Lillian Tanabe, one of 10 dietitians at Stanford University Hospital. Her day includes making nutritional assessments of patients, patient education, attending rounds with physicians, communicating orders with nursing staff, assisting patients with menus, and charting patient progress in medical records—to name a few activities.

Tanabe is responsible for the nutritional care of patients on West 1A, West 1B and the coronary care unit. About half are general surgery patients, and half are cardiology patients. She not only answers their questions about nutrition and any special diet their physician has ordered, but also helps them make that diet work.

"Many of our patients have acute medical and surgical problems. When we interview the patient, we may find even though the person is extremely overweight, this may not be the time to start a strict diet, particularly if there's lots of stress already. But we want patients to have as much knowledge as possible before leaving, about ways to meet their nutritional needs at home," Tanabe said.

"A person recovering from a heart attack, for example, needs to know how to decrease animal fats—cholesterol—how to decrease salt, and if overweight, to decrease calories," she said.

Tanabe has seen patients' attitudes about nutrition change during her 16 years at Stanford. "I think the media has increased people's understanding about nutrition. They know a little now; but many have lots of burning questions.

"They ask which are the better fats to use in cooking. We advise them to use a polyunsaturated oil, and to read the label when selecting margarines. The first ingredient listed should be a high polyunsaturated oil, and the margarine should not contain palm or coconut oil.

"They ask what foods to eliminate that are high in cholesterol. I advise using less fatty cuts of meat, and smaller portions. Three-to-four ounce servings of meat, less than half a pound, are sufficient," she said.

Tanabe's friendly and helpful manner is well known on the units. Jane Woeckener, assistant director of Dietetics, said the dietitian is "extremely dedicated to her patients and their individual care." Patient education, said Tanabe, is the best part of her job.

"I like to get the whole family involved," she said. "The husband and wife team is important. Many heart conditions, for example, can be inherited. And it's easier to get on a healthy diet if you start adjusting to it at a young age."

While Tanabe encourages patients to ask their nutrition questions, she takes the complaints in stride. "You have to understand that a patient may complain about the food or diet if he's under a lot of stress, or has just had some bad news. Sometimes, the medical news is just hard to take and that affects how a person feels about things like food."

"Sometimes, the medical news is hard to take and that affects how a person feels about things like food."

—Lillian Tanabe

Tanabe, right, chats with patient Susan Chapman about her diet plan.

If a patient complained about the taste of a new salt-free diet, would she just say, "You'll get used to it"?

"Oh, I wouldn't say that at all. There are seasonings available to spark up the taste. Or we could order more lemons for flavor. Also, there are products like unsalted ketchup, mustard and mayonnaise that can enhance flavors of food," she said.

Tanabe turns patients' complaints into opportunities to try new things. For a patient who loves cheese, she offers, "most cheese is made of whole milk, which makes it fatty. But you could look for those made partially of skim milk. Also, you could exchange one serving of egg for two more ounces of cheese each week."

Occasionally, Tanabe is willing to share her own experience if she feels it might benefit a patient who is apprehensive about surgery. She underwent a coronary bypass operation at Stanford a few years ago. "See," she says cheerfully, "I'm OK!"

Tanabe sets a good example for her patients in other ways too. Though she admits jogging isn't her thing, she does daily exercises to keep in shape, and is particularly interested now in aerobic dancing.

Another interest is in her Japanese heritage. "After my first visit to relatives in Japan, I promised I wouldn't be back until I learned the language," she said. Last October she made the second trip, with a fair command of the language.

Born and raised in Hawaii, Tanabe did undergraduate work in institutional management of dietetics at the University of Hawaii. She left the island to serve a dietetics internship at Ancker Hospital in St. Paul, Minn., where her sister was a nursing student.

She returned to California ("it's closer to Hawaii") to become a therapeutic dietitian at Sonoma County Hospital in Santa Rosa and then chief dietitian at Kaiser Foundation Hospital in Walnut Creek. She joined Stanford in 1966.

Tanabe likes Stanford for its variety and quality. "You can't get stale here; there are always new challenges as part of a team with some of the best physicians, professors, nurses and staff."

What would she like to see changed? Space! "Like everyone, we need more room, especially for teaching," she said. "We'd like to do group teaching of patients, but that's not possible now. And we'd also like to expand teaching into the community."

—Barbara Battino

Health care workshop to explore cultural diversities

A multicultural health care workshop will be presented Saturday, March 26, by Stanford's division of family medicine and the South Bay Area Health Education Center (AHEC).

The workshop, developed by medical anthropologist and lecturer Elois Ann Berlin, Ph.D., is designed to enhance the skills of primary health care providers in the delivery of culturally sensitive health care.

The morning session will focus on the ways in which the health beliefs and practices of Southeast Asian refugees are relevant to health care delivery. The session will be followed by a catered Vietnamese luncheon.

In the afternoon, discussion will center around the influence of the Hispanic population's health behavior and belief systems on health care. The workshop, which will run from 8:30 a.m. till 5:30 p.m. in room 204, CERAS Hall, main campus, concludes with a Fiesta and live Latin music.

The workshop is an extension of the multicultural clinical teaching program initiated in the fall of 1982. It will accent an appreciation of the refugee and migrant experience, the transition to U.S. lifestyle, and the ways in which minorities are perceived.

Faculty include Dr. William Fowkes, Jr., chief and associate professor in family medicine; Dr. Thuan Duong, a resident at the San Jose Health Center; Virginia Fowkes, F.N.P., M.H.S., director of the Primary Care Associate Program; Berlin; Dr. Count Gibson, professor and chairman of the Department of Family, Community, and Preventive Medicine; Marita Grudzen, preceptorship coordinator in family medicine; Dr. Carlos Inocencio, a resident at the San Jose Health Center; and Dr. Gene Levitz, community physician.

Also Leona McGann, M.S.W., M.P.H., assistant professor in family medicine; Dr. John Radebaugh, clinical associate professor in family medicine; Dr. Eleanor Segal, lecturer in family medicine; Ruth Stark, F.N.P., M.H.S., director of the Women's Health Care Training Project; and Esperanza Garcia Walters, R.N., M.P.H., director of the South Bay AHEC. The musicians and caterers will also share their experiences with participants.

The workshop is approved for continuing medical education credit through Stanford's office of postgraduate medical education. A registration fee includes educational materials and lunch.

Pre-registration is required. For further information and to register, call 497-7284.

Construction Corner

C.T. Scanner: Renovation of rooms P1029 and P1031 is now in progress in order to accommodate a new C.T. scanner for the Department of Radiology. The new model, which will replace an existing older model, will provide improved imaging for head scans. The area under construction should be completed by April 27.

Gordon MacLachlan and Erik Lund of the SUMC facilities/projects office are coordinating the work.

Edwards Renovation: Twenty-six hundred square feet of office space on the second floor of the Edwards Building are now being renovated for the Department of Surgery. Upon completion of construction May 30, the area will contain two laboratories, a tissue culture room, and the main departmental offices.

Wells Hoeltje is project manager and Gordon MacLachlan is construction coordinator.

O.R. Office Area: Phase I offices of the Operating Room Services Department are in the process of being expanded and remodeled. Upon completion May 1, the project will provide additional administrative offices, a computer terminal room, and a conference room. The office areas will be occupied by the director, the assistant clinical nursing coordinators, the business manager, the schedulers, secretary and receptionist.

Phillip Eubanks and Norm Berge are the SUMC facilities team assigned to the project.

Sycamore Trees Relocation: Sycamore trees in the parking lot south of the Sherman Fairchild Auditorium will be relocated soon to a designated area in the medium of Campus Drive. According to Gene Kershner of the University facilities office, the trees will have a better chance of survival if moved now while in their dormant stage. The trees are being displaced by the Research Animal Facility building which is scheduled for construction this summer.

Boswell Clinics Renovation Update: The contractor has completed placement of the steel columns and decking for the project and has removed the crane from the site. According to project manager Erik Lund, the impact of the crane at the entrance to the Medical Center was minimized by the planning and cooperation of the staff of the SUH facilities protection/security department.

While welding activities and placement of the metal decking continue on the exterior of the building, the demolition phase is under way on the interior south side of the first floor. Completion of the new exterior balconies is scheduled for mid-June of this year.

South Parking Lot Improvement: According to Kershner, the project to improve the medical center's south parking lot (at the corner of Campus Drive and Panama Street) is scheduled to begin around April 1 and be completed by July 1.

Kershner reported, "The south parking lot job will eliminate the current shortfall of approximately 100 spaces in the area, provide replacement for those spaces lost to the Research Animal Facility phase I construction yard, and provide a modest 'overage' of approximately 100 spaces."

Temporary Redesignation of Lot "R" Parking: Due to construction needs of the Cardiovascular Building project, a temporary loss of approximately 33 parking slots will occur in that area. On a temporary basis, therefore, the "A" parking slots adjacent to the Phase I building have been designated as evening shift "C" parking. Additional parking slots have been designated from the visitor pay parking lot as replacement "A" parking.

When the parking slots have been returned to the Hospital's control, they will revert to their previous designations.

Editor's Note: Watch future *Construction Corners* for updates on the plans and progress of projects affecting the physical facilities of the medical center.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MARCH 16

Hematology Patient and Family Support Group: First session 10:30 a.m. till noon, TF122c. To be held again on subsequent Wednesdays. Facilitators will be Phyllis Burton, R.N., B.S.N., and Dr. John Ruarke. For further information or referrals, call the Hematology Clinic at 497-6961.

Progress in Medicine Lecture: "Who Suffers More—The Health Care Team or the Family?" Panel discussion by Dr. James Silverman, Dr. Thomas Raffin, Jean Bronstein, R.N., and Aaron Smith, M.P.H., L.C.S.W. Fifth of a six-part public series on the progress and ethical dilemmas of intensive care. 7:30 p.m., Fairchild Auditorium.

Dept. of Medical Microbiology Seminar: "A New Mechanism for Sensitivity in Biological Regulation"—Dr. Daniel Koshland, Jr. (UC Berkeley). 1:15 p.m., M114.

Office of Postgraduate Medical Education 38th Course of Lane Medical Lectures: "From Viruses to Chromatin"—Dr. Aaron Klug. 5 till 6:15 p.m., Fairchild Auditorium.

Dept. of Biochemistry Seminar: "Molecular Analysis of the Antennapedia Complex of *Drosophila*"—Dr. Matthew Scott (Indiana University). Noon, M316.

THURSDAY, MARCH 17

Dept. of Biochemistry Seminar: "Expression, Mutagenesis, and Transport of Viral Membrane Proteins"—Dr. John Rose (Salk Institute). Noon, M114.

Dept. of Surgical Pathology Conference: "Diagnosis and Immunochemical Analysis of Endocrine Tumors"—Dr. P. Heitz (Basel Univ., Switzerland). 8 a.m., L201.

Dept. of Medicine Grand Rounds: "Autoimmunity and the State of Medical Theory"—Dr. Halsted Holman. 8:30 a.m., Fairchild Auditorium.

FRIDAY, MARCH 18

Dept. of Pediatrics Grand Rounds: "Hyperviscosity Syndrome of Newborns"—Dr. David Stevenson. 8 a.m., M106.

Dept. of Gynecology and Obstetrics Grand Rounds: "Modern Approaches to Prenatal Diagnosis of Hemoglobinopathies"—Dr. Stephen Embury (UCSF). 8 a.m., A336.

SATURDAY, MARCH 19

Children's Health Faire at Stanford Shopping Center: Stations will be set up to represent and introduce specialty health services at SUH, Children's Hospital at Stanford, and within the community. 10 a.m. till 5 p.m.

MONDAY, MARCH 21

Nursing Educational Services Critical Care Course, Level I: "Selected Topics in Medical-Surgical Critical Care." 8 a.m. till 4:30 p.m., Faber Auditorium, Children's Hospital at Stanford. Call Carole Kidder for further information at 497-6366.

Dept. of Gynecology and Obstetrics REI Conference: "Amenorrhea and the Hypothalamus"—Dr. Rifaat Salem. 8 a.m., A336.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Hearing Aid and Earmold Technology"—Earl Schubert, Ph.D. 7:30 a.m., R117.

WEDNESDAY, MARCH 23

Div. of Orthopedic Surgery Grand Rounds: "Paget's Disease"—Dr. Marjorie Oda. 8:30 a.m., M114.

Dept. of Genetics Seminar: "Immunoglobulin Transcription is Activated by Downstream Sequence Elements"—Dr. Cary Queen (National Cancer Institute). 4 p.m., M114.

MARCH 23-25

Nursing Educational Services and Perinatal Nursing Region of Stanford Hospital Symposium: "Advanced Perinatal Concepts." Room 270, Tresidder Union. Registration limited. For further information, call Carole Kidder at 497-6366.

Dept. of Surgical Pathology Conference: "Current Concepts in Surgical Pathology." 6 a.m. till 6 p.m., Fairchild Auditorium. For further information, call 497-7211.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Study on effects of space travel seeks healthy earthling volunteers

Healthy men and women aged 30 to 50 are needed to participate in a study relating to space travel and blood pressure regulation in Stanford's department of endocrinology.

According to postdoctoral fellow Michael Ash, astronauts, upon returning to the earth's gravity after a period of weightlessness, may experience a fall in blood pressure when they stand upright.

"We are conducting studies in which volunteers sit in a warm pool, followed by a day of bed rest, to simulate the effect of weightlessness," he said. When participants arise, researchers will monitor pulse, blood pressure and blood chemistry, while testing ways to anticipate and prevent low blood pressure.

Volunteers will spend 48 hours in the study, conducted at SUH and affiliated facilities. They will receive, free of charge, a complete physical examination and laboratory test screenings.

Subjects are needed beginning March 21. For further information or to volunteer, call 497-6675 between 8:30 a.m. and 5 p.m.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

...News Notes...

The Medical Center's office of public events reports that community and in-house use of the SUMC tour program has shown increase over the past two years since its inception.

"Indicative of the varied audiences that the center attracts is the expectant mother population," stated Michael Cowan, office director. "We are scheduling 144 couples per month for tours of the delivery suite."

Other groups which have participated in tours in significant numbers include patients and their families, SUMC employees, medical and other students, American and foreign physicians, Bay Area hospital groups, Stanford University groups, donors, administrators, Auxiliary members, Hospital Board members, adult education classes, and many more.

In the first year ending February 1982 there were a total of 136 tours with 967 visitors. For the second year there were 188 tours accommodating 1,748 visitors.

For information regarding the SUMC tour program, call the office of public events at 497-6389.

In last week's **Memo**, *we neglected to mention that the department of emergency services will be among the several SUH display participants in the March 19 children's health faire at Stanford shopping center. Everyone is invited to attend; bring the kids!*

SOVIET VISITORS TO THE U.S.

Taksar tells how Soviets control profs visiting U.S.

The author of the following article was born in Moscow, graduated from Moscow University in mathematics in 1971, then worked as a junior researcher in mathematics with the Soviet Academy of Science for six years. Fired from this position because of his desire to emigrate, he then worked for a year with the Institute of Emergency Aid. After immigration, he obtained his Ph.D. at Cornell in 1979, when he joined the Stanford faculty as an assistant professor of operations research.

By Michael Taksar

Last year the Stanford administration informed the U.S. National Academy of Sciences the University would not enforce State Department restrictions on a proposed visit to the U.S. by Nickolay Umnov, a Soviet expert on robotics. Ultimately Umnov did not come to the U.S.

While the State Department is attempting to protect national interests, the Stanford administration claims to protect the free and open exchange of scientific information, a benefit not only to the scientific community but the country as a whole.

However good these principles are, they will not much help the true reciprocity of scientific exchange. Before deciding the principles of free scientific exchange, a prior question should be asked: "Whom should the University fight for?"

The selection process in the Soviet Union for visiting abroad is completely different from that of the U.S. In most cases the Soviet scholars visiting the U.S. are chosen on the basis of anything but their scientific credentials. One cannot deal with the Soviet visitors on the same basis as with visitors from Sweden or Italy.

Before applying good principles the University must be sure that they are applied to a true scientist. During the Umnov dispute, nobody on either side asked the questions: "What kind of scientist is Dr. Umnov, how can his visit benefit scientific exchange?"

Previous discussions reveal a lack of basic information about the way the Soviets[1] select scientists going abroad.

In contrast to the U.S., science in the USSR is not concentrated at the universities and colleges but mainly at Research Institutes. These institutes employ the major part of scientific equipment and scientists of the country.

Many research institutes have councils endowed with the right to approve dissertations for doctoral degrees the same way as in the universities.[2] Research Institutes are the arm of the USSR Academy of Sciences, and there are hundreds of them under different ministries and State Committees.

Educational[3] and research institutions in the USSR have two very significant nonscientific departments: the local Communist Party Committee, called the Party Bureau, and the First Department. The primary responsibility of the local Party Committee is to carry out the politics of the Party inside the institute, to control the ideological level of the staff, to maintain the required level of political propaganda, etc.

The First Department is a watchdog for the KGB. The primary goal of the First Department is to maintain and control the use of classified documentation, but it also has different responsibilities such as monitoring personnel related to classified projects. They ensure that these researchers have no contacts with foreigners, whether orally or in writing.

Scholars who go abroad are considered to be fulfilling a Party and government assignment; they are on missions as representatives of the socialist state. To be considered for the mission, a scholar must describe the applicant's political, business and social qualities and must necessarily contain a sacramental phrase: "The applicant is politically literate and morally stable." This is a euphemism meaning that the applicant will not be likely to defect, knows how to answer "slippery" political questions, and is not prone to having an affair during a visit abroad.

Before obtaining such a character review one is interviewed by the Party Bureau. The character review should be endorsed by the head of the First Department, which indicates that the KGB does not have obvious grudges against the applicant. After that the applicant may appear before the District Party Committee for additional interviews and endorsement.

An additional interview at the level of the Central Committee of a Republic is required for scholars visiting capitalist countries for the first time. Together with the application for going abroad and a bundle of other documents (e.g., a copy of marriage license, records from the place of living, and medical records[4], etc.), the character review goes to the Department of External Relations[5] (UVS) of the USSR Academy of Sciences, where the initial screening is conducted.

UVS handles all contacts of the USSR Academy of Sciences with foreign scientists, whether inside or outside the Soviet Union. The department is a branch of the KGB. It has several hundred employees, most of whom are active or retired KGB officers. The chief of the department, Stepan Korneyev, is a KGB general (not a colonel as reported in the **Stanford Daily**), a colorful figure well known in academic circles. UVS has the right to ban any scientist from participation at any conference abroad and even from a domestic conference attended by foreigners.

The application for going abroad along with the other documents are subject to several screening stages. The lower stages are done by UVS but the subsequent stages are done by superior levels of the KGB. The final decision is made by a special top secret Exit Commission, which consists of representatives of the KGB, the Central Committee of Communist Party, State Ministries, etc.

There are many criteria for screening. The first is ideological reliability. Next, all close relatives and in-laws are checked to see whether any are abroad, were repressed by the regime, have Jewish blood and so on. Should there be Jewish blood in the veins of the applicant or his relatives, or should other negative factors be revealed, these are offset against positive factors like being a member of a Party Bureau, writing denunciations of his colleagues, etc. *[Taksar is Jewish.—Editor]*

Everybody who is granted permission to leave the USSR is given instructions to beware of provocations, not to speak with strangers in the streets, not to sit with strangers at a table in restaurants, to change compartments of a train rather than to share it with a member of the opposite sex,[6] and so on. Those who go on a mission (i.e., to a Congress or a conference) sign in addition the form[7] reproduced here without abbreviation. *(See below.)*

Given the knowledge of the selection process in the USSR, it is no surprise that nine out of every 10 visitors to foreign conferences are Party members, and that most of these visitors are colorless figures unknown to the scientific community.

As for capitalist countries, I do not doubt that barely two or three percent visiting them are noncommunists. Therefore 50 to one is just a fair bet that Dr. Umnov is a communist, as well as any other Soviet visitor whom Stanford hosts or hosted in the past.

Two years ago a group of six scientists came to Stanford from my former institute. I knew all of them either directly or by names. All were communists and at least two out of six were members of the Party Bureau.[9] And all of them but one person were absolutely unknown to anybody whom they visited here.

If a real scientist receives an invitation to a foreign conference, his chances to attend it are almost negligible. UVS cuts nine out of every 10 requests even before a thorough screening. It is not a private matter for a Soviet citizen to participate in a foreign conference.

The best a real scientist can expect is that in a very exceptional case the administration at his place of work decides to support his request and solicit on his behalf in front of the higher authorities, trying to persuade them that the visit abroad of the scientist in question will benefit the institution and the Soviet State.

Visits abroad are so rare in the Soviet community that they are considered a very high privilege which is awarded by communist authorities for distinguished loyal and faithful services.[10] In most cases these services have nothing to do with scientific achievements and that is one more reason why one sees so few real scientists visit the U.S.

At the latest International Congress of Mathematicians in Helsinki, Dr. Margulis from the USSR was to be awarded a Fields Medal, the award often called the Nobel Prize for mathematicians. He was only the second in the USSR to receive this prize. He requested permission to go to the congress and it was denied.

Being a noncommunist, and a Jew in addition, made him an unacceptable figure in a delegation to a capitalist country. And last but not least: he obviously had no merits in the eyes of the communist authorities to award him a trip to a capitalist country. Recently Dr. Arnold from Moscow was awarded the Crawford prize, but he was not allowed to go to Sweden to receive this prize, presumably for the same reasons as Dr. Margulis.

Leakage of information and universities

A natural question arises: why do Soviets want to maintain scientific contacts if they are not eager to send abroad the most qualified persons? It would be much simpler to reward faithful servants by sending them abroad on a tourist trip.

One benefit is certainly propaganda, which the Communist Party has always valued very highly. It is very important that political propaganda be conducted in a private and unofficial atmosphere.

The second is technological espionage. The latter is not very secret in the USSR. A prominent Soviet journalist, Mark Popovsky, who had worked for more than 30 years covering scientific issues in magazines and who had published dozens of books about scientists, wrote a book titled **Why a Scientist Needs Conscience**.

There he, in particular, advocated free scientific contacts with foreign scholars. After he submitted his book to Znanie publishing house, which specializes in popular scientific literature, he was summoned by the director, Colonel Marinov. Marinov demanded all mention of free contacts to be excluded from the book, adding:

"The Central Committee held a conference for propagandists and told us straight out: the whole purpose of scientific contacts with the West is to get as much from them and give them as little us we can.

"Of course we need some Western discoveries and technology, but we have no intention of cooperation fair and square with them. Do you understand? No rose-colored spectacles, they told us: don't let the wool be pulled over your eyes. And here you go writing about the necessity and inevitability of free contacts."[11]

Instructions for scientists traveling abroad

"APPROVED"

Academician-Secretary of the Department of Biochemistry, Biophysics and the Chemistry of Physiologically Active Combinations of the Academy of Sciences of the USSR,
Academician

_____ A. A. Bayev

_____ 1978

Scientific-Technical Assignment

To the scientific employee of laboratory.....of the Institute.....of the Academy of Sciences of the USSR, /grade-rank/ /position/ /Name: Last, First, Patronymic/ departing for /country/

1. To participate in the work of /Name of Symposium, Colloquium/ in the city of _____ from /date/ to /date/
2. In conversations with foreign scientists propagate widely the achievements of Soviet science and the successes of socialist construction in the USSR, the peaceable policy of our government, and the resolutions of the XXV Congress of the CPSU.
3. Explain and popularize the ideas of the new Constitution of the USSR, and should the question of "human rights" be brought up, adhere to our principal policies as these are set forth in our central press organs.
4. In speeches and conversations abide only by those facts which have been published in our open press and have been authorized for publication abroad.
5. Inform the Soviet Embassy about your arrival in /country/ and about all subsequent movements within that country.
6. Should you be asked to appear on radio or television, or to write an article in the local press, you must coordinate with the Soviet Embassy.
7. Upon return home, within two weeks submit a report on your mission to the UNSS[8] of the Academy of Sciences of the USSR.

Acting Director of the Institute of
the Academy of Sciences of the USSR: /signature/

Taksar...

continued from page 16

Similar, though slightly different in form, are revelations I occasionally heard myself from Party propagandists, who regularly visited the Academic Institutes to disseminate and advocate the politics of the Central Committee of CPSU. Usually they added Lenin's well known and most commonly cited phrase: "Capitalists are useful idiots. They will sell us the rope on which we will hang them," thus emphasizing once more that the politics of the party is in full accordance with the legacy of the Great Proletarian Helmsman.

It comes as no surprise that American scholars admitted to the USSR by exchange programs study Pushkin's poetry and Church-Slavonic language, while Soviets send in exchange specialists in high technology. Not the specialists with whom Americans can cooperate and engage in scientific exchange, but the ones who only have enough knowledge to find out what deserves stealing.

The amount of stolen Western technology in the USSR is immense. The most popular series of Soviet computers, RYAD, and the latest series ELBRUS are the versions of stolen IBM 360s and British Burroughs. A large army of researchers works trying to digest the stolen technology. For example, a huge Moscow institute, NIICEEVT (acronym for Scientific Research Institute for Digital Electronic Technology), is engaged entirely in digesting stolen Western software and accommodating it to Soviet computers, and not without successes.

But NIICEEVT is only the tip of an iceberg, the main part of which is the series of highly classified institutions dealing with stolen software and hardware. The largest achievement in this area is the recent construction of a computer chip factory, which is working on stolen technology. For four years the USSR has been stealing and illegally buying through dummy faces and companies the technological machinery for completely equipping the factory.

It is not hard for Soviets to steal technological secrets and equipment, and with American carelessness, stealing technology is a simple exercise for novices. The real problem is to find out what deserves attention. With this respect the American universities are really a bonanza for Soviet agents. This is what should be kept in mind while speaking about leakage of information through universities. Concentration of research combined with open atmosphere and willingness to cooperate makes the work of Soviet agents relatively simple.

What can be done?

The position of Stanford's administration in Dr. Umnov's case can be summarized as follows:[12] the reciprocity of scientific exchange in Umnov's case is guaranteed by

a) the desire of a professor from the School of Engineering to host Dr. Umnov because this faculty member had met Dr. Umnov occasionally at conferences.

b) the National Academy of Sciences recommended Dr. Umnov for the visit.

[In his talk at Bechtel International Center Feb. 12, 1982, Vice Provost Gerald Lieberman said, in part: "We believe that the best interests of U.S. science and technology, and therefore, the national security, are met through open and free scientific exchanges.

"We assume that any scientific exchange is based on a reciprocity of scientific information. If all the information is flowing in one direction this is not a genuine exchange, and such programs should be called into question.

"Further, if visiting scholars are "agents" in disguise, it is the responsibility of the State Department to prohibit their entry into this country rather than ask universities to restrict the flow of information."—Editor]

In order to assess Umnov's contribution to science, I looked through the review journal **Mekhanika** for the last five years. This Soviet journal reviews all Russian publications in Mechanics, as well as the publications of Soviet authors abroad.

I could find only one paper of about 10 pages by Dr. Umnov written without coauthors,[13] and nothing, even the papers with coauthors, was published in refereed magazines. A half-hour computerized literature search revealed that all of Dr. Umnov's presentations at the conferences were made with coauthors, but what is more: there were no citations in the literature of Dr. Umnov's works for the last 12 years. *[Prof. Bernard Roth, Umnov's prospective host, told Northern California science writers March 10, 1982, that Umnov was "not a big player in the world of robotics."—Editor]*

Judging by all this, I can assume that there is no scholar at Stanford who would have been interested in exchange with the proposed Soviet visitor except maybe for one person from the School of Engineering.

I contacted the department in the NAS responsible for USSR-U.S. scientific exchange. According to Lawrence Mitchell, the staff director of USA-Eastern European exchange program, the NAS has nothing to do with verifications of scientific credentials of the proposed visitors. NAS accepts all the names selected by the Soviet Academy of Science (or to be more precise—by KGB) and forwards them to the universities.

Mitchell said that the NAS does not customarily verify the scientific value of the proposed visitors and relies completely on the authority of universities. Being asked if he remembered at least one "non-customary" occasion on which the NAS verified the scientific credentials of a Soviet scholar, Mitchell answered no. So, NAS recommendation does nothing to guarantee reciprocity.

NAS blindly accepts whoever is sent to them by the Soviet Union. The University blindly accepts whoever is proposed by NAS. Each one points to the authority of the other, thinking that the other guy does the job. Nothing but disgrace results for both the NAS and the University, but definitely more for the latter because nobody else but the University eventually swallows the Soviet garbage shipped under the label "Scientific Exchange."

In Umnov's case we have at least one faculty member who presumably visited Umnov in Moscow and is eager now to host him at Stanford. But let me point to another example which clearly illustrates the University's approach to reciprocity and true scientific exchange.

A year or two ago, a Soviet scholar from Kiev, Mikhail Moklyachuk, visited via an exchange program the Department of Statistics. Nobody knew either his name or his work and I was even asked once if I had ever heard of him in the USSR.

Moklyachuk wrote in his application that he would like to work with Prof. (Rudy) Kalman, however after arrival he did not make an attempt to do so. He became famous for his parties with a lot of vodka and caviar; that did not make his research of more value and interest to Stanford faculty.

Presumably Moklyachuk made a faux pas because all of a sudden, in the middle of his visit, the Soviets demanded that he return home in 24 hours. He abruptly left Stanford, not being able to even pick up all of his belongings or say good-bye. He told one member of the faculty that his mother was ill, another was told that his wife was ill; later in his letters Moklyachuk adhered to the version of a sick mother.

I still cannot conceive what kind of idea guided one of the best Statistics Departments in the nation to accept a visitor whom nobody was familiar with and whose works nobody had heard of. Did anybody from the University (and the Statistics Department in particular) check on what basis the International Research Exchange Board, by which Moklyachuk was proposed, selected applicants from the Soviet Union? *[According to Prof. Bradley Efron, the Statistics Department has an "open door" policy to visitors from all countries. Moklyachuk received no financial support from the department.—Editor]*

It appears that IREX has the same guiding "principles" as the NAS. It is remarkable how the University, which is concerned about its prestige and reputation in all aspects of its life, becomes so insensitive when it comes to the quality of Soviet visitors.

Let me remind everybody that the campaign by the University for free access by Soviet visitors to American research is conducted at a time when the Soviet Union has started a new wave of crackdowns on dissident scientists whose only guilt is fighting for human rights. A physicist, Yuri Orlov, is still detained in a concentration camp on charges of anti-Soviet propaganda. A computer scientist, Anatoly Shcharansky, is now dying in jail. The Nobel prize winner academician Andrei Sakharov was banished into internal exile without any judicial procedure. Recently, he was subjected to a brutal attack of KGB agents. Most of his documents were stolen, including an almost completed 500 page work on the origin of the universe.

To list all the persecutions of dissident scientists by the communist regime would require dozens of pages. Many conscientious scientists in the U.S. and in Western Europe, being concerned about the fate of their persecuted colleagues, organized a group called Scientists for Sakharov, Orlov, and Shcharansky (SOS). They realized the impossibility of having a meaningful scientific exchange program without guaranteeing the rights of the scientists both as scientists and as human beings. The SOS committee pleaded to all scientists to sign a moratorium pledge on contacts with the Soviet Union unless it stops persecuting their colleagues.

Unfortunately, whether to make scientific contacts conditional upon the brutality of an oppressive regime somewhere on the other side of the globe is a matter of conscience and therefore is a very subjective thing. Everybody has different opinions on this.

But the **quality** of such contacts is something that everyone at Stanford—from those who actively participate in the SOS committee to those who have never heard about it—values. If Stanford **really cares** about scientific exchange and cooperation it must follow a simple and rigid policy: no Soviet visitor is invited to Stanford unless he is a proven scholar in his field, whose contribution to science is undoubtful, and whose work Stanford researchers are familiar with and interested in.

Otherwise any proposed visitor, whether sent alone or as a member of a delegation, should be rejected without hesitation and with clear explanation that this is done on the basis of the low scientific quality of the applicant. No official delegations of scientific nonentities should be tolerated, whether forwarded by NAS or IREX.

And each case when a scientific nonentity is sent to Stanford by an exchange program should be made public as should the names of those scientists whom Stanford would like to see as guests and who were not allowed to come.

If our statisticians had expressed publicly how they were satisfied with their Soviet visitor, no doubt the next time the Soviets would think twice before sending Stanford a visitor of similar quality. There is one thing that the Soviets are very sensitive to: publicity.

For instance, when the case of Dr. Margulis was widely publicized by the international mathematical community, the Soviets backed off. They later allowed him to go to Bonn alone for two months by invitation of his German colleagues, a privilege otherwise reserved for a very distinguished member of the Communist Party.

The policy of inviting and accepting only real scholars not only will benefit the true reciprocity of scientific exchange, but it will help national security **more** than any government-university cooperative programs. And this is the **main message** to the Stanford community.

Stanford cannot and should not police every step of its visitors. But it can and should see to it that in each **particular** case the quality of those whom it accepts corresponds to the high standards of one of America's finest universities.

Here is where the solution to all the problems lie, including national security. The problem lies in that most of the real scientists are not ideologically reliable from the Soviet point of view, and they do not want to cooperate with the KGB in stealing Western technology. That is why one sees so few of them visiting America.[14] A firm and widely publicized policy of accepting only proven scholars will eventually open the doors for those like Dr. Margulis. Moreover, it will virtually eliminate the leakage of information through universities.

I do not want to mislead anyone, by claiming that there are no corrupt men even among the best Soviet scientists. Certainly there are, but the percentage is very small, it is almost negligible. By the same token there were few real scientists in the Third Reich corrupted by the Nazi regime.

No doubt everybody from the Soviet Union, even a true scholar, if he gets permission to visit the U.S., will sign first the assignment such as the one presented above; and nobody would ever dare to break such a contract unless he is eager to ruin his career in one day.

But in the case of a real scientist there will be at least a hope for a sort of scientific exchange and cooperation. Otherwise, if Stanford follows its present shameful policy of swallowing whatever the KGB selects, there will be no hope. I can guarantee that any colorless and scientifically unknown figure in a Soviet delegation is either an agent or a Party bureaucrat in science rewarded for his loyal services by the trip to America.

The proposed policy of accepting only proven scholars is not something new to the American scientific community. In April of 1981 the chairman of the SOS committee, Morris Prepstein, a physicist from Berkeley, visited Stanford and participated in public debates over Soviet policy. He told us that long before the organized boycott was suggested, a policy of dealing only with recognized Soviet scientists had been proposed in a letter of British and American physicists to **Nature** magazine.

Infuriated by the absence of all invited speakers to international conferences and by the fact that all Soviet delegations consisted of unknown colorless people, many of whom were even ignorant of physics, the British and American scientists protested and asked everyone not to deal with official Soviet representatives unless they are known specialists in their field.

Unfortunately, this letter never found resonance among American scientists. If it had, the question of information leakage **through universities** never would have arisen.

Notes

[1] Not Russians. To call the Soviet Union "Russia" and the citizens of the USSR "Russians" is no more legitimate than calling the U.S. "the Royal American Colonies" and Americans "Anglo-Saxons." Russians constitute barely 50 percent of the total population of the USSR.

[2] The final award of scientific degrees is centralized and done by a specially created and very rigidly controlled government institution: Superior Certification Commission.

[3] What is called "academic" in the U.S. is called "educational" in the USSR, while "academic" is used in relation to the Academy of Sciences.

[4] Before the middle of the 1970s, the applicant needed also to present the statement from the psychiatrist that he was not mentally ill and was not under psychiatric treatment of any sort.

[5] The word-for-word translation of this department's name is "The Management for External Affairs."

[6] The official Soviet ideology cannot admit that a Soviet citizen can be "morally unstable" with a member of the same sex. As a matter of fact, homosexuality is a criminal offense subject to up to 10 years imprisonment.

Black students voice concerns on curriculum, professorship board, ASSU

continued from page 1

that we raise our concerns now," they added. The School has 31 tenured and seven nontenured faculty.

At a news conference Wednesday, March 9, BSU Chairperson Rhonda Trotter said "we do not have anything personally against Greenberg and Chambers" and "no problems with the content of the course."

Other BSU speakers said the GPB should have helped fund a series of African history courses jointly sponsored by the African and Afro-American studies program and the Stanford Workshops on Social and Political Issues (SWOPSI).

European and American universities "have institutionalized a false history and are now becoming further entrenched in that falsehood with Western culture requirements," Granville Simmons of the BSU said.

Enrollment in the course started at 20 and has diminished, partly because of the pressure resulting from the 15-unit Western culture sequences and other course requirements, he said. It is taught by Irvin Brown.

Vincent Johnson of the BSU said that the School of Humanities and Sciences had given an "arrogant response" to a request for helping fund the course, and shown a "total disregard" for the academic concerns of black students.

BALSA's leaders said the Guest Professorship Board had avoided consideration of funding the BSU proposal for eight months "with no adequate explanation for the delay." Linfield replied that the course had been funded through SWOPSI and the Academic Organization Board.

He noted that four of the nine guest professorships sponsored by GPB in the past have come from minority backgrounds, as did two of the four proposed this year—Chambers and Elaine Jones, the NAACP Legal Defense Fund's chief lobbyist. "Serious negotiations" are in progress for Alex Haley to teach under GPB auspices next year, he added.

According to Linfield, the GPB standards for selection of guest professors must be "an adequate scholar" as judged by other scholars in the field; "widely recognized for her achievements"; and "possessed of sufficient pedagogic ability to convey her expertise to her students." The course must receive departmental accreditation, be "academically rigorous. . . commensurate in benefit and burden with a typical University course," and be likely to attract 150 or more students.

Linfield said Greenberg first came to the GPB's attention when students scanned lists of award winners and noted he had received the Granville Clark prize in 1978. No students expressed opposition to Greenberg and Chambers when their names were included in a list of proposed guest professors last fall, and one black was among those voting 10-2 in favor of funding the course Feb. 22.

The controversy is the second to erupt this year over guest professorship selection. The Student Senate voted approval of former Rep. Pete McCloskey's proposed course on Congressional politics 11-5, despite concerns expressed by some students over his views. The margin was one more than the required two-thirds majority for GPB funding.

As many as 800 may seek to enroll in McCloskey's course, which will be limited to 250, Linfield said. The GPB feels strongly that student groups should not have "censorship rights" in selecting professors.

At the BSU news conference, David Porter, BSU treasurer and a member of the Student Senate, criticized the Senate's failure to authorize BSU's inclusion among fee assessments authorized for a student ballot later this year. While backed by a 10-3 margin, the measure fell one vote short of the total needed under ASSU rules.

Individuals at the news conference expressed confidence that the fee assessment would be placed on the ballot as a result of petitions signed by 2300 students, or 20 per cent of those enrolled, as provided by ASSU.

Asked if she felt the campus climate toward blacks was becoming "hostile," BSU Chairperson Trotter replied "yes." She cited improvements needed in the black theme house, Ujamaa; the African course controversy; minority student and faculty concerns; and non-recognition of black fraternities as specific concerns.

The University "has not come to the position where it should be," she said.

Asked if she could foresee any conditions under which Greenberg and Chambers might teach at Stanford, she said she personally felt this might happen when there was "drastic improvement in faculty tenure for minorities."

An underlying theme in many black comments was concern for greater consultation and involvement of blacks in curricular concerns affecting their interests.

[12] *Presented by the vice-provost at a public discussion at the Bechtel International Center.*

[13] *There is a widespread form of scientific bribery in the USSR: the subordinate includes his boss as coauthor of the article. In most places this is even a form of compulsory "taxation." That is why, when a Soviet head of a division has many coauthored publications, this raises a lot of suspicions in their authenticity.*

[14] *Everyone can conduct a simple experiment: Look for 15-20 Soviet scholars you consider to be the major contributors in your own field and then see how many of them have been seen at the international conferences, especially those held in the West, or coming to the West by exchange programs.*

Space age shuffleboard at Stanford

Hy Tran, Stanford graduate student in mechanical engineering, watches a test run of a scaled down, computerized version of shuffleboard. Developed for Prof. Larry Leifer's class in smart product design, computers use lasers and other devices to calculate where shuffleboard pucks should be targeted, and then physically launch them.

Richard Lyman: the portrait and the original

Lyman portrait unveiled at Library

continued from page 1

during the difficult 'Seventies."

Peter Bing, former president of the Stanford Board of Trustees said Lyman "was a hero when very little was heroic. Not a popular hero, to be sure. Not a Mr. Chips, who was beloved for his benign and grandfatherly ways. But rather a steadfast and uncompromising defender of liberty in an educational institution, where constitutional freedoms were applauded in principle, but sometimes forgotten in the general abandonment of civility that characterized the late 1960s and early 1970s. . . .

"His legacy is an institution that emerged from its ordeal stronger by every measure than when he entered it."

Provost Albert Hastorf served as master of ceremonies for the brief event in the absence of President Donald Kennedy, who was testifying in Washington. In a note read by Hastorf, Kennedy expressed hope that "neither Richard nor his image (in the painting) bears an expression of disapproval.

"But if it has to be *one* of them, for God's sake let it be the real one."

Dick and Jing Lyman appeared quite happy, even though the president emeritus noted that "being unveiled is a disconcerting notion."

To most of those attending, the events of the late 1960s and early 1970s were far more disconcerting.

Lyman left Stanford in 1980 to become president of the Rockefeller Foundation. His mother, a Palo Alto resident, attended the ceremony.

Regular weapons, electronics nearly match nukes vs. tanks

New electronic technology can make conventional weapons almost as effective as tactical nuclear devices against armored divisions, according to William Perry, former head of defense research and development programs for the U.S.

Now a fellow in Stanford's Northeast Asia-U.S. Forum on International Policy, Perry told an unofficial group of Chinese academic researchers that "new technology which has been developed to improve the efficiency of conventional weapons approaches the same efficiency as nuclear weapons."

The technology includes both precision-guided munitions and multiple independent conventional warheads.

"We are moving only slowly toward achieving this military capability for reasons that have to do with political hesitation rather than technical limitations," he said.

NATO has been "very comfortable living under the nuclear umbrella over the last few decades," he explained. "This has been seen as cheaper and easier than building conventional military capability. In the last few years, Europeans have become less and less comfortable living under this umbrella, which they now perceive as leaky." But whether this discomfort will result in strengthening conventional forces remains to be seen.

One detailed study estimated that 10,000 air sorties would be required to destroy an armored division with conventional iron bombs, compared to only 100 with tactical nuclear weapons, Perry said. But the same result could be achieved with only a few hundred flights using multiple warhead, precision guided conventional weapons.

In a 1980 visit to China as undersecretary of defense for research and development during the Carter Administration, Perry concluded that "technology could play a key role in the modernization of the Chinese forces, that anti-armor capability was the most important requirement, and that the development of microelectronics in China was the key to success," he said.

Since the change in administrations, his efforts to bring U.S. electronics firms together with the Chinese Ministry of Electronics for cooperation on civilian projects have been unsuccessful.

U.S. firms were "very reluctant" to become involved with the Chinese so long as both governments were unwilling to cooperate. Since September 1980 "there has not been an inch of progress," he observed.

John W. Lewis, Stanford professor of political science and director of the forum, noted that "stalemate" remains the most likely outlook for U.S.-China relations.

"The dramatic beginnings of the decade of normalization between our countries (started by President Nixon in 1972) provided only a superficial basis for cooperation.

"It provided neither the understanding nor the necessity to resolve the Taiwan issue, but left a residue of distrust that injected (Taiwan) into all other issues.

"The impasse in official relations rendered almost meaningless any real coalition strategy to meet the Soviet challenge in Asia."

But "the way the U.S.-China stalemate is shaping up limits further deterioration or at least a complete rupture," he added. Major joint ventures for developing China's resources, trade, and flourishing tourism appear to provide a floor for U.S.-China ties.

To make progress, not impasse, the norm, he suggested creating a small, binational working group of security and political specialists from both countries to develop informal policy recommendations for the two governments to consider.

Lewis and Perry are among the contributors to a new Northeast Asia-U.S.Forum report on *The Security Challenge in Northeast Asia: Report of a Conference*, resulting from a visit to Stanford from scholars at the Beijing Institute for International Strategic Studies (BIISS).

At the June 1982 conference, BIISS Director Zhao Rui noted that the past decade has been marked by "continuous expansion" of Soviet arms "in an attempt to gain overall superiority over the U.S." Where the Soviets had no overseas bases a decade ago, now they have obtained rights to use more than 50 air and naval bases in 26 Third World countries.

Liu Shiliang, another BIISS director, said "the Soviets will attempt to use only conventional arms to win a war. . .nuclear arms would be the last resort.

"Soviet nuclear weapons are directed mainly against American forces. It is not likely the Soviet Union would first use nuclear weapons against China."

Superior equipment would give the Soviets an initial advantage in a ground attack against China, he said. But "China is like a sponge or a vast desert and the Soviet Union is like water—China can absorb as much as the Soviets throw at it."

Copies of the conference report may be purchased at $7 each, including postage, from the Northeast Asia-U.S. Forum on International Policy, Stanford University, 320 Galvez St., Stanford, Ca. 94305. Phone (415) 497-9741. California residents should add 40 cents sales tax.

New technology which has been developed to improve the efficiency of conventional weapons approaches the same efficiency (against armored divisions) as nuclear weapons...

Europeans have become less and less comfortable living under this (nuclear) umbrella, which they now perceive as leaky.

—William Perry

Students seek summer internships. . .

videotapes and workshops on such topics as resume writing, job interviewing, and researching prospective employers.

While many students would like to work for large firms, Shinkman notes that "Stanford has an unusual number of bright, ambitious, aggressive students, who would prefer working for themselves rather than for others."

Last spring, more than 500 from Stanford attended a student-organized conference on entrepreneuring, for example.

Looking ahead, students are extremely interested in obtaining internships and other experience that may give them an edge in finding full-time jobs later, he adds. "Our three professional staffers are swamped" by students seeking internships and summer jobs.

Former placement director at Trinity College in Hartford, Connecticut, Shinkman is impressed by the diverse activities of Stanford students. More than a third study overseas; scores of undergraduates do independent research with individual faculty members; and about a fourth "stop out" for a while before graduating.

"The University is very good about letting students come and go without a lot of red tape," he observes.

"There's no question that these activities have important career implications for many students. It gives them a better sense of who they are and what they're looking for."(Prior to a news interview, he'd counseled a student who plans to "stop out" for six months to train for the Olympics.)

Shinkman cited the development of alumni and parent "networks" to help provide career advice and internships as other ways in which Stanford assists job-seeking undergraduates.

Audrey Bernfield, director of advising and career counseling for human biology, currently is working with several other departments to document individual examples and further suggestions of how liberal arts education can lead to interesting careers.

While nine out of 10 graduating seniors at Stanford still plan to attend graduate or professional school at some point in their life, the proportion seeking full-time work soon after commencement has doubled since the mid-1970s, to more than 50 percent. This change, concurrent with persistent tightening in the national job market, has resulted in a sustained increase in undergraduates using the services provided through the Career Planning and Placement Center.

Contracts and grants

Following is a selected list of government and nongovernment contracts and grants of $200,000 and over, received for the month of January:

FEDERAL

Contracts—Amendments

Stephen E. Harris and James F. Young, W. W. Hansen Laboratories, "Research Studies on Radioactive Collisional and Ultraviolet Lasers," $983,425 from the Department of the Air Force for 3 years.

Robert Hofstadter, W. W. Hansen Laboratories, "Design Phase of TASC for Energetic Gamma Ray Experiment Telescope to be Flown on GRO," $518,061 from NASA for 1 year.

Joseph B. Keller, mathematics, "Research in Theoretical Acoustics," $212,353 from the Department of the Navy for 2 years.

William E. Spicer and Ingolf Lindau, Stanford Electronics Laboratories, "Studies of the Electronic Surface States of III-V Compounds and Silicon," $1,424,301 from the Department of the Navy for 3 years.

Richard N. Zare, chemistry, "State Identification of Reaction Products," $200,000 from the Department of the Air Force for 1 year.

Charles H. Kruger, Robert H. Eustis, Morton Mitchner, and Sidney A. Self, mechanical engineering, "A High Magnetic Field MHD Generator Program," $490,287 from the Department of Energy for 1 year.

New Grants

Samuel Strober, Edgar Engleman, C. Garrison Fathman, F. Carl Grumet, and Ronald Levy, School of Medicine, "Use of Hybridomas and T Cell Clones in Transplantation," $432,577 from the Alcohol, Drug Abuse, and Mental Health Administration for 1 year.

Grants—Amendments

W. Stewart Agras, psychiatry, "Behavioral Factors Influencing Infant Weight Control," $210,912 from NIH for 1 year.

Jack D. Barchas, psychiatry, "Neuroregulators and Behavior," $463,069 from NIH for 1 year.

Daniel Bershader and Jean Mayers, aeronautics and astronautics, "A Summer Program of NASA Summer Faculty Fellowships," $319,637 from NASA for 1 year.

William C. Dement, psychiatry, "Sleep and Its Disorders in the Elderly," $610,799 from NIH for 1 year.

Leonard A. Herzenberg, genetics, "Clinical and Biological Uses of Automated Cell Sorting," $412,803 from NIH for 1 year.

Leonard A. Herzenberg, genetics, "Genetic Study with Mammalian Cells," $220,657 from NIH for 1 year.

NON-FEDERAL

New Grants

Ruth T. Gross, pediatrics, "Project for Risk Infant Development," $309,283 from the Robert Wood Johnson Foundation for 1 year.

Clark W. Reynolds, Food Research Institute, "Project on U.S./Mexico Relations," $300,000 from the Hewlett Foundation for 2 years.

Grants—Amendments

Halsted R. Holman, School of Medicine, "Clinical Scholar Training Program," $538,325 from the Robert Wood Johnson Foundation for 3 years.

Richard M. Swanson, Stanford Electronics Laboratories, "High Efficiency Silicon Concentrator Cells," $349,000 from the Electric Power Research Institute for 1 year.

Carpools

Carpoolers wanted for existing carpool. Marin County to Stanford University. M-F, 8-5. Contact Kyle at 7-5602.

One person to join existing carpool to Stanford. M-F, 8-5. We meet at Stevens Creek & Wolfe Road, Cupertino. Please contact Ana Errico at 7-0612.

Carpoolers wanted, 8-5, M-F, from Pleasanton, Livermore, Union City, Fremont area to Stanford. Call Patty, ext. 7-2071.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

39476-TC (JCC:5588) LIFE SCI RES ASST I: Work on a research proj to determine the effects of interferon on chronic hepatitis B virus infection in patients; respon for lab testing of viral DNA polymerase, viral antigens & antibodies, & viral DNA in serum & immunofluorescent staining of liver biopsies; involves handling a virus which is pathogenic of liver biopsies; involves handling a virus which is pathogenic for man & special procedures to adequately contain virus, such as wearing gloves, decontaminating eqpt, & geographic isolation of the virus to prevent infection of lab personnel; must understand the biological implications of the work & the theoretical basis of methods in order to interpret results & design new methods to solve specific problems; QUALIFICATIONS: prefer BS in microbiology or equiv combination of edu & exp w/ prev lab exp using above listed techniques.; C05; $1670-2086.

33698-TC (JCC:5588) LIFE SCI RES ASST I: 60%; plans & carries out details of experiments for researchers investigating Respiratory Diseases utilizing basic biochemical, immunological, & molecular biological procedures & experiments; routine analysis & procedures; prep of monoclonal antibodies incl animal injections, removal of spleens, cell fusions, cell maintenance & cloning; adapts or works out details of new, nonstandard methods outlined by supvr or taken fr literature; interprets results of clinical tests, instrumental analyses, etc; respon for ordering & maintaining lab supplie eqpt, & chemicals; QUALIFICATIONS: requires knowl of scientific theory generally assoc'd w/ completion of BS or equiv edu & exp in an applicable sci; at least 6 mos lab work exp during or after college.; C05; $1002-1252.

33243-LL (JCC:5986) NURSE EDUC/CLINICAL NURSE SPEC: Receives initial referral fr M.D.'s, P.H.N.'s, etc. in relation to services to be provided for all potential patients & families by Birth Defects Ctr staff; attends 3 clinics together w/ clinic nurses; evaluation of nursing needs & prov for nursing serv needed by patients & families; plans for discharge of B.D. patients; advises parents; maintains liaison w/ community agencies; serv as consultant to agency staff, under supvn of B.D. Dir, for screening patients w/in those facilities who have as yet unrecognized genetic syndrome & stimulates referral to approp med facility; QUALIFICATIONS: Masters degree desirable, but not required; bkground & exp w/ children w/ develop'mtl disabilities; knowl of community agencies providing care for children; knowl of genetics & genl pediatrics is valuable.; K06; $2358-2549.

SLAC

91726-JM (JCC:8890) MISC TECHNICIAN: TMS Unit; temporary till 9/30/83; assembly of prototype electronics, loading components on PCB, soldering components; testing prototype electronics, measurement of circuit performance using simple test eqpt, oscilloscopes, pulse generators, DMV's logic analyzers; QUALIFICATIONS: 1 yr exp in electronic testing & repair; circuit design exp in analog & digital preferred; some exp in mechanical design to support electronics.; A99; $7.50/HR.. APPLY AT SLAC

Bargaining Unit

29333-JB (JCC:7158) DELIVERER I: 50%, fixed term 3/28/83-6/30/84; 1-5pm; delivering & retrieving class mat'ls (homework, course notes, exams) to & fr 10-15 companies covering a route of 45 miles each day fr Palo Alto to Mt. View; distributing & retrieving mat'ls to & fr faculty & their secretaries mainly w/in Sch'l of Engrg by bicycle; helping out in offc by filing, typing & running errands; QUALIFICATIONS: Calif. drivers license; good driving record; good sense of direction; reliable & dependable; some clerical exp.; A16; $ 7.16.

7005-DS (JCC:7324) FOOD SERVICE WORKER IV: TMS Unit; 7-3:30; full respon of recieving, storing, rotating & despensing all deliveries; respon of maintaining a kardex file for all commodities fr the commissary & take inventory each quarter on all items incl glassware, dishes, & flatware; also kitchen eqpt & supplies inventoried every spring quarter; maintain & repair eqpt in kitchen & repair tables & chairs; capable of operating all eqpt & supv dishroom at noon & maintain sanitary work areas; occasionally do the cooking, pantry work, pots/pans & custodial duties; QUALIFICATIONS: able to lift heavy loads; able to read, write & understand English.; A20; $ 7.91.

29758-DS (JCC:7654) CUSTODIAN TMS: Unit; 7:30-4; works under direct supvn; performs custodial duties; daily cleaning, mopping, waxing, vacuuming, cleaning restrooms, etc; washes walls & woodwork by hand or using industrial eqpt; spot cleans, shampoos, waxes, dusts, & oils furniture; supvr schedules work & provides detailed instructions; QUALIFICATIONS: knowl of cleaning & waxing methods & mat'ls used in industrial cleaning; knowl of related safety procedures; ability to lift moderately heavy items, 25-75 lbs; ability to withstand extensive walking, pushing, pulling, stooping, & squatting.; A13; $ 6.68.

Nonexempt

30398-PM (JCC:2470) OFFICE ASST IV: Prov offc & sec'l support for key personnel in large health edu proj using mass media; typ draft mat'ls & forms; finalize & format complex reports; respon for coord of part-time employees; execute & follow-up on financial commitments, keep up internal budget sys; work w/ graphics, graphic design, or print production (phoning for cost estimates, etc); answer phones, screen inquiries; maintain offc records; make appts & travel arrangements, etc; QUALIFICATIONS: typ 70, s/h preferred; highly superior sec'l skills; excel spelling; ability to use or learn abstracting & bibliographic tech, word processing, SCRIPT, EDS, & audio & audio-visual eqpt for playback; able to manage several projs simultaneously; send appl/resume to Dr. June Flora, HRP Bldg.; B14; $1440-1514.

33286-PM (JCC:2512) OFFICE ASST III-SPEC: Working directly w/ administrator of Epidemiology Lab, who is concerned w/ epidemiological research, computer data processing, & publication of the INTERNATIONAL PSORIASIS BULLETIN & the PSORIASIS NEWSLETTER; code & transcribe data; type corresp & reports; file corresp & reports; order & maintain supplies; answer phone & handle inquiries; QUALIFICATIONS: typ 60; knowl of offc routne; genl knowl of med lang; ability to interact w/ administrator & offc personnel efficiently; work independently; ability to set up & maintain corresp & report files; have desire to learn new skills & tools (e.g. word processor or computer terminal text entry); send appl/resume to Lexie Nall, Edwards Bldg., R-156.; B12; $1310-1373.

33616-PM (JCC:2562) SECRETARY III: Plan, organize, maintain complex appt calendar; arrange mtgs involving VP, other Univ VPs, faculty, sr. mgmt staff, sr. officials at external affiliated institutions, community physicians, major donors; screen, prior, route & monitor large volume of incoming & outgoing mail; draft corresp for VP; prep confidential mat'ls; allocate other typing to spec typist; proofread; oversee distribution; respon for VP filing; prov bkground info & files for mtgs & to accompany mail; screen & route heavy volume of phone calls; prep, process, reconcile expense reports,etc; QUALIFICATIONS: typ 60; s/h helpful; requires excel knowl of offc procedures & univ practices & policies; ability to handle wide variety & heavy volume of tasks in confidential & highly sensitive situations w/ good judgment & discretion; excel oral & written commu skills; exp in a team setting; 3 yrs exp in sec'l field; exp in Med Ctr/univ/health care or comparable environ preferred; send app/resume to Pam Washburn, SUMC, M-121.; B14; $1440-1514.

19964-PM (JCC:2562) SECRETARY III: 50% Univ position & 50% Vet Admin Med Ctr posiiton; sec to the Chief of Ophthalmology at Vet Admin Med Ctr in Palo Alto; able to prov full range of sec'l duties; able to work w/ grant/contract budgets & speak for the Chief of the Section; entail letter/memo composition; dealing w/ internal as well as external admin & funding agencies; med terminology; edit manuscripts & papers; QUALIFICATIONS: typ 70-75; good sec'l skills & med terminology; able to edit manuscripts & papers; requires a CIVIL SERV RATING for VAH portion; send appl/resume to Mariann M. Crane, Div of Ophthalmology A227, SU Med Ctr.; B14; $1440-1514.

33244-PM (JCC:2570) SECRETARY III: Coord of commu betw patients, commun physicians & agencies, SUH clinics & physicians & personnel in Birth Defects Clinic, Spina Bifida Clinic, Craniofacia Animal Clinic; commu incl coord in appts & conferences, arrangements for finan asst thru outside agencies; soliciting of med info fr referring physicians, institutions & agencies; answering questions; admin of offc & companion clinics; ordering charts, X-rays, sched appts; posting & distri of schedules to consultants for clinics; maintaining files of patients; some typing of dictation & reports fr clinics; supvn of work of transcriptionist/secty, etc; QUALIFICATIONS: typ 65; efficient & accurate typing; genl sec'l exp; able to cope w/ varied pressures, deadlines & numerous demands; good interpersonal skills; requires confidence & patience; good commu skills essential; med terminology desirable; contact: Ann Johnson, Med Ctr S332, 497-5344.; 1 B14; $1440-1514.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, March. 22, in Room 270, Tresidder Union.

The sessions are open to all new employees without preregistration.

Hospital

Please submit all applications/resumes to the Hospital Personnel Department to the attention of Celia Corchado, 770 Welch Rd., Suite 100.

SECRETARY II—Blood Bank—#8103—C-10: Responsibilities: Transcribes and types correspondence, memoranda, minutes; types transcripts, manuals, newsletters and other materials for publication. Produces and distributes copies of above materials. Takes dictation of letters, meeting minutes and other events which require a formal record. Prepares reference materials. Coordinates Blood Bank mail and postage. Schedules meetings, conferences and other appointments as necessary. Orders routine office supplies. Receives and screens phone calls and visitors, referring as appropriate. Maintains and/or assists in the maintenance of various departmental files. Some computer data entry and retrieval. Qualifications: Two years of secretarial experience, and/or successful completion of a formal secretarial course or two years of college required. Minimum corrected typing rate of 60wpm, and proviciency with a system of dictation/transcription required. Permanent Full-Time M-F 8-5pm $7.19-$9.85 hourly.

Rental housing

HOUSING AVAILABLE

□ **June 25 to Jan 1, '84:** Fully furn 3BR/2BA hse. nr San Jose State, 1 mi. to #680/280. LR, DR, patio w/vines & citrus, in family nghbrhd. Ideal for children. $900/mo. Call Dr. Otten (408) 288-6331.

□ **Late June thru Aug. '83:** Fully furn 5BR/3BA hse., LR, DR, AEK, FR, W/D, enclosed yd. No pets. 20 min. to Stanf. $1000/mo. incl grdnr. + sec. dep. + util. + phone. Call Wendy Waldie (408) 736-8368 (day), (408) 732-7799 (eve).

□ **Apr. thru Dec. '83:** Cozy 1BR bungalow, 15 min. walk to Stanf. & dwntwn P.A. Fully furn. w/study, office, or child's BR area, patios, easy upkeep yd. Ideal for cpl. $800/mo. Call 326-3450.

□ **Aug. '83 to Aug. '84 (flex):** Fully furn. campus hse. 4BR (1 converts to study), DR. Children, pets OK. $1300/mo. Call 856-4038 before 8 pm.

□ **Beg. Apr. 3:** Prof. woman w/beaut. 2BR/2BA apt. in Sharon Hgts to SHARE. Incl. piano, pool, tennis, W/D. 5 min. to Stanf. No pets, nonsmoker, female. $400/mo. + ½ util. Call Sunny (415) 858-3933 (day), 854-8621 (eve).

□ **June 1 to Aug. 31, '83:** Summer Sublet. 2 or 3BR/1½BA, LR, DR, encl. patio. 1 mi. to Stanf, dwntwn Palo Alto, Menlo Pk. $825/mo. Call 322-0234 (eve).

□ **Beg. Apr. 1:** Lrge furn. hse, 6BR/2BA, W/D. nr. shops., fenced yd, off-st. prking. Berkeley, 1 blck no. of U.C.B., Walnut/Vga area, in "gourmet ghetto." Mo. to mo. terms. $1500/mo. or nego. terms to right tenant for lease w/maintenance. Call Lucien (415) 548-6288 (day or eve), Diana (415) 329-1298 (eve).

□ **June to Aug. '83:** Approx 10 wks. Charming Los Altos Cape Cod hse 3BR/2BA w/hot tub & lovely yd. Tennis, etc. nrby. Call (415) 961-4218 (eve).

□ **June 41 thru Aug. 29:** Fully furn. west Atherton estate. 5BR/3½BA, pool, maid service, grdnr, util. incl. No pets. $9750 total. Call 321-4100.

□ **July & Aug. '83 (flex):** Fully furn apt. Wash. DC, nr embassies. 1BR, DR, air-cond., AEK, DW, new, fireproof bldg, pool. EXCHANGE for furn. apt., hse in Palo Alto area. Call Whitney (202) 296-8863.

□ **June, July, Aug. '83:** Exec. fully furn. 5BR/4BR hse., pool, W/D, panoramic view, Portola Valley. Rent incl. grdnr, clean., pool serv. Call 851-2481.

□ **Beg. Mar. 18; beg. Apr. 1:** Two rms in old Victorian priv. hse on each of given dates. Fully furn, ktchn priv, lndry. Walk to dwntwn, Stanf. Short term rental pref. $400/mo. Call Peggy (415) 327-2510.

□ **Aug. '83 to Jan. '84:** Fully furn. Cape Cod Colonial hse in Palo Alto, 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr. schls, shops, park, Com. Ctr. Prof. going on Sabbat. $1500/mo. Call 325-1709.

□ **Apr. 1 to June 1 (flex):** Fully furn hse, 2BR/2BA, FR, lrg LR, AEK, 2 frpl, 2TV, park-like 1/3 acre. 1 queen, 1 dbl bed. Quiet dead-end st. Car poss. $1050/mo. Call (415) 967-2918.

□ **July & Aug.:** Very attrac. summer rent, dwntwn Palo Alto. 1BR/2BA condo, fully furn. Suit. cpl. Libr. w/spiral strcse, balc, pool, secure. 18th C. Europ. style. $1500/mo. Call Pat Mueller-Vollmer 324-1624 (eve), 327-3505.

□ **Beg. June 1:** Summer rent, and/or 1 yr. High Portola Val. (Ladera). Beaut. 3BR/2BA fully furn hse. Atrium, lrg. self-maint. grdn, oaks, pool, tennis. 7 min. to Stanf. $1500/mo. Call Pat Mueller-Vollmer, (415) 324-1624 (eve), 327-3505.

□ **NOW:** Fully furn hse, 2BR/1BA, W/D, piano, grdnr. Nr. Stanf. lrg. encl. grdn. $850/mo. incl. grdrn. Call Jenny, 497-6017 (day), 321-9760.

□ **Aug. '83 to Aug. '84:** New 1600 sq. ft. hse on Maui on slopes of Haleakala. Energy effic., 3-4BR, sleep loft, sep. liv. areas con. by porch, shoji drs, W/D, microwv, DW, w/w carpet, on 4 acres incl mtn. stream, 2 min. to store, 7 min. to surf beach, 12 mi. to Kahului ctr. Contact Laurie or Sam Friedman, 3728 Redwood Circle, Palo Alto 94306 or call (808) 572-1481 for info. EXCHANGE for home in Palo Alto.

□ **Late Aug. '83 to late Mar. '84:** Campus hse, fully equipped, 3BR/3½BA + guest/FR, study, DR. $1400/mo. incl. grdnr. Call 497-1941 (day), 493-0777.

□ **Beg. April 13 (approx):** Indef. Oak Creek studio sublease. Fully furn. 5 pools, jacuzzi, sauna, steam bath, gym, tennis, cov. prkng, view. Conv. to Stanf. Call 857-1885, eves & wknds.

□ **Academic Yr. '83-'84:** Twnhse, heart of London. 3-4BR/2BA, mod. ktchn, DW, W/D, TV, VCR, gar. new Barbican complex, access to grdns, playgrnd, schls, London U. EXCHANGE for similar home in Palo Alto. Call Ian Benson c/o Desi Glassel, (415) 859-6487.

□ **Aug. 1, '83 to June 30, '84 (flex):** Fully furn. campus hse, 4BR/3½BA, LR, DR, study, library, frpl, pool, view, acre. $1600/mo. incl. grdnr, pool serv., water. Call (45) 327-5204 or 497-4732 (day).

□ **Beg. April thru June, Aug. longer:** Peter Coutts Hill, 2BR/2BA, LR, DR, + study, fully furn. $1100/mo. Or will rent portion of unit: 1BR/1BA, LR, DR + study for $850/mo. Call Frances Duignan, 321-2052, or (415) 435-3044.

□ **June 18 thru Aug. '83:** Fully furn. campus hse, 4BR/2½BA, FR, piano. Will EXCHANGE for London hse/flat, or RENT for $1500/mo. incl. water, util., cleaning, grdnr. Nonsmokers, no pets. Call 493-8874.

□ **April 10 to July 15, '83:** London Hampstead nr Heath Regency Hse; beaut. furn. 3BR/2BA, study, dshwsher, W/D, garden. Details, photos avail. from owner. Avil. for future occasions. Call Himmelweit, 321-2052 (day).

□ **April 15 to June 15, '83:** Palo Alto nr Stanf. 2BR/2BA, study, lrg. LR w/frpl, DR, pool w/spa. Adults only, nonsmokers, no pets. Sec. dep. req. $1200 (8 wks) incl. hseclean., pool serv. Call 856-9696.

□ **Beg. Mar. 19:** Fully furn. 3BR/3BA hse, beaut., spacious, Palo Alto nr. Stanf. New kitchn, W/D, piano, frpl. Fenced yd. No pets. (Flex. time per.) $1550/mo. incl. grdnr, water. Call COLLECT (602) 299-4499.

□ **Aug. 1, '83 to summer '84:** Fully furn. campus hse, 5BR/4½BA, lrg. study, DR, decks, 1+ acre. 1 yr. lease. $1600/mo. Call 497-4547 (day), 327-4277.

□ **June 16 to Sept. 5, '83:** Spanish style hse, central Palo Alto, fully furn., 5BR/5BA, balconies, spiral staircase, new kitchn, enclosed crtyd, pool, jacuzzi w/dress. rms. Acre, creek on prop. No pets. $3000/mo. + util. Call 327-1142.

□ **Beg. June 1:** Summer rental and/or 1 yr. High Portola Valley (Ladera). Beaut. 3BR/2BA fully furn. hse. Atrium, lrg. self-maint. grdn; oaks, pool, tennis. 7 min. to Stanf. $1500/mo. Call Pat Mueller-Vollmer, 324-1624 (eve), 327-3505.

□ **NOW:** No. Tahoe/Incline village. Furn. 2BR condo, long term rent; 6 mo. or more. $350/mo. Call (415) 361-1859 (eve. & wknd).

□ **Beg. June 10, '83:** Sunny, attrac. lrg. modrn priv. apt. 1BR, in Frenchman's Hill hse. Fully furn. w/self-def. frig, self-clean oven, cov. priv. patio, sunbath patio. Summer only $900/mo. $850/mo. incl. util. & furn. Call Shirley 856-6049.

□ **Regularly avail:** 1, 2, & 3BR furn. & unfurn. apts. & twnhses & 3BR/2BA hses in Palo Alto & Menlo Pk in good nghbrhds. Close to campus. $595 to $1200/mo. Call Shirley, (415) 856-6049 or Jane, (415) 968-4957.

□ **April 9 to June 5, '83 (flex):** Fully furn. hse., 2BR/1BA, W/D, gar., yd. Great loc. in Palo Alto nr Stanf. $650/mo. Call 324-1509 (eve).

□ **April 5 to July 12, '83 (flex):** College Terr., walk to campus. Lovely furn. 1BR/apt. Patio, TV, gar. $525/mo. Call 494-4917 or 857-0585.

□ **March thru June:** Oak Creek apt. 2BR/1-1/3BA, furn. Built-in bar, gar. space avail. Util. furn. Call Alice, 321-2625.

□ **July 1 to Dec. 31, '83:** Fully furn. & equipped hse in Sharon Hgts. 4BR/3BA, study, FR, DR, 2 frpl, 1/3 acre. 1 mi. to Stanf. $1500/mo. incl. grdner. Call 497-3785 (day), 854-7471 (eve).

□ **NOW:** London flat, fully equipped. 1 min. Willesden Green Stn. undergrnd. 2BR/1½BA, central heat. $600/mo. Call (415) 661-4067, (415) 387-7300.

□ **NOW:** Attrac. furn. 2200 sq. ft. hse. 4BR/2½BA, study, DR, FR, patio, 3 car gar. W/yr lease incl. ktchnware, linens, 2 TV, grdnr. Lrg. front & back yd. Quiet, safe nghbrhd. $1400/mo. Call (415) 965-1302 (eve).

□ **NOW:** Ski cabin—So. Lake Tahoe. 2BR, frpl, color TV, phone. Adj. natl forest, walk to lake, Tahoe Keys. $120/wknd, $200/wk (5 days). Call Janine, 497-2501 (day), or (408) 739-3141 (eve).

□ **NOW:** Spacious 2BR apt in Barron Pk. Share w/female. Balcony, piano, W/D. $300/mo. + ½ util. + dep. Call 325-0566, 365-6961.

□ **April 10 to Oct. 15, '83:** 2BR/2BA hse, 4¼ mi. to campus, wooded setting, suitable for 2-3 adults. Furn. or partially furn. W/D. $1100/mo. Call 941-6444 (eve).

□ **July '83 1 yr lease:** Renewable lease, 4BR/2BA ranch-style hse. nr Rinconada Pk. Unfurn. or partially furn. $1250/mo. Call Sue Sherman, 328-2864, 328-7477.

□ **April 1 to Nov. 15, '83:** Fully furn. hse. 4BR/2BA, LR, FR, lrg. cov. patio, easy upkeep, auto. sprinkl. Palo Alto. Adults. No pets. $1200/mo. incl. water. Call 858-0880 (eve).

HOUSING NEEDED

□ **Beg. Aug. 21 for 3 to 6 wks:** Prof. cpl. w/daughter wish to hsesit in Stanf. area. Local refs. Write D.K. Nordstrom c/o Oster, Gyllenstiernsgatan 18, 11526 Stockholm, Sweden, or call (415) 857-1641.

□ **Beg. Summer '83 for 1 yr:** Visit. scholar & fam. need 3 to 4 BR furn. or unfurn. hse. Can furnish loc. refs. Call 493-6401 anytime before 10 p.m.

□ **Beg. May 15 for 1 mo:** Polish Prof, former Stanf. Prof. Journalism Fellow, a visit. tchr. at Antioch's San Francisco campus would like to hsesit or rent at Stanf. Accompanied by wife and 2 dghtrs, 5¼ & 11. Call Harry Press, 497-2558 or 497-4937 (day).

□ **April 10 to May 10:** Visit. Scholar at Hoover Inst. seeks 1 rm or 1BR apt. nr. Hoover. Call COLLECT United Kingdom 865-512872 before Mar. 27.

□ **Beg. April-May, or May-June, 6-8 wks:** British Visit. Scholar at Hoover Inst. seeks rm on or nr campus. On leave from Manchester Univ. Stanf. refs avail. Call George Duca, 323-7680, noon or eve. before 10:30 p.m.

□ **Beg. Oct/Nov '83 for 1-2 yrs:** Visit. Australian M.D., wife & 2 children (5 & 2) seek 3 or 4 BR furn. hse on or nr campus. Refs. avail. Call B. B. Barnett 497-5913 (day).

□ **Sept. '83 to Aug. '84:** Visit. French M.D. and wife seek 1BR furn. apt. on or nr. campus. Call B. Barnett, 497-5913 (day). Local refs.

□ **Aug. '83 to June '84:** BETHESDA, MARYLAND area. Stanf. fac. family, nonsmokers, 2 boys, 11 & 14, seek furn. hse, apt. or condo while on sabbatical at the NIH. Call Paul Basch, Sch. of Med., 497-6698 (day), 493-4590 (eve).

□ **Summer '83 to summer '84 (flex):** Visit. Prof. (cpl & 2 children) need furn. 3+BR home, Palo Alto, or campus. Call 321-0250.

□ **April 1 to May 31 (flex):** Visit. scholar, female, seeks rm w/kitchn priv. or shared apt to rent. Smoker. Call COLLECT (916) 756-6220 (eve).

□ **NOW:** 3rd yr. med. student seeks studio or 1BR apt. within bike dist. to Stanf. Call Steve Freedman, 857-9357.

□ **April to July:** Single female prof. Sabbatical at Stanf. seeks hsng. or hsesit. To $440/mo. Call COLLECT (213) 206-6121.

□ **Sept. 1, '83 to June '84:** Prof. from Stanford-Florence seeks 3-4BR furn. hse on campus. Call Sandy Cover, 497-4865 (a.m.) or 328-3023 (p.m.)

□ **Beg. April or May:** SLAC physicist, wife, baby wish to *trade* Swiss country villa for all or part of 2 yr stay here. Call SLAC Hsng. Off. 854-330, X3111.

□ **NOW:** Stanf. staffer, resp, quiet, no pets, age 35, a musical writer; seeks own unfurn. 1BR cottage or apt nr campus. Excel. loc. refs. Call Julia, 497-3811 (day), (415) 648-4835 (eve).

□ **Beg. April/May:** Prof. female, nonsmoker, seeks long term rental, 1-2BR hse or cottage. Palo Alto, Menlo Pk, Stanf. area. Call 497-7921 (day).

□ **NOW:** Extremely resp., conscientious cpl seeks hsesit/caretak. arrang. or rental of cottage/gar. apt. on lrg. estate. All situations considered. Refs. avail. Call Mark or Ginny, (415) 941-5713 before 9 a.m. or eves.

□ **Sept. '83:** French visit. scholar seeks Stanf. hsng in EXCHANGE for 2BR apt. on Mediterranean shore (nr Montpellier). Please contact J. Schmidt, 28 Montee Saint-Laurent, 69005 Lyon, France. Tel. (7) 837-6280.

□ **July or Aug. thru Dec. '83 (flex):** Humanities Ctr fellow & fam. seek 3 or 4BR fully furn. hse or apt in Palo Alto or Stanf. area, poss. in EXCHANGE for our Ann Arbor, Mich. 4BR hse. Call 493-1359.

□ **July '83 to June 30, '84 (flex):** Carnegie Inst. Fellow, spouse, 2 children, seek hsng Palo Alto-Stanf. Area. Will rent or EXCHANGE our Berkeley hse: 5BR/3BA hse, LR, DR, library, frpl w/yr of wood, piano. 1 acre, lush grdn, auto. water. Incl. maid, grdnr, sec. system. Call (415) 483-8484 (day), (415) 548-1735, eve & wknds.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Computer music...

continued from page 7

ease with which one could compose using the programs."

(Smith has since become involved in using computers to produce musical manuscripts.)

Chowning then turned to the nature of that computer-generated sound, the synthesis and modulation. He invented a synthesis technique which the University licenses. Originally it was just a program, but now there are hardware aspects to it.

Chowning earned his doctorate. The computer music project moved into the D.C. Power Lab, which then housed the Artificial Intelligence project. The lab was built by General Telephone and Electronics, but never completed. It is drafty, sometimes gloomy, but sits on a hill behind the campus with a lovely view.

Artificial Intelligence moved out, eventually, and the computer music people, all part of the Music Department, now use the building in isolated splendor.

Their project is now called the Center for Computer Research in Music and Acoustics, CCRMA, pronounced "Karma."

Along with the Institut de Recherche et de Coordination Acoustique-Musique (IRCAM), headed by Pierre Boulez, CCRMA is one of the world's leading centers in this field. There are also computer music centers at MIT, UC-San Diego, the University of Illinois and Colgate, most of them seeded by Stanford graduates.

CCRMA stays small deliberately, Chowning says.

"There's a critical size. If one gets beyond that, one loses contact with the people and the work that's being done. One of the most wonderful things about CCRMA is that we have this kind of natural interdisciplinary environment.

Half of the people who work here produce music, most of them composers; but the other half are electrical engineers, (or are in) speech and hearing, psychology, and computer sciences—mostly electrical engineering and speech and hearing sciences."

There are three engineers doing their Ph.D. work at CCRMA.

Chowning loves the environment.

"When I compose, that's all I do. I typically get up at one o'clock in the morning. I work up here until eight or nine in the morning. Then I take care of business nine to twelve and then I go home. That's the only way I can do it."

He does not work at home, he does not want a computer in his house. He only recently allowed a stereo, and then only because his children insisted.

"The last piece I did, I finished about a year and a half ago. I did that for six months, the only break was Thanksgiving and Christmas."

His music does not fall into classical forms. On the other hand, it is not the kind of minimalistic, or indeterminate music now popular among many modern composers and almost universally ignored by audiences. "The idea behind much of that music is more interesting than the music," he says.

The computer can be made to sound like an instrument. This proved to be more complicated than it was first thought because there was more to the sound than was apparent. A pure, computer-generated sound did not sound natural; a certain random fuzziness was required to emulate nature, a very fine "random frequency fluctuation."

One instrument can be made to blend into another, the change almost inperceptible. A flute suddenly becomes a violin, which can, in turn, become a human soprano.

"It is also possible, of course, to produce a sound that has no counterpart in nature, but even here the sound requires something more than purity.

"We know how perfectly dull a sound is if it's perfectly periodic, it never sounds real," says Chowning.

"That's quantifying something which has never been quantified before, or even noticed as an important contribution in the perception of the timbre (tone color). If one wants to produce a sound that has no likeness to nature, there must be small changes in the sound in order to lead the ear.

"We've reached a fair degree of elegance in the kinds of sounds we can construct now that aren't necessarily like natural tones, but they all have a kind of liveliness because of having tried to model nature. It's not very easy to discover this sort of attribute to sound if one is working on some abstract notion."

"This little bit of randomness is like soy sauce in a Chinese restaurant; one wants to sprinkle a little bit everywhere."

The best test of a sound remains the human ear, Chowning says, and a musician's ear is the best of all.

Most computer musicians are now using high-level computer programs in their work as aids to composition. Many of the languages were developed by the artificial intelligence people, including the Stanford Artificial Intelligence Language (SAIL), and LISP, the seminal language of AI.

The languages are being used both for the overall composition and for the interior composition. Computers are helpful because they can remember rules and order, and much of music consists of rules and order.

"A canon is a rule, and to some extent, a fugue is a rule too," Chowning says.

No one is trying to produce Beethoven's Tenth Symphony (he only wrote nine), although artificial intelligence languages might be able to simulate one.

Programming musical structure, on the other hand, is quite useful, particularly complexes of notes or chords. The computer gives composers a great deal of power in this.

It would be theoretically possible to synthesize an entire symphony orchestra, Chowning says, but he does not see any point to doing it.

"People play because they want to play. We don't see here the computer as supplanting or replacing musicians. . . it's rather additive," he says.

Some of this music is finding its way into concert halls. A Loren Rush composition, "Song and Dance" for symphony orchestra and quadrophonic tape, was played by Seiji Ozawa when he was conductor of the San Francisco Orhcestra. A few recordings have been made.

Mostly, however, this music can be heard at computer music concerts, including the ones at Stanford.

Last summer some 2,000 people came to a set of two concerts held at Frost Amphitheater on campus.

CCRMA has received a large grant from the System Development Foundation of Palo Alto to continue its work. The money will go to buy new equipment, including a special computer built by David Poole's company, and the SUN (Stanford University Network) work station. CCRMA has also received support from Systems Concepts of San Francisco, which built CCRMA's digital synthesizer.

Board of Trustees report

Trustees consider finances, gifts, hear about heuristic programming

The Board of Trustees took the following actions at its meeting on March 8, 1983:

1. Approved actions already taken by the Office of the Vice-Provost and Dean of Graduate Studies and Research to enter into contracts and grants for research for the month of January, 1983, totaling $10,737,263. The monthly average of such awards for the 12-month period ending January 31, 1983, was $14,615,353 compared with $12,281,801 for the corresponding period the year before.
2. Accepted gifts received during the month of February, 1983, totaling $7,228,573.
3. Approved a revised Statement of Investment Goals and Objectives.
4. Approved an expansion of the Investment Board of the Department of Athletics, Physical Education, and Recreation from a maximum of 17 members to a maximum of 22.
5. Authorized an investment of $2,000,000 in Advent V, a venture-capital limited partnership.
6. Authorized an investment of $1,000,000 in CH Partners III, a venture-capital limited partnership.
7. Heard a report from G.T. Management, the managers of Stanford's international portfolio.
8. Heard a report on the Charles R. Rittenberry Fund.
9. Approved the concept of the Hoover Tower Fire Safety Project.
10. Heard a report on the financial status of the Research Libraries Group (RLG).
11. Heard a report on financial profiles and trends over the last 10 years.
12. Heard a report on the status of the Edgar F. Kaiser, Sr., Professorship.
13. Approved the University's Operating Budget Guidelines for 1983-84.
14. Heard a report from Professor Edward Feigenbaum on "Knowledge Technology: The Research of Stanford's Heuristic Programming Projects."
15. Welcomed W. James Ware, newly elected Trustee, to his first meeting.

Promotions, appointments, reports

On March 8, 1983, the Board of Trustees approved the following actions, effective September 1, 1983, unless indicated otherwise:

Promotions:

Mark G. Perlroth, professor of medicine; Lawrence L. Stahlberger, professor of Slavic Languages and Literatures; David E. Wellbery, associate professor of German Studies.

Reappointments:

Carl W. Bielefeldt, assistant professor of religious studies; Carol Conell, assistant professor of sociology; Sandra E. Drake, assistant professor of English; Edmundo Fuenzalida, associate professor of education; Bryan David Myers, associate professor of medicine; Brian D. Serot, assistant professor of physics; Henry A. Walker, assistant professor of sociology.

Appointments:

W. Brian Arthur, professor at the Food Research Institute; Richard P. Bagozzi, 7/1/83, associate professor of marketing, GSB; Michael R. Bristow, 4/1/83, assistant professor of medicine; C. Allin Cornell, 7/1/83, professor of civil engineering; John A. Ferejohn, 3/1/83, professor of political science; Thomas M. Himel, assistant professor at the Stanford Linear Accelerator Center; Denise Levertov, professor of English; Charles Martoff, 1/1/83, assistant professor of physics; Christos H. Papadimitriou, 4/1/83; professor of computer science and operations research; Clyde B. Tatum, assistant professor of civil engineering.

Report Matters:

Albert Cohen, William H. Bonsall professor of music, reappointed Chairman of the Department of Music, 9/1/83 to 8/31/84.

W. Brian Arthur, professor in the Food Research Institute, appointed the Dean and Virginia Morrison professor of Population Studies, effective 9/1/83.

Julius Moravcsik, Professor of Philosophy, appointed Professor, by courtesy, of classics, 3/1/83 to 8/31/88.

Robert T. Schimke, professor of biological sciences, appointed the American Cancer Society Research Professor of Biology, effective 1/1/83.

Graduating seniors give high marks to undergraduate education program

Once more, Stanford has gotten very high marks from its students.

Among graduating seniors, Stanford's undergraduate education is rated "excellent" by 44 percent, "good" by 50 percent, and "average" by 6 percent, a new survey shows.

More than a third of the graduating class say Stanford was "better" or "much better" than their personal expectations, while 15 percent say it was "worse" or "much worse" than anticipated. Only one per cent fell in the last category.

Surveys over the past three years have shown "great stability" in student evaluation of the undergraduate program, the faculty and staff, and their personal abilities, according to a new report from the Office of the Vice Provost for Undergraduate Education.

There were "very modest upward trends" in the overall quality of education, courses in their academic major, adequacy of training in liberal education and faculty teaching, as seen by seniors.

Over the past three years, the proportion of students who regard their ability to use computers as high has increased significantly, to 50 percent from 38 percent. "Rising trends are evident for technology and foreign languages as well," the survey report notes.

The proportion of graduating seniors saying they plan to work full-time after graduation fell slightly last spring, to 49 percent from 52 percent. The proportion planning to continue studies full-time dropped slightly, to 38 percent. The rest plan to travel, work and study, or pursue other activities.

The proportion planning full-time work ranged from a high of 62 percent for engineering majors to a low of 24 percent for natural science majors, many of whom plan to attend medical school.

In the social sciences, 61 percent plan full-time work after graduation, as do 48 percent of the humanities majors.

The percentage of students planning full-time work immediately after graduation rose from 28 percent in 1975 to a high of 55 percent in 1979, but has fallen slightly since then.

The educational aspirations of Stanford seniors remain high, with 89 percent eventually planning to attend graduate or professional school.

Seniors rate their abilities quite highly, with half or more saying they have "good" or "excellent" ability in nearly all fields surveyed. The major weaknesses concern student understanding of Western and non-Western culture, foreign languages, computers and government. The University did not introduce a Western culture course requirement until the fall of 1980, when distribution requirements also were tightened by the faculty.

The overall rating of undergraduate education at Stanford was "considerably higher" than for some specific parts. Roughly three out of four rated courses within their academic major as "good" or "excellent," and training for further education was highly regarded in nearly the same proportion of the graduating seniors.

A substantial majority (57 percent) said their campus living arrangement contributed highly to their intellectual life.

Nearly nine out of 10 who attended an overseas program rated this experience "good" or "excellent." More than a thirds of Stanford's graduating seniors have studied overseas with the University for three months or more prior to graduation.

Two-thirds of the students said the overseas experience was "excellent," and again two-thirds said it was "better" or "much better" than expected.

More than nine out of 10 students (93 percent) felt the faculty were either "good" or "excellent" in research, but less than two-thirds (63 percent) felt the same way about their teaching. More than a third said faculty teaching was worse than expected.

Reiterating criticism voiced by their predecessors, nearly half (46 percent) rated their general academic advising as "poor" or "very poor," with more than half (58 percent) saying advising was "worse" or "much worse" than expected.

Opinions were considerably more positive for advising after students chose their major. Only 29 percent described their advising as juniors and seniors as "poor" or "very poor," compared to 40 percent saying it was "good" or "excellent."

Opportunities for working with individual faculty are considered very great, and much better than expected, by most students.

Students viewed the ability of faculty as teachers to be of much greater importance to them than faculty skills in research.

The quality of teaching assistants , whom the students rated lower, was "only of average importance" to the seniors, the report notes.

"The students seem to be saying: 'I get a very good education at Stanford, and it means a lot to me. Not all the professors are outstanding teachers or good advisers, but these shortcomings have not affected my educational experience that much.' "

Asked about their own skills, more than four out of five rate themselves as "good" or "excellent" in ability to write clear English prose. A strong majority rate themselves highly in ability to "understand social processes and institutions" and to "understand the significance" of gender and ethnicity in the U.S.

While there were few significant differences in opinion between men and women surveyed, the quality of liberal education and of advising within the academic major were especially important to women,

In general, humanities students expressed the greatest satisfaction with their academic major programs and departments, and social science majors the least.

Humanities majors also felt they got the best liberal arts education, with engineers the least satisfied in this regard.

On the other hand, natural science majors feel very well trained for further study, as do engineering majors, while humanities and social science majors felt much less adequately trained.

When asked what three factors affected their plans for the coming year, about 35 percent mentioned money or financial considerations, 23 percent the desire to "escape academics," and 20 percent intellectual interests and a desire to learn.

The survey was based on responses from 673 graduating seniors, 40 percent of the class. Results were analyzed by John Boli, research coordinator for Herant Katchadourian, vice provost for undergraduate education.

Grad students praise increase in stipends

As members of the graduate community, we applaud the University's decision to include funds for a special increase in the graduate fellowship stipend in the 1983-84 operating budget.

This is the third annual installment of such increases, which were designed to bring the fellowship stipend—which is the smallest stipend received by Stanford-supported Ph.D. students, and whose recipients are concentrated in the Humanities Departments—up to a target level of 70 percent of a minimal budget for living expenses.

While there will continue to be disagreements about the adequacy of the financial support provided to Stanford graduate students, we recognize that the University's decision to follow through on its original intention of providing this third increment was by no means trivial or automatic, coming as it did at a time of severe pressure on the University budget.

We are confident that this effort to increase the financial support for graduate education represents a solid long-run investment in the continued excellence of Stanford University.

Dirk Van Compernolle, president
Graduate Student Association

Jonathan Siegel, member

Faculty, staff bowling leagues form at Tresidder for spring quarter

Faculty and staff may compete in the spring bowling leagues now being formed by the Tresidder Recreation Center.

An Interdepartmental Bowling League bowls on Monday evenings. This handicap league consists of four-person teams and will last for eight weeks, at which time the champion department will receive an award donated by the Recreation Center. This league will form at 6 p.m. Monday, April 4.

The "Bowl for Lunch Bunch" league is a relaxing way to exercise and have lunch at the same time. Lunch leagues are offered at noon Tuesdays and Fridays. Participants will bowl two games per week with one partner. These leagues will begin on Tuesday, April 5 and Friday, April 8.

The Tresidder Recreation Center offers special group rates to offices, organizations or Stanford affiliates that would like to reserve the bowling lanes for a special function. For more information contact the Tresidder Recreation Center at 497-4316.

For any of the leagues mentioned above you may sign up as a team or individually.

Senior citizen bowling

The Recreation Center is also organizing two bowling leagues specifically for senior citizens.

The leagues are handicap which allows everyone a chance to win. The Recreation Center staff will hold free bowling clinics and information sessions on these bowling leagues at 1 p.m. Monday, April 4, and 10 a.m. Wednesday, April 6.

The leagues will organize and start the week of April 11 and continue for eight weeks. The cost will be $2.50 per week, which includes three games of bowling, shoe rental and league statistics.

For more information call 497-4316.

Museum displays Nicholson's graphics

A collection of graphics by artist William Nicholson will be displayed at the Stanford University Museum from March 20 to May 22.

In connection with the opening, Associates of the Stanford University Libraries and the Committe for Art at Stanford will present an illustrated lecture by Stephen Gale Herrick on Sunday, March 20.

Herrick, who has loaned his extensive collection of Nicholson graphics for the exhibition, is well known as a book collector, hand bookbinder and as a founder of the Hand Bookbinders of California.

His talk, "Introducing Sir William: William Nicholson 1872-1949," will be given in the Carl F. Braun Auditorium, Mudd Chemistry Building at 3 p.m.

Nicholson is a well-known English portraitist whose works are represented in American collections including that of the Metropolitan Museum of Art. Knighted in 1943, he was the father of the late Ben Nicholson, also an important artist.

"California Seens," a selection of photographs by Lisa Hudson, will be shown at the Coffee House Gallery in Tresidder Union through March. Hudson is inspired by the beauty of nature and hopes to present to the viewer a new way of seeing.

Ph.D.orals

THURSDAY, MARCH 17

Robert Jon Perlmutter, electrical engineering. "Contributions to Digital Holography for the 3-D Display of Medical Imagery," 2 p.m., Room 450, Durand.

Mason's etchings shown at H & S for two months

An exhibition of etchings by Rob Mason was installed on March 12 in the recently renovated School of Humanities and Sciences space in Bldg. 1 on the inner quad. Mason's prints will remain on view for two months and will be followed by exhibitions arranged by Priscilla Hexter, coordinator of art exhibitions at Stanford's International Center.

Mason, born in Corvallis, Oregon, was brought up in Palo Alto. His father, Donald L. Mason, was associate professor of industrial arts at Stanford in the 1940s and '50s, and his mother still lives in the family home on Lincoln Ave. in Palo Alto.

The artist holds a bachelor's degree in industrial engineering from Oregon State University, where he also studied art. He is a registered professional engineer in California. After a 20-year career in various facets of the maritime industry Mason has chosen to pursue full-time his long-standing interest in art—especially printmaking from the etching process.

The influence of his background together with a personal interest in sailing is apparent in his art. Landscapes, still lifes and some figurative work are included in Mason's etchings, with much of the work at the School of Humanities and Sciences based on scenes along San Francisco Bay and the northern California coast.

The artist studied printmaking at Foothill College and is now himself an instructor in printmaking at the Palo Alto Art Club. He lives and has his studio in Palo Alto.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., March 16, to cover the week of Mon., March 21, through Sun., March 27.

MONDAY, MARCH 21

Baseball: vs. USC. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Discovery Film Series: "New Zealand". 2:30 p.m. Kresge Aud. $3.

Discovery Film Series: "New Zealand". 7:45 p.m. Memorial Aud. $4.

TUESDAY, MARCH 22

Women's Tennis: vs. San Diego State. 1:30 p.m. Varsity Courts.

WEDNESDAY, MARCH 23

Baseball: vs. Oregon State. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

THURSDAY, MARCH 24

Biological Sciences Special Seminar: "Molecular Probes To Study the First Differentiation in the Mouse Embryo," by Dr. Phillipe Brulet, Institut Pasteur , Paris, France. 4:15 p.m. Herrin Hall, Room T-175.

Stanford-Berkeley Joint East Asia Center: "Berkeley at Stanford" Lecture. Prof. John Jamieson (U.C. Berkeley Dept. of Oriental Languages), former Academic Advisor to the American Embassy in Beijing and recently Visiting Professor of History at Peking University, will speak on China. 7:00 p.m. Polich Room, Lou Henry Hoover Bldg.

Spirit of Japan Lecture Series: "Japanese Ceramics," by Prof. John La Plante. 8:15 p.m. Annenberg Aud. Non Members $5, Comm. for Art members & students $4.

FRIDAY, MARCH 25

Baseball: vs. Arizona State Univ. 2 p.m. Sunken Diamond. $2 general, Stanford students free.

Stanford Child Research Forum: Keynote Address by Annette Karmiloff-Smith, MRC Cognitive Development Unit, London. 8 p.m. Terman Aud. Registration for 3-day forum: $15 students, $20 general.

SATURDAY, MARCH 26

Baseball: vs. Arizona State Univ. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

International Association of Quality Circle Conference: "Circling Our Resources". 65 workshops will be held throughout the day. Material will be appropriate for managers, steering committee facilitators, circle leaders, and members. 8:30 a.m. to 4:30 p.m. Graduate School of Business. $30 Registration Fee.

Stanford Child Language Research Forum: Papers and workshops by Lois Bloom and Kenji Hakuta. 9 a.m. to 5:15 p.m. Terman Aud. $15 students, $20 general for three day forum.

SUNDAY, MARCH 27

Baseball: vs. Arizona State Univ. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

University Public Worship: Preacher: R.G. Hamerton-Kelly, Dean of the Chapel. 11 a.m. Memorial Church.

Stanford Child Language Research Forum: Presentation of papers and workshop by Dan Slobin. 9:30 a.m. to 4:45 p.m. Terman Aud. Registration for 3-day forum: $15 students, $20 general.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

"Photographs of Old Russia," by Jack Kollman. Faculty Club. Jan. 17 - March 26.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Contrasts - Marina Goodier. Watercolors, some oils, and pastels in a delicate and warm expression of nature and grace. Tresidder Upper Lobby, 2nd. Floor. March 1 - March 31.

California Scenes by Lisa Hudson. The natural beauty of this world in a simple and straight-forward presentation. Coffee House Gallery. March 1 - March 31.

Annette Kaplan, *Luz do Sol*, Tapestries. I-Center. March 3 - March 30.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

Please be careful!

People who have responsibility for listing events in the *Campus Report* calendar should be especially careful to give the correct information, now that the calendar is on the computer.

A student employee enters the information into the computer at night to take advantage of cheaper rates, and University offices are not open then to check on discrepancies.

Events and Services depends on departments to supply the correct information about their events. If corrections or changes occur after initial information has been supplied, please send them to Events and Services, Press Courtyard. (After the calendar deadline has passed, phone corrections to Pat Black, ext. 7-2558.)

CAMPUS REPORT

Volume XV, Number 25 | A publication for Stanford University faculty & staff | March 23, 1983

Parker issues 1983-84 salary guidelines

Guidelines for 1983-84 salary increases have been issued by Robert Parker, Director of Personnel.

University President Donald Kennedy said that the salary program, which is substantially smaller than last year's, reflects the University's budgetary realities.

"We've had to cut back on several fronts: tuition, administrative overhead, and academic program funding," he said. "The staff salary improvements are less than they were, but they are equitable in terms of the things we are doing elsewhere.

"We believe our salary program is sound, that it will still allow us to attract and retain the quality people for which Stanford is noted."

Parker noted that "in view of the sharp decline in inflation and the current recession, other Bay Area employers have sharply reduced the rate of increase in their salary programs compared to the last two or three years. Stanford's program is consistent with what's happening around us."

Highlights of the salary program include:

* Nonexempt, nonbargaining unit staff: a 5 percent upward adjustment of the Four-Step ranges, and a 7 percent merit program for Merit Zone employees. Also each range maximum has been increased by 1.5 percent.

* Exempt staff: a 6.3 percent merit program.

* Supervisory Merit ranges: a 6.3 percent merit program.

* Bargaining unit staff: the negotiated range adjustment of 5 percent and normal step increases. In addition, all steps 4 have been adjusted upward by 2 percent, in accord with the current contract.

The guidelines cover regular administrative, professional, clerical, library support, and bargaining unit employees, but exclude faculty. Also excluded are Bing teachers, social workers, nurses, and police supervisors. Guidelines for these groups will be issued in the near future.

The salary program guidelines were announced following approval by the Board of Trustees at its March 7 meeting. The guidelines were presented to the Board after several weeks of deliberations by the Administrative Council and the Budget Group.

The new guidelines include revised curve ranges, step ranges and supervisory merit ranges *(see accompanying charts and tables on pages 12-13.)*

Departments will use the guidelines when preparing salary proposals for review and approval in June by the University Vice-presidents and the President. The approved salaries are announced to employees in July and August, and are implemented September 1.

Law School applications dip but H&S, Engineering gain

Changes in the national Law School Admissions Test (LSAT) and its scoring have led to a sharp decline in applications to Stanford and other leading law schools.

The drop stems from differences between the expected and the actual distribution of student scores on the test, which is now graded on a scale of 10 to 50.

Where a score of about 45 was believed needed for those applying to top schools, a score of 40 proved equivalent to about the 91st percentile among those taking the test. In other words, those scoring 40 or higher were among the top tenth of all those taking the new LSAT.

Many of those scoring in the low 40s may not have applied to the most competitive schools, even though they ranked very highly among those taking the test.

As of March 15, applications to Stanford Law School declined about 22 percent from a year ago, to 3,357 from 4,324, for 172 places in the first year class.

Informal checks with Harvard, Yale, Penn, Chicago, Columbia and NYU indicate declines of about 5 to 20 percent in law school applications, according to

Massy urges affordable housing

Affordable housing remains a central goal of the 1,275-unit Stanford West project, University officials told the Palo Alto City Council Wednesday night, March 16.

Vice President William F. Massy opposed proposals to reduce the planned density of the project or obtain further open space commitments from the University.

Stanford West would be located on 46 acres adjoining Willow Road, between the Oak Creek apartments and the Children's Hospital.

"The project we have proposed is 20 percent less dense than the zoning allows, would cover one quarter of the site instead of the allowable 45 percent, would provide three times as much open space as that required, and calls for buffer areas wider than stipulated," Massy said.

Present plans would provide nearly a four-fold increase in below market rate housing for Palo Alto, he added. Besides providing 220 below market rate (BMR) units at Stanford West, the University would make the four-acre Mayfield School site available to the city for only $100,000—a fraction of its market value—for construction of additional BMR units.

BMR units are available to those households earning incomes 80 to 120 percent of the county median.

Frank Morrow, director of real estate, noted that at least 80 to 85 additional BMR units could be built at the Mayfield site, bringing the total to nearly 25 percent. "This far exceeds any mitigations ever proposed by any developer in the area," he declared.

The non-BMR units for sale at Stanford West would range from $60,000 to $250,000, with an average price of $125,000 to $130,000.

"Given reasonable economic conditions and rational interest rates, these units would be very affordable, even in today's condition of 11.5 to 12.5 percent interest rates," he said.

A large single bedroom unit or small double bedroom could be purchased by those with a gross household income of $33,000 to $39,000. A large two-bedroom or small three-bedroom unit would be

People

Theodore Hansch

Theodor W. Hansch, Stanford professor of physics, has won the 1983 Herbert Broida Prize from the American Institute of Physics.

The award is given annually for work in atomic and electronic spectroscopy and molecular physics.

The citation praises Hansch's work in inventing a Doppler-free spectroscope using a broadly tunable laser. According to AIP, Hansch's "elegant experimental method" is widely emulated in physics.

Hansch is a native of Heidelberg, Germany, and received his degree in physics from the University of Heidelberg (summa cum laude) in 1969. He was a NATO fellow and research associate at Stanford in 1972 and joined the Stanford faculty in September, 1972.

Much of his work in spectroscopy has been done with Nobel laureate Arthur Schawlow.

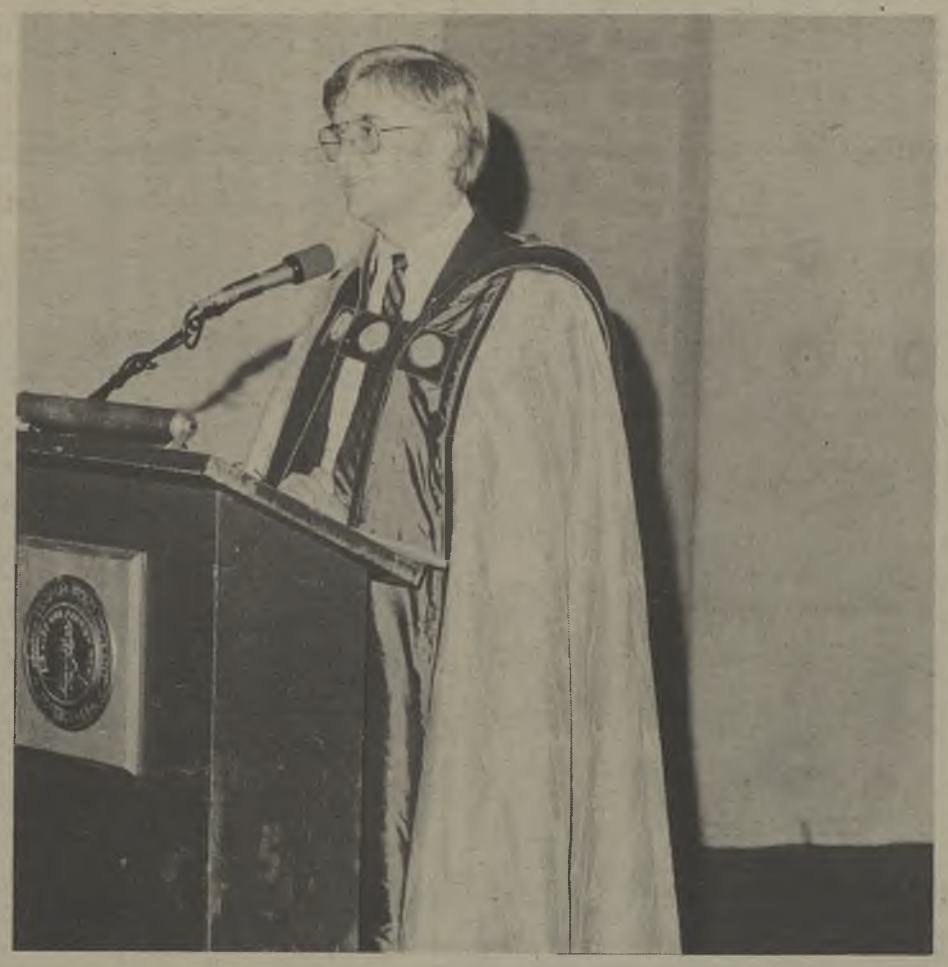
The award will be given at the spring meeting of the American Physical Society in Baltimore on April 20.

Carol Ellen Eger

Stanford Business School Assistant Professor Carol Ellen Eger has been named recipient of the 1983 Trefftzs Award of the Western Finance Association for her paper, 'An Empirical Test of the Redistribution Effect in Pure Exchange Mergers."

Her paper was judged the best student manuscript in an annual competition sponsored by the western states professional group. Eger, who joined the Business School faculty during the current academic year, was a doctoral student at the University of Minnesota at the time she submitted her manuscript.

Bruno Bettelheim



Bruno Bettelheim, visiting professor emeritus in the Stanford School of education, will receive the Goethe Medaille of the Goethe Institute in ceremonies at the German Consulate in San Francisco March 22.

One of the two highest cultural awards of the Federal Republic of Germany, it is given to no more than five persons annually on March 22, the anniversary of Goethe's death.

The citation accompanying the medal says "his work as child psychologist and author have assured Bruno Bettelheim the highest recognition the world over. In the U.S., he embodies the intellectual tradition of German culture to an especially impressive extent."

Now a resident of Portola Valley, Bettelheim was born in Vienna in 1903, emigrating to the U.S. in 1939 after a year in the concentration camps of Dachau and Buchenwald. He headed the Orthogenic School for autistic children at the University of Chicago for 30 years, where he held professorships in psychiatry, psychology and education.

He recently has investigated falsification of the work of Sigmund Freud at the time of its reception through inadequate translations into English.

Dean of the Chapel Robert Hamerton-Kelly wears the new Dean's cope, presented to Memorial Church in honor of his 10th anniversary at Stanford.

Friends honor Hamerton-Kelly

The Friends of Memorial Church have presented the Church with two gifts in honor of Dean of the Chapel Robert Hamerton-Kelly's 10th anniversary at Stanford: the Robert Hamerton-Kelly Summer Scholarship Fund and the Dean's cope, a liturgical vestment to be used on special days.

The scholarship fund—the "works" gift—will provide for three currently enrolled undergraduates, chosen by the Dean, to do religious or social service projects during the summer.

The new Dean's cope—the "faith" gift—was made by Charles Ross of San Francisco of fine silk with a mosaic-like pattern. The hood is embroidered with the cross that is carved in the marble altar of Memorial Church. It will be used on Christmas, Easter, Founders' Day, and Baccalaureate.

Hamerton-Kelly accepted the gifts at a Founders' Day dinner in his honor earlier this month. He also received a book of letters from 16 interns and Stanford students whose vocation to the ministry he influenced and a cross embroidered by needlework artist Marilynn Price.

Hamerton-Kelly's first Sunday at Stanford was Founders' Day 1973. For the same service this year University organist Herbert Nanney composed and associate choir director Gregory Wait arranged for the choir a new setting for one of the Dean's favorite hymns—"We Limit Not the Truth of God."

Prof. Lewis Spitz, history, was chairman of the Dean's Anniversary Committee.

The Friends of Memorial Church, now numbering some 150 members, was launched last fall to provide financial and program support for the Church, which does not have an official membership. For information on the group call ext. 7-1762.

Running the Dish? Get a permit

A permit to run the Dish?

Even though most people have either attempted this run or heard others tell about it, very few people are aware that a special pass is required to run in the Stanford foothills. The passes (good for one year) are available in Room 105 Encina Hall upon presentation of a Stanford ID.

Some of the rules for the Dish run are that parking is not allowed on Junipero Serra, running and hiking are limited to designated trails and *only* during daylight hours, and dogs are not allowed. The land is leased by Piers Dairy, which necessitates guidelines to ensure that the land is not abused. So next time you get ready to "run the Dish," don't forget your shoes, don't forget your shorts, and don't forget your pass.

For more information about this and 19 other Stanford runs, plus tips on warming up, pacing, nutrition, clothing and equipment, look for a copy of *Run the Foothills to the Bay*, published last spring by Tresidder Union. Copies are available at the Tresidder Store and Recreation Center, and the Stanford Bookstore. The book was written by Michael Mayhew, a 1981 Stanford graduate in economics and a former runner on Stanford track and cross country teams.

John Henry Merryman

Stanford Law Prof. John Henry Merryman has been awarded an honorary doctorate degree by the University of Aix-Marseilles, of France. The award ceremony took place Dec. 5 in Aix-en-Provence.

Merryman, an expert in comparative law and art law, is believed to be the first American lawyer to be so recognized by the French university.

He has been a member of the Stanford law faculty since 1952 and holds the endowed Nelson Bowman Sweitzer and Marie B. Sweitzer professorship.

Linda Kim

Tresidder Union has announced the appointment of Linda H. Kim as its new catering manager.

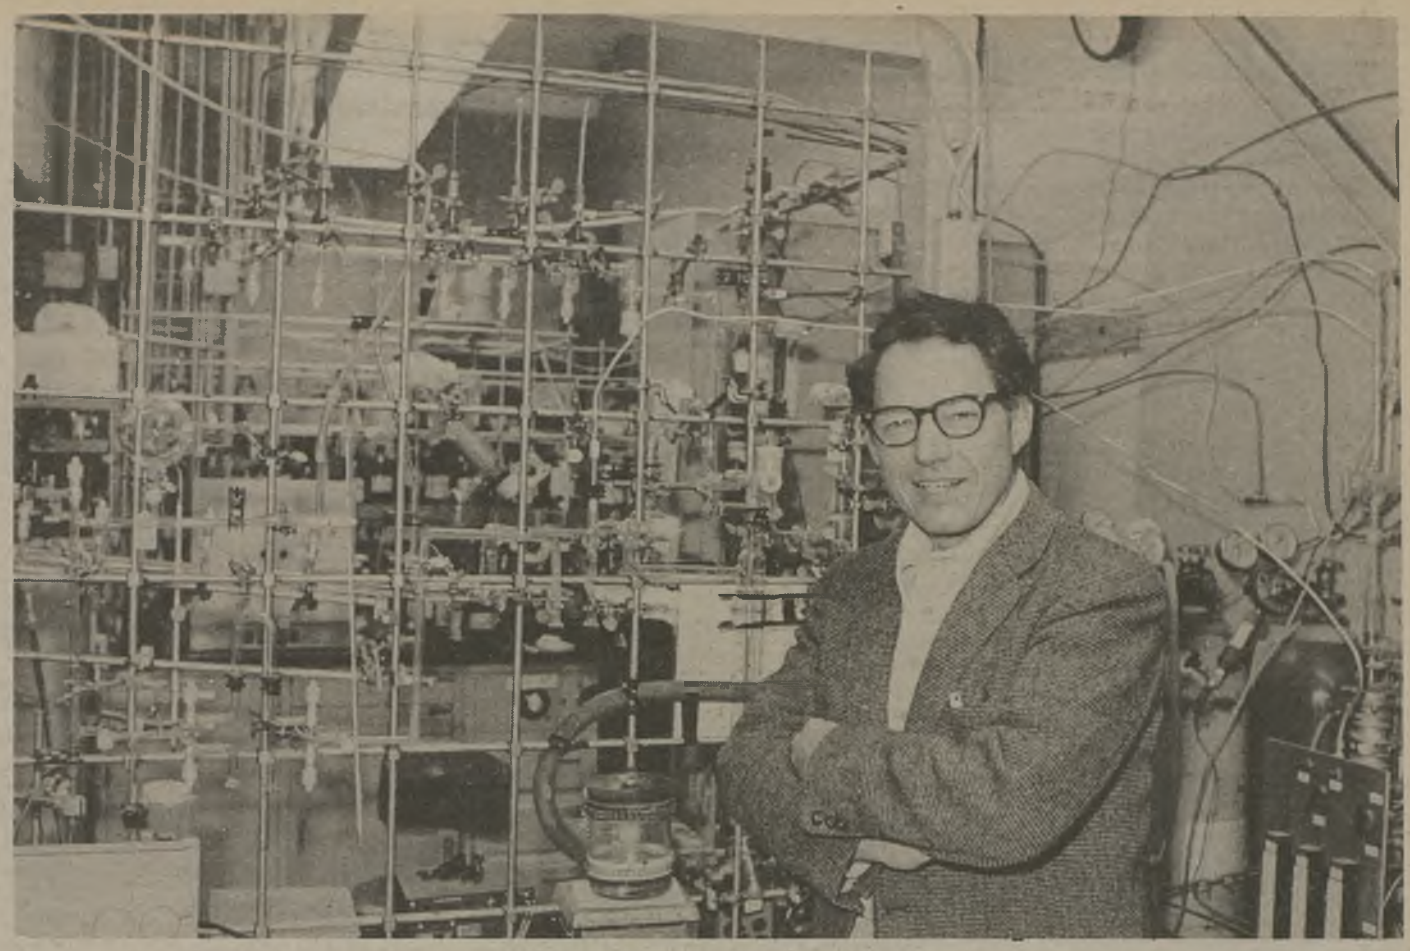
Kim previously operated her own catering service and worked for a number of catering services in Paris, France. She has attended the Academie du Vin, Ecole Lenotre and Le Cordon Bleu, all in Paris, and has a degree in food science and technology from UC-Davis.

She can be reached at the Catering Office, located off the Union Crossroads dining room in Tresidder Union, 497-4324.

Apologies to Nodding

Campus Report apologizes to Prof. Nel Noddings, whom it called Ellen in the headline and photo caption in the March 16 issue.

There was also an error in the title of her forthcoming book: it is *Caring: A Feminine Approach to Ethics and Moral Education*, to be published by the University of California Press.



CAMPUS REPORT
(ISSN:0049-2108)

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

A simple inexpensive way of creating superconductivity would bring abundant energy to the world at low cost, revolutionize our power systems, our transport, our lives. There's just a chance that James Collman may have found that way.

Strange new substances could be clue to superconductivity

BY DONALD STOKES

After many years of research Stanford Prof. James P. Collman, one of the leading chemists in the nation, has discovered a new approach to an almost mythical goal, a metallorganic polymer which might be superconducting.

It is a very long shot, but if it comes off it could become an extremely important discovery.

What is superconductivity? In basic terms, it is a means of overcoming the resistance to electrical currents which burdens present systems; energy now has to overcome the molecular resistance of the wires that carry it. The only known method up to now to overcome that resistance is to lower the temperature of the wires close to absolute zero—an expensive and impractical way.

Collman's new experiments are designed to produce a new class of materials which will test a very speculative, but exciting proposal made by Stanford Physics Prof. Bill Little, a double Ph.D. who has been experimenting with superconductivity for 20 years. Little has speculated that a different type of superconductivity could exist at much higher temperatures than now is possible with traditional superconduction.

A simple inexpensive method of creating superconductivity would bring abundant energy to the world at low cost, revolutionize our power systems, our transport, our lives.

Collman began the train of thought that led him to his present discovery 20 years ago, when he was a professor of chemistry at the University of North Carolina.

"When I came to Stanford in 1966, I met Bill Little and heard his theories about superconductivity and how it should be possible to create polymers (very long molecules) which conduct electricity without having to lower temperatures drastically," Collman said.

"I started to build chains of metals on which we could hang dyes, along the lines of Bill's theories. We were never able to produce anything that was as interesting as a superconductor. Eventually I gave up in frustration.

"But now I have evolved an idea, after six months of thought, about how to make the right sort of system. My team is getting to work on it, and I shall be discussing with Bill how my idea conforms with his theory. It is derived from some new substances we have discovered in the lab."

Are they organic substances?

"They are strange substances. They have a porphyrin ring such as you find in the oxygen carrier in hemoglobin. It is a big flat organic molecule and at its center there is an iron, but there can be other metals.

"We have discovered some metal porphyrins, which bind together in pairs, and the only force holding them together is a bond between two metals. This is a powerful bond, and one can vary its strength—called bond order.

"Such substances can have as many as four bonds joining the two metals. We have discovered that the bonding process happens spontaneously.

"I have conceived a scheme for converting these into a polymer." Collman drew diagrams to explain the process and went on: "If we take a substance such as elemental sulphur, we should be able to insert sulphur between the metals so that we create an infinite chain.

"There should be a band of electronic states in the solid. This looks as if it might fit in with Bill's idea. It would be a sort of everlasting shish-kabob of molecules, where the metal and another nonmetallic atom make up a long chain and the dyes are the 'meat' along the wire."

That would be the way to superconductivity?

"That is a very speculative possibility. Bill will have to decide whether the geometry is right. We are certainly going to attempt to create such polymers and they should be metallic. At the very least, they should be interesting new materials and possibly useful as infra-red detectors or something like that. If we are really lucky, they might be superconductors.

"That may be one chance in a thousand. However, if it does happen it will be a very important discovery.

"We are looking at something that is potentially significant, and also we are certain that at least some parts of it will work. So we shall get a little new chemistry, and maybe some new physics.

"This is the sort of risk that is worth taking, and the sort of risk I like to take. I often tell my students that I would rather swing for a home run rather than be content with a single."

When Collman 10 years ago abandoned his first effort to unveil the secret of superconductivity, he turned to other quests which were successful.

First came the synthesis of some molecules which behaved like the oxygen-carrying center in hemoglobin—the red pigment of blood.

"Nobody had been able to create such a viable hemoglobin mimic. I began to wonder why simple synthetic analogs didn't work. I conceived of some that should. We made them and they did work. We made some substances which are very faithful mimics of the oxygen carrier. They attracted attention from the biochemical world.

"We studied all the parallels and all the differences we could, in a way that showed what the protein wrapped around the hemoglobin was doing in the biological system, and what it wasn't doing.

"That sent me off on a search, taking hints from biology about how certain metal complexes function in enzymes. I have continued that line of activity and it has been quite successful."

Collman's team consists at this time of nine graduates, and a couple of postgraduates. Many of them work on research projects he suggests.

Collman had come to Stanford in 1967 largely because of Prof. Henry Taube, one of the great chemists of the nation. It was Taube who suggested to Collman an area of research which he had not realized was significant. It seemed simple; it was to reduce oxygen to water, in other words to add four electrons and four protons (hydrogen ions) with a catalyst.

"That process does of course work, but without a catalyst it is slow and inefficient. Nature has developed an enzyme to make that reaction very fast. Nature stores the energy from this reaction by creating the energy rich molecule, ATP, which is subsequently used for muscle action.

"There is also a need for such a reaction in air batteries or fuel cells where you take oxygen from the air and reduce it to water; in doing so you use electrons that you get from fuel in another electrode, a fuel-like hydrogen gas.

"Theoretically just by electrochemically burning the fuel, you could make current obtaining most of

continued on page 4

Collman/ continued from page 3

the available combustion energy.

"But there were no practical catalysts for the four-electron oxygen reduction. At Taube's suggestion, I began to think how I could invent some. We began a six-year task, with many students.

"A fuel such as gaseous hydrogen can be "burned" electrochemically with atmospheric oxygen. Such a device is called a fuel cell. The maximum theoretical efficiency of a fuel cell is far greater (about 2.5 times) than that of any heat engine.

If fuel cells are so efficient, why are they only used in space stations and a few other exotic places? Why not provide home electricity and power automobiles with fuel cells?

"The difficulty is in catalyzing the four-electron reduction of oxygen to water. Far less energy can be extracted from a one- or two-electron reduction of oxygen. The present commercial fuel cell catalyst, platinum metal, is expensive, slow, and operates at a potential far less than the theoretical value.

"Since World War II, chemists and engineers have looked for oxygen fuel cell catalysts which might be more efficient and less expensive than platinum. These largely empirical studies uncovered a few catalysts, but all were less effective than platinum since in all cases only oxygen was first reduced by two electrons at a relatively low voltage which produces much less power. Furthermore, the intermediate product, hydrogen peroxide, is quite corrosive."

This situation has now been dramatically changed through the collaborative efforts of Collman's group at Stanford and Professor Fred Anson of Cal Tech.

These chemists designed and constructed a series of dimeric metal porphyrin complexes and tested them as oxygen electrode catalysts. This work led to the discovery of a few very effective catalysts for the four-electron reduction of oxygen to water. At the same operating potential as the best current platinum electrode catalysts, these "face-to-face" cobalt porphyrin catalysts are more than 100 times faster. This research is multidisciplinary since it involves synthetic organic and inorganic chemistry, electrochemistry, and kinetic and structural studies.

It has also been discovered that the operating potential of these catalysts can be improved by chemical modification, which suggests the eventual development of even more potent catalysts. However, at the present time, these oxygen electrode catalysts are too expensive and insufficiently robust to be technologically useful.

This discovery is a chemical hallmark, since for the first time a synthetic multi-electron redox catalyst was developed through molecular design.

"It is as if an artificial enzyme has been invented!" said Collman.

Other very interesting multi-electron redox catalysts for processes such as nitrogen fixation could theoretically be designed and constructed. Such work has just begun in Collman's lab.

What practical application do these developments have?

"Theoretically you should be able to take a fuel such as hydrogen or a more complicated one like methyl alcohol, put it in the tank of your car, have a fancy battery system that draws oxygen from the air and so make electricity directly with great efficiency.

"It might have four times the efficiency you get from an internal combustion engine. You could power your house with electricity that way."

Are such developments a long way off?

"There are apartment houses which use fuel cells, and they are also used in space stations. However, they use platinum as their catalyst, which is expensive but somewhat effective. Our catalyst is much faster than platinum, although it is still very expensive and not so long-lived.

"I think that eventually a system such as ours, or analagous to it, may be used. We call these substances homogenous catalysts. It is feasible that

Prof. James P. Collman in his laboratory.

one day autos will run on such a system, although many difficult engineering problems remain to be solved, not to mention problems of durability and cost."

Collman's basic method, he says, is to try to steal Nature's methods and make them work in chemistry. "Enzymes are nature's catalysts. Our work is biominetic inorganic chemistry."

In cooperation with Prof. John Brauman, chairman of the Chemistry Department, Collman's team has developed metallic reagents which may some day find application in the manufacture of drugs, perfumes, insecticides and other high value chemical products.

Collman's approach to research is based on his particular talent, which is producing ideas. "I provide the chemicals and the lab space, the students, and find the funds, and John Brauman provides the brains, I think up the problem, and we codirect the student. John helps the student unravel reaction mechanisms, and I suggest how it might be done. We have all worked together in this way many times, and it is fruitful.

"By the end of such a process, the student comes out knowing what I know and what John knows!"

Collman once declared in a talk that "science is a young person's game." Asked if he still believed this, now that he is 50, he replied, "I used to think I would run out of ideas by my present age, but that is apparently not happening. I seem to be able to generate new ideas, and to convince young people to develop them."

Collman has received the dean's award for superior teaching, and is very popular among students for the way he helps them. Asked for his thoughts on teaching, he said that he tries to get students to think for themselves.

"Also, I don't grade on a curve. I don't give out the same percentages of "As" and "Bs." If all the students do well, I give them high grades; if they all do badly I give them all poor marks.

"Many students are easily discouraged by a teacher who does not communicate clearly. They are easily put down and their interest stifled by people who don't relate to them. That is unfortunate. A student should never allow a faculty member to decide his or her career simply because teacher and student don't mesh. But students do."

Are students less robust intellectually than they used to be? Collman thinks they are only more sensitive. He sees no sign at Stanford of the reported national decline in student's basic intellectual skills: "I would say it has slowly improved at Stanford in the years I have been here."

James Collman's family was among the original settlers of Nebraska, and his great-grandfather was a U.S. Senator.

He claims to have been an indifferent student at school, and that his main connection with sports was to run a book on football games. The only subject that interested him was chemistry.

He married Patricia Tincher, a farmer's daughter from the same state, and went to the University of Nebraska with the idea of becoming a lawyer.

"When I reached the university, the registration for freshmen was held in a very large hall, rather like the Cow Palace in San Francisco. I found there were no prelegal courses, as I had hoped. When I said that the only other thing I was interested in was chemistry, I was directed to a doddering old guy who automatically signed me up for all the required courses for a B.Sc. in chemistry.

"Fortunately I soon grew interested in the courses and by the time I was a sophomore, I was in a course consisting mostly of graduate students. I realized that I was better than they were, and they were being paid to come to class.

"I was intrigued at doing something I was good at, and before you know it I had my doctorate at the University of Illinois."

He joined the faculty of the University of North Carolina, where he stayed for seven years, rising to full professor. In 1965 he came to Stanford on a sabbatical with a National Science Foundation Fellowship.

Stanford had for three years been looking for an outstanding inorganic chemist, and in Collman they found one who is also interested in organic chemistry, materials science and biochemistry. He accepted Stanford's offer of a tenured professorship. "I don't know if I would have had the courage to come here without tenure.

"Stanford allowed me to split my time between organic and inorganic chemistry (nowadays I teach undergraduates in organic and graduates in inorganic chemistry). So I have always walked in both of these subdisciplines of chemistry. Most of the work I have done takes advantage of my knowledge of the two areas.

When I started out, organic chemistry was a very well-developed field that was in its golden era. There was new instrumentation and methods. It was a large and rich field.

"On the other hand, inorganic chemistry was thought to be almost dead. It seemed that there was nothing more to be done in it. Only a few notable chemists were working in it—Henry Taube was one. Most other inorganic chemists were more interested in structure rather than reaction.

"Even as an undergraduate, I had begun to ask questions such as: if you took an organic molecule and bound it to a metal, making a complex, what would be the reactions of that complex?

"When I was working for my Ph.D., my adviser was uncomfortable with my suggested projects and discouraged me from working on them. I pursued these ideas in North Carolina and found this to be a rich area of chemistry, and my work in it began to attract some attention.

"My work happened at a time when all over the world inorganic chemistry was just beginning to come into its own."

What *is* inorganic chemistry?

"Essentially it is chemistry that involves other elements besides carbon, hydrogen, nitrogen; and oxygen.

"Inorganic compounds are sometimes important on catalysis. They act very fast and selectively.

"These facts awakened industrial interest. I was part of the surge of attention given to inorganic chemistry in the early 1960s. Everything I thought of seemed to work immediately. I had a sort of Midas touch. I had some marvelous postdoctoral people working with me; curiously enough, they were mostly from New Zealand.

"When I came to Stanford on sabbatical, it was appreciated that inorganic chemistry was a rapidly growing area, but there were very few senior people in it, as it was really being reborn.

"At Stanford I tried to leap into some new fields of research, but they didn't work. I tried other fields, and slowly some of them began to bear fruit. And now some of my earliest ideas look very promising."

That process or research has spread over 20 years, but the fruit seems tantalizingly close today.

* * *

Collman has four daughters: Victoria, 22; Pamela, 19; Diane, 17; and Carolyn, 15.

"The only other male in the house is the dog!" says the great chemist, in mock dismay.

Bolivar House saved energy *and* money—the staff did the weatherstripping

A visitor to the Latin American Studies (LAS) Center at Bolivar House one January afternoon would have found music blaring, beer in the fridge, and graduate students, visiting scholars, staff, and the director of the program casually dressed.

An informal get-together, the visitor might conclude—but then why are these people carrying tools, getting caulk all over their hands, and putting up weatherstripping?

"We wanted to have an 'energy bee,' something like a quilting bee," said Prof. John Wirth, LAS program director.

"Everyone who uses Bolivar pitched in a few hours of work. We ended up having a good time during the actual 'bee' and saved six or seven hundred dollars on labor. Best of all, the weatherstripping worked so well we had to turn the thermostat down the next week."

Bolivar House provides space for staff, graduate students, a secretary, and visiting scholars. The building has been perenially cold and drafty, and the secretarial area, located on an uninsulated converted porch, was particularly chilly.

Cold air leaked into the building through loose-fitting door- and window-frames as well as louvered windows. Unused fans and air conditioners were virtually open holes in the walls.

A beginning

In 1977 people in the LAS program decided it was time to improve the energy-efficiency and comfort of Bolivar House. Wirth called Karl Johnson at the Energy Program Office, who surveyed the building and suggested a number of possible improvements. Labor was available, either in the form of a proposed SWOPSI workshop or volunteers from the LAS program, but at that time there were no funds available for materials.

Even so, the department made some substantial low-cost improvements. Awnings were installed on south-facing windows and the building's hot water was completely turned off. Later, some incandescent fixtures were converted to energy-saving fluorescents.

The problem of draftiness remained unresolved until last summer, when LAS program coordinator Kathy Durham sent a funding request to the Provost's Office. When an Operations and Maintenance estimate for weatherstripping the first floor, taking out a fan, and removing three window air conditioners totaled over $1,800, the inhabitants of Bolivar House decided that they could save money by doing much of the simpler work themselves.

Work party idea

Wirth contacted Johnson again in December, and the concept of the "energy bee" as a community work party began to take shape.

"I've always found that this kind of hands-on participation is particularly satisfying in the academic environment," Johnson said, "where rewards aren't often very tangible or immediate."

Most of the funding for the project came from the Provost's Office, with contributions from the LAS budget and the Energy Program Office. Johnson and Peter Skinner from the Energy Program Office provided expertise and arranged for the purchase of about $250 worth of weatherstripping, caulk, and other materials.

The actual "bee" lasted about three-and-a-half hours. The participants removed a ventilation fan and three air conditioners, sealed the holes, sealed a leaky stovepipe venthole, and weatherstripped all the outside doors and windows on the first floor. About 14 people, including Skinner and Johnson, were involved.

By doing the work themselves, the department has funds left over to pay for other projects requiring skilled labor, such as replacing the leaky louvered windows and unused air conditioners with sliding glass windows. In addition, Wirth hopes to get thermostatically controlled radiators.

The next step

Skinner noted that it might take the LAS program a little longer than usual to recover the costs of the weatherstripping. "The payback time for weatherstripping a house like Bolivar typically would be about a year or two. Here, it might be a little longer, since these people are so conscientious that their energy bills are already low and there is less room for improvement."

"The 'energy bee' was very much in the tradition of Bolivar House," Wirth added. "A few years ago we saved a lot of money by painting the house ourselves, and had a good time doing it. We find that the community effort we generate helps us work together on a day-to-day basis."

Wirth would like to move on to his next big project, renovating the attic to create more office space—"We just want to be able to get more foreign visitors per watt."

Linus Pauling—No dispute between nations can justify nuclear war

The U.S. should "institute a nuclear freeze by ourselves," Stanford Nobel Laureate Linus Pauling told about 200 local peace activists in Memorial Auditorium Tuesday, March 15.

Conceding that "the freeze movement may be running down a little," the Nobel Peace Prize winner urged individuals to "forget the channels" and "organize mass movements for peace."

Speaking in Moscow last December, "I advocated independent action against militarism" there, Pauling declared.

"The Soviet people are much more eager to have peace," he said. Having suffered 50 times as many casualties than the U.S. in World War II, "they know war in a way we don't" he observed.

Paraphrasing a quote from the Eisenhower era, Pauling said "the people want peace so badly that government should get out of the way and let them have it."

The growing complexity of nuclear weapons increases the danger of "the ultimate Holocaust" from psychological or technical accident.

It would be "absolutely insane" for the Soviets to deliberately attack the U.S., even if they had twice as many missiles as we do, because "they'd still be killed" by retaliatory strikes, he said.

The world now has about 60,000 megatons of nuclear explosives, he estimated. This is equivalent to about 13 tons for every person on Earth. (World population now totals nearly 4.5 billion.)

The first day of a nuclear conflict could unleash more than 10,000 times the destruction of all World War II, he said. One Institute for Defense Analysis study estimated that 720 million of the 800 million inhabitants of America, Europe and the Soviet Union would die within 60 days of a full-fledged nuclear exchange.

"No dispute between nations can justify nuclear war," Pauling said.

In adding as much as 15,000 megatons to U.S. nuclear capability, he suggested, President Reagan "can't distinguish between reality and fantasy. . . ."

Linus Pauling

"The Soviet Union follows our lead with a lag of about five years. It's likely the Soviets will soon have Cruise missiles if we deploy them."

Individual nations should begin to reduce their nuclear stockpiles from what physicist Phil Morrison has called "insane" to "less irrational levels."

In a two-hour interview with Moscow radio last December, Pauling said the Soviets were "incensed" when he pointed out that they exploded the largest single bomb—60 megatons—in 1961. But his interviewer, like half the world's present population, wasn't old enough to remember that event or recognize he'd been brought into "a world of militarism."

"The whole business is just plain crazy, preparing for a conflict which would mean the end of the human race," Pauling said.

But he expressed hope humanity might still "muddle through."

Asked the reason for his optimism, Pauling replied: "In 1960, the physicists estimated the probability of nuclear destruction at 10 percent per year. Just the fact that we've gone through 38 years is evidence that we can get through another 38 if we just use our heads a bit."

His talk, given during final exams at Stanford, brought standing applause from his audience. It was sponsored by the World Peace Council.

A recipient of the Lenin Peace Prize, he was awarded the Nobel Prize in chemistry in 1954 and the Nobel Prize for peace in 1962.

Letters to the editor

Reader objects to Stanford's hosting studies on nuclear weaponry

Editor, **Campus Report**:

As an unimportant member of the Stanford community, I should like, nonetheless, to offer an opinion on William Perry, fellow of the Northeast Asia-U.S. Forum of International Policy, whose talk, "Regular weapons, electronics nearly match nukes vs. tanks," was reported in **Campus Report** of March 16, 1983. I feel that William Perry and the subjects he studies have no legitimate place at Stanford University.

I graduated from Stanford in 1955—my degree was in English literature, with a minor in classics. At that time the Political Science Department offered no courses in nuclear weaponry, as far as I can remember, and there was no "Northeast Asia-U.S. Forum," which studied first-strike nuclear war scenarios. I am shocked more than I can say that Stanford now not only permits such research but encourages it.

William Perry's macabre researches are symptomatic of the national psychosis. His Chinese colleagues must be as sick as he and I feel that perhaps the best sort of therapy might be a year or so working with the children at Bing Nursery School on campus.

Unfortunately, there are all too many folks like William Perry; their number, in our society, is legion. If these people were obliged for a while to associate with young children, perhaps then they would be able to understand the consequences—in human terms, in medical terms, in environmental terms—of thermonuclear war.

I am a grandmother and dearly love my granddaughter, aged 16 months. She was born prematurely and for four months we in my family felt a ghastly anxiety about her. But she survived and has grown to become an expert crawler—agile, energetic and irrepressibly curious about the world around her. I am enchanted by her; this state of mind is characteristic of grandmothers. When I see my grandchild with her happy young parents, then I feel a loathing for nuclear weapons that is hard to describe.

I wish William Perry well. Like my granddaughter, like myself, he is a human being and deserves his place in the sun. But I wish he were in other work. We must all now take heed of the beautiful words in **Deuteronomy**; their warning could not be more relevant.

I call heaven and earth to witness against you this day, that I have set before you life and death, blessing and curse; therefore choose life, that you and your descendants may live. . .

Choose life.

Peace
Constance Kurruppu
Medical Secretary, Radiology

Another correction

Campus Report apologizes to Assistant Prof. Michael Taksar, operations research, whose paper on Soviet visitors in the U.S. we printed last week with a line omitted.

Below is the correct version of the 11th paragraph in the first column of page 16 of the March 16 issue.

Scholars who go abroad are considered to be fulfilling a Party and government assignment; they are on missions as representatives of the socialist state. To be considered for the mission, a scholar must obtain a character review from the local Party Bureau. The review must describe the applicant's political, business and social qualities and must necessarily contain a sacramental phrase: "The applicant is politically literate and morally stable." This is a euphemism meaning that the applicant will not be likely to defect, knows how to answer "slippery" political questions, and is not prone to having an affair during a visit abroad.

Raubitschek: Schools should become more discriminating about talent

Editor, **Campus Report**:

A short residence in hospital enabled me to read more carefully Donald Stokes' thoughtful report on (Prof. Myron) Atkin and his views on education.

Nothing in what follows is critical of Atkin's views or the account, but I am trying to examine two of the underlying issues, one as a student of philosophy and the other simply as an educator.

The classical philosophers almost unanimously thought that significant changes in the people's attitude towards political action could come about through education and not through legislation. Not only matters of career and vocation but attitudes to sex (abortion) and public service (registration for the draft) should be the result of education, and that means persuasion.

This would indicate that the home and the school would not take a neutral stand in these matters, but function as the exponents of society in seeking to provide its identity and its continuity. It is in a sense, the old fashioned "indoctrination" made more palatable and more justifiable by its being done within the framework of a public education (paid for or supported by taxation).

This would not only strengthen the schools through the eyes of the public, it would also save money from formulating and enforcing policies.

The second point is concerned with our attitude to education which presupposes that the major effort be made by school boards, parents, teachers, and that the pupils and students are little more than the precious object of education. It is obvious that this attitude is wrong, so wrong that it does not need to be argued. Implied in this error is a more harmful view, namely that to provide equal educational opportunity for all means that all have the same education potential.

We all know that this is wrong and we are keeping our young from achieving the best they can be telling them and ourselves that competition and discrimination based on it are morally wrong and undemocratic. This error must be eliminated and true discrimination must be practiced through our schools in order to encourage the best to do their best.

Prof. Antony Raubitshek
Classics, emeritus

Ronald Hilton writes about Cleopatra's nose, Jenkins' ear, and his own toe

Pascal remarked how different the history of the world would have been had Cleopatra's nose been a little longer. In 1739 the War of Jenkins' Ear, provoked by the de-earing of Captain Robert Jenkins, began the final assault on Spanish tyranny. Now Hilton's toe joins those illustrious extremities, as the symbol of the revolt against medical bureaucracy. Venceremos!

Since I lead a sober and virtuous life I see a doctor only once every ten years or so. Physicians require an assurance on this point before accepting a job in the Stanford area. Early last year I had a slight cut on my toe. Wishing to alleviate the penury of the medical profession, I decided to go to Stanford's Department of Extremities. I told the physician that I needed some extreme unction (I forgot that I had some in my medical chest). "Ah!" he beamed, "That's our specialty." It worked, so I reported back to said department. "How's your toe, honey?" said a feminine extremist. "Fine," said I. That conversation cost me $20, but I went away full of extreme good will.

Then my troubles began. Having come to Stanford in 1941, I retired before 1979, which the Stanford Administration has established as the dividing line between those emeriti who must fight for themselves and the rest of the faculty, including emeriti, who are eligible for Take Care. By coincidence, an "active" friend of mine (for some reason the Administration deems me "inactive") had the same problem as I. He pays the Clinic $4 a visit and $2 for medicine, and no sweat. He and a former secretary of mine, who served for just over 10 years and recently retired, are covered by Take Care until they are *in articulo mortis*.

The pre-79ers like myself must face the System, which not even Dr. Rube Goldberg, who invented it, can understand. I began to get a flood of incomprehensible bills, for which the computer was blamed. This bewildering confusion went on for weeks. I asked some doctors what to do, and was told "Don't pay. We don't. The bills just go away." "Ah," I objected, "You poor people are on Medicaid. We bloated humanists are expected to pay our bill." Which I did.

My nervous system had recovered when, nine months later, I got another bill. I saw red, the color of another deficit, and called the Faculty Practice Program, which had sent me some of the earlier bills. The reply was that the School of Medicine does not do tests. They are sent to the Hospital, which has a separate billing system, about which the F.P.P. knows nothing. I must call Medical Center Finance. To assuage me, the F.P.P. spokesman said that the F.P.P. is preparing a multimedia presentation, just like *son et lumiere*, to explain to people how to understand their medical bills. Unfortunately said presentation is just in the planning stage; I had already had a lot of *son* but not much *lumiere*.

Being smitten with the research bug, I was determined to find out how the System works. No one knows. A number of most helpful university officials gave me quite contradictory explanations. When I presented the conflicting versions to one of them, her response was "Why don't you go to the Senior Citizens' Center? I believe there is someone there who understands the System."

Back to my research project. Medicare uses a list of "Usual, customary, and reasonable charges." Could I have a list of them? For that you must go to Social Security, so down to Cambridge Avenue I went. The officials there looked at me in disbelief. There is no such public list; the Russians might get hold of it, so it is labeled "top secret." So back I went to the Medical School and asked for a list of their charges. This too is a deep secret; the attending physicians just put something into the computer.

One helpful Medical Center employee suggested: "Why don't you go to the Palo Alto Clinic? That's were I go." The charges there are apparently lower, but that again is top secret. I decided to call the Palo Alto Clinic, because in a sympathetic reaction to my toe, my finger had somehow got cut. I spoke to the Department of Extremities, which has two doctors, a nurse, and a receptionist, and asked for an appointment. "I can't give you one," said the receptionist, "because we make all our appointments by computer, and the computer is down." I gave up, but as a gesture of help for that department I sent it a small diary and a ball point pen.

Another helpful person said "The professors in the Humanities have been given computers to help with their home finances. Can't that help you?" No, I said, the emeriti had been classified as inactive and told to use abaci (or is it cusses?). Fortunately an especially enlightened administrator realizes that not even an abacus can understand the System, so we may get help.

Having lost faith in human inventions, I have decided to let Mother Nature take its course. She assures me that she does not use a computer and her charges are in the public domain. However, she pointed out that life, like all good things, must end. Perhaps when the emeriti lose their marbles they will be able to understand the System and make sense of their medical bills. I doubt it. Meanwhile, I am prepared to become ultimately a number in a computer. But what if the computer breaks down?

Venceremos. I have written my Requiem, the refrain of which is: "Glory, hallelujah! His toe goes marching on!"

Ridendo castigat mores.
Ronald Hilton
Professor of the Humanities, Emeritus

High technology probably will lower job skills most workers really need

High technology probably will lower job skills required for most U.S. workers, two Stanford educators declare.

Citing Bureau of Labor Statistics and other data, Prof. Henry M. Levin and Research Associate Russell W. Rumberger challenge a great deal of currently popular conventional wisdom. Levin directs the Institute for Research on Educational Finance and Governance at Stanford.

While many high-tech occupations have rapid growth rates, they will account for only 7 percent of the new jobs created between 1978 and 1990, according to the BLS projections.

The U.S. will need three times as many new janitors and sextons (600,000) as new computer systems analysts (200,000) in this period.

Total new jobs in the same period for computer programmers (150,000) are less than one-fifth the projected growth in fast food workers and kitchen helpers (800,000).

Few openings require degrees

Only three or four of the top 20 occupations in total number of new jobs require education beyond high school and only two—teaching and nursing—require a college degree,the Stanford educators note.

Growth in professional and managerial occupations, projected at 28 percent, will be far slower than the preceding two decades. These occupations grew 36 percent in the 1960s, and 45 percent in the 1970s.

High technology will "profoundly affect" many existing jobs. It is likely to "further simplify and routinize work tasks, reducing opportunities for worker individuality and judgment," Levin and Rumberger contend.

"Moreover, the displacement in jobs and the downgrading of skill requirements for most of the new positions will undermine employment generally, and especially the employment of skilled workers."

In a study of the impact of automation on job skill requirements in U.S. industry more than 20 years ago, Prof. James Bright of the Harvard Business School found that skill requirements rose at first, then fell sharply as mechanization increased. A similar pattern may prevail in high technology, Levin and Rumberger believe.

Software advances

"Advances in software enable many workers to use computers without any knowledge of computer languages. . . Moreover, office computers perform many of the tasks formerly done by secretaries, actually reducing the requisite skills of office work.

"Machines will be able to perform more complex, mental tasks as more advanced software is developed. But the use of such sophisticated equipment will not necessarily require workers with more sophisticated skills. In fact, past technological advances suggest the opposite is often the case.

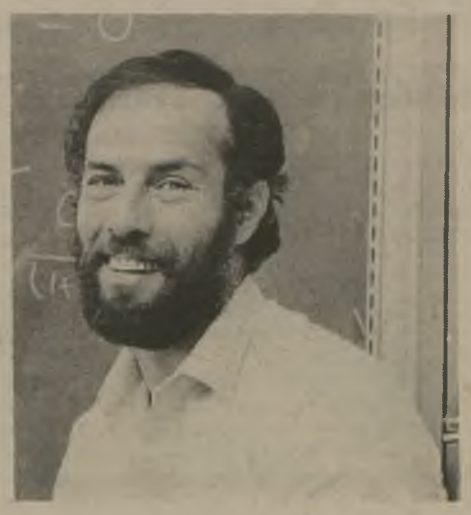
"The automobile of today is far more sophisticated than its predecessor of 50 years ago, yet today's car is far easier to drive.

"Entire classes of skilled workers will disappear or will be severely reduced in numbers as their jobs are replaced by robots or computer software.

"For example, robots could replace up to 3 million operative jobs in the next 20 years and potentially eliminate all 8 million operative positions—currently 8 percent of the work force—by the year 2025.

"The widespread use of computer-aided design may virtually eliminate the occupation of drafter in the not-too-distant future, a potential loss of 300,000 skilled positions."

Over the past 30 years, technological advances in the printing industry have eliminated many highly complex craft jobs and sharply reduced the skills required for those remaining in composing rooms.



With the exception of a relatively small number of highly specialized positions, most new jobs will not require higher skill levels, Levin and Rumberger believe.

"The preponderance of people affected by industrial shifts and technological change will not need more mathematics or computer science.

"The general educational requirements for creating good citizens and productive workers are not likely to be altered significantly by high technology.

General education

"Everyone should acquire strong analytic, expressive, communicative, and computational skills as well as extensive knowledge of political, economic, social and cultural institutions. . . . To the degree that present schools fall short of providing these results, they should be sought for their own sake rather than because of the claim that they are required

Henry M. Levin

for a high technology future.

"Since we cannot predict in any precise sense which jobs will be available to particular persons, which jobs they will select from those available, and what the characteristics of jobs will be over a 40-year working life, it is best to provide students with a strong general education and an ability to adapt to a changing work environment.

"Such adaptation requires a sufficient store of information about culture, language, society and technology as well as the ability to apply that information and acquire new knowledge. Accordingly, general academic and vocational preparation should be stressed, as opposed to specific training, especially for young students.

"Specific job skills can best be learned on the job, if a worker's general background is sufficient. Recent surveys of both U.S. and British employers indicate that they seek new employees with a sound education and good work habits, rather than narrow vocational skills."

Education-industry ties

Abrupt changes in work requirements may require better ties between education and industry, and should not exclude the possibility of more industry-based training. Since workers may no longer acquire a set of jobs skills at the start of their careers useful over their entire work life, recurrent educational programs will be needed.

"The educational implications of high technology are that a solid basic education rather than narrow vocational preparation will become more important in the future," they conclude. "This will require elementary and secondary schools to strengthen virtually all their instructional offerings that require analytical and communicative skills."

Their research was supported by funds from the National Institute of Education, but the analysis and conclusions do not necessarily reflect its views or policies.

Copies of their report on "The Educational Implications of High Technology" may be obtained for $2 each from IFG, CERAS Building Room 402, Stanford, Ca. 94305. Phone (415) 497-2754.

Corporate strategy should consider firm's culture

A corporation may sabotage its best laid strategic plans if it fails to consider how the plans will mesh with that firm's particular culture, a pair of Stanford Business School researchers contend.

Professors L. J. Bourgeois and David B. Jemison have devised a way to include cultural analysis in strategic planning, enabling a company to tell how its strategic plans will or won't fit with the organization's culture. The pair describe the approach in the forthcoming issue of the Organizational Behavior Teaching Journal.

Although anthropologists have long known that any planned social change has to be shaped to the culture of the community, many businesses continue to believe it is the other way around, according to the authors. Bourgeois, assistant professor of business policy, and Jemison, assistant professor of management, both teach strategic management and strategy implementation at the Business School.

Heroic efforts

"Strategic planning has been around for several years but, as many critics argue, strategic planning without concomitant consideration of implementation issues is incomplete and quite often dangerous to the firm," they say.

"Companies will often undertake heroic efforts to understand their current strategic situation, the state of the (business) environment, and their capabilities, and then develop a strategy that is the 'best fit' among these without paying attention to the firm's culture.

"At other times, managers may try to understand the firm's culture in isolation and without considering the firm's strategic context. If a careful analysis of the culture is done, it can provide guidance with respect to the changes that are required and that are possible in implementing strategy."

Indonesian example

Bourgeois and Jemison, who developed the cultural analysis method while doing fieldwork with a variety of corporations, illustrate how it was applied in an Indonesian subsidiary of a North American firm.

The firm, which was in the process of changing the subsidiary's top management from a mixture of Westerners and Indonesians to an all-Indonesian executive force, was experiencing increased competition from new entrants into the field in an already highly competitive industry, said Bourgeois.

In its cultural analysis, the subsidiary found that its two strongest elements were commitment to management education and a "please the boss" mentality. The management education interest fit well with the firm's devotion to improving the knowledge and skills of the executive group, and the executives saw it as crucial to the company's success in competing.

The "please the boss" culture meant that subordinates often refrained from disagreeing with their bosses or passing along negative information. This was seen as a distinct mismatch for the company in an increasingly competitive environment, the executives reasoning that if they were shielded from the truth, poor decisions would be made.

The two elements were put together in a humorous way, said Bourgeois and Jemison, when one executive suggested that the reason the group chose management education was to please the managing director, who promoted education as one of his central concerns.

"The very fact that these executives could surface and discuss such a cultural element in the presence of the managing director was significant," the researchers said.

The executives decided "to recognize the implications of 'please the boss' in formulating strategy but not spend time trying to change it. The reason was simple, said the authors.

The executives or their parents had been raised under Dutch rule, before Indonesia became an independent nation. The colonial period bred an attitude of "tell the person in charge what they want to hear, even if it's not always the truth."

The executives believed that the next generation, raised under independence, would have a very different outlook on lifestyle and work-related questions, and would probably not harbor the "please the boss" attitude. In addition, said the authors, the Indonesian executives believed that it would take 20 years or more to change the attitude, and by that time a new generation of managers would be running the company anyway. The natural forces at work in the environment made any concerted attempt to change internal culture unnecessary, they concluded.

The result of such cultural analysis may show a company that a second choice rather than a first choice strategy may be much more efficient to the organization in the long run because it will not require upheaval of the culture.

Medical Center MEMO

Taking a fresh look at heart function after surgery

A blend of modern technology and cardiovascular research will be giving doctors a new look at the heart in much the same way that a dynamometer helps mechanics analyze engine function.

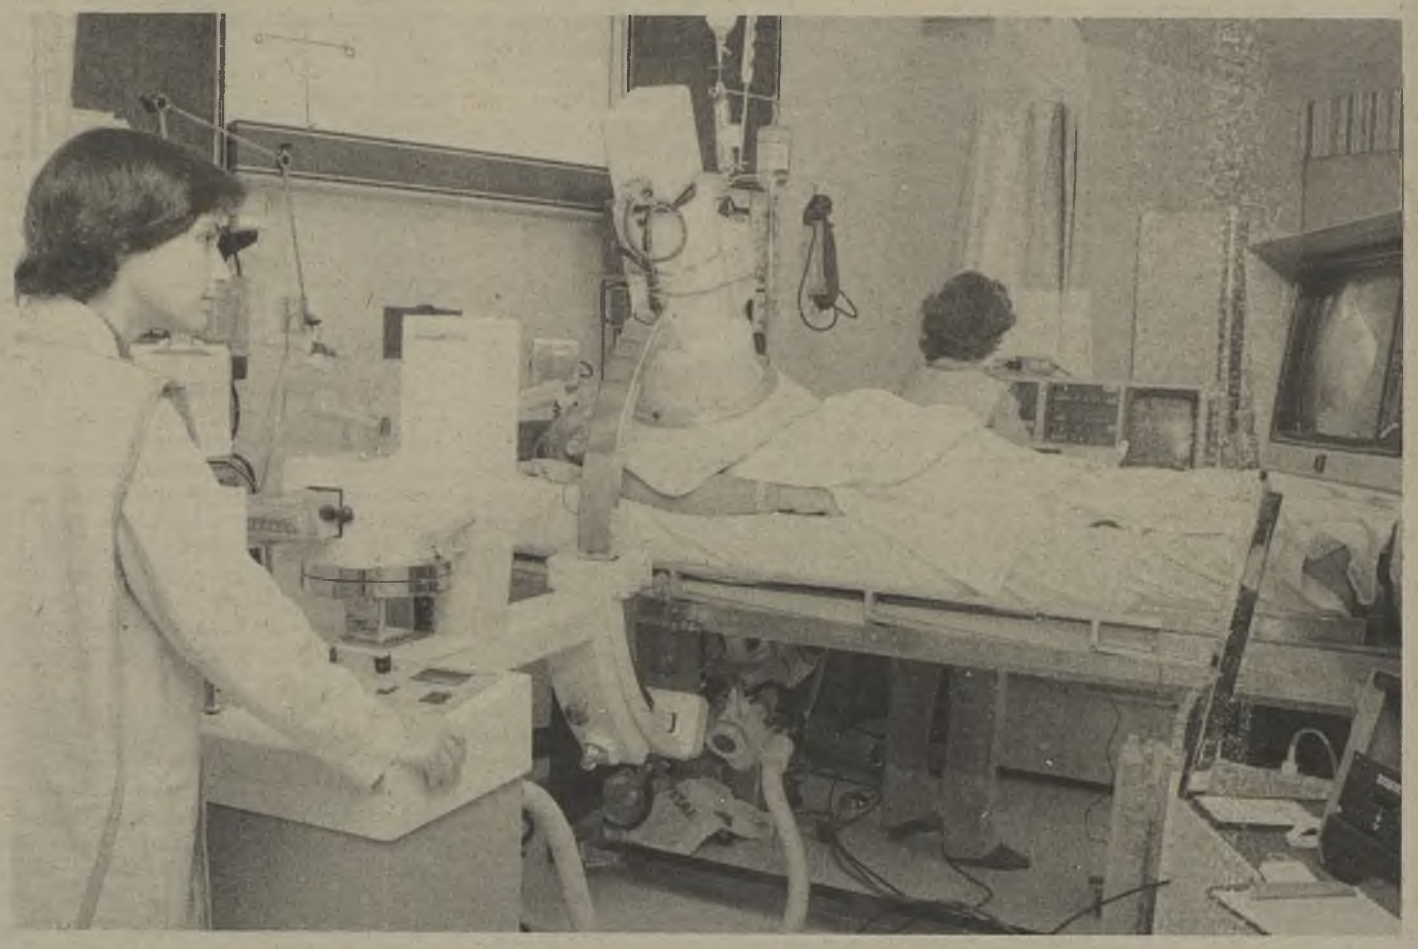
Dr. D. Craig Miller, associate professor of cardiovascular surgery at Stanford University School of Medicine, recently received a three-year, $491,334 federal grant to study the changes occurring in cardiac function immediately after open heart surgery.

The study is a collaborative effort with the Palo Alto Medical Research Foundation (PAMRF), where Dr. Neil Ingels Jr., Ph.D., and engineer George Daughters earlier developed the underlying technology for the research.

"It's difficult to believe, but we still are ignorant of certain changes in left ventricular function and bioenergetics which occur immediately following cardiac surgery," Miller said.

"We can partially compensate for the unknowns by extremely diligent monitoring. But better knowledge of these changes and responses to different drugs and interventions should translate eventually into better patient care," he added.

Specifically, Miller said, the study might answer questions about the optimum dose of many different drugs to be administered to patients in the crucial hours after surgery.



"We will be taking a precise look at the blood volume and pressure in the left ventricle," where blood is propelled from the heart out to the body, said Miller.

"Additionally, we will be measuring 'on line' coronary blood flow and the amount of oxygen used by the heart," he added.

Two "gadgets," actually serious technological advances both refined at PAMRF, are central to making the study possible, Miller said.

First is an X-ray machine which can be wheeled to the patient's bedside in the intensive care unit shortly after surgery. This device was modified specifically for the study to incorporate high resolution and high power in a large screen format, while simultaneously retaining sufficient portability and compactness to be used at the bedside.

Unlike traditional X-ray—which requires cumbersome equipment to record the picture on film—the technique employed in the current study permits a series of pictures to be recorded on a 10-inch video camera which is linked to a high quality video disk drive unit.

Anne Schwarzkopf, a research assistant in the Department of Cardiovascular Surgery, checks sophisticated monitoring equipment on a patient who recently underwent open heart surgery.

The data on the video disk, which includes blood pressure and other data as well as images, is later transferred to a permanent (dedicated) computer system.

A total of 1,200 frames, taken at the rate of 30 per second, can be recorded and eventually transferred to the main computer system for analysis.

Studies can be carried out every four to six hours after surgery for the first 36 hours and then again after the patient recovers.

Like a movie

"This enables us to track the beating of the heart muscle, since we will be able to see movement much like a television or motion picture," Miller explained.

But tracking the precise motion of soft tissue such as the inside of a heart is impossible without using a dye or other material injected directly into the left ventricle. So the researchers have developed a second technological aid. This involves a series of seven tiny, almost microscopic markers, which are placed in the wall of the heart during surgery.

Made of a rare metal called tantalum, these markers are visible in the X-ray pictures and will not be felt by the patient, Miller said.

The pictures actually will be images of the markers moving, which by being placed strategically, will offer an accurate blueprint of the changes in the left ventricle's size every 1/30 of a second, Miller said.

The markers have already been placed during the past eight years in heart transplant and other patients at Stanford, using bioengineering and computer techniques developed by Ingels and Daughters at PAMRF.

In the current tests, Miller said he hopes to record data from one patient per week undergoing either cardiac valve replacement or coronary bypass grafting. These patients will have been fully briefed about the study and will have signed a consent form agreeing to participate in the study.

To improve patient care

"What we are learning may be analogous to the information which a mechanic receives from a dynamometer. We don't anticipate that these studies will ever become a routine clinical test, but as a research tool, they will enable us to gain physiological information never before possible in man immediately after surgery. This should improve care for open heart surgery patients everywhere in the future.

"In the past we have not been able to study precisely and instantaneously what is occurring in the left ventricle immediately after surgery. Such information

Family Medicine presents public lecture series on women and health

A Friday noon lecture series on *Women and Health* will be presented this spring at the Stanford Medical School by the division of family medicine.

Open to the public free of charge, the scheduled lectures are:

- April 1: "Transforming Stress into Creativity," with Margaret Buck, John F. Kennedy University;
- April 8: "Living with Questions," with Alla Bozarth-Campbell, Episcopal priest, gestalt therapist, feminist poet;
- April 15: "Women's Health Movement," with Sheryl Ruzek, M.P.H., Ph.D., postdoctoral research fellow in epidemiology, U.C. Berkeley, and core faculty, Women's Roles in Health and Healing, U.C.S.F.;
- April 22: "Abusive Images of Women in Mass Media and Pornography," a presentation by WAVPM (Women Against Violence in Pornography and Media);
- April 29: "Women and Women's Health Care: Legal and Professional Barriers," with Rosemary Mann, C.N.M., teacher of women's health care and law student;
- May 6: "Maternal Alcoholism and Family Life," with Genevieve Ames, Ph.D., Fellow - NIAAA, medical anthropologist, teacher and researcher, Alcohol Research Group, School of Public Health, U.C. Berkeley;
- May 13: "Barriers to Health Care for Older Women," with Donna Ambrogi, managing attorney, Bay Area Law Center on Long-Term Care, coordinator of Care Giver Task Force, Older Women's League;
- May 20: "Sex Role Development," with Julie Olsen Edwards, director, department of early childhood and family life education, Cabrillo Community College;
- May 27: "Women and the Nuclear Arms Race," with Dr. Deborah Gordon, family physician, co-president, Redwoods chapter, Physicians for Social Responsibility.

A discussion group with case presentations will be held for enrolled participants following each lecture, from 1:15 to 2 p.m., with the speaker, as well as research assistant Marita Grudzen, Jeanne DeJoseph, C.N.M., Ph.D., and Dr. Judith Martin from the Division of Family Medicine.

The lectures will be held from noon to 1 p.m. in room M114. For further information call 497-7043 between 8 a.m. and noon, or 497-6431 from 2 to 5 p.m.

Harold Schuknecht

Harvard scholar on dizziness

Understanding dizziness will be the topic of the seventh annual George S. Kiperash Lecture on Thursday, March 24, at Stanford University.

The lecture, "Labyrinthitis and Endolymphatic Hydrops, Cause and Effect," will be delivered by Dr. Harold Schuknecht, professor of otology and laryngology at Harvard Medical School.

Labyrinthitis, or infection in the middle ear, is among the leading causes of dizziness, explained Dr. Martin Hopp, assistant professor of otolaryngology/head and neck surgery at Stanford. Another leading cause, endolymphatic hydrops, or the enigmatic "Meniere's Disease," is characterized by severe recurrent dizziness, he said.

The public is welcome to attend the lecture, sponsored by the Division of Otolaryngology/Head and Neck Surgery, to begin 8 p.m. in the Forum Room, Meyer Library on campus. Continuing medical education credit is available.

Schuknecht is a well-known ear disease specialist who has been instrumental in developing new surgical treatments for dizziness disorders. These treatments, now available as well at Stanford University Medical Center, will also be discussed in his lecture.

A native of South Dakota where he received his bachelor's degree in 1938, Schuknecht had his medical training and residency at the University of Chicago, where he later served on the faculty. He served at the Henry Ford Hospital in Detroit from 1953-61 before joining the Massachusetts Eye and Ear Infirmary (Mass. General Hospital), where he is now chief of otolaryngology.

Schuknecht has been the president of four otolaryngology societies, served on the editorial boards of five professional journals, and published widely throughout his career.

The Kiperash Lecture was established to bring national and international figures to Stanford and to enhance continuing education and residency training. It is named after George Kiperash, Jr., a former Stanford patient and native of San Jose.

For further information regarding this year's lecture, call 497-6891.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

...News Notes...

Excerpts from an interview with Chief of Staff James Silverman, as well as historical photographs of Stanford Nursing School students, are part of a KQED program on nurses which will air this evening at 8 p.m. on Channel 9.

"Unsung Healers," a special program of KQED's Wednesday Report, chronicles the history of change in the nursing profession and acknowledges the special demands and frustrations of the modern nurse.

The half-hour report examines among others the fallacies that nurses exist to serve as "handmaidens" to doctors, and that nursing is a natural function of women rather than a chosen profession. And it questions the persistent problem of low status which nurses struggle against.

Nurses and other medical professionals from various Bay Area hospitals were interviewed to reveal their views on these and other subjects relating to the nursing experience.

The program will again air 3:30 p.m. Sunday, March 27, and 9:30 p.m. Tuesday, March 29, on Channel 9.

* * * *

Eleanor Hedenkamp, R.N., and Aaron Smith, M.S.W., L.C.S.W., both of SUH, answered questions last night, March 22, from members of "Parents for Heart," an information and support group sponsored by the Santa Clara County Chapter of the American Heart Association.

The group meets regularly to discuss aspects of children's heart disorders and to explore possible causes, treatments, and coping mechanisms with guest speakers. Anyone interested in further information about the group should call (408) 247-8555.

* * * *

Passover matzos will be available throughout the Holy Days in both the main center and Hoover cafeterias for 25 cents.

* * * *

Effective this week, there is a five percent price increase on all cafeteria items. This is the regular yearly adjustment for increasing food costs.

* * * *

Many Easter items are presently for sale in the Hospital's Auxiliary-run gift shop, along with a wide selection of other gift items.

Please note, however, that the gift shop will be closed for inventory Thursday, March 31.

* * * *

Annette Lee, a special procedures and angiographic technologist in SUH's department of diagnostic radiology, was named one of 15 winners of the YWCA's "Outstanding Mid-Peninsula Black Women Recognition Awards." Certificates of recognition were presented Feb. 25, as part of the Fifth Annual Black Experience celebration of the Mid-Peninsula YWCA.

Lee had been nominated for the award by Jeanne Kennedy, director of Community Relations.

Lee came to Palo Alto 15 years ago from Boston where she had worked in the field of diagnostic radiology since 1957. Before that she worked in Nashville, Tenn.

Besides her technical responsibilities, she teaches special procedures to students from Foothill Community College. These include the most sensitive and complicated diagnostic services: cardiovascular, coronary arteriograms, carotid arteriograms, and neurological procedures.

Lee has been listed in "Who's Who Among Women." In 1972, by special invitation she visited Yugoslavia, to see how a government hospital works under a socialist system.

She has been appointed president for 1982-83 of the Association of University Radiologic Technologists, and has other professional affiliations as well.

Lee is a member of the University A.M.E. Zion Church in Palo Alto. She was an active member for three years of the N.A.A.C.P. Every year she collects donations for the American Heart Association.

The awards were intended to recognize black women in this area who have contributed positively to the development of their communities.

Blood drive soon

The Stanford University Blood Bank will hold a blood drive in the central conference room at the Children's Hospital at Stanford from noon to 4 p.m. Tuesday, March 29. Medical Center and Hospital staff are especially encouraged to participate, and all university staff are invited to donate.

Renee Burgard of the Blood Bank said patients at SUH and Children's Hospital at Stanford often have complex and sophisticated transfusion needs, and the demand for all blood products is great. The two hospitals combined use more than 100 units of blood each day, and in order to support this need, the Blood Bank asks for everyone's support.

Call 497-7831 to make an appointment to donate March 29, or just drop by.

Cardiac studies...

continued from page 8

could only be gained by invasive cardiac catheterization techniques which simply aren't feasible to perform on patients in the intensive care unit every few hours during the first two postoperative days," Miller explained.

The grant from the National Heart, Lung and Blood Institute includes a $75,972 per year subcontract to PAMRF for bioengineering support and mathematical analysis of the myocardial marker data.

Collaborators in the current study include Drs. Edward Stinson and Philip Oyer, Miller's colleagues in the Department of Cardiovascular Surgery, and a Stanford cardiologist, Dr. Edwin Alderman.

Other researchers in addition to Ingels and Daughters are Geraldine Derby, research nurse; Carol Mead, senior research assistant at PAMRF; Anne Schwarzkopf, Stanford research assistant, and cardiology fellows Dr. Steve Osterle and Mike Fowler. —**Mike Goodkind**

Rodney Million

Million to give Culpeper talks

New combinations of treatments for aggressive cancers of the head and neck will be highlighted in a lecture given March 31 by Dr. Rodney Million, the 1983 Charles E. Culpeper visiting professor at Stanford University School of Medicine.

Million, professor of radiology and director of the division of radiation therapy at the University of Florida College of Medicine in Gainesville, will speak on "The Results of High Dose Radiation Therapy and Surgical Salvage for Carcinoma of the Pyriform Sinus" at 5:15 p.m. in room M112.

Although head and neck cancers are responsible for only seven percent of all cancers, they can be among the most vicious, said Dr. Malcolm Bagshaw, chairman of Stanford's department of radiology.

Surgery to eradicate the cancer can require cutting through the jawbone, or removing the larynx.

"Any supplemental treatment, such as radiation therapy, that can reduce the extent of the surgery is very useful," Bagshaw said. "Dr. Million is a distinguished researcher who has made great contributions in this area—demonstrating how radiation and surgery can work together to eliminate the cancer. He also has made important contributions in identifying some of the adverse effects of radiation, particularly on the eye."

Million will deliver three lectures, all open to the public, during his three-day visit to the Medical Center. "The Effects of Radiation on the Normal Eye and Optic Nerve" will be held 5 p.m. Wednesday, March 30 in room M106; while "Experience with Preoperative Radiation in Rectal Carcinoma" will take place 8 a.m. Friday, April 1 in room S092.

A 1954 graduate of Indiana University Medical School, Million has been a faculty member of the University of Florida College of Medicine since 1964, and has published more than 40 papers on cancers of the head and neck. In 1979 he was awarded the Grubbe Gold Medal award by the Chicago Radiological Society and, in 1982, garnered the Distinguished Alumnus Award from the M.D. Anderson Hospital and Tumor Institute in Texas.

This is the third year of a five-year rotating visiting professorship at Stanford sponsored by the Charles E. Culpeper Foundation of New York. The departments of surgery and medicine hosted the first two visiting scholars.

The Foundation primarily supports health, education, science and technology programs, in addition to offering grants to support arts and letters, youth activities, administration of justice and Native American affairs.

Charming the pint-sized crowd and demonstrating the proper way to brush one's teeth was a big bunny with a giant toothbrush at the children's health faire, Saturday, at the Stanford Shopping Center. The first of its kind, the well-attended event was presented on a (luckily) sunny day by Children's Hospital at Stanford and the pediatrics department of SUH. This community dental exhibit was one of more than 35 displays on the mall, all intended to teach kids about health-related topics.

Teens lose weight at summer camp

Stanford's behavioral medicine program this year is again offering a summer weight-loss day camp for teen-agers, ages 12—17, on the University campus.

Encouraging campers to take charge of their own weight management, the program will teach them to lose weight safely through eating and exercise patterns that promote permanent weight control.

Intended specifically for teen-agers, the camp will allow them to have fun and develop skills while slimming down. Included will be group seminars in behavioral change techniques and nutrition education; aerobic activity, tennis, swimming, and other recreational activities; group lunches on campus; and weekly seminars for parents.

(An important feature of the camp is consistent weight-loss management achieved through the intensive day program combined with parental support at home.)

Faculty will include members of the behavioral medicine program of the School of Medicine.

Two sessions will be offered, and a fee will be charged. The first session will run from June 20 through July 14; the second from July 18 through August 11. Both will take place Mondays through Thursdays, from 9 a.m. till 1 p.m. Campers may register for one or both sessions.

Early enrollment is recommended, as space is limited. For further information call Dr. Mary Southam, at 497-5065.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MARCH 23

Div. of Orthopedic Surgery Grand Rounds: "Paget's Disease"—Dr. Marjorie Oda. 8:30 a.m., M114.

Dept. of Genetics Seminar: "Immunoglobulin Transcription is Activated by Downstream Sequence Elements"—Dr. Cary Queen (National Cancer Institute). 4 p.m., M114.

Dept. of Biochemistry Seminar: "Genomic Sequencing of Mouse Immunoglobulin and Human Fetal Globin"—Dr. George Church (Harvard). Noon, M316.

Hematology Patients and Families Support Group Weekly Meeting: 10:30 a.m. till noon, TF-122c. For further information, call the hematology clinic at 497-6961.

Dept. of Biochemistry Seminar: "Genetic and Molecular Analyses of Alcohol Dehydrogenase Locus in *Drosophila*"—Dr. Michael Ashburner (Cambridge). 4 p.m., M316.

Progress in Medicine Lecture: "Ethical and Emotional Issues in the Care of the Dying Patient and Family"—Rev. Ernle Young, Ph.D. Last of a six-part public series on ethical dilemmas of intensive care. 7:30 p.m., Fairchild Auditorium.

MARCH 23 THROUGH 25

Dept. of Pathology Seminar: "Current Concepts in Surgical Pathology." 8:45 a.m. till 8 p.m. Wednesday; 9:45 a.m. till 5:45 p.m. Thursday; 8:30 a.m. till 4:45 p.m. Friday; Fairchild Auditorium. For further information, call 497-7211.

Nursing Educational Services and Perinatal Nursing Region of Stanford Hospital Symposium: "Advanced Perinatal Concepts." Room 270, Tresidder Union. Registration limited. For further information, call 497-5384.

THURSDAY, MARCH 24

Nursing Educational Services registration deadline: for "Pediatric Critical Care Course, Level I" to be held March 31. Geared toward nurses caring for children who undergo cardiac surgery. Addresses physiological, surgical and social service considerations of care for these patients. Registration required, fee charged, and continuing education credit available. Room to be announced. For further information, call Carole Kidder at 497-6366.

Dept. of Psychiatry and Behavioral Sciences, and Nancy Pritzker Laboratory of Behavioral Neurochemistry Lecture: "Structural and Mode of Action Studies on Peptide Toxins, Neuropeptides, and Peptide Antibiotics"—Dr. Dudley Williams (University Chemical Laboratory, Cambridge, England). 4 p.m., M112.

Dept. of Biochemistry Seminar: "Anatomy of Heat-Shock Promotors"—Dr. Hugh Pelham (Cambridge). Noon, M114.

Div. of Otolaryngology/Head and Neck Surgery 1983 Seventh Annual George Kiperash Lecture: "Labyrinthitis and Endolymphatic Hydrops, Cause and Effect"—Dr. Harold Schuknecht (Harvard). 8 p.m., Forum Room, Meyer Library.

Dept. of Medicine presentation of the Albion Walter Hewlett Award. Recipient will deliver Grand Rounds lecture. 8:30 a.m., Fairchild Auditorium.

FRIDAY, MARCH 25

Dept. of Pediatrics Grand Rounds: "Acquired Immunodeficiency Syndrome"—Dr. Charles Abilgaard (UC Davis). 8 a.m., M106.

Div. of Surgical Pathology Research Seminar: "DNA Repair Mechanisms and Meiosis"—Dr. Michael Resnick (NIEHS, Maryland). Noon, M112.

SATURDAY, MARCH 26

Stanford Audiology Clinic Seminar on Acoustic Coupling Hearing Aids. 7 a.m. till 6 p.m., Fairchild Auditorium. For further information, call 497-6816.

Div. of Hematology Stanford-UCSF Combined Conference. Presentations will be made by Drs. Thomas Kipps, Lee Levitt, Susan Perrine and Tania Weiss. 9:30 a.m. till 12:30 p.m., M110. Lunch served at 12:30 p.m. in C122b. For further information, call Lynda Spencer at 497-5007.

MONDAY, MARCH 28

Dept. of Gynecology and Obstetrics REI Conference: "Neurosurgical Therapy for Prolactinomas"—Dr. Jerry Silverberg. 8 a.m., A336.

Dept. of Medical Microbiology Seminar: "Human Infection with *Clamydia Trachomatis*"—Dr. Julius Schachter (UCSF). 1:15 p.m., M114.

Div. of Orthopedic Surgery Grand Rounds: "Bone Grafting—Principles and Techniques"—Dr. Darrell Hayes, 7:30 a.m., M114; and "Electrical Stimulation of Bone"—Dr. John Csongradi, 8:30 a.m., M114.

TUESDAY, MARCH 29

Stanford University Blood Bank Drive: Noon till 4 p.m., central conference room, Children's Hospital at Stanford. Please call 327-4800 ext. 244 to make a donation appointment, or just drop by during blood drive hours.

WEDNESDAY, MARCH 30

1983 Charles E. Culpeper Visiting Professorship Lecture: "The Effects of Radiation on the Normal Eye and Optic Nerve"—Dr. Rodney Million (Univ. of Florida at Gainesville). 5 p.m., M106. (*See story this issue or next week's calendar for Million's Thursday and Friday lectures.*)

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

Graduate application trends: computer science, English, physics increase

continued from page 1

Dora Z. Hjertberg, Stanford law admissions director.

Prof. Jack Friedenthal said the LSAT was the "main factor" in the drop. "The original predictions of the percentage at the high end among those taking the test was incorrect."

Widespread publicity that "law is no longer an open field," with "an overabundance of people pounding the pavement" is "not true for graduates at top schools," he said.

Higher costs may also have had some effect on applications to the most competitive schools, Friedenthal added. "There's no question it's tougher to go. That's true anywhere. Stanford tries very hard to find money for those in need."

Minority applications to the Law School are running at a record rate, Friedenthal said. By mid-March, 395 minority applications had been received, up 15 from a year ago.

The decline in total law school applications may be part of a shift from professional programs to graduate studies.

While Business School applications are holding about even with last year at Stanford, other business schools are reporting a 5 to 10 percent decline.

Applications to the Stanford Medical School M.D. program are running about 5 percent below last year. The number of students taking Medical College Admissions Tests nationally declined slightly this year for the first time in several years.

As of March 15, all three professional schools at Stanford had about the same number of applicants as five years ago.

Graduate applications to the Stanford School of Humanities and Sciences are up nearly 11 percent this year, paced by gains in computer science, English, and physics. Engineering and Earth Sciences also report increases, while Education has declined (see table below.)

Business School Admissions Director Kathleen Gwynn said about 3,700 applications had been received by March 21. By the April 15 deadline, she expects slightly more applications than last year's 4,977 total for 320 places in the entering MBA class.

Stanford is the most selective of the nation's major business schools. Of those admitted, 75 percent enrolled, a "yield" rate not exceeded by any other school.

Overall, the number of minority applicants appears to be down this year, with the number of women remainng about 25 percent of the applicant pool. Last fall's entering MBA class included 10 percent minority students.

Vice Provost Gerald Lieberman, dean of graduate studies and research, said minority applicants in fields covered by the Graduate Admissions Office are up about 10 percent. By mid-February, American Indian applicants had increased from 8 to 20, and blacks from 93 to 109. But Chicanos dropped from 70 to 66 and Puerto Ricans from 26 to 25.

Lieberman is pleased but far from complacent over the increase. "Last year was not good at all," he pointed out. "To make a real impact on the applicant pool for jobs in academia we need a major increase nationally."

He's "not surprised" at the overall increase in graduate school applications, but puzzled at the failure of social sciences to show an increase here.

"In the humanities, at a time when the economy is in trouble, I'd expect more applications for graduate school.

"That doesn't apply to engineering, which is still a field with many job possibilities. Even there the market has tightened, except for electrical engineering and computer science."

The professions likewise are getting "somewhat overcrowded" and "students react to that," he observed. "Professional degrees are no longer the apparent sinecure they were five years ago."

Highly publicized national rankings of graduate programs "probably had no effect" on applications this year, since most college students made plans before the rankings were published, he said.

The impact of federal and university financial aid policies on graduate applications is "very hard to estimate," he added. While doctoral students receive financial support, "students can't live on that alone—they must have other sources." These include loans, which often are not made through the university, and hence not easily monitored.

The tables

Within the School of Humanities and Sciences, graduate applications in computer sciences jumped sharply, to 691 from 559. The department recently was top-ranked nationally. English applicants rose more than 100 and Physics more than 50.

Engineering School applications rose about 7 percent, to 2,730 from 2,559, with every department except engineering economic systems showing an increase. The largest gain was in mechanical engineering, with electrical engineering second.

Every department in Earth Sciences rose, with applied earth sciences and geology showing the greatest gains.

Medical sciences applications rose slightly, to 524 from 511.

Graduate applications by March 15

	1983	1982	1978

1983-84 salary guidelines cover four-step

continued from page 1

Four-step ranges

The Four-Step range structure has been adjusted upward by 5 percent for all ranges (B07 through B24). In addition, all range maxima have been adjusted upward by an additional 1.5 percent, allowing departments greater flexibility to reward outstanding long-term employees.

Effective September 1, 1983, the 5 percent range adjustment applies across-the-board to all employees on Steps A through C; these employees will also receive a 5 percent step increase on their annual salary review dates.

Individual salaries in the Merit Zone as of August 31, 1983 are not automatically adjusted by the 5.0 percent range adjustment; they are subject to a 7 percent control and are to be administered in the same manner as exempt salaries (see below).

Employees on Step D will receive either the 5 percent range adjustment or a merit increase which includes the 5 percent range adjustment. If Step D employees are to enter the Merit Zone, the 5 percent range adjustment becomes part of the total merit increase, which is subject to the 7 percent control.

Exempt staff program

The program for exempt staff is comprised of merit increases subject to a salary program control of 6.3 percent of the salary base, and special adjustments of .2 percent to help alleviate selected internal equity and external market problems.

While there is a University-wide salary control of 6.3 percent for merit increases, there will likely be variation among units, since some units may need to reserve a portion of their merit allocation to solve salary equity problems if the special adjustment allocation proves insufficient.

Some units may also choose to withhold a portion of the authorization for selected midyear increases; any resources withheld are limited to use for 1983-84 salary increases and not for other departmental needs.

A common misunderstanding about the salary program control percent is that it represents increases given to satisfactory employees, while larger increases go to superior performers. In fact, the typical employee in most units is an excellent performer; consequently, a merit increase near the control percent, above or below, would indicate strong performance.

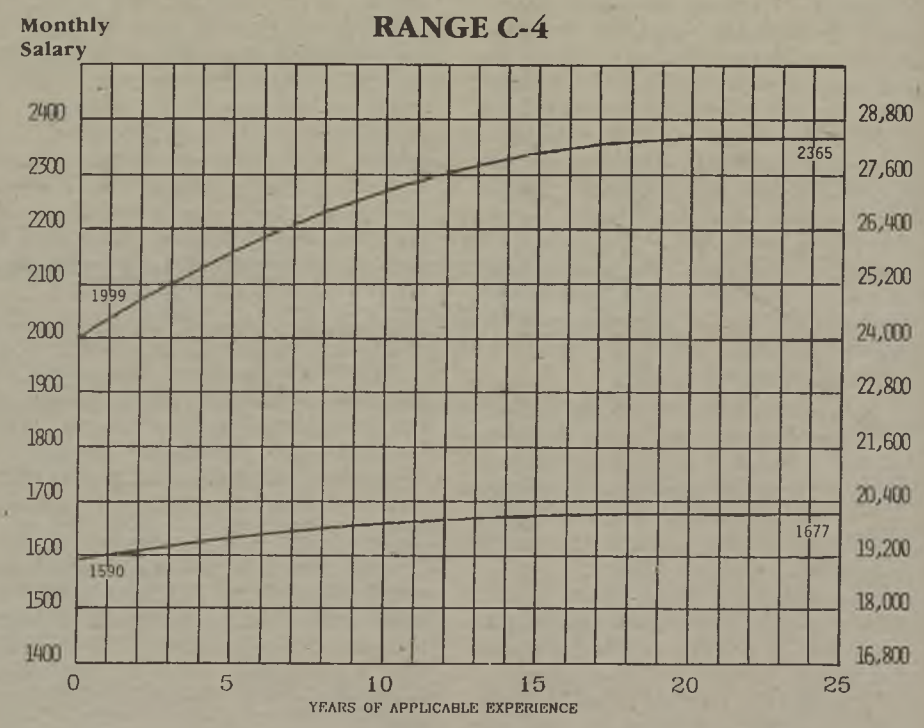
In past years, central guidelines were issued which included a description of ranges of performance and suggested corresponding percentage merit increases. This year, that descriptive portion of the guidelines is omitted.

Exempt salary increases are limited in the aggregate by the salary control percent and the curve range structure; but within these constraints, the goal is to recognize and reward individual staff members' performance.

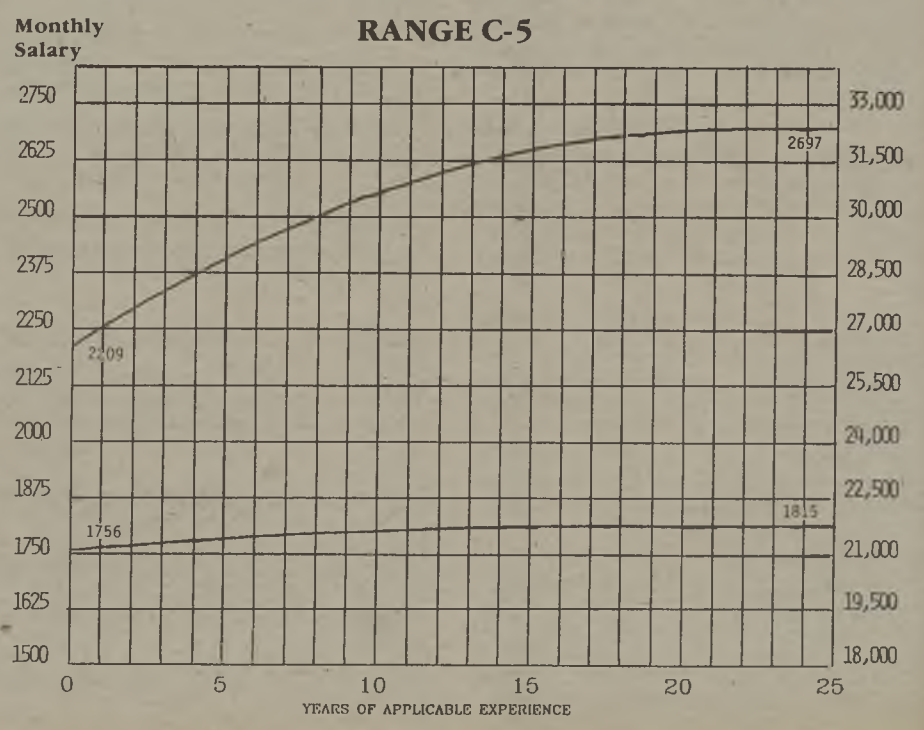
The omission of descriptive guidelines this year resulted from consultation with administrators and staff affairs officers, who felt that the old guidelines created confusion and false expectations. The approach this year is an experiment to simplify the salary-setting process, and is in keeping with the spirit of the recommendations of the Task Force on Personnel Policies and Administration.

Supervisors and managers will be expected to make judgments about the relative performances of their employees and to recommend corresponding salary increases. Salary increases within each Vice-Presidential area should aggregate to 6.3 percent, and the degree of dispersion around that number should reflect the extent of variation among employees' performances. Typically, the result will be a spread of salary increases a few percentage points above and below the salary program control percent.

As in the past, all recommendations for salary increases should be supported by documented performance evaluations maintained in the departments.



FOUR—STEP RANGE STRUCTURE
(effective September 1, 1983)



Range Number	Step A	Step B	Step C	Step D	Merit Zone	Range Maximum
B- 7	$1077/mo	$1132/mo	$1187/mo	$1248/mo		$1499/mo
B- 8	1132	1187	1248	1308		1573
B- 9	1187	1248	1308	1376		1654
B-10	1248	1308	1376	1442		1741
B-11	1308	1376	1442	1512		1826
B-12	1376	1442	1512	1590		1920
B-13	1442	1512	1590	1673		2018
B-14	1512	1590	1673	1755		2119
B-15	1590	1673	1755	1846		2230
B-16	1673	1755	1846	1939		2339
B-17	1755	1846	1939	2037		2455

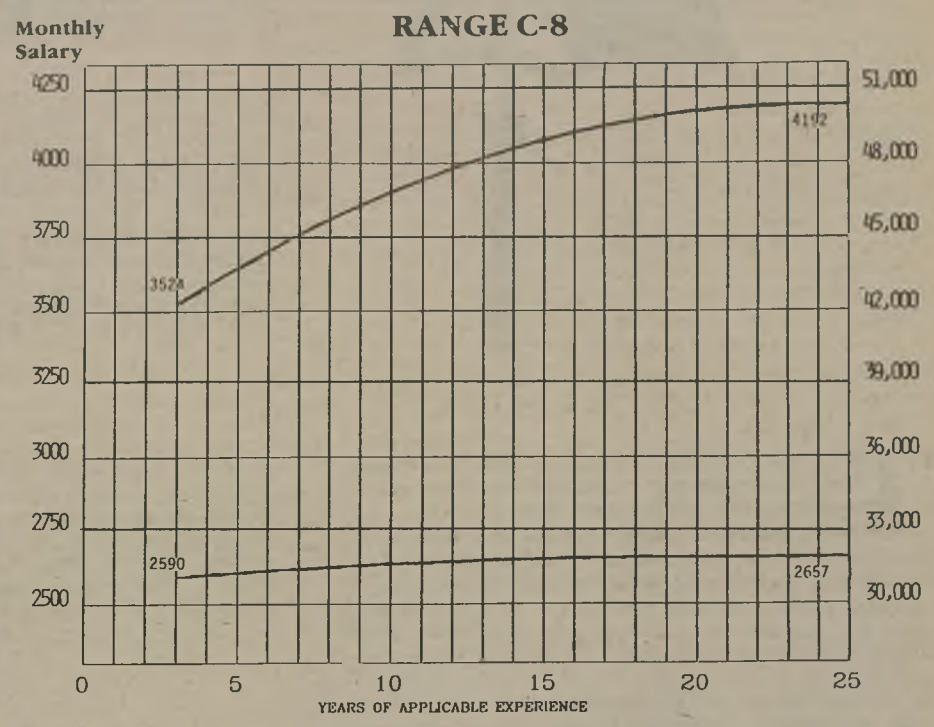
Exempt curve ranges effe

supervisory, and exempt staff increases

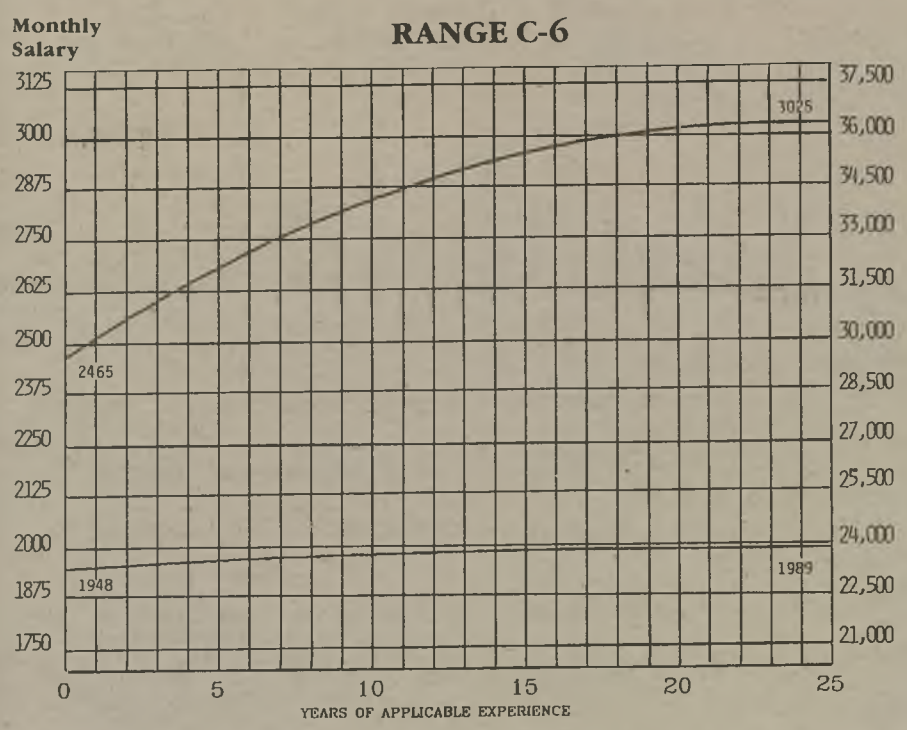
Supervisory merit ranges

The Supervisory Merit Ranges are being adjusted upward by 5 percent at the minima and 6 percent at the maxima this year. While the Supervisory Merit Ranges include both nonexempt and exempt employees, the salary determination process parallels that for exempt classifications.

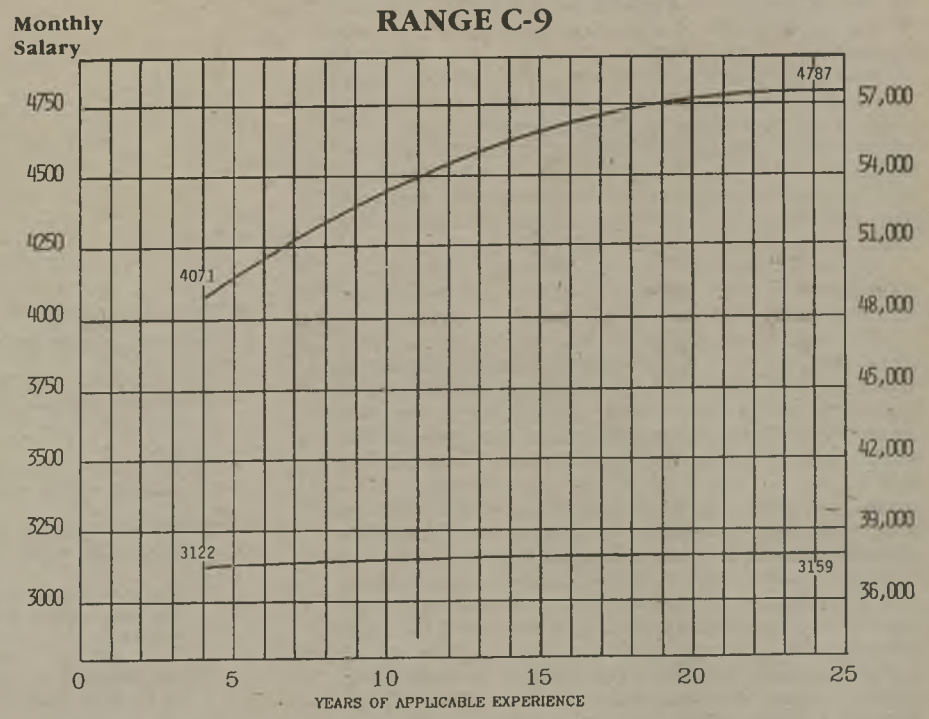


Individual salary decisions should be made in a manner consistent with the general guidelines for exempt staff. Managers should also consider the appropriateness of each supervisor's pay level with respect to the pay level of subordinates as well as to supervisors in similar jobs, so that pay differences reflect differences in both performance and responsibility.

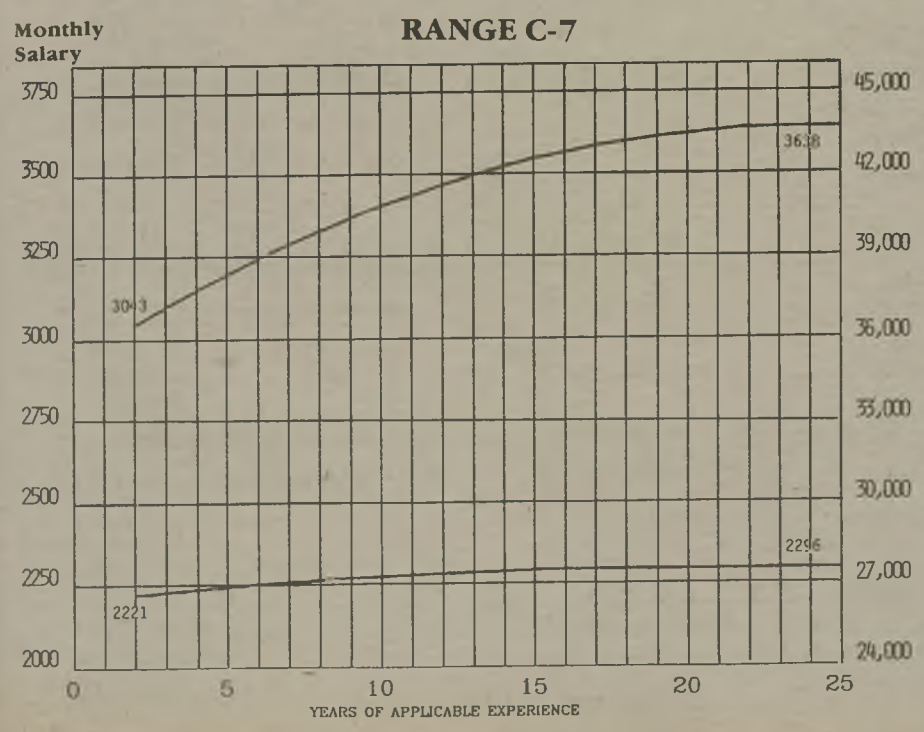
Curve ranges adjusted upward 5-6%



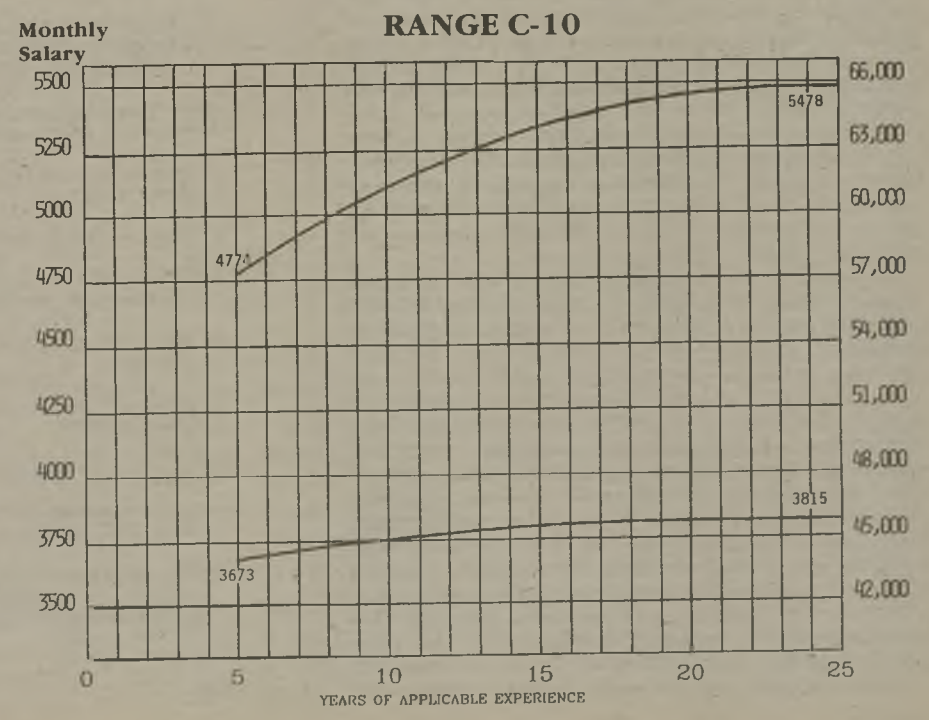
Most exempt positions at Stanford are assigned to the curve ranges for salary setting purposes.



The curve ranges are designed to provide a general framework for setting salaries, while allowing supervisors maximum flexibility in recognizing job factors such as performance, length of service at Stanford, level of career development and equity considerations. These factors (rather than curve placement) are the key considerations in the salary setting process.



The lower and upper curve lines define the possible minimum and maximum salary for an employee based upon the individual's years of applicable experience (YAE). The 1983-84 curve ranges which appear on these pages reflect an upward revision of 5 percent at the minima and 6 percent at the maxima.



Effective September 1, 1983

SENIOR SURVEY

Except in general advising, Stanford gets high marks as Commencement nears; about half the class plan full-time work

The Senior Survey is an annual effort by the Office of the Vice-Provost for Undergraduate Education to ascertain the retrospective views of seniors concerning various aspects of their undergraduate experience.

The survey has four parts. The first part pertains to assessments by seniors of the undergraduate program, their general experiences with the faculty and administration, and their competence in broad areas. The results of this portion of the survey constitute the subject matter of the present report.

The second part of the survey, prepared and compiled at the Academic Information Center, reviews students' professional school plans. This is intended to provide undergraduates and their advisers with information about the success of Stanford students in gaining admission to particular programs. The results are available for reference at the Academic Information Center.

The third part of the survey elicits students' views concerning particularly outstanding or poor departmental and faculty performances. These results are not made public but are conveyed confidentially to department chairs and senior academic officers of the University. Department chairs are encouraged to share this information with their faculty at their own discretion but not to incorporate it in departmental faculty folders or otherwise keep it on file.

The fourth part of the survey consists of essays by the respondents on what constitutes an educated person and how they assess themselves in this regard.

The 1982 survey questionnaire was answered by 673 graduating students, some 40 percent of the graduating class. The usual procedure was followed: seniors received questionnaires by mail during spring quarter and they voluntarily returned the questionnaires anonymously. The return rate was about the same this year as in previous years.

In comparing the senior survey population with the graduating class as a whole, once again we find that the respondents quite faithfully match the larger population in most background characteristics. About 44 percent of the 1981-82 graduates were women, as against 43 percent of the survey population. Similarly, 14 percent of the class were transfer students, while 13 percent of the survey population were transfer students. The distribution of students across the major departments of the university was also similar within the two groups. These figures give us confidence that the survey results provide a meaningful picture of the views of the entire graduating class. Our confidence in the representativeness of the sample is further bolstered by the results we obtained from a special subpopulation randomly selected for the 1980-81 survey. About 90 percent of this identified random sample of students returned the survey, and their responses to the questionnaire items were very similar to those of students who returned the questionnaire anonymously that year. Hence, though we do not have a true random sample of respondents, we have strong evidence that the views of the survey respondents closely approximate those of all graduating seniors.

As shown in the two data summary tables, the results are subsumed under three broad categories: Table 1, Part A deals with general aspects of the undergraduate program; Part B deals with student interaction with faculty and staff. The items and scales used in this part of the survey were identical this year to those of the past two years, so we can look at the stability of results over time and begin monitoring trends in student evaluations. Table 2 presents self-ratings by students of their abilities in a wide variety of areas that cover the entire scope of our general education program. Items 3 through 11 in this list query the specific areas which encompass the distribution requirements instituted in 1980, including the Western Culture requirement. These items were also identical this year to the set of items used the past two years. They therefore provide us with a basis for studying the effects of the distribution requirements over time.

The assessments of the undergraduate program and personnel were made from three perspectives: **absolute** evaluations of items, evaluations **relative** to students' **expectations** concerning the items, and evaluations of the **importance** of the items to each student. The assessments of student abilities likewise included three perspectives: absolute evaluations, evaluations of the "degree of improvement" since the student entered Stanford, and the importance of the ability to the student. The summary results given here present, first, some highlights of student evaluations of the undergraduate program and its faculty and staff; second, the results with respect to students' assessments of their abilities; third, some analyses of differences between men and women and among students

Senior Survey

continued from page 14

of different schools in the university; fourth, comparisons of results for 1979-80 through 1981-82, to determine if there are any systematic trends in students' responses; and fifth, a brief section on students' plans for the year immediately following graduation. To save space we have omitted the data tables on sex differences, but they are available for those who are interested in this information.

Evaluations of the Undergraduate Program (Table 1)

The overall quality of undergraduate education is rated as 'good' or 'excellent' by 94 percent of the respondents. This rating of the general Stanford experience is considerably higher than the ratings for more specific aspects of undergraduate education, such as courses within the major (rated 'good' or 'excellent' by 76 percent of the respondents) and training for further education (highly rated by 74 percent of respondents). The latter items are in turn more highly rated than both Stanford's liberal education (68 percent high ratings) and the coherence of the program of study (63 percent high ratings; see Table 1, Part A). Students thus have a globally positive view of undergraduate education at Stanford but consider some areas, such as liberal education, less satisfactory than others. On the whole these items suggest that students are quite positive about the academic aspects of the undergraduate program.

In addition, students' living environments are seen as contributing positively to their academic development, both at the home campus, and, even more, at the overseas campuses feel that their experiences there were good or excellent. Note that the great majority (68 percent) of students who went overseas characterize the experience as 'excellent,' the highest figure for any item in Table 1, and that 67 percent of the students feel that the overseas experience was better or much better than they had expected. These findings constitute further evidence that students are generally very positive about their undergraduate education.

The responses are more complex, however, with regard to assessments of the faculty and staff (Table 1, Part B). Faculty are clearly viewed as high-quality scholars and researchers, with 93 percent of the responses at the high end of the scale for this item. But faculty teaching is rated less highly (63 percent 'good' or 'excellent' responses and nine percent 'poor' or 'very poor'), and this is especially true with respect to students' expectations: 36 percent of students feel the faculty as teachers are 'worse' or 'much worse' than expected. Teaching assistants are also evaluated much less highly than the undergraduate program as a whole. This paradox, where students rate the undergraduate program as of considerably higher quality than the instructors who conduct it, has been found consistently in the survey in recent years.

Assessments of the faculty are ambivalent in other dimensions as well. The opportunities for individual work with faculty are considered very great, and much better than expected, by most students. But as advisers the faculty is disappointing to the students, especially for freshmen and sophomores before they declare a major, 46 percent of respondents say that their first advisers were 'poor' or 'very poor,' and 58 percent say that these advisers were 'worse' or 'much worse' than they expected. Opinions are considerably more positive for the major advisers, with only 29 percent of the students describing them as 'poor' or 'very poor' and 40 percent saying that they were 'good' or 'excellent' (compared to 31 percent for their initial advisers). The differences here are probably related to the different tasks expected of these two sets of advisers.

Turning briefly to the importance of these aspects of students' academic experiences, we see generally that items are considered of at least moderate importance by nearly all students, and most students consider most items of 'great' or 'very great' importance. The items concerning the undergraduate program considered of greatest importance are the overall quality of undergraduate education, the quality of courses in the major, and the overseas campus experiences—all items that are rated highly by the students on the absolute scale. With respect to the faculty and staff, the most important item (93 percent responding that it is of 'great' or 'very great' importance) is the quality of the faculty as teachers, while the quality of the faculty as researchers is of far less importance. The quality of teaching assistants is of only average importance, so that the lack of student enthusiasm for teaching assistant capacities is of less importance than student disappointment with faculty teaching abilities. Finally, all of the items concerning the faculty and staff, with the exception of faculty teaching quality, are considered of much less importance than the items concerning the undergraduate program as a whole. To sum up, we can say that the undergraduate program as a whole is perceived more positively, and as having greater significance, than the quality of the instructors and advisers who conduct it. The students seem to be saying, "I got a very good education at Stanford, and it means a lot to me. Not all of the professors are outstanding teachers or good advisers, but these shortcomings have not affected my educational experience that much."

TABLE 2

Self-Assessments of Abilities
1981-82 Senior Survey (percentages)

		On an absolute scale:					Degree of improvement since you entered Stanford:					Importance of the item to you:				
	Not applicable or blank	Very poor	Poor	Average	Good	Excellent	Very Slight	Slight	Moderate	Great	Very great	Very slight	Slight	Moderate	Great	Very great
C. Rate your current ability to:																
1. Write clear English prose.	2%	*	1%	15%	54%	29%	6%	14%	43%	28%	9%	0%	1%	13%	33%	52%

*<.05%

(N = 673)

Assessments of Abilities (Table 2)

Graduating seniors have moderate to high opinions of their skills and abilities over the whole range of areas named on the questionnaire. Only a handful of items receive responses of 'poor' or 'very poor' from more than 20 percent of the respondents; similarly, for most items, only 15 percent to 20 percent of respondents are sufficiently bold to characterize their skills as 'excellent.' The most striking assessment concerns the ability to "write clear English prose," where a total of 83 percent say they have 'good' or 'excellent' skills. A strong majority of students give high ratings for their ability to "understand social processes and institutions" and to "understand the significance of" gender and ethnicity in U.S. society. Students also have very positive opinions of their more general abilities to "absorb and analyze information" (fully 92 percent rating themselves highly here) and "use your creative faculties" (74 percent giving 'good' or 'excellent' responses). The ratings on these two items are higher than for nearly all others. Interestingly enough, it is precisely those areas in which students assess their abilities most positively that are considered of greatest importance, with the ability to write well again topping the list.

The converse is also true: those areas deemed of least importance are those for which the respondents assess their abilities as weakest. Thus, only 36 percent of the students feel that they have 'good' or 'excellent' understanding of a non-Western culture, and only 45 percent feel this item to be of great importance. The corresponding figures for the ability to understand the development of Western culture are 42 percent and 51 percent respectively. Other areas in which the ability is considered least important include understanding mathematical sciences and using a foreign language (43 percent and 52 percent, respectively, at the high end of the scale for these items). With the exception of the mathematical sciences item, students also perceive their abilities as relatively poor for these items. The items relating to Western and non-Western culture as general subjects of study reflect the lower ratings mentioned earlier for the adequacy of the liberal education program at Stanford—students feel less competent with respect to areas of study that focus on the world outside the U.S., and they think that these areas are of less importance than other areas.

Most of the responses concerning the degree of improvement of student abilities at Stanford center around the 'moderate' and 'great' responses, with a rather balanced

continued on next page

Senior Survey

continued from page 15

distribution across the other response categories. There is a fairly close correspondence between the absolute evaluations of abilities and the degree of improvement at Stanford. Thus, for example, three of the ability items receiving the most positive absolute ratings—understanding the natural sciences, understanding social processes and institutions, and making judgments about international problems—also rank high in the assessments of degree of improvement. One exception here is the ability to make use of computers. While only 50 percent of respondents say they have 'good' or 'excellent' computer skills, 61 percent feel they have improved 'greatly' or 'very greatly' at Stanford. Two exceptions of a different kind are the abilities to write English and use one's creative faculties, for both of which students feel that their ability is far greater than the degree to which it has improved at Stanford.

Items for which the degree of improvement is least include the abilities to use a foreign language (35 percent 'slight' or 'very slight' improvement); understand mathematical sciences (36 percent) and the natural sciences (33 percent); and understand a non-Western culture (40 percent) and the development of Western culture 35 percent.) These findings provide further evidence of the necessity of the recent revisions of the distribution requirements and the institution of the Western Culture requirement. The finding that students have relatively weak language ability also reinforces the importance of the new foreign language requirement, which went into effect in the 1982-83 academic year. The results for these items in future senior surveys will constitute a baseline for assessing the progress made by students covered by the revised requirements.

Differences by Area of Study and Sex

Among the analyses of the responses from various subsets of the respondent population, two dimensions of special interest are those of the area of study (grouped by 'schools') and sex. In the first case, the responses allow us to assess the various schools as they are perceived by those majoring in departments within them; in the second case we learn more about the students themselves through comparisons of the responses made by women with those made by men. To simplify the discussion, in this section we will use mean ratings rather than the percentage distributions across the ratings scales. The mean can range from 1.0 (very poor) to 5.0 (excellent).

A. Differences among schools (Table 3, Parts A and B)

We have grouped the majors into five 'schools': engineering, humanities, social sciences, natural sciences, and interdepartmental programs. The earth science students are grouped with engineering because they are so few in number. Data for the mean ratings by school are given in Table 3.

Students majoring in humanities departments give the highest overall evaluations for various aspects of their coursework and major departments (Table 3, Part A), nearly all of them rating the courses in their major highly (mean of 4.20) and most rating the faculty highly as teachers (mean of 3.87). Social science majors give the lowest overall ratings, with their major courses receiving a mean rating of 3.74 while the faculty as teachers are rated at 3.61 and major advisers at 3.10. Engineering majors rate their department courses and advisers very highly but give average ratings for the faculty as teachers (3.62). Natural science and interdepartmental majors also give mixed evaluations, rating the overall quality of their education relatively highly but giving low evaluations of their major advisers or courses. The most positive evaluations of teaching assistants come from engineering majors (mean of 3.43), while the humanities and social science majors give the lowest responses (3.17 and 3.08, respectively).

By contrast, humanities majors give relatively less positive ratings for the adequacy of their training for graduate or professional school (mean of 3.68), while natural science and engineering majors give the highest responses (4.29 and 4.21). Social science majors also give relatively low responses on this dimension. The humanities and social science majors feel that they received the most adequate liberal education (means of 4.17 and 4.14, respectively) while the engineering and natural science majors feel much less satisfied in this area (3.36 and 3.62). Separating the interdepartmental majors into two groups, one of a natural science orientation (human biology and mathematical sciences) and the other of a humanities and social science orientation (international relations, American Studies, and other small programs), we find that the former give responses very similar to those of the natural science majors while the latter resemble humanities students most. The only major difference is that the humanities/social sciences group is more satisfied than humanities majors with their professional training and major advisers.

With respect to perceptions of abilities, the results provide few surprises (Table 3, Part B). Engineering and natural science majors give themselves much higher ratings than other majors for such abilities as understanding mathematical sciences, making use of computers, understanding technology and applied sciences, and the like; while humanities majors rate themselves more highly for such abilities as understanding literature and fine arts, understanding a non-Western culture, and so on. Social science majors rate their ability to understand social processes and institutions, understand the workings of government, and make judgments about international problems more highly than do other majors.

B. Sex Differences

There are few significant differences between men and women with respect to their ratings of the undergraduate program and the faculty and staff. Men rate the adequacy of their training for further education higher than do women while women give more positive evaluations for faculty teaching and the quality of teaching assistants. The adequacy of training for professional school has the largest difference in mean rating at 0.28.

Similarly, there are few sex-related differences with regard to students' assessments of the quality of the undergraduate program and faculty relative to their expectations. However, women rate nearly all of these items as being of greater **importance** to them than do men. Especially important to women are the quality of their liberal education and their major advisers.

With respect to abilities developed in the undergraduate career, sex differences generally seem to follow traditional stereotypes: men rate their abilities more highly than women in the mathematical and natural sciences, technology, computers, and government and international problems. Mean ratings for men are higher than those for women by up to 0.70. Women rate themselves more highly, but by somewhat smaller margins, in the areas of foreign languages, literature and fine arts, human development, and understanding the significance of gender, ethnicity, and social class in how American society functions.

These sex-based differences are to some extent a reflection of the uneven distribution of men and women among the various majors. For instance, natural science and engineering majors rate their mathematics ability higher than do humanities majors. Since men are overrepresented in the natural sciences and engineering, we should expect to find a difference in mathematics ability

continued from page 16

favoring men. However, even when we control for area of study sex differences often persist. For example, while women in the social sciences rate themselves much more highly than do women in engineering in the "male" domain of understanding government, they nevertheless rate themselves less highly in this dimension than do men in the social sciences. This pattern holds up most clearly for the areas of computers, technology, government, and international problems (men higher); and literature and the fine arts, and understanding gender and social class differences (women higher). One important exception is that sex differences for most of the math and science areas are negligible or quite small for both engineering and natural science majors. Women in these schools rate themselves about on a par with their male counterparts, and large sex differences are found mainly among students in other areas.

For both sexes, ratings of the degree of improvement of their abilities generally correspond to the ratings of abilities: where men rate their abilities more highly than do women, they also rate their degree of improvement higher; and likewise for women. Also, the importance of the abilities generally corresponds to the differences in assessments of the abilities: men attach more importance to the abilities in which they excel, and women attach more importance to the abilities in which they excel. All of the differences in this regard are relatively small except for the "social issues" of gender, ethnicity, and social class, where women express much more concern than men.

Comparison of Results for Three Years (Table 4)

For three consecutive years, the structure of the questionnaire used in the Senior Survey has not changed significantly. This means that we can begin to assess trends in student evaluations of Stanford. In this section we report a comparison of results for the past three years to show the kind of monitoring that is now possible.

In Table 4 we present the responses on the absolute scale for the questionnaire items for the three years. The striking finding here is the great stability of student evaluations of the undergraduate program, the faculty and staff, and their own abilities. Most of the differences within individual response categories are no more than three to five percentage points, or about the normal margin of error expected in sample survey results of this type.

For parts A and B of the survey questionnaire, which deal with evaluations of the undergraduate program and of the faculty and staff, we find very modest upward trends in the overall quality of education, courses in the major, adequacy of training, liberal education, and faculty teaching, and no downward trends. This is a welcome result. It is also reassuring to see that in areas where there was a modest decline in 1980-81 we find a rebound this year, most notably for the overseas campus experience and also for the coherence of the study program and the quality of teaching assistants.

Turning to the ability areas, we again find mostly stable response patterns for the three years. In three areas, however, real increases in ability ratings have occurred. The greatest increase is for the item concerning computers, with 50 percent of respondents saying they have high ability in 1981-82 compared to 38 percent in 1979-80, and only 24 percent rating themselves as 'poor' or 'very poor' this year compared to 32 percent two years ago. Rising trends are evident for technology and foreign languages as well. The increases for computers and technology make sense in light of the increasing proportion of students in engineering and the proliferation of computers on campus in recent years. The improvement in foreign languages is less easily explained, but it cannot be due to the new foreign language requirement because it applies only to students now entering the university.

Stability generally characterizes the responses for the other scales used in the questionnaire (assessments relative to expectations, importance of the items, degree of improvement of abilities). Exceptions are so few in number as to be expected on the basis of chance alone, and we therefore will not discuss these results in detail.

The overall results for the three years discussed here provide us with a further vote of confidence in the survey instrument, as it appears to yield a quite reliable range of responses for nearly all items. This finding reinforces our decision to use the survey instrument in its present form for at least several more years, so that a good longitudinal series of responses will be available for monitoring students' evaluations of Stanford and themselves.

TABLE 3

Part B: Abilities Responses by Major School 1981-82 Senior Survey (means, absolute scale)*

	Major School				
	Engineering/ Earth Sciences	Humanities	Natural Science	Social Science	Inter-departmental
C. Rate your current ability to:					
1. Write clear English prose.	4.01	4.46	3.93	4.13	4.00
2. Use a foreign language effectively.	3.02	3.54	3.13	3.58	3.23
3. Understand the development of Western culture.	2.90	3.81	3.09	3.28	3.01
4. Understand a non-Western culture.	2.83	3.29	2.94	3.23	2.93
5. Understand literature and fine arts.	3.25	4.29	3.40	3.60	3.55
6. Understand philosophical, social and religious thought.	3.11	3.83	3.48	3.64	3.49
7. Understand human development, behavior and language.	3.26	3.61	3.68	3.59	3.90
8. Understand social processes and institutions.	3.44	3.68	3.40	4.01	3.89
9. Understand mathematical sciences.	4.30	2.97	4.11	3.23	3.31
10. Understand natural sciences.	4.08	2.92	4.71	2.85	3.74
11. Understand technology and applied sciences.	4.60	2.63	4.06	2.74	3.30
12. Make use of computers.	4.19	2.80	3.59	3.23	2.92
13. (a) Absorb and analyze information.	4.49	4.26	4.41	4.31	4.33
(b) Use your creative faculties.	4.04	4.28	3.93	3.93	3.82
14. Understand the workings of the government.	3.14	3.42	3.05	3.81	3.37
15. Make judgments about international problems facing the country.	3.34	3.56	3.32	3.78	3.64
16. Use library resources to find information relevant to a particular topic.	3.80	3.97	3.87	3.99	4.02
17. Understand the significance of the following factors in how U.S. society functions:					
(a) Gender	3.66	4.05	3.59	3.92	3.85
(b) Ethnicity	3.51	3.79	3.55	3.76	3.63
(c) Social Class	3.57	3.94	3.61	3.91	3.80
Typical number of cases	120	110	100	150	100

*Mean values can range from 1.0 (very poor) to 5.0 (excellent).

Plans After Graduation

Just under half (49 percent) of the 191-82 respondents said they planned to work full-time immediately after graduation. Somewhat fewer (38 percent) planned to study full-time, and the remainder planned to travel, work and study, or pursue other activities. These figures represent a slight decline from last year in the proportion working full-time (52 percent). Women were more likely to work full-time after graduation than were men (55 percent to 44 percent), with a correspondingly larger proportion of men planning to study full-time. Further, there were considerable differences among students in the various schools. The proportion planning full-time work ranged from a high of 62 percent for engineering majors to a low of 24 percent for natural science majors, with the social science and humanities majors in between (61 percent and 48 percent, respectively). Nearly three-quarters of the natural science majors planned to study full-time, more than twice as large a figure as for the next highest school (humanities majors, 34 percent). This finding reflects the fact that many of the natural science majors attend medical school and do not delay their entry, unlike students entering many other fields of graduate study.

Longitudinal results concerning students' immediate plans show that the trend toward working full-time has been reversed. The percentage of students planning to work full-time immediately after graduation stood at 28 percent in 1975 and increased steadily thereafter to a high of 55 percent in 1979, but in the past three years it has declined to 49 percent. Again we should note that students maintain high long-term educational aspirations: fully 89 percent of all 1982 graduating seniors say that they eventually plan to attend graduate or professional school (or are already in a co-terminal master's program), a figure quite comparable to those of previous years.

When asked for three factors that affected their plans for the coming year, the students most frequently mention money or financial considerations (cited by about 35 percent of the respondents). The second most frequently mentioned category (23 percent) is the desire to escape academics and do something else. Third is intellecutal interest and the desire to learn (20 percent). The next three most often named factors are personal goals, a desire to apply knowledge or skills learned at Stanford, and personality factors. Particular individuals (parents, faculty, friends, etc.) are not among the most important factors mentioned. These results are very similar to those from 1980-81.

Senior Survey

continued from page 17

Summary

The overall assessment of Stanford undergraduate education given by graduating seniors in 1982 is once again quite positive. Students rate both the undergraduate program and the faculty and staff highly, though there is less satisfaction with the faculty as teachers and genuine dissatisfaction with general advisers. Most aspects of undergraduate education are considered better than or equal to students' expectations, and students attach considerable importance to all of the aspects of their undergraduate training that are covered by the survey.

Students also rate their abilities quite highly, with half or more of all students saying that they have good or excellent ability for nearly all of the items mentioned. The major weaknesses here have to do with students' understanding of Western and non-Western culture, foreign languages, computers, and government. Students also see their abilities as having improved a great deal in nearly all areas queried and they view these areas as being of moderate or great importance to them, with the greatest importance being attached to those areas in which they perceive their abilities most positively.

There are important differences among schools, with humanities students expressing the most satisfaction with their major programs and departments and social science majors expressing the least. Humanities majors also feel they got the best liberal education, while engineers are least satisfied in this regard. On the other hand, natural science majors feel very well trained for further study, as do engineering majors, while humanities and social science majors feel much less adequately trained. Assessments of abilities tend to follow the expected lines based on major area of study, with the engineering and natural science majors strong in quantitative and technical areas; the social science majors strong in dimensions directly related to their disciplines; and humanities majors strongest in humanistic dimensions.

There are few sex-based differences with respect to evaluations of the undergraduate program and of the faculty and staff. The main differences here concern the importance attached to items, with women considering most items of greater importance. Differences in abilities conform generally to traditional sex-related images in American culture and often hold up when area of study is controlled. Evaluations of improvement in ability and of the importance of the various abilities generally correspond to the evaluations of ability: men claim to have improved most in areas in which they have done well, and they consider these areas to be of greater importance. The same is true for women.

This year's results bolster further our confidence in the survey instrument and our procedure of administering it. Comparing the 1979-80 through 1981-82 surveys, for which most of the survey items have been completely identical, we find very great stability in the results and thus feel reassured about the reliability of the questionnaire. These findings reinforce our decision not to alter the questionnaire in coming years so that longitudinal data can be gathered to monitor student evaluations meaningfully.

Stanford West will provide four-fold increase in below market rate housing

Following is a statement by Vice-President William Massy to Palo Alto City Council March 16, 1983:

I am Bill Massy, vice president for business and finance at Stanford. My colleagues and I are pleased to be here tonight to talk about the proposed Stanford West housing project.

I don't think that I need to belabor the need for housing in this area. During the past several years, study after study was reported on the serious imbalance that exists between jobs and homes. That is the theme that runs through your Interim Housing Statement of 1973, your two Comprehensive Plan Reviews, the County's 1977 Call for Action in housing, and in this Council's zoning decisions.

At Stanford, the housing shortage has been described by President Kennedy as one of the most serious problems confronting the University in the 1980s. The quality of the institution in the future is directly related to the academic appointments made today. Housing is a key ingredient in that recruitment process.

William Massy

Stanford has responded to the many internal and external pressures in a number of ways. We have constructed 82 units in the Pearce Mitchell project, and 140 units on Peter Coutts Hill. We have created the highly successful Stanford Second Mortgage Coinvestment Program, called "COIN." It enables those in Eligibility Pool I—faculty and senior staff—to buy homes within commuting distance of the University. By the end of June, we will have committed something on the order of $30 million to that program.

We also have created a Housing Allowance Program (HAP) that provides outright subsidies to help newcomers buy homes. We expect to spend up to $370,000 a year on this in the next few years.

We prepared the Stanford Comprehensive Housing Program, including a complete review of our housing policies for faculty, staff and students, as well as a detailed survey of their housing needs.

And now we have come forward with the Stanford West project, our first effort aimed at that large group of Stanford staff and others who do not fall within Eligibility Pool I.

We believe that our proposal is a sound one that is fully in keeping with the City's long-established zoning policies. The 46-acre site was identified in your **1953** General Plan as suitable for housing. The project we have proposed is 20 percent less dense than the zoning allows, would cover one-quarter of the site instead of the allowable 45 percent, would provide three times as much open space as that required, and calls for buffer areas wider than stipulated.

In her letter to you of February 28, Chairwoman McCown sums up the principal objectives of the project quite well, with but one exception. That exception is the Planning Commission's definition of "affordable housing" as necessarily having to be "below market rates." Here are the objectives she listed:

1. To address the housing needs of the Stanford faculty and staff, and graduate students respectively, followed by opportunities for persons employed on University lands, then persons working in Palo Alto.

2. To provide affordable housing (and here is the exception) which we define as being below market rates but within the range of households earning 120 percent to 150 percent of the Santa Clara County median income.

3. To lessen the jobs/housing imbalance in the area.

4. To reduce the adverse effects of commuter traffic by providing housing closer to Stanford jobs.

5. To provide a significant number of Below Market Rate (BMR) units for households earning incomes 80 percent to 120 percent of the County median.

Obviously, Stanford West will help reduce the jobs/housing imbalance in the area, and obviously it will cut commuter traffic. By the same token, Stanford has agreed to a BMR program that could result in 220 below-market-rate units, or nearly **four times** the number that have been built so far in all of Palo Alto.

The agreement, which contemplates a project as currently before you, also calls for the four-acre Mayfield School site to be made available to the City for only $100,000—a fraction of its market value. That will permit the construction of additional BMR units.

As to affordability, we consider "affordable housing" to be that which is within the financial reach of the target buying group, whether it is below market or not. It is here that we differ with the Planning Commission's definition, for the below-market-rate requirement could seriously jeopardize the entire project.

The Planning Commission "strongly supports these laudable objectives," Ms. McCown's letter reports. **So, I might add, does Stanford.** These are precisely the objectives that led us to commit the time, effort, and money that we have during these past two years. Our public statements, the location of the project, its density, the proposed BMR agreement, and the design concepts all testify to our search for those goals.

The location cuts commuting. The proposed density of 1,275 units spreads the fixed costs, reducing the price or rent of each unit. A limit of 920 units would be disappointing, not fully responsive to the area housing need, and conducive to higher costs.

The Stanford West design is intended to mitigate the visual and noise impacts of the housing, as you will hear from the architects tonight. We have listened to the concerns of our neighbors across San Francisquito Creek with great care. Clearly they prefer an open field, or a less intensive development, to the 1,275 units proposed. And yet, housing holds a competing high social value, or it would not be cemented in Palo Alto's Comprehensive Plan as strongly as it is.

Then too, it is our hope that Stanford West will have far less impact than is feared, given the orientation of the residents toward Stanford and the broad buffer provided by the creek, a 90-foot set-back, and substantial landscaping.

In short, the density and design concepts at Stanford West were developed with affordability in mind, as well as functionality and aesthetics. Given those concepts, **the units at Stanford West are targeted to be affordable to a broad cross-section of Stanford staff and others, at market prices and rents, under economic conditions that are expected to prevail on average over the life of the project.**

We believe that, given current and projected economic conditions, about half of the project will be affordable to those in the County's 120 percent-150 percent median income range. The half-million dollar Environmental Impact Report that accompanies this project is one of the most thorough that we have ever seen. It contains a considerable number of suggested mitigation measures. The Planning Commission has also proposed a reduction of density on the 46 acres to 920 units, and some incentives for achieving what the Commission believes are overriding public benefits.

Stanford is prepared to work with the City staff to try to reach an agreement with respect to mitigations. We can start this week, and I hope that we can arrive at conclusions before the scheduled May 2 meeting of the Council. A fair and reasonable solution with respect to traffic issues and similar mitigations should not be beyond our reach.

We shall approach the negotiations in a spirit of compromise, and I am confident that we can reach an understanding on most of the issues. At the same time, I urge everyone concerned to bear in mind the strong correlation between the cost of mitigations and the ultimate price of units.

We will approach the question of the project's design with the same spirit of cooperation. That question is not officially before the Council at this time, but it is a highly important element. Stanford West will be our community, too, and the quality of life for its residents is equally important to us.

Now let me turn to those incentives with respect to density that have been proposed by the Planning Commission. First, let me say that we appreciate the thinking that underlies the proposed incentives. The Commission tried to find a way to allow the number of units proposed while at the same time advancing values of importance to the community. In examining those incentives, however, we find that they run counter to some important University principles.

The open space allowance as proposed would tie up Stanford lands not related to Stanford West in long-term open space contracts. We share the concern of the citizens of the area for the environment. Like you, we treasure our outlying vacant lands, and our Land Use Policy emphasized the aesthetic and educational importance of that asset. That land was given to us in trust for University purposes.

Our policy is to evaluate each commitment of Stanford lands on its merits, in terms of the proximate values for that particular parcel. Committing acres to long-term open space contracts would violate that policy, even when the land in question might very likely remain open for many decades.

We cannot gauge the relative values, in terms of University purposes, of "incentive" units on Stanford West on the one hand, and the loss of irreplaceable resources that may be needed for future academic purposes, on the other.

We fear that the precedent of "linkage" would come to have no limits, and we are not prepared to take a step along that road. So it is that we must respectfully decline an invitation to exchange our open land for additional units at Stanford West.

The affordable housing incentive allowance also carries with it a number of implications that give us serious pause. In essence, it would ask us to guarantee, over the entire life of the project, that additional units (beyond the City's BMR requirements) be "affordable" to those in a set income range.

The problem is in administering and paying for a system of such **guarantees**, and in relating them to the University's role as an employer rather than a normal developer or a government regulatory or assistance agency. The value of the land enters into the equation, but it is not the most important factor.

Stanford is quite unlike other developers in that it is a permanent employer whose primary mission in life is education. The burden of instituting and monitoring forever the allocation of a scarce housing resource to a lucky few would be massive and complex.

Like Palo Alto, Stanford strives to achieve equity in compensation. The principle of equal pay for equal work would be systematically and significantly violated under the incentive proposal. A relatively small number of fortunate employees would receive disproportionate benefits; all the others would receive nothing. The original allocations could be based on need to be sure, but over time the perception of relative need could become blurred, or change entirely.

The list of problems goes on. The proposal would foster "company town" atmosphere in which housing problems are injected into the working place. We already find this to some extent on the campus.

When an employee left the University, the pressure to evict that individual from the housing would be great. The linkage of housing to employment also would tend to lock people into working at Stanford whether or not that is sensible from a career point of view. The occasional need to lay off or terminate an employee would be made all the more difficult and painful.

Finally, such a benefit would lead to demands for other housing assistance programs on the part of the 11,000 other employees at Stanford, the Hospital, and SLAC.

All in all, we can foresee major problems from the incentive proposal. We can make the adjustment for the BMR units required under your regulations, for that will be a relatively small program, and a mandated one.

The housing assistance programs for faculty and others that I mentioned earlier are designed to minimize those problems. They are entitlements for everyone within eligible sub-groups. They owe their success to the fact that they aid groups of people, rather than subsidizing housing for a few. It is a policy that has worked for us in the past, and one that we are anxious to continue.

There is no question but that Stanford will realize the value of some of its land endowment as a result of market pricing. The benefits of this to the University's educational programs cannot be denied. I want to emphasize, however, the realization of land value did in fact come about as a consequence of the market pricing decision, and **not** as the cause of it. **Frankly, we could realize as much value with a much smaller number of more expensive units on the 46 acres.** The density and unit mix that we have proposed are driven by our desire to provide as much affordable housing as possible, not to make money through land development.

In summary, our proposal is well within the City's regulations and policies, and is responsive to the call for housing that we have heard from so many quarters for so long. We think that the impacts will be far less than feared, that most of them have been anticipated by the City's zoning, and that they can be adequately mitigated.

If ever there is an issue on which Stanford and Palo Alto should be able to reach agreement for their mutual benefit, it is this one.

We want Stanford West to be affordable to our target groups, which are essentially those about which you and your colleagues in the Planning Commission are concerned. All of this is consistent with your goals, and with ours.

We are proud of Stanford's record in housing faculty and students, and look forward to the day when many employees of the University and its tenants may share in the benefits of living close to their work, on Stanford land in the City of Palo Alto.

We ask for your support in that undertaking.

Staff employment opportunities

Exempt

30396-LL (JCC:5932) CLINICS STAFF NURSE III: 50%; flex hrs nec, evenings & wkends; respon for assisting the Survey Ctr Supvr in collecting data on local cardiovascular risk reduction, morbidity & mortality in SHDPP's community study in Salinas; conducting case-finding & abstracting activities using death certificates, med record indexes, & patient records in local health depts & hospitals; interviewing death certificate informants regarding circumstances of death; contacting indivs eligible to participate in survey; maintaining records & files, etc; QUALIFICATIONS: valid Calif R.N. license; recent med record abstracting exp; public contact; interviewing skills; some exp in physiological measurements; accuracy of record keeping; work w/ a wide variety of people; knowl of area & Spanish-speaking highly desirable.; K03; $991-1072.

23945-VW (JCC:2028) ADMIN SERVICES MGR: I Respon for admin & financial mgmt of Offc of Student Affairs & Offc of Med Edu; interacts w/ & supports a highly intelligent & active student body; preparation of annual budget, monitoring of offc expenditures & some knowl of policies & procedures related to student financial aid; respon for med student orientation & commencement programs, spec projs for OME as well as accuracy & timely release of numerous publications incl Med Student Handbook & Bulletin of Med Sch'l; QUALIFICATIONS: have strong interpersonal skills, incl tact, diplomacy & ability to handle confidential mat'ls; demonstrated financial & statistical abilities required; prev exp in supvn & offc mgmt in an academic or similar environ.; C06; $1854-2312.

33004-JB (JCC:2036) ADMIN SERVICES MGR II: Marketing Administrator respon for develop't, coord, & maintenance of strong, responsive customer serv & marketing programs for Word Graphics; coordinating the efforts of group mgrs, & drawing staff support as needed; call on Univ depts; w/ computer aid, analyze Univ graphic needs; develop & implement marketing plans; survey marketplace; advise mgmt; QUALIFICATIONS: extensive working knowl of & exp in graphic serv & products; strong interpersonal skills; ability to conceptualize & develop customer serv & marketing programs; knowl of Univ needs & structures; some sys & data processing bkground helpful but will instruct; knowl of Affirmative principles & programs.; C07; $2113-2724.

Carpools

One person to join existing carpool to Stanford. M-F, 8-5. We meet at Stevens Creek & Wolfe Road, Cupertino. Please contact Ana Errico at 7-0612.

Carpoolers wanted for existing carpool. Marin County to Stanford University. M-F, 8-5. Contact Kyle at 7-5602.

Carpoolers wanted, 8-5, M-F, from Pleasanton, Livermore, Union City, Fremont area to Stanford. Call Patty, ext. 7-2071.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, March. 29, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Rentals on Stanford West studio apartments could start at $400 per month

continued from page 1

affordable for those with incomes of about $44,000 or $45,000.

"We have targeted rentals for studio apartments to start at or near $400 a month," Morrow added. "That would require a 30 percent expenditure of a $16,000 per year income. We anticipate the average rental unit to be affordable to those with a household income of $32,000 to $33,000."

"To limit the total size of Stanford West to 920 units would be "disappointing, not fully responsive to the area housing need, and conducive to higher costs," Massy said.

"The balance between density and affordability is very delicate," Morrow said. "Specifically, by reducing the density by 100 units, the cost of the remaining units goes up by approximately $1,500 per unit. For the next 100 units lost the cost of those remaining rises $3,000 and for the third 100 the cost of the remaining units goes up nearly $7,000 per unit."

Massy "respectfully declined" a proposal to permit additional units in exchange for setting aside more open space on University lands. Such "linkage" could come to have no limits and result in "the loss of irreplaceable resources that may be needed for academic purposes," he explained.

An affordable housing incentive allowance "would ask us to guarantee, over the entire life of the project, that additional units beyond the city's BMR requirements be 'affordable' to those in a set income range."

"The burden of instituting and administering forever the allocation of a scarce housing resource to a lucky few would be massive and complex," Massy said. "A relatively small number of fortunate employees would receive disproportionate benefits; all the others would receive nothing."

"This proposal would foster a "company town" atmosphere in which housing problems are injected into the working place. We already find this to some extent on campus."

Massy said the University's educational programs would benefit from realizing the market value of the 46 acres as part of the project's pricing. But this was the result of Stanford's decision to follow market prices for the project—not the cause of that decision.

"Frankly, we could realize as much value with a much smaller number of more expensive units on the 46 acres," he said. "The density and the unit mix we have proposed are driven by our desire to provide as much affordable housing as possible, not to make money through land development."

Stanford's 8,000 acres remain one of the largest and most open private parcels of land on the plains and foothills of the San Francisco Peninsula.

Responding to the housing shortage, the University is now completing a new 800-unit, $35 million undergraduate housing complex. An additional 140 units of faculty housing recently opened at Peter Coutts Hill. An additional 14 units have been proposed on a site overlooking the Stanford Golf Course.

By the end of June, the University will have committed about $30 million to a second mortgage coinvestment program for faculty and senior staff.

The University expects to spend up to $370,000 a year in a housing allowance program to help faculty newcomers buy homes.

Rental housing

HOUSING AVAILABLE

□ **April 1 to June 1 (flex):** Los Altos, fully furn. 2BR/2BA, FR, AEK, 2 frpl, 2TV, park-like 1/3 acre. 1 Queen, 1 dbl bed. Dead-end st. Car poss. No pets. $1050/mo. Call (415) 967-2918.
